

January 5, 2026

Dear CPS Energy Customer:

Thank you for being our customer. We are notifying you about a proposed substation and transmission line project in your area.

The Legend Falls Substation and Transmission Line Project involves the proposed installation of a new 138 kilovolt (kV) substation in far east Medina County, and a new 138 kV transmission line, which will be approximately 2 miles in length. The transmission line will connect the proposed Legend Falls Substation to a South Texas Electric Cooperative (STEC) San Geronimo Substation, as part of a larger ERCOT-endorsed project for the area.

The transmission line will require a new right-of-way (ROW) easement with a width varying between 75-100 feet. The proposed transmission line will be double circuit utilizing 100 feet of ROW between the existing CPS Energy transmission line and the proposed Legend Falls Substation. The proposed transmission line will be single circuit utilizing 75 feet of ROW between the proposed Legend Falls Substation and the STEC San Geronimo Substation.

The Public Utility Commission of Texas (PUC) requires CPS Energy to file a Certificate of Convenience and Necessity (CCN) application for review and approval of the project. Following the review of the CCN application, the PUC selects the final transmission line route. We plan to file a CCN application for the project in the first quarter of 2026 and expect to receive a response from the PUC in summer or fall of 2026.

In order to prepare an application to the PUC, CPS Energy has developed preliminary substation site options and associated proposed transmission line route alternatives. This letter and the associated materials are being provided in order to advise you of the project and provide you an opportunity to present feedback on the options being considered. A brochure describing the proposed project and the study area maps with preliminary routes and potential substation sites is included with this letter. We have also included a project questionnaire, which you can use to provide feedback, as well as a collection of frequently asked questions. Additional information will also be available at [www.cpsenergy.com/infrastructure](http://www.cpsenergy.com/infrastructure). Scroll down to the "Legend Falls Project."

We encourage you to review the project information and reach out to the project team with questions or feedback (including completed questionnaires). The project team can be reached at:
