

November 1, 2010

Dear CPS Energy Customer:

CPS Energy invites you to attend an open house to learn about plans to build a new 138-kilovolt transmission line located in Bexar County, Texas.

CPS Energy is planning to construct a new electric transmission line in Bexar County to improve reliability and to meet growing needs for electric power. The proposed project will consist of a new 138-Kilovolt (kV) transmission line from the existing TCC Substation to the existing SWRI Substation. The single-circuit transmission line will be approximately 2 miles long and will occupy a right-of-way approximately 100 feet in width. The new transmission line is needed for power system reliability and rapid load growth.

The new line will be needed by June 2012 to maintain electrical reliability.

To hear from you and other area residents, CPS Energy will host an open house:

John Jay High School
7611 Marbach Road
San Antonio - Texas - 78227
November 16, 2010
5:30-8:30 p.m.

CPS Energy project team members who will plan and build the power line will be available to answer your questions.

Included in this packet are an aerial map showing the preliminary alternative routes, a project brochure, and a process document. Property owners whose land could be crossed by, or is near to, proposed routes are receiving these letters and information packets.

If you would like more information about this project, please visit our website: www.cpsenergy.com. Search: TCC-SWRI

We look forward to meeting with you and answering your questions at the upcoming open house, and we thank you in advance for taking time to give us your feedback about this project.

Sincerely,

Bruce Raney
Project Manager
