v.	§	Bexar County, Texas
	§	
Houston Pipe Line Company, LP and	§	
Oasis Pipeline, LP,	§	
Defendants–Counterclaimants.	§	407th Judicial District

DECLARATION OF DAVID SHANK

1. My name is David Shank, my date of birth is October 26, 1983, and my office address is 303 Colorado, Suite 2400, Austin, Texas 78701. I am of sound mind and duly qualified and capable to make this Declaration. I have never been convicted of a felony or a crime involving moral turpitude. I make this Declaration based upon personal knowledge.

2. I am counsel for Defendant/Counter-Plaintiff City of San Antonio, acting by and through its City Public Service Board ("**CPS Energy**"), in *CPS Energy v. Houston Pipe Line Company, LP and Oasis Pipeline, LP*, Cause No. 2021-CI-05138, 407th Judicial District, Bexar County, which has been transferred for consolidated pretrial proceedings in *In re CPS Energy Gas Supplier Litigation*, Master File No. 2022-CI-02879, 407th Judicial District, Bexar County, Texas. I am a partner at the law firm of Scott Douglass & McConnico LLP in Austin, Texas.

A. CPS Energy's ICE Chat Logs

3. On August 31, 2021, I contacted Michael Maydick, CPS Energy's Account Manager at the Intercontinental Exchange ("**ICE**"). ICE operates a real-time messaging platform used by CPS Energy and other buyers and sellers in the natural gas industry.

4. I requested that Mr. Maydick provide CPS Energy with a complete ICE chat message log for six CPS Energy user accounts for the time period from January 1 to March 18, 2021. The user accounts I requested chat message logs for included: Paul Vinson (pvinson1), Ken Skaer (kskaer1), Bruce Bordovsky (bbordovsky), Amber Irving (amirving), Candy Horner (chorner), and Buck Guinn (bguinn1).

5. On September 14, 2021, CPS Energy received an agreement from Mr. Maydick for a one-time pull of the six chat users listed above. On September 16, 2021, CPS Energy executed the agreement.

6. On September 22, 2021, CPS Energy received a consolidated chat log containing all ICE chat messages sent or received by the six users identified above, including for each message the sender, recipient, message content, and date and time sent (in Eastern Standard Time).

7. On September 30, 2021, I forwarded a copy of the consolidated chat log to Sam Merritt, Senior Consultant at HaystackID, CPS Energy's e-discovery vendor for the above-captioned case. To facilitate CPS Energy's review of ICE chat messages for relevance and privilege, and ultimate production of relevant, non-privileged messages, I asked Mr. Merritt to extract from the consolidated log individual logs containing all ICE chat messages exchanged between any two individuals.

8. Without modifying the content of any messages, Mr. Merritt proceeded to extract the individual chat logs for review and possible production. Each extracted log includes that entire chat history from January 1, 2021, to March 18, 2021, between each CPS Energy user and their chat counterparty, identifying each message's sender, recipient, message content, and date and time sent (in Eastern Standard Time).

9. After appropriate review, the relevant individual chat logs were produced with bates numbers and, when appropriate, redactions.

10. The documents attached as **Exhibits 44, 55, 56, 59–67, 92**, and **162–166** to this Declaration are true and correct copies of certain produced chat logs from ICE and reflect real-time communications made by employees of CPS Energy over the ICE messaging platform with various other CPS Energy employees or counterparties.

B. ICE Transaction and Offer/Bid Data

11. On July 22, 2022, CPS Energy issued a subpoena to ICE that requested, among other things, production of the data for all bids and offers posted by any Energy Transfer Entity (as defined in the Subpoena) on ICE's trading platforms for the purchase or sale of physical natural gas to be delivered on any day(s) during February 10, 2021, through February 28, 2021, at any delivery point in Texas (the "Relevant Bids/Offers"). A true and correct copy of that subpoena is attached as **Exhibit 90E** to this Declaration.

12. On September 1, 2022, ICE produced, among other data, a file containing tab delineated data for the Relevant Bids/Offers, bates labeled ICE-Energy_Transfer000011. ICE also provided a business records affidavit for that data. A true and correct copy of the September 1, 2022 cover letter from ICE and the enclosed business records affidavit are attached as **Exhibit 90D** to this Declaration.

13. The file labeled ICE-Energy_Transfer000011 includes 2997 rows of data. For each row, it provides several columns of information, including ORIGINAL_ORDER_NO. (the order number assigned to the bid or offer), MODIFICATION_TIME (the date and time in GMT time zone of the order activity reflected in the row), MARKET (identifying the relevant location and whether the bid or offer is for next-day or same-day and fixed-price or index-price), STRIP_BEGIN_DATE (the first flow date), STRIP_END_DATE (the last flow date), BID_OFFER (whether it is a bid or offer), QUANTITY (quantity in MMBtu of the bid or offer), RESERVE_QUANTITY (the quantity held in reserve by the party posting the offer), OR-

DER_PRICE, STATUS (whether the status of the offer reflected in the row, such as active, withdrawn, or consummated), TRADER_FULL_NAME, AND COMPANY_NAME.

14. I imported the data from ICE-Energy_Transfer000011 into a Microsoft Excel file without modifying it. Once imported, I added two columns that, by Excel formula, translated the MODIFICATION_TIME to display in Eastern Standard Time and Central Standard Time: MODIFICATION_TIME (EST) and MODIFICATION_TIME (CST).

15. From the imported Excel file, I then made three relevant excerpts that are attached as **Exhibits 90A, 90B,** and **90C** to this Declaration. Each excerpt includes columns identified in paragraph 13 and 14 for the excerpted bids and offers.

a. **Exhibit 90A** includes all bids and offers that any Energy Transfer Entity posted on February 12 for fixed-price, next-day gas at HSC-HPL Pool.

b. **Exhibit 90B** includes all bids and offers that any Energy Transfer Entity posted on February 16 for fixed-price, next-day gas at HSC-HPL Pool, Katy-Oasis, Katy-Lonestar Intrastate, or Katy-Enstor Pool.

c. **Exhibit 90C** includes all bids and offers that any Energy Transfer Entity posted on February 18 for fixed-price, next-day gas at HSC-HPL Pool, Katy-Oasis, Katy-Lonestar Intrastate, or Katy-Enstor Pool.

16. On September 19, 2022, CPS Energy issued a subpoena to ICE that requested among other things, production of the data for all purchases or sales executed on ICE's trading platforms for physical natural gas to be delivered on any day(s) during February 2021 at any delivery point in Texas (the "Relevant Deals"). A true and correct copy of that subpoena is attached as **Exhibit 91E** to this Declaration.

17. Because the definition of Relevant Deals was not limited to deals in which an Energy Transfer Party or an Enterprise Party was involved, the subpoena permitted ICE to provide anonymous unique identifiers for the parties to each deal. But the subpoena requested a key identifying the anonymous unique identifiers used for each of the Energy Transfer Entities and Enterprise Entities.

18. On October 19, 2022, ICE produced a file containing tab delineated data for each of the Relevant Deals, labeled ICE-ET-EP000001. ICE also produced a Microsoft Excel file labeled ICE-ET-EP000002 that identified the anonymous unique identifiers used for the Energy Transfer Entities and Enterprise Entities in ICE-ET-EP000001. ICE also provided a business records affidavit. A true and correct copy of the October 19, 2022 cover letter from ICE and the enclosed business records affidavit are attached as **Exhibit 91D** to this Declaration.

19. The file labeled ICE-ET-EP-000001 includes 20,543 rows of data. For each row, it provides several columns of information, including TRADE_TIME (the date and time in GMT time zone that the trade was consummated), MARKET (identifying the relevant location and whether the bid or offer is for next-day or same-day and fixed-price or index-price), STRIP_BEGIN (the first flow date), STRIP_END (the last flow date), QUANTITY_IN_LOTS (the total quantity of the transactions across all flow days, expressed in "lots" where 100 lots equals 10,000 MMBtu), TRADE_PRICE, BUYER_PARTICIPANT (the anonymous unique identifier of the buyer), and SELLER_PARTICIPANT (the anonymous unique identifier of the buyer).

20. I imported the data from ICE-ET-EP000001 into a Microsoft Excel file without modifying it. Once imported, I added two columns that, by Excel formula, translated the TRADE_TIME to display in Eastern Standard Time and Central Standard Time: TRADE_TIME (EST) and TRADE_TIME (CST). I also added a column labeled DAILY QUANTITY that, via Excel formula, translates the data from QUANTITY_IN_LOTS to express the daily quantity of gas in MMBtu for each deal. Finally, I added columns labeled BUYER and SELLER that, via Excel formula referencing the key in ICE-ET-EP00002, replace the anonymous unique identifiers for the Energy Transfer Entities and the Enterprise Entities with their names but otherwise include the data from BUYER_PARTICIPANT AND SELLER_PARTICIPANT.

21. From the imported Excel file, I then made three relevant excerpts that are attached as **Exhibits 91A**, **91B**, and **91C** to this Declaration. Each excerpt includes columns identified in paragraphs 19 and 20 for the excerpted bids and offers.

a. **Exhibit 91A** includes all fixed-price, next-day deals consummated on February 12, 2021, at HSC-HPL Pool, Katy-Oasis, Katy-Lonestar Intrastate, or Katy-Enstor Pool.

b. **Exhibit 91B** includes all fixed-price, next-day deals consummated on February 16, 2021, at HSC-HPL Pool, Katy-Oasis, Katy-Lonestar Intrastate, or Katy-Enstor Pool.

c. **Exhibit 91C** includes all fixed-price, next-day deals consummated on February 12, 2021, at HSC-HPL Pool, Katy-Oasis, Katy-Lonestar Intrastate, or Katy-Enstor Pool.

C. Summary Judgment Evidence

22. Attached as **Exhibits 1–182** to this Declaration are true and correct copies of the following documents:

Mr. Reed Williams - Chairman
City of San Antonio
Committee on Emergency Preparedness (CEP)

RE: CoSA CEP RFI #1.B – Revised Utility Primer

Dear CEP Chairman Williams,

In response to your request for information regarding the **inclusion of the supply chain process from fuel source (solar, wind, gas, coal, etc.) to power generation for all fuel source types expected to be in use during the winter storm as requested in RFI 1.1 and a description of each of the ancillary services provided by ERCOT into the basic primer**, we have attached two updated documents.

1. **CPS Energy & the Texas Electric Market Revised** – This is an informative document we created and have shared on our website that outlines the flow of the electric market. It explains how the market functions, our participation in the market, and how the winter weather event impacted the market. This document has been updated to include information on CPS Energy's power generation fleet, renewable portfolio, fuel considerations and ancillary services.
2. **Glossary Revised** – This is a glossary of terms that are used in industry. This glossary was used in our recently published ***Flexible Path***^{SM} Resource Plan document. We have also updated this document for additional definitions needed.

Please let us know if you have any questions or require additional information.

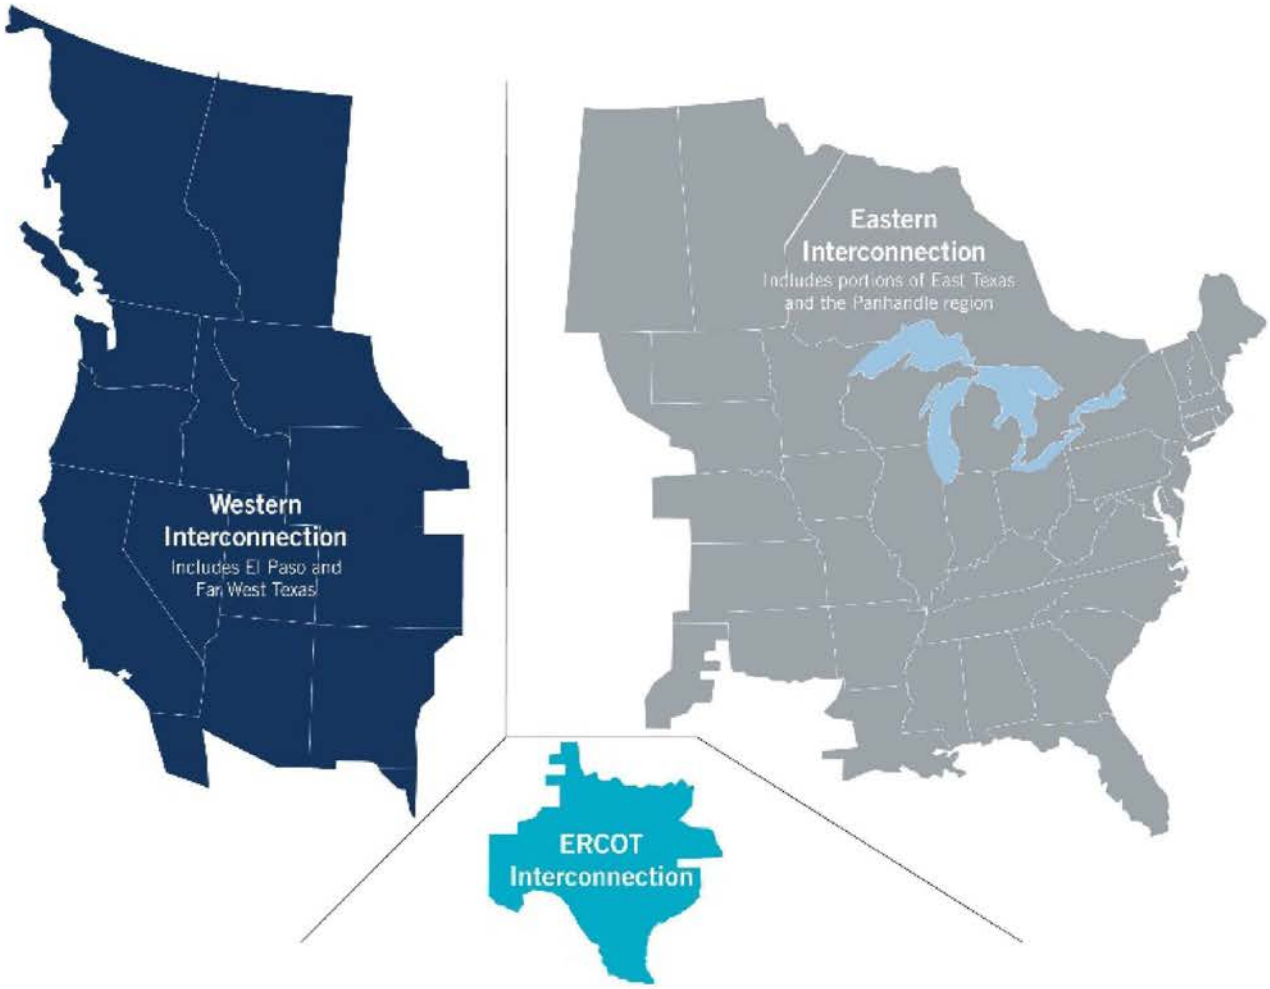
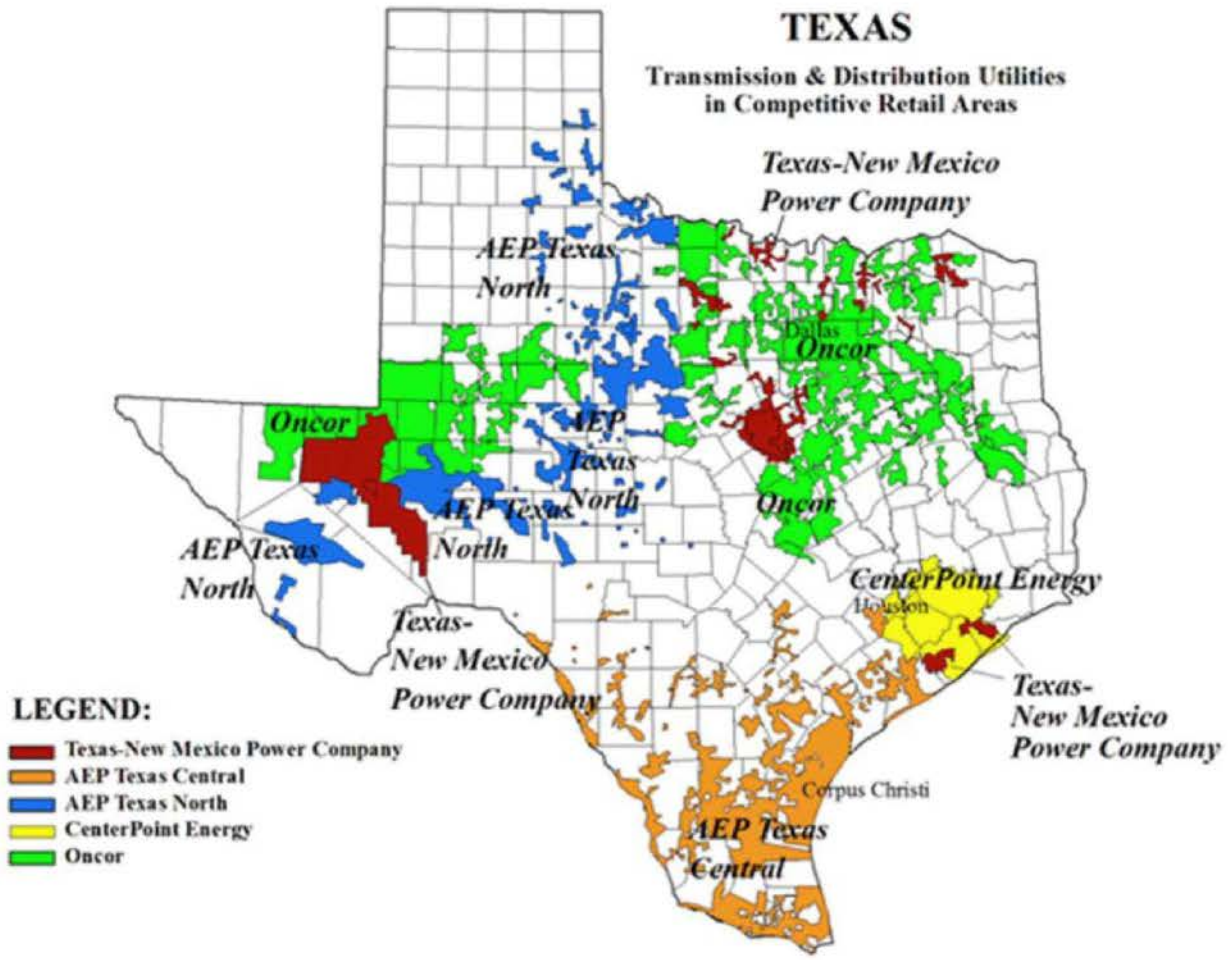
CPS Energy and the Texas Electric Market Revised
Glossary Revised



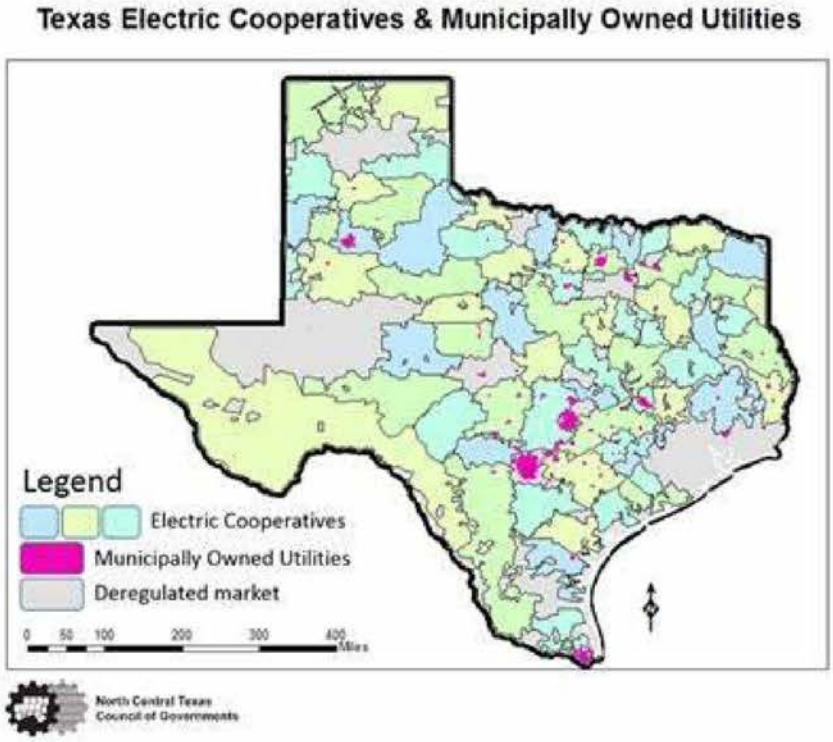
CPS ENERGY & THE TEXAS ELECTRIC MARKET

OVERVIEW: The flow of electric power for more than 26 million customers in Texas is managed by the Electric Reliability Council of Texas (ERCOT). This represents about 85% of the state's electric load, including San Antonio as shown below.

Within Texas, the ERCOT grid serves 85% of the electric load, and covers 75% of the land. ERCOT is connected to the Eastern Interconnect and Mexico by DC ties.



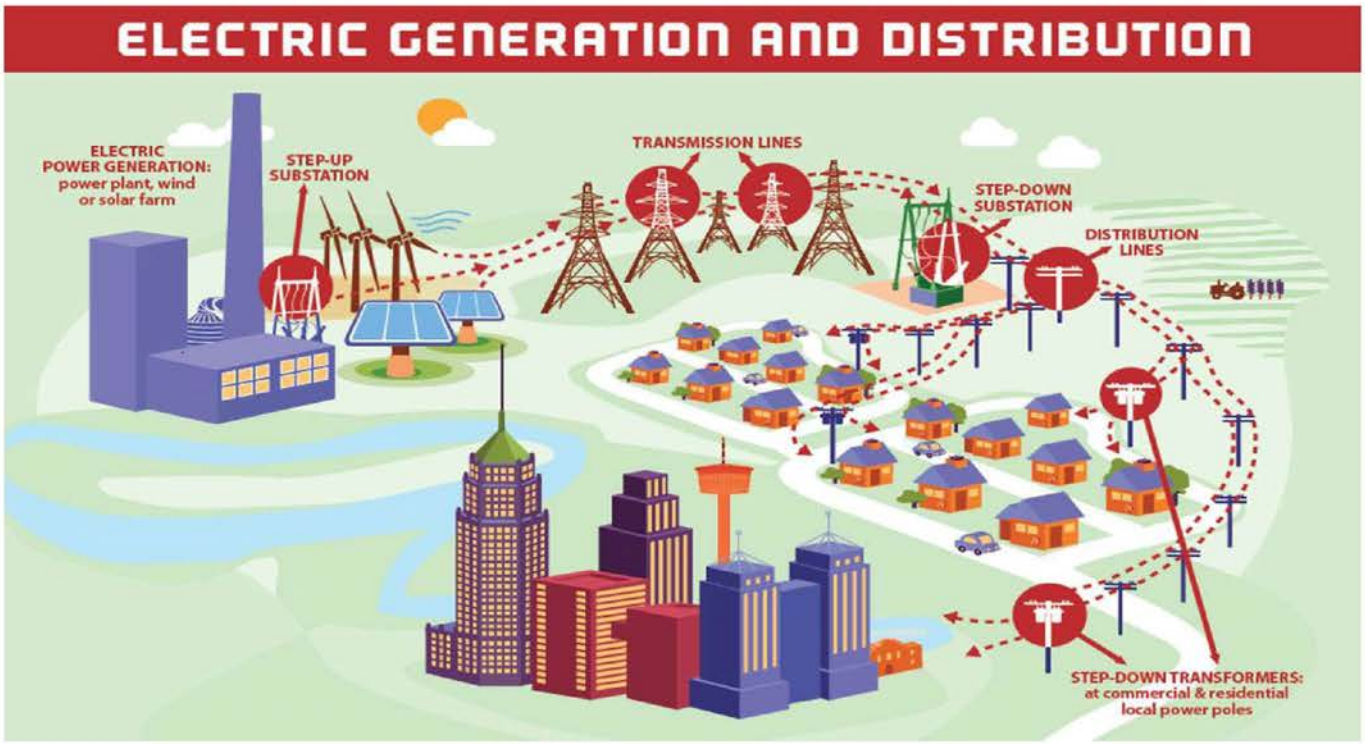
Nationally, ERCOT is one of several councils that manage the flow of electricity in the transmission systems. ERCOT is tied to other national and international grids but only for minimal amounts of power to be imported or exported.



There are several types of entities that serve Texas's electrical needs such as not-for-profit municipally owned utilities (MOUs), not-for-profit electric cooperatives (Co-ops), and investor owned utilities (IOUs). CPS Energy is the largest MOU in Texas and has served the San Antonio area for 161 years. A breakdown of the largest deregulated areas shows most of the State is open to competition.

Transmission & Distribution Utilities in Competitive Retail Areas

Texas Electric Cooperatives & Municipally Owned Utilities



Responsibilities: ERCOT, a non-profit corporation, is responsible for two things:

(1) managing the flow of electric power over the transmission grid to customers; and

(2) managing the sale of electricity under regulation by the Public Utility Commission of Texas (PUC) and the laws of the State of Texas.

Overview of the Electric System:

ERCOT Market Participants: Since 2001, when a competitive retail market design in Texas was created within ERCOT, electricity has been managed under laws adopted by the Legislature and PUC rules. There are several kinds of participants in the market:

- **Generators** that produce and sell electricity;
- **Transmission companies** that own and operate the high voltage lines over which the electricity moves across the state;
- **Distribution companies** that own low voltage lines that deliver electricity from the transmission system to our homes across neighborhood utility poles; and
- **Retail Electric Providers** (REPs) that buy electricity from generators and sell it to customers, which is delivered over the transmission and distribution lines owned by others.

MOUs & CO-OPs: MOUs, like CPS Energy, and Co-ops can participate in each market function if they have the capabilities and choose to do so. This is because in 2001, the law allowed Co-ops and cities that own MOUs to skip participation in the competitive electric market, unless they chose to opt-in.

How the market functions: Every day, ERCOT asks market participants who serve retail customers how much electricity they need to buy. They also ask Generators how much electricity they have to sell and at what price. In this day-ahead market, the transactions are made and the next day the power is delivered to customers. CPS Energy provides retail service to customers and is a generator of power. So, in the day-ahead ERCOT market, CPS Energy commits available generation to serve the amount of electricity needed by our customers, and if there is excess generation available, we sell that power into the ERCOT wholesale market to serve the needs of Texas, which our customers benefit from in terms of revenue.

In addition to the day-ahead market, there is also a real-time market. CPS Energy participates in both markets. In the real-time ERCOT market, if Generators have problems delivering the electricity they promised to sell, they must buy that electricity from ERCOT while ERCOT works with other Generators to identify where reserve electricity is available (ancillary services). In addition, for market participants who chose not to buy or sell electricity in the day-ahead market, those with retail customers will buy their electricity and generators will sell their electricity in the real-time market through coordinating the same kind of buy/sell transactions that were done as part of the day-ahead process.

All these daily transactions are settled (reconciled) and payments are made through ERCOT.

A simple way to think of how electricity flows on the grid is to imagine that electrons are like marbles and the grid is like a jar. All of the Generators put their marbles in the jar, and each utility takes out the marbles they will need for their customers on a daily basis. ERCOT is responsible for checking that there are enough marbles in the jar, and that those who take marbles pay for them, and those who put marbles in get paid.

Ancillary Services: Since ERCOT's primary responsibility is to ensure the day-to-day reliability of the ERCOT transmission grid, ERCOT must match generation output and system demand, and make sure that the transmission system is operating within its established limits. In addition to matching system demand with generation, ERCOT must also be able to respond quickly to ever-changing system conditions, including rapidly increasing or decreasing

demand or sudden loss of generation. To meet this grid reliability need, ERCOT procures and reserves additional capacity from certain generators that can respond quickly enough to meet changing system conditions. Capacity reserves procured for this purpose are called Ancillary Services.

ERCOT has four types of Ancillary Services: Regulation Down Service, Regulation Up Service, Responsive Reserve Service, and Non-Spinning Reserve. Each of these services has distinct performance requirements for response if ERCOT calls on the reserved capacity to be deployed as energy in response to system conditions as described in the table below.

Ancillary Service Type	Definition
Regulation Down Service	An Ancillary Service that provides capacity that can respond to signals from ERCOT within five seconds to respond to changes in system frequency.
Regulation Up Service	An Ancillary Service that provides capacity that can respond to signals from ERCOT within five seconds to respond to changes in system frequency.
Responsive Reserve Service	An Ancillary Service that provides operating reserves that is intended to: (a) Arrest frequency decay within the first few seconds of a significant frequency deviation; (b) After the first few seconds of a significant frequency deviation, help restore frequency to its scheduled value to return the system to normal; (c) Provide energy or continued load interruption during the implementation of the Energy Emergency Alert (EEA); and (d) Provide backup regulation.
Non-Spinning Reserve	An Ancillary Service that can be synchronized and ramped to a specified output level within 30 minutes and that can operate at a specified output level for at least one hour.

Ancillary Service capacity that is reserved for responding quickly to changing conditions is above and beyond what is required to meet the forecasted system demand. Market participants are allowed, but not required to self-provide ancillary services as part of their regular private transactions. This means that the market will rely on ERCOT to procure additional ancillary services to resolve grid problems. ERCOT procures ancillary services from generators and load resources, and retail electric providers are charged for the services on a load ratio share. Load ratio share is a percentage of the total ERCOT load.

How CPS Energy fits into the ERCOT market: CPS Energy, as a MOU, does not participate in the competitive market at the retail level, so we provide ALL the market services listed above to our retail customers. We generate electricity. We buy electricity under long term contracts for renewables. We transmit power over our transmission lines. To complete the process, we deliver it to customers over our distribution grid. We are the retail connection with our customers, providing information, sending bills, taking calls from customers, etc.

We do participate in the ERCOT wholesale market, which means we buy and sell power every day like the other market participants. As a generator of power and a retail provider to customers, what happens in the wholesale market impacts CPS Energy and ultimately our customers. This allows us to buy and sell power to provide the lowest cost possible and ensure we have sufficient power to meet projected customer needs. Most days, we generate enough power to serve our customers. When our plants are unavailable due to maintenance, we sometimes buy power from the ERCOT market to ensure reliable service for our customers.

CPS Energy's Power Generation Fleet: CPS Energy has a diverse fleet of electric power generating resources consisting of nuclear, gas, coal, wind, solar, landfill gas, and battery storage. This diverse portfolio helps us manage the risk associated with reliance on any single generation type. The diversity also balances the strengths and weaknesses that vary across the generating types regarding cost, variability in output, reliability, flexibility, and emissions. The high availability and controllability of CPS Energy's traditional fleet of nuclear, coal, and gas generation enables CPS Energy to integrate a large set of variable renewable resources into the portfolio.

CPS Energy's Renewable Portfolio: CPS Energy has over 1,600 MW of wind, solar, and landfill gas renewable capacity, totaling over 20% of our power generation fleet (see figure below). The renewable power is acquired through long-term contracts with third parties that own and operate the renewable plants. The majority of the renewable resources are located outside of the San Antonio area where the sun and wind provide the most economical output. These remotely located renewable resources deliver their electricity to the grid though a connection to the high voltage transmission system.

