

Who is CPS Energy?

Established in 1860, CPS Energy is the nation's largest public power, natural gas, and electric company, providing safe, reliable, affordable, and cleaner energy to more than **996,000** electric and **399,000** natural gas customers in San Antonio and portions of seven adjoining counties.

Our customers' combined energy bills rank among the lowest of the nation's 20 largest cities – while generating \$10.6 billion in revenue for the City of San Antonio since 1942. As a trusted and strong community partner, we continuously focus on job creation, economic development, and educational investment.

We are powered by our skilled workforce, whose commitment to the community is demonstrated through our employees' volunteerism in giving back to our city and programs aimed at bringing value to our customers.

INFORMATION ABOUT THE CAGNON TO HOWARD TRANSMISSION LINE REBUILD PROJECT

What is the Cagnon to Howard Transmission Line Rebuild Project?

CPS Energy, along with our contractor Chain Electric and their subcontractors, will be working on the 345kV Electric Transmission Line as part of the Cagnon to Howard 345kV Rebuild Project. The Project includes installing thirty-five (35) foundations with tubular steel monopoles, replacing 26 miles of wire, and the removal of 16 lattice towers. All work will be utilizing CPS Energy existing easement. Transmission lines consist of various material (wood, concrete, steel, etc.) and wires that move electricity long distances at high voltages from station to station.

How might this project affect you?

Our contractor will work to minimize impact to area residents. Construction activities will be focused along the Right-of-Way (ROW) of the existing transmission line route shown on the Project Location Map. Activities that may be typical during the construction project are the presence of construction equipment and materials, as well as temporary partial road closures while construction is in progress.

Why is this project needed?

Maintaining our customers' need for reliable electric power is of utmost importance. The project will improve the quality and safety of an aging transmission line and help ensure electric reliability in the area identified on the map.
