

Solar Initiative Rebate Program

CPS Energy Renewable Energy Credit Assignment Agreement

The CPS Energy Board of Trustees is committed to support renewable energy. CPS Energy's goal is to have the equivalent of 20% of our projected peak load in 2020 to come from revenue energy resources.

In consideration of receiving a rebate incentive from CPS Energy, you are being asked to assign the rights to the Renewable Energy Credits (REC's) generated by your solar PV system to CPS Energy. The REC's generated by your system and other program participants will be aggregated by CPS Energy through the CPS Energy Solar Initiative Rebate Program. CPS Energy will record and track the amount of renewable energy generated by the solar PV system.

By signing the Solar PV Energy Assignment Agreement, you are agreeing to assign the REC's generated by your solar system to CPS Energy in consideration for receipt of a rebate from the CPS Energy Solar Initiative Rebate program.

I _____ (please print) acknowledge that I have read the above explanation and understand by signing this agreement that I agree to assign the REC's generated by my solar system within CPS Energy's certificated area to CPS Energy in consideration for any solar rebate incentive provided to me.