OUR RENEWABLE PORTFOLIO

Over 20% of our capacity is from renewable resources

Diversifying with renewables is beneficial, but comes with the challenges of:

- ***Intermittency***
- ***Congestion***
- ***Forecasting***

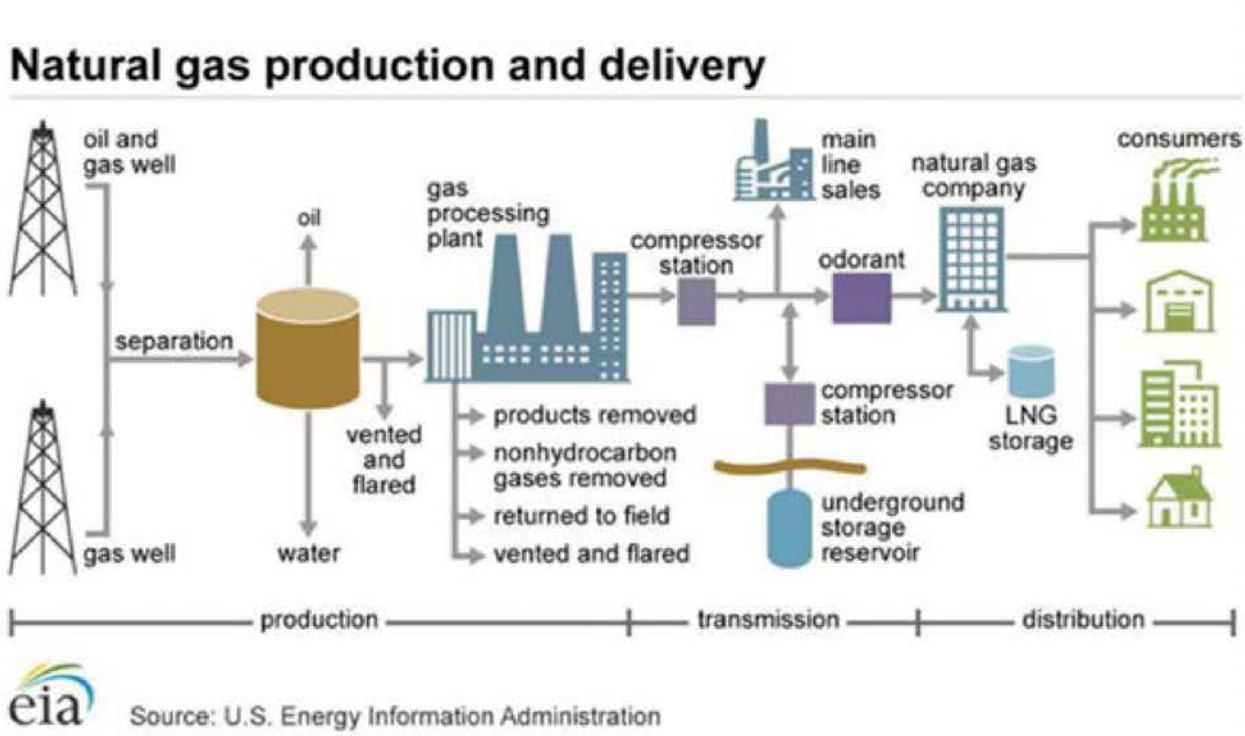
Since renewable output is dependent on wind and sun patterns, CPS Energy uses any renewable output that is available at the time, while filling in any gaps with our traditional generating resources. On an annual average basis, solar will output about 25% to 30% of its maximum capability and wind will output about 35% to 40% of its maximum capability. During winter events, freezing rain and snow can greatly reduce wind and solar output until weather conditions improve.

Fuel Considerations: CPS Energy's traditional fleet of nuclear, coal, and gas generation rely on a diverse set of fuel types. Wind and solar do not require fuel as their output is dependent on wind and sun patterns. Each fuel type is summarized below.

Nuclear Fuel

South Texas Project Nuclear Operating Company (STPNOC) operates the South Texas Project nuclear plant on behalf of the owners, of which CPS Energy owns 40%. STPNOC manages all aspects of nuclear fuel procurement as part of their duties. Each load of nuclear fuel lasts about 18 months.

Coal



CPS Energy sources coal from mines in the southern Powder River Basin (PRB) in Wyoming. There are master enabling agreements in place with the four main PRB producers. Delivery of coal to San Antonio is by railroad. There are two railroads with access to CPS Energy facilities and the service is solicitated for on a routine basis. CPS Energy maintains an onsite inventory of several weeks of coal burn.

Fuel Oil

CPS Energy maintains an inventory of fuel oil to provide a backup fuel for its gas fired generating units that can burn fuel oil. Fuel oil is utilized in the event of limited natural gas supplies and for testing and training purposes. The oil utilized is ultra-low sulfur diesel, it is sourced from local San Antonio area terminals, and delivered by truck. CPS Energy maintains an onsite inventory of several days of fuel oil burn.

Natural gas

Natural gas is typically an abundant, affordably-priced fuel. CPS Energy purchases natural gas supply for our power plants and to serve our retail natural gas system from many suppliers through a competitive market place. Most natural gas is produced in locations outside of the San Antonio area. As shown in the figure below, and there are several steps required to produce, process, transport, and deliver natural gas to customers.

While CPS Energy planned for natural gas supply for our power plants and to serve our retail natural gas system, it was necessary to purchase additional fuel during this event, which we used to generate power or be a direct source of energy. We have a lot of natural gas under contract all the time, but the projected demand for gas during the February weather event far exceeded what was anticipated across the entire State of Texas. When we purchased this gas, we found that the prices were much higher than the market had ever seen.

With the support of the San Antonio City Council and our Board, we remain committed to pay all reasonable and legitimate costs. We are working to determine how we can pay for this gas without imposing excessive, unlawful, and unconscionable charges to our customers. As a statewide issue, this is a difficult problem that a number of utilities across the state are dealing with, including CPS Energy.

Participation in the Wholesale Market – Winter Weather Event:

CPS Energy generated as much electricity as it could throughout the February

winter weather event. Some of our generation units had difficulty due to the extreme weather, creating a need to purchase some electricity from the market for some hours during the winter weather event. That is one reason being in ERCOT helps us – it gives us a source of electric power when we need it, not just a market into which we can sell excess power when we have it.

Every MOU & Co-op in Texas (most of which are not participants in the Texas competitive retail market, whether they own generation or buy power from other generation companies) is still impacted by wholesale market prices in Texas.

Load Shed Requirement: As cold weather descended upon the entire State of Texas in the early morning hours on Monday, February 15, generation forced off the system totaled over 30,000 MW due to equipment challenges caused by the severity of freezing temperatures.

When generation shortfalls happen, the grid must be protected to avoid catastrophic failure of the system. To stabilize the grid, when ordered by ERCOT, CPS Energy, along with other market participants, must take the necessary steps to alleviate the emergency situation and return the ERCOT grid to a more stable state. All market participants must cut power to some circuits, or shed load. The required amount of customer load is set by ERCOT and will create customer outages to try to reduce the length of customer interruptions to a minimum. The outages are intended as rolling in the beginning and ultimately end up controlled, as required.

During the February 2021 event, ERCOT required as much as **20,000 MW** of load shed across the State at one time, an event which lasted from Monday morning (2/15 at 1:07 am) through Wednesday evening (2/17 at 11:55 pm), a time period just under 72 hours. This was about 10 times the impact of load shed in 2011.

This was the highest amount of load shed experienced for the longest period of time in history and five times the largest load shed event previously experienced in ERCOT. This challenged utility systems across the state, including CPS Energy.

Previous Load Shed Events:

- Dec. 22, 1989, extreme cold during morning peak, ERCOT directed utilities to shed **500 MW** for 30 minutes

- April 17, 2006, extreme heat during afternoon peak, ERCOT directed utilities to shed **1,000 MW** for almost 2 hours
- February 2, 2011, after a major snow and ice storm, the unplanned loss of generation during a period of high demand forced ERCOT to direct utilities to shed **4,000 MW** of load for over 7 hours.

ERCOT Load Shed Table

Transmission Operator	2019 Total Transmission Operator Load (%MW)
AEP Texas Central Company	8.67
Brazos Electric Power Cooperative Inc.	4.96
Brownsville Public Utilities Board	0.37
Bryan Texas Utilities	0.51
CenterPoint Energy Houston Electric LLC	24.85
City of Austin DBA Austin Energy	3.71
City of College Station	0.28
City of Garland	0.79
CPS Energy (San Antonio)	6.79
Denton Municipal Electric	0.48
GEUS (Greenville)	0.15
LCRA Transmission Services Corporation	5.97
Oncor Electric Delivery Company LLC	36.07
Rayburn Country Electric Cooperative Inc. DBA Rayburn Electric	1.3
South Texas Electric Cooperative Inc.	2.48
Texas-New Mexico Power Company	2.62
ERCOT Total	**100.00**

CPS Energy will continue to share helpful information and updates about our operations. We welcome any questions you have. Please send questions to feedback@cpsenergy.com.

Glossary

Terms/Acronyms	Definition/Clarification
Accelerated Depreciation	Accelerated Depreciation - a depreciation method whereby an asset loses book value at a faster rate than the traditional straight-line method.
ADSC	Adjusted Debt Service Coverage - measurement of available cash flow to pay current debt obligations.
Affordable Clean Energy (ACE)	Establishes emission guidelines for states to use when developing plans to limit carbon dioxide (CO2) at their coal-fired electric generating units (EGUs).
Ancillary Services	Products used by ERCOT to maintain reliability minute-by-minute, 365 days per year. There are four main ancillary service products: Regulation Service – Up, Regulation Service – Down, Responsive Reserve Service, and Non-spinning Reserve Service.
Baseload	Is the minimum level of demand on an electrical grid over a span of time. Baseload power plants are designed to meet this minimum level of demand.
Behind-the-meter	Reference point to what occurs on the energy user's side of the utility meter.
BESS	Battery Energy Storage System - are rechargeable battery systems that store energy from solar arrays or the electric grid and provide that energy to a home or business.
CAAP	Climate Action and Adaptation Plan - provides a roadmap to achieve equitable climate mitigation and resilience goals for San Antonio, Texas - one of the largest and fastest growing cities in the U.S. The City of San Antonio aims to be carbon neutral by 2050 and the CAAP identifies mitigation strategies intended to advance that goal, inclusive of adaptive ecosystem restoration and social equity strategies.
Cash on Hand	Funds available to a company that can be spent as necessary.
Calendar Year (CY)	January 1 to December 31
Capacity Factor	The ratio of actual electric energy produced over the maximum possible electric energy that could be produced.
Carbon Intensity	The total amount of Carbon Dioxide (CO_2) emitted by fossil fuel power generation units (coal & natural gas) in pounds (lbs) divided by the total power generation (mwhs) from all generation sources including coal, natural gas, nuclear, and renewables.
Clean Air Act (CAA)	The Clean Air Act of 1963 is a United States federal law designed to control air pollution on a national level.
CO_2	Carbon Dioxide, the most commonly produced greenhouse gas.
Combined-Cycle (CC)	A type of power plant (typically natural gas fueled) where power is generated using two thermal cycles, typically a CT (see definition) and a ST (see definition).
Congestion	There are limitations on the electrical grid that prevent the flow of power from one location to the next. These limitations create costs for moving power through limited transmission lines.
Credit Downgrade	Debt is classified by Credit Rating Agencies based on the risk of the borrower not being able to repay. The Credit Rating Agencies downgrade a credit when they think a borrower has more risks, not as credit worthy.
CT	Combustion Turbine - a machine in which air enters, becomes compressed, and is mixed with gas or oil before being ignited. Combustion turbine units are typically used to supplement power supply during peak demand periods when

