

Dear CPS Energy Customer,

Thank you for allowing us to serve your energy needs. We are reaching out inform you about a project in your neighborhood to convert our existing overhead electric lines to underground lines for improved electric service reliability. We are undertaking this project because underground electric lines are generally less susceptible to damage and/or service interruptions due to storms, vehicles, trees, and animals than overhead lines. This enhancement to our infrastructure is meant to significantly improve the electric service we provide you and your neighbors.

The enclosed map shows the areas our construction contractor will perform work. At this time, we don't anticipate needing access to your property. If we determine that your property requires access, a notice will be placed on your door at least one business day in advance.

You may notice temporary spray paint markings on the ground identifying underground utility locations. As our work moves through your neighborhood, crews will ensure your property is returned to the state it was in when work began.

During this project, you may experience temporary power outages that are necessary for our field crews to perform their work safely. We will notify you by phone at least one to two business days before any planned outage to inform you of the outage start time and approximate duration. A notice with specific outage information will be placed on your door one day before any planned outage.

Please be sure we have the correct contact phone number and email to reach you. Log on to Manage My Account through cpsenergy.com or reach our Energy Advisors by calling 210-353-2222 to update our records so we can contact you in a timely manner with this important information.

In the next several weeks, you may notice some activity under Wurzbach Parkway and Vista Del Norte. This work is related to the project and may result in lane closures. You can find information about road closures and about this project at cpsenergy.com/infrastructure. Project information is listed by location.

If you have questions or concerns about this project, please contact Rachel Krepps at 210-353-5621 or email rkrepps@cpsenergy.com. We appreciate your patience and understanding while we complete this work to serve you better.

Sincerely,

Brian D. Bartos, PE

Senior Director, Distribution Engineering