Terms/Acronyms	Definition/Clarification
	electricity use is highest.
D/C	Debt to Capitalization - the total D/C ratio is a measure that shows the proportion of debt a company uses to finance its assets, relative to the amount of cash (equity) used for the same purpose.
Discount Rate	See WACC.
DCOH	Days Cash on Hand - represents the number of days a company can continue to pay its operating expenses with the current cash available.
DDP	Distribution Development Plan - a plan to manage distribution systems and ensure continuous, reliable, and affordable electricity service to customers through identification of infrastructure requirements.
Decay (Energy Efficiency)	Dec the estimated degradation of EE programs over time as products like LED lighting, solar and HVAC equipment reach the end of their engineered life span.
Demand Response (DR)	Demand Response is a change in the power consumption of electric customers to better match the demand for power with the supply. Customers may adjust power demand by reducing or shifting tasks that require large amounts of electric power.
Depreciation	An accounting reduction in the value of an asset with the passage of time, due in particular to wear and tear.
Econometric Regression Computer model	A multiple variable regression model that has application of statistical methods to economic data.
ELG	Effluent Limitation Guidelines - are national regulatory standards for wastewater discharged to surface waters and municipal sewage treatment plants. EPA issues these regulations for industrial categories, based on the performance of treatment and control technologies.
Energy Efficiency (EE)	Using technology or services that requires less energy to perform the same function.
EOY	End of Year
EPA	Environmental Protection Agency - an independent executive agency of the United States federal government tasked with protecting people and the environment from significant health risks, sponsoring and conducting research, and developing and enforcing environmental regulations.
ERCOT	Electric Reliability Council of Texas - operates the electric grid and manages the deregulated market for 75 percent of the state of Texas.
ESG	Environmental, Social and Corporate Governance - refers to the three central factors in measuring the sustainability and societal impact of an investment in a company or business. These criteria help to better determine the future financial performance of companies (return and risk).
Fiscal Year (FY)	For CPS Energy, February 1 to January 31.
Flexible Path[SM]	CPS Energy's strategic approach to thoughtfully discover, explore, and implement new power generation and demand-side solutions to transform the utility to lower and non-emitting energy resources over the next 20 years and beyond.
FlexPOWER Bundle[SM]	An initiative supporting the ***Flexible Path***[SM] strategy; envisioning adding 900 Megawatts of generation capacity by adding solar, storage, and firming capacity to the utility's power generation mix.
FlexSTEP[SM]	A dynamic, flexible program for promoting energy efficiency, conservation, and new technology that builds on CPS Energy's Save for Tomorrow Energy Plan's (**STEP**) proven model for delivering energy savings and empowering customer choice.

Terms/Acronyms	Definition/Clarification
FOM	Fixed Operations and Maintenance - is the recurring annual cost that occurs regardless of the size or architecture of the power system.
Forecast of Retail Electric Sales	Predicted amount of electrical usage by CPS Energy Customers.
Front of the Meter	Reference point to what occurs on the grid side and is deemed to be in front of the utility meter.
Generation Production Cost Modeling	A model that is used to forecast the cost of producing electric power.
Greater San Antonio	See San Antonio Metropolitan Statistical Area definition.
ISO - Electricity	Independent System Operator – An organization formed to coordinate controls and monitors the operation of the electrical power system, in Texas this is ERCOT (See ERCOT above).
ISO - Standards	International Organization for Standardization - is an international standard-setting body composed of representatives from various national standards organizations.
Kilowatt-hour (kWh)	A standard unit to measure electricity. One kWh is 1,000 watts of electricity used for 1 hour.
LOLE	Loss of load expectation, a reliability metric representing how many hours the electricity supply will not meet demand.
LRT	Long Range Transmission - allows remote renewable energy resources to be used in populous cities. Hydro and wind sources cannot be moved closer to populous cities, and solar costs are lowest in remote areas where local power needs are minimal.
Megawatt (MW)	A measure of capacity to produce electric power. A megawatt equals 1,000 kilowatts or 1,000,000 watts. One megawatt can power about 200 homes on a hot day.
Megawatt-hour (MWh)	A unit to measure electricity one MWh is 1 MW used for 1 hour, or 1,000 kWh's.
Metropolitan Statistical Area (MSA)	A geographic region with a relatively high population density at its core and close economic ties throughout the area, typically centered on a single large city or multiple large cities that have significant influence over the region.
mmbtu	Million British Thermal Units – A measure of the energy content of fuel.
Mothballing	For power plants, putting the plant in a deactivated state but not decommissioning/deconstructing the plant.
NBV	Net Book Value - is based on the original cost of the asset less any depreciation, amortization or impairment costs made against the asset.
NCP	Non-Coincidental Peak, reducing energy consumption throughout the day.
NGCC	Natural-Gas Combined Cycle - is an advanced power generation technology which allows to improve the fuel efficiency of natural gas.
Non-Spinning Reserve	An Ancillary Service that can be synchronized and ramped to a specified output level within 30 minutes and that can operate at a specified output level for at least one hour.
Normalized Residential Use per Bill	An industry standard adopted method that will adjust the diverse weather conditions that exist from year to year to be of a common weather basis. This method is used so comparisons can be done from year to year without skewing due to differing weather conditions.
NO_x	Nitrogen oxides - may refer to a binary compound of oxygen and nitrogen, or

Terms/Acronyms	Definition/Clarification
	a mixture of such compounds.
NPV	Net Present Value - is the calculation used to find today's value of a future stream of payments. It accounts for the time value of money and can be used to compare investment alternatives that are similar.
O&M Expense	Operations and Maintenance Expense – are costs incurred to keep an item in good operating condition.
Particulate Matter (PM)	Solid particles and liquid droplets found in the air.
PPA	Power Purchase Agreement - a contract between two parties, one which generates electricity (the seller) and one which is looking to purchase electricity (the buyer).
PRB	Powder River Basin is a geologic structural basin in southeast Montana and northeast Wyoming, about 120 miles east to west and 200 miles north to south, known for its coal deposits. The region supplies about 40 percent of coal in the United States.
R&R	Repairs and Replacement Account – in accordance with CPS Energy's Bond Ordinances, a restricted cash account which may be used to fund construction costs.
Regulation Down Service	An Ancillary Service that provides capacity that can respond to signals from ERCOT within five seconds to respond to changes in system frequency.
Regulation Up Service	An Ancillary Service that provides capacity that can respond to signals from ERCOT within five seconds to respond to changes in system frequency.
Reliability	Reliability is the ability of a utility to provide power at any given time. Outages are disruptions of reliability.
Reserve Margin	Defined as (generation capacity minus peak load) divided by the peak load. Represents the ability of electric production to meet electric consumption.
Residential Use per Bill	The amount of energy usage a customer consumes in a home. Often used as an average across all residential customers per year
Resiliency	The ability to quickly recover from outages.
Responsive Reserve Service	An Ancillary Service that provides operating reserves that is intended to: (a) Arrest frequency decay within the first few seconds of a significant frequency deviation; (b) After the first few seconds of a significant frequency deviation, help restore frequency to its scheduled value to return the system to normal; (c) Provide energy or continued load interruption during the implementation of the Energy Emergency Alert (EEA); and (d) Provide backup regulation.
RICE	Reciprocating Internal Combustion Engine - are devices that convert the **chemical energy** contained in a hydrocarbon into mechanical energy (rotation of a shaft with a certain speed and torque) and into the thermal energy of the waste gases that escape into the atmosphere.
RIF	Reduction in Force - is when an employee is let go from a company due to budgetary reasons, workforce planning initiatives, position eliminations or other right-sizing events.
Rooftop Solar PV	Rooftop Solar Photovoltaic (PV) is a system that has electricity generating solar panels mounted on the rooftop of a residential or commercial building or structure
San Antonio Metropolitan Statistical Area	Area in Texas made up of eight counties: Atascosa, Bandera, Bexar, Comal, Guadalupe, Kendall, Medina, & Wilson. This area is also reerred as "Greater San Antonio".

Terms/Acronyms	Definition/Clarification
SCR	Selective Catalytic Reactor – An electric generating plant system that reduces nitrogen oxides emissions
SM	A service mark identifying services owned by CPS Energy. Similar to a Trademark, but legally distinct.
SO_2	Sulfur dioxide - a toxic gas responsible for the smell of burnt matches. It is released naturally by volcanic activity and is produced as a by-product of copper extraction and the burning of fossil fuels contaminated with sulfur compounds.
Spruce	J.K. Spruce Power Plant
ST	Steam Turbine – Equipment in an electric generating plant, driven by the pressure of steam, that rotates to drive an electric generator
STEP	CPS Energy's Save for Tomorrow Energy Plan - an innovative energy conservation program with the goal to save 771 Megawatts (MW) between 2009 and 2020. The cost of the program was initially estimated at $849 million, with annual costs ranging from $12 million to over $77 million. We achieved the community's goal of reducing energy demand by 771 MW! In fact, the goal was achieved a year ahead of schedule and 15% under budget.
STP	South Texas Project - a nuclear power station southwest of Bay City, Texas, owned by NRG Energy, Inc., Austin Energy, and CPS Energy.
Stranded Asset	An asset that has suffered from unanticipated or premature write-downs, devaluations or conversion to liabilities.
Terawatt-hour (TWh)	1 billion kilowatt-hours (kWh)
Utility Cost Test (UCT)	A way to measure the benefits of a program with respect to the cost of achieving those benefits.
VOM	Variable Operations and Maintenance
WACC	Weighted Average Cost of Capital - the rate that a company is expected to pay on average to all its security holders to finance its assets.
Wholesale	The sale of goods (specifically power) to retailers. Effectively power sold to other power companies.
Wholesale Market	See Wholesale Power Market
Wholesale Power Market	Market where electricity can be bought and sold by power producers and electricity retail companies.
WRnF	Wholesale Revenue Net Fuel – the revenues from market sales of incremental power produced less the cost of fuel to produce the power.

MR. SHANK: Okay.

Q. BY MR. DOBROWSKI: Exhibit 1A. Enterprise Exhibit 1A, please, sir. Thank you. Okay. What you're saying is that you do recognize, now, Exhibit 1; right, with the --

A. I believe so. Yes.

Q. -- Exhibit 1 -- I'm sorry, sir, with Exhibit 1A taken off?

A. I believe so. Yes.

Q. Okay. Very good. And can you explain to me and the ladies and gentlemen of the jury how the NAESB agreement works, in terms of purchasing gas from a client like mine, EPO?

A. The NAESB agreement is strictly an enabling agreement --

Q. Okay.

A. -- which allows two parties to do business at some point in time.

Q. And how do they do business if they want to do it pursuant to the NAESB agreement, based on your experience?

A. Based on my experience, it's a contact either via phone, via instance message, ICE Chat a -- a communication method of stuff.

Q. What's an ICE Chat?

Q. It's spot market?

MR. SHANK: Objection; form.

THE WITNESS: Apples and oranges.

Q. BY MR. DOBROWSKI: Well, okay. What is the difference between same-day gas and spot market?

A. So, spot market is just a -- a mechanism by where you go and you can actually buy and sell gas. It's a -- it's -- a spot market's typically for one day.

Q. Okay.

A. Okay. And typically, that -- typically that -- those transactions are for next day.

Q. Okay.

A. And so, if we're doing the deal today, it would be for tomorrow. Starting at 9:00 a.m. tomorrow through the following 9:00 a.m.

Same-day is when we're actually talking about it today, but we want to flow it today.

Q. Okay.

A. Same-day gas.

Q. Got it. And here at 12 -- or 2:11:12 p.m. you write, "Great, thanks. Still waiting for one of the big guys. Can you give me a few more minutes?" Do you see that?

A. Yes.

THE WITNESS: A comment that Cary made?

Q. BY MR. SHANK: Uh-huh.

A. Yeah. I don't -- I don't remember that particular one.

Q. All right. Let's talk generally about -- I want to just cover some general things about CPS Energy, its use of gas and forecasting that were covered earlier today.

So, what does CPS Energy use natural gas for, very generally?

A. High level, CPS Energy buys the natural gas to supply to the power plants to produce electricity to supply to the residences of San Antonio and to the market whatever is available to send to the market.

And also, natural gas to supply to the distribution customers of San Antonio for their home heating, water heaters and whatnot.

Q. CPS Energy is the retail provider of electricity for the people in San Antonio?

A. Yes.

Q. It is also the retail natural gas provider in San Antonio?

A. Yes.

Q. Okay. What would happen if CPS Energy just didn't buy enough gas to cover its, let's start with

the -- the distribution service?

MR. CALLAHAN: Objection; form.

THE WITNESS: I think what you'd see probably is -- is basically, curtailments, that they would be -- not curtailments. That would be -- that's not -- the wrong word. Brownouts, or sections of the city probably -- if we didn't have enough gas, sections of the city wouldn't have gas delivered to their -- to those sections of the city.

So, that would mean no -- no heaters during the storm. That would mean no gas deliveries to those -- to those customers.

Q. BY MR. SHANK: Okay. In your time at CPS Energy, has it ever even been presented as an option to you to not buy sufficient gas to cover CPS Energy's requirements?

MR. CALLAHAN: Objection; form.

THE WITNESS: No.

Q. BY MR. SHANK: Did you have power during Winter Storm Uri?

A. At my house?

Q. Yeah.

A. I did. Yes.

Q. Do you know others at CPS Energy who didn't?

Enterprise Pipeline; right?

A. There's a park and loan agreement that's -- agreement that is part of the basket of transportation and storage agreements with the pipeline.

Q. So -- so, park and loan service isn't something that Enterprise Pipeline does just out of charity? It's something you've contracted for; right?

A. Yes.

Q. Okay. You also were asked a lot of questions about bid day gas. Do you remember those?

A. Yes.

Q. And is the gas that's purchased on bid day for the next month also referred to as baseload?

A. Yes.

Q. Is baseload gas, or bid day gas, it is a fixed quantity that must be delivered every single day of the month; right?

A. That's correct.

Q. At whatever the particular delivery points are in the offers you accept; right?

A. Yes.

Q. Is CPS Energy's gas demand the same every day of the month?

A. No.

Q. In your experience in CPS Energy, would it even be possible to fulfill CPS Energy's monthly requirements with bid day gas?

MR. CALLAHAN: Objection; form.

THE WITNESS: Can you repeat the question?

Q. BY MR. SHANK: Yeah. I guess what I'm saying is, could you ever -- if CPS Energy's burn every day of the month is never even, you could not perfectly fill their full burn with baseload gas in any month; is that fair?

MR. CALLAHAN: Objection form.

THE WITNESS: True statement.

Q. BY MR. SHANK: Okay. Prior to the storm, had you ever, in your experience buying gas, paid more than $35 per MMBtu for a weekend gas?

A. I don't remember, you know, what the maximum price we ever paid was, but I don't believe it was over that.

Q. You ever paid $150?

A. No.

Q. You ever paid $225?

A. No.

Q. Okay. Have you ever paid anything above that?

Q. BY MR. SHANK: You may not know the answer it this. But in those 11 minutes, can you think of anything that could have happened that would have, you know, changed Energy Transfer's cost of supply for that gas?

MR. CALLAHAN: Objection; form.

THE WITNESS: I wouldn't know that.

Q. BY MR. SHANK: Okay. Without going through this whole exhibit, there were other instances during the winter storm when you were quoted prices by Energy Transfer and you asked for a lower price; right?

A. I believe so.

Q. And all of those requests were refused; right?

MR. CALLAHAN: Objection; form.

THE WITNESS: I don't know for sure for all of them, but that -- it seems that that's the case.

Q. BY MR. SHANK: We talked about -- you were asked questioned about delivered gas versus transport. Do you remember those?

A. Yes.

Q. What is delivered gas?

A. Delivered gas is gas that's actually bought and delivered directly at the -- one of the City gate

points or a power plant point. Typically, those points are -- are pipeline points. It's where the pipelines deliver transportation gas or whatnot.

And -- and at times we would buy delivered gas from the pipelines there at those points. Typically, the pipelines don't allow -- don't allow other counterparties, suppliers, access to those points.

So, it's typically, usually either transportation on our side to transport the gas there, or to buy it from the pipeline at those locations.

Q. In what circumstance --

MR. CALLAHAN: Object to -- object for the answer and the -- apparently, your question called for speculation.

Q. BY MR. SHANK: In what circumstances do you -- does CPS Energy generally buy delivered gas?

A. Typically, only when we really need it.

Q. And -- and what -- what circumstance, with regard to your transport, would make you really need delivered gas? If your transportation is full --

A. Transportation. You know --

MR. CALLAHAN: Object to form.

THE WITNESS: -- transportation is full,

REPORTER'S CERTIFICATE

ORAL AND VIDEOTAPED DEPOSITION OF

BRUCE BORDOVSKY

AUGUST 10, 2022

I, PAMELA SUE PETERSON, Certified Shorthand Reporter in and for the State of Texas, hereby certify to the following:

That the witness, BRUCE BORDOVSKY, was duly sworn by the officer and that the transcript of the

deposition is a true record of the testimony given by the witness;

That the deposition transcript was submitted on September 1, 2022 to the witness or to the attorney for the witness for examination, signature and return to me by September 22, 2022;

That the amount used by each party at the deposition is as follows:

PAUL J. DOBROWSKI (04h18m)
Attorney for Enterprise Products Operating, LLC
BRYCE CALLAHAN (01h59m)
Attorney for Energy Transfer
DAVID SHANK (00h27m)
Attorney for CPS Energy
LAUREN A. VALKENAAR (00h00m)
Attorney for CPS Energy
DYLAN FEDDERMAN (00h00m)
Attorney for CPS Energy

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

MR. PAUL J. DOBROWSKI, Attorney for Enterprise Products Operating, LLC;
MR. BRYCE CALLAHAN, Attorney for Energy Transfer;
MR. DAVID SHANK, Attorney for CPS Energy;
MS. LAUREN A. VALKENAAR, Attorney for CPS Energy;
MR. DYLAN FEDDERMAN, Attorney for CPS Energy;

I further certify that I am neither counsel for, related to, nor employed by any of the parties

or attorneys to the action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of this action.

Further certification requirements pursuant to Rule 203 of TRCP will be certified to after they have occurred.

Certified to by me on this 1st day of September, 2022.

MMbtu?

A. Which page are you on?

Q. The 13th.

A. Oh, 13th. Okay.

Q. And if you look below that the baseload remains the same; but that makes sense because both the prepaid deals and the baseload deals remain stagnant for the month, right?

A. Yes.

Q. And so here you have a delta that has grown from, let's say, approximately 170 to approximately 675,000 MMbtu?

A. Uh-huh.

Q. If we go to the 17th, the last spreadsheet there, the forecast remains substantially higher. It's at 540,000. The baseload remains the same at 32.

And so for February 17th to meet the load forecast, CPS Energy has to purchase 500,000 or so MMbtu to generate power; is that correct?

MR. ARAVIND: Objection, form.

A. Generate power and also supply LDC.

Q. (BY MR. DEBAUCHE) So generate power and supply natural gas to its customers?

A. Yes.

Q. Earlier you had said that there was -- there

would ask that there would be page/line designations for specific AEO material by CPS Energy.

(DEPOSITION CONCLUDED AT 4:58 P.M.)

properties, certain businesses, for instance, to shut off their electricity versus someone else's.

A. No.

Q. Even though, in theory, you could do that; it would be a manual process.

A. Yes.

Q. So if -- if someone is on a circuit, residence, business, whatever, absent going out and physically cutting off them, CPS can't stop them from drawing electricity, right?

A. Correct.

Q. Okay. In other words, if -- if there is a Walmart, let's just say, that had all the lights on during Winter Storm Uri, absent going out and literally cutting off their electricity alone, they would just still draw from the grid like anyone else.

A. Yes.

Q. Now, during Winter Storm Uri, was CPS prioritizing electricity for human needs?

A. During the storm -- so I would say yes from the standpoint that our load shed program and plan are targeting to prioritize keeping the most critical loads avoiding hitting those for load shed to the extent possible.

Q. How does CPS identify the most critical loads that you refer to?

A. There's a process where we work with our customer -- customer service or the company and go through and identify, you know -- you know, different categories of critical needs. So major hospitals might, you know, be one example of those. And we identify those circuits and those circuits are exempted from the load shed process.

Q. Is there a -- I take it there's some sort of formal policy, some document that lays out this -- these critical loads?

A. There is a -- and, you know, I'm speaking from, you know, when I was there. I think, you know, there may have been changes since then. But there was a document that would identify the circuits that were identified as critical and, you know, what the -- what the particular loads on that circuit were that -- that put it in that designation.

Q. Besides identifying circuits where there's a hospital, let's say, is there any sort of like priority ranking of circuits that you will -- you will load shed, you know, this circuit first and then go down to these?

Is there some priority system?

A. There wasn't at that time. It was either available for load shed or it was not.

Q. I think you told me this earlier. How many circuits are there at CPS?

A. 600 and some-odd.

Q. Do you know how many are identified as critical?

A. At that time, coming into the Uri event, there was approximately a third that was available for load shed, a third that was identified for customers and a third that was identified as part of what's called under frequency load shed, which is a fully automatic shedding of circuits if the grid is on the edge of -- of a blackout.

And that's -- that whole under frequency load shed system is NERC prescribed and a typical system for all utilities.

Q. How does -- how do some circuits get put under the under frequency load shed category?

A. It mostly has to do with identifying circuits that will be able to consistently, regardless of season, provide a consistent amount of load reduction.

So you -- so a circuit that might

have, you know, very different loading during different seasons might be problematic because it might not give you the load reduction that you were expecting in that automatic critical situation. So it's mainly a -- kind of an operational technical consideration.

Q. For the -- for those circuits where they would be -- have critical loads, other than hospitals, as you sit here, what other types of businesses, if you will, or what have you would be on that list besides...

A. Some military, gas compressor stations, the emergency operation centers. I think there might be others. Those are probably the -- SAWS pumping stations, some of them.

Q. Anything else that comes to mind?

A. No.

(Exhibit 160 marked.)

Q. (By Mr. Stafford) I'll show you what I'm marking as Exhibit 160 (indicating).

MR. ROSENBLUM: Thanks.

Q. (By Mr. Stafford) This sort of jumps ahead to -- we were talking about the winter storm. This jumps around to May 27th, 2021. And we talked earlier about you ending up with the task of

REPORTER'S CERTIFICATION

ORAL & VIDEO DEPOSITION OF PAUL BARHAM

OCTOBER 7, 2022

****

I, TAMMY ELLIS, Certified Court Reporter in and for the State of Texas, hereby certify to the following:

That the witness, PAUL BARHAM, was duly sworn by the officer and that the transcript of

the oral and video deposition is a true record of the testimony given by the witness;

That the amount of time used by each party at the deposition is as follows:

CODY W. STAFFORD - (3 hours, 3 minutes)
RICK ROSENBLUM - (0 hours)
MEGAN STURM - (0 hours)
LAUREN DITTY - (0 hours)
ALI SHAN ALI BHAI - (1 hour, 47 minutes)

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

CODY W. STAFFORD and RICARDO G. CEDILLO,
Attorneys for Plaintiff;
RICK ROSENBLUM and LAUREN DITTY,
Attorneys for Defendant;
ALI SHAN ALI BHAI, Attorney for Defendants
Houston Pipeline and Oasis Pipeline;

I further certify that I am neither counsel for, related to, nor employed by any of the

parties in the action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of the action.

Further certification requirements pursuant to Rule 203 of TRCP will be certified to after they have occurred.

Certified to by me this 25th day of October, 2022.

sell some of that electricity into the grid. I understand over the course of the storm, they were in a deficit situation.

MR. DOBROWSKI: Object; nonresponsive.

Q. (By Mr. Dobrowski) I didn't ask you about Winter Storm Uri. I'm just asking you, you -- you keep -- you have said repeatedly, Doctor, that CPSE was compelled to buy natural gas for human needs, true?

A. Yes, sir, absolutely.

Q. Okay. Does CPSE buy natural gas for any other reason, any reason other than meeting human needs?

MR. ARAVIND: Objection; form.

THE WITNESS: Well, on an ongoing basic, CPS has hundreds of thousands of customers who use gas and electricity, particularly electricity, for a variety of purposes. I suppose you could say that running a factory, for example, you might not characterize that as a human need, so there may be -- there may be functionalities that are -- that use that electricity for something other than human needs.

But -- But CPS has a -- has an

obligation to provide for its customers the electricity they need to run their homes, run their businesses, military bases, hospitals, and any number of other things. And a vital part of that is meeting just basic human needs in the case of this storm for warmth.

Q. (By Mr. Dobrowski) And it has that obligation before -- it had that obligation before Winter Storm Uri and after Winter Storm Uri, right?

MR. ARAVIND: Objection; form.

THE WITNESS: My understanding is, as I've said a couple times before, CPS has an ongoing obligation, that it -- That's what it's chartered to do, is to meet the natural gas and electricity needs of its customers on an ongoing basis.

Q. (By Mr. Dobrowski) Well, I'm using your phrase "human needs." CPSE had the obligation to meet those human needs before Winter Storm Uri and after Winter Storm Uri, right?

MR. ARAVIND: Objection; form.

THE WITNESS: I would certainly agree that CPS has an ongoing obligation to meet human needs, yes, sir.

Q. (By Mr. Dobrowski) Okay. Did CPSE -- and I'm trying to understand this. Your

Q. Have you seen that contract before, sir?
A. I have. Let me look at it quickly here.
Q. Sure. I'm not going to ask you about the whole, you know, front to back or anything. I just have a couple short questions about it.
A. I have seen this document before, yes, sir.
Q. Okay. So if you turn to page 7 of this document --
A. Yes, sir.
Q. -- there is Section 7. Do you see Section -- well, there's 7.2, 7.3, 7.4. Do you see those sections?
A. I do, yes, sir.
Q. So I'm referring specifically to 7.4. You are aware, aren't you, sir, that 7.4 is the provision under this NAESB contract by which CPS is challenging the prices of gas during Winter Storm Uri, correct?
MR. ARAVIND: Objection; form.
THE WITNESS: Again, without giving you any legal connotations to it, I have that general understanding, yes, sir.
Q. (By Mr. Young) Okay. And that -- that portion of the contract, 7.4, says, "If the invoiced

So let me back up.

You believe that the figure 38.83 or, in its revised form, 37.74 --

A. 38.74.

Q. 38.74. Sorry. 38.74. You do not believe it is a price cap?

MR. ARAVIND: Objection; form.

THE WITNESS: A price cap? My analysis was -- I was not asked to determine a price cap for a market. That would be a much -- a much different, much broader analysis than what I was asked to do.

Q. (By Mr. Young) And so it is not a price cap, correct?

A. Not in the sense I think of a price cap in a marketplace. That's usually a legal construct that -- that makes it unlawful to charge more than that. And I'm not -- I wasn't asked to do that -- that type of analysis.

Q. You didn't do an analysis of whether it was unlawful to charge more than that? That's what you just said, correct?

A. Right. I would not be doing any analysis with regard to what is or isn't lawful. Except in some narrow context economists get themselves into

the choke price to the finder of fact?

And the reason I ask that is because you said it's not a price cap, and you've said that it is the price that would be paid in the absence of extreme stress. But we know that during Winter Storm Uri, it was a time of extreme stress. And we know that during Winter Storm Uri, purchasers actually did pay more than your choke price.

So my question is simply, given those facts, what is the value of your choke point -- price?

MR. ARAVIND: Objection; form.

THE WITNESS: Well, the market ceased to function properly at the -- at the higher price levels. And -- And the -- the stress you mentioned brought about a market failure at that point in time. And consequently, what my analysis does is indicate what the price of -- of -- of natural gas -- the outer range of the price of natural gas should have been if the market had functioned properly during the storm, during this period of time, and that people had not opted to take advantage of the situation of a market failure and -- and charged excessive prices because of the -- the nature of the situation was created by

Energy Transfer, in your opinion, violated this principle of economic fairness, you're not saying that they did anything wrong in a sort of moral sense; you're saying that they didn't do as good of a job as they could have done to maximize long-term value?

MR. ARAVIND: Objection; form.

THE WITNESS: I'm not trying to make moral judgments here, but the overall thrust of what I talked about in -- particularly in the first report and then broadened in the second report was that -- that the market -- there was a market failure here that's created an opportunity for exploitation in a broken market, and that your client was one of those that participated in that. And I just tried to quantify the consequences of that with respect to the very specific transactions involving CPS.

Q. (By Mr. Young) But CPS itself did not participate in the exploitation of that broken market; that's your opinion?

MR. ARAVIND: Objection; form.

THE WITNESS: Well, as I -- as I mentioned earlier -- and I'm not -- I'll stand by the answers I gave previously -- various aspects of

SAN ANTONIO, TEXAS, THURSDAY, AUGUST 11, 2022

9:36 A.M.

THE VIDEOGRAPHER: On the record, 9:36.

WILLIAM KENNETH SKAER, III,

having been first duly sworn, testified as follows:

EXAMINATION

BY MR. STAFFORD:

Q. Good morning, Mr. Skaer. Will you tell us your full name, please.

A. My name is William Kenneth Skaer, III.

Q. Mr. Skaer, have you ever given your deposition before?

A. I have not.

Q. Okay.

A. Not that I can recall, anyways.

Q. Got it. Just a few ground rules to help us out today. Number one, you do understand this morning that you are under oath?

A. Yes.

Q. Okay. And despite the informality of this room, you understand your testimony is as though you were sitting in front of a judge or a jury?

Number one, did -- technically, did Mr. Bordovsky report to you?

A. Technically, he reported to me, although we both had the same manager title.

Q. Okay. You said, though, that you would have to go -- you, and Mr. Bordovsky would have to go to your executive team during Winter Storm Uri to get approval to purchase gas?

A. As the gas prices began to elevate, we were very concerned about the prices and wanted to ensure that -- that we had full support before buying any gas deals that were, what we considered, to be excessively priced.

Q. Okay. Who is -- who was on the executive team that you referenced that had to -- that you went to to get approval for these purchases?

A. We would typically tell my boss, Paul Vinson, and Paul Vinson would tell his boss, Kevin Pollo. And as the price -- prices got higher, my understanding was that Kevin got approval from his bosses. But I -- I don't -- I don't know for a fact to -- to what extent he had to get, or even got approval, from -- from -- from his bosses.

Q. Okay. So, your personal knowledge of how far up the chain this went to approve prices was to

Q. -- when you were selling natural gas.
A. Uh-huh.
Q. Okay. At what places did you sell natural gas when you were a trader?
A. I -- probably 25 different place around the country.
Q. Sorry. I meant what companies. What places -- at which employers did you sell natural gas?
A. I was a -- I was a gas trader. So, I would buy and sell gas at Tenneco, which became El Paso, at CMS -- no, KN Energy, which became Kinder Morgan --
Q. Right.
A. -- and CMS Energy. So, I was a -- a gas trader. I would buy and sell physical and financial gas at a multitude of locations.
Q. Got it.
A. And use -- and would use a multitude of different publications to price those out.
Q. Okay. Let's say -- let's focus for a minute on when you were buying and selling natural gas, not with CPS Energy --
A. Uh-huh.
Q. -- and limit it to Texas, what indices, or what reference points, would you use to determine the

market price of natural gas?

MR. SHANK: Objection; form.

THE WITNESS: Well, the most common would be the inside FERC, which I -- now I guess is S&P -- S -- S&P Global Platts inside FERC. And I think throughout my career they keep extending the name somehow.

And then gas -- the gas -- the Gas Daily is the -- is one of the ways. The actual ICE system used to come up with its own index. Argus is another opportunity that we would look at, see what the daily and the monthly prices would come out at. So, those were some of the different ways.

Q. BY MR. STAFFORD: Anything else you would look at, that you recall, to determine what you thought the market price for natural gas was while you were in Texas while you were trading, not at CPS Energy?

MR. SHANK: Objection; form.

THE WITNESS: I guess the only other thing is, we would -- by talking to other counterparties and -- about what they may or may not have traded that gave more insight in -- as to what -- what -- what the going rate of gas prices might be at any given time.

your "power needs might be on a given day," how would that impact what you felt was a fair price in the market for natural gas?

A. If we needed to buy more gas for power, then we might be a little bit more willing to pay a higher price.

Q. You might be willing to pay more if you were short versus if you were long on gas that day?

MR. SHANK: Objection; form.

THE WITNESS: And if we -- our power plants weren't running very much, then we could be extremely selective or not even buy gas.

Q. BY MR. STAFFORD: When you were at CPS Energy, were you mostly buying gas daily, like, next-day gas? Or were you more set up on long-term contracts?

Just, kind of, tell me how most of your trades were restructured as, I need to go out every day and buy gas? Or is it more, let me look at bids for the next month and lock in a price for 30 days?

MR. SHANK: Objection; form.

THE WITNESS: CPS Energy would not sell gas. We were not a gas seller. So, we would only buy the amount at the beginning of the month that we knew we were going to utilize, and then we would buy

Q. -- you ever suggested to anyone at CPS Energy that they -- that CPS Energy not pay the deals that you entered into during Winter Storm Uri?

A. No.

Q. Okay. Okay. Other than your -- other than your belief that a hundred times on the price is excessive, other than that, is there anything else you base your opinion on, that the market prices during Winter Storm Uri were not reflective of the true market price for natural gas?

A. In my opinion, there are only limited companies that can sell gas directly to CPS Energy. So, I felt like CPS Energy was at the mercy of those companies and we, essentially, had to buy the gas at whatever price they dictated, unless our executive team was willing to not buy the gas and have people freeze. I don't the --

MR. CALLAHAN: Objection; nonresponsive.

THE WITNESS: I don't know the right answer -- you know, the right answer. I mean, I was without -- without -- I was freezing for three days without electricity. And personally, after talking to people in San Antonio, some people wished that they would have frozen for three days instead of having elevated prices for the next 10 years.

A. Yes.
Q. And they -- and that party is the one that, once the traders make a deal, the confirming party will then send out a confirmation that shows the terms of the deal?
A. Yes.
Q. Okay. Because a lot of the -- is it fair to say that a lot of the transactions that happen between CPS Energy and its counterparties --
A. Uh-huh.
Q. -- are done over, like, ICE Chat?
A. Yes.
Q. Okay. Then whatever you do on ICE Chat if you're sitting there at the computer and you make a deal with someone over ICE Chat --
A. Uh-huh.
Q. -- how does that deal get put into CPS Energy's system?
A. The trader who transacted the deal with, typically -- either -- either that trade -- typically one of the traders would put the deals into the system that -- that would house that and -- yep. And so...
Q. Is CPS Energy's system, whatever it is --
A. Uh-huh.

Q. -- is that a manual system that you have to go in and literally put in, like, a spreadsheet? Or is it some sort of automated system?

A. It's a -- it -- at the time of this, it -- it had gone to an automated system.

Q. Okay. So, you would put in whatever deal you did over ICE Chat would automatically then come up, I take it, with what we see as Exhibit 37?

A. Yes. Yes. And I -- I -- it doesn't have to be the trader who puts it in. But, you know, like, one of the traders would put -- put the deals in. You know, like, Bruce could put my trade in. It's not a --

Q. Okay.

A. -- problem.

Q. If you look at Exhibits 36 and 37, you'll see that, again, the --

A. Uh-huh.

Q. -- on the Enterprise transaction confirmation on 36 --

A. Uh-huh.

Q. -- it has deal number 503758, the top right-hand corner.

A. Okay.

Q. And on the -- on Exhibit 37, the CPS Energy

light to keep going with our plan." Number one, who's Jay?

A. My understanding is, that would be Jay -- Jay Riley, I believe, who worked at Enterprise.

Q. And what is the plan, if you recall?

A. I don't recall.

Q. Okay. All right. Let's take a break.

THE VIDEOGRAPHER: Off the record, 12:13.

(At 12:13 p.m., a luncheon recess was taken, the deposition to be resumed at 1:00 p.m.)

AFTERNOON SESSION

(At 1:17 p.m., the deposition was resumed, the same parties being present.)

THE VIDEOGRAPHER: Back on the record, 1:17.

Q. BY MR. STAFFORD: Mr. Skaer, coming back from the lunch break, I wanted to follow up on something I'd asked you early on which is, as I understand it, when you would purchase gas on behalf of CPS Energy, CPS Energy would use that gas in essentially two ways.

One, would be to generate power -- electricity through power stations, power plants, and

the other would be to go directly to residents of San Antonio that use CPS Energy to actually use natural gas; right?

A. Right. Which we call either retail or distribution.

Q. Retail. Okay. For -- do you happen to know the percentage of each? In other words, what percentage of the gas you buy typically goes to retail versus generation?

A. I -- I -- I do not know, but it fluctuates quite a bit. And there have been times where the power plants have almost all come off to where it's mostly all distribution. But the majority of the time, it would be the majority would be the power plants going to the power plants.

Q. For the natural gas that goes to the power plants to generate electricity, that electricity -- electricity is then sold to San Antonio residents; right?

A. Right.

Q. Okay. Does CPS Energy ever sell electricity back to the grid?

MR. SHANK: Objection; form.

THE WITNESS: Yes. Yes, I -- I believe so.

Q. BY MR. STAFFORD: In cases where there's

MR. SHANK: Objection; form.

THE WITNESS: I think large number of energy -- of energy gas traders felt that way, and I think most people are reluctant to say such a thing on ICE Chat or text, or what -- what have you.

MR. CALLAHAN: Objection; nonresponsive, speculation.

Q. BY MR. STAFFORD: Did you -- did you give Mr. Brown any evidence that there was any manipulation of the Texas intrastate market?

A. I do not think so.

Q. Did you have any evidence that there was manipulation of the market?

A. I went around the country visiting customers with my previous job and heard repeatedly that people felt like Energy Transfer was able to manipulate the gas prices, particularly Houston Ship Channel, and that many of them were reluctant to even trade the basis of Houston Ship Channel for that very reason.

MR. STAFFORD: Objection; nonresponsive.

Q. BY MR. STAFFORD: Do you have any evidence, other than talking to random people around the country, you say --

A. Uh-huh.

Q. -- you -- previously, I mean, you've testified like, you think it's, kind of, excessive, or --

A. Yeah.

Q. -- you know, kind of unreasonable, and kind of used these, you know, kind of, subjective terms --

A. Yeah.

Q. -- in your -- in your per- -- that's in -- that's just in your personal experience; right?

MR. SHANK: Objection; form.

THE WITNESS: Yes.

Q. BY MR. CALLAHAN: Okay. So -- but I'm asking you --

A. Okay.

Q. -- are you -- and you already said you're not aware that there may have been other gas transactions at much higher prices than what --

A. Uh-huh.

Q. -- CPS transacted for; right?

A. Right.

Q. Okay. Are you also -- it sounds like you're not aware --

A. Uh-huh.

Q. -- that when it came to the prices that

Q. BY MR. CALLAHAN: Are you going to take your --

MR. SHANK: -- not to answer.

Q. BY MR. CALLAHAN: Are you going to take your lawyer's instruction not to answer a simple yes-or-no question?

A. Yes, I'm going to take it. And I don't appreciate the line of questioning, the way -- the direction you're going.

Q. When you use the term "City gate," what are you referencing, Mr. Skaer?

A. Points within the CPS Energy system.

Q. And are the City gates have to do with distribution or -- or power plants or either/or?

A. In my -- I would probably refer to it as either/or.

Q. Okay.

A. But I don't know if that's correct or not, but -- but just in general.

Q. If gas is delivered to, let's say Rio Nogales, is that for the power plant?

A. That is a power point that -- a power plant that I would not consider on the CPS system. So, I would not consider that necessarily to be a City gate, so to speak.

Q. Okay. Is there any specific delivery point that CPS takes delivery of gas at that indicates whether or not it's for power plants or for distribution to the businesses of -- of San Antonio?

MR. SHANK: Objection; form.

THE WITNESS: I'm sorry. I got distracted. I -- would you repeat the question?

Q. BY MR. CALLAHAN: As far as delivery points at CPS that you're buying gas for --

A. Uh-huh.

Q. -- or that you're transporting gas to, is there a delivery point that indicates whether or not it's for a power plant or for distribution to San Antonio consumers?

A. It -- there are some that can feed both, and then there are others that are more just for the distribution.

Q. Okay. Which ones are just for the distribution?

A. Like, there's a point up on the north end of the system that Energy Transfer would oftentimes deliver to us. I believe we call it, like, Northgate. You know, so that would be, like, an example of one that, kind of, goes into our system. But there's no power plants on that whole side of the

system.

Q. So Northgate delivery is for distribution, in your view?

A. Yes. It -- yeah. Yeah.

Q. And what other distribution points may be for power plants?

MR. SHANK: Objection; form. I think you meant gates.

Q. BY MR. CALLAHAN: What -- what other distribution --

A. Yeah.

Q. What other delivery points --

MR. SHANK: Here.

Q. BY MR. CALLAHAN: -- might be used for power plants?

A. Well, when Enterprise sells us gas, they're able to put the gas into the CPS system at a multitude of other spots that can be used more easily for our power plants or for distribution.

Q. Did you ever see any documents within CPS, or are you aware of any documents with CPS, that tracked CPS's sales of power into the ERCOT grid?

A. Not that I recall.

Q. And do you think, for example, Mr. Hale or Mr. Pollo would know better about the documents

a good relationship with the Energy Transfer gas traders?

MR. SHANK: Objection; form.

THE WITNESS: Personally? Or, I mean, like --

Q. BY MR. CALLAHAN: Did you have a good relationship --

A. You, as in the company?

Q. -- with --

A. Or you, as in the Ken -- you, as in the company, I would say no. I would say that oftentimes when we asked them for a price, Bruce, for instance, was afraid to hang up the phone because he said if he called them back in one minute they would raise the price. And that was --

Q. Well --

A. -- how they operated on a regular basis. So I would say, no, we didn't have a very good relationship with them.

Q. Okay. Well, maybe that explains why you're suing them.

A. For me -- for me personally, I thought --

Q. All right.

A. -- I had a great relationship with Jonathan.

Q. Okay. So, you know, before Winter Storm Uri --

A. Uh-huh.

Q. -- you know, there's -- there's no requirement for CPS to do business with Energy Transfer; right?

A. That -- that is -- well, that is incorrect because they are one of the only companies that can deliver in certain points on our system. So, we pretty much were at their mercy at those times that we needed to buy gas for -- you know, for maintenance, or to get onto the north end of the system or for, you know, a multitude of -- of things along those lines.

So it was, kind of -- we didn't really do that much business with Energy Transfer when there was an option. But when it wasn't an option, then we would buy gas from them because they were the only ones that could deliver into our system at the places we needed it.

MR. CALLAHAN: Objection; nonresponsive.

Q. BY MR. CALLAHAN: When you say -- do you know of any requirement --

A. Uh-huh.

Q. -- any -- any legal requirement for

CPS?

A. Somewhat. Yes.

Q. Did you review it as part of your job?

A. Yes.

Q. Have you reviewed it recently?

A. I -- I -- I have not reviewed it recently.

Q. Not -- not since you were an employee at -- at CPS?

A. Right.

Q. Okay.

A. I pretty much have not talked to or spoken to or thought about CPS in over a year.

Q. Who was in change of doing the analysis -- or who was involved in doing the analysis in January of 2021 about whether or not CPS had the correct baseload gas going into February of 2021?

MR. SHANK: Objection; form.

THE WITNESS: Bruce Bordovsky would meet with Paul Vinson and me and talk about historical Februaries, for instance, or whatever the month was that we were going into, and discuss all of the different variations and gas volumes that were required.

And then we would determine what the minimum was that we needed to buy on a baseload basis

without having to sell gasses -- gas.

Q. BY MR. CALLAHAN: What other information did you consider in formulating this -- this strategy, other than historical Februaries? Anything else that you remember?

A. Well, maybe -- maybe -- maybe if -- what the -- what the -- if we were going to get offers, or what the prices of those offers would be, because sometimes at certain points we didn't even get any baseload offers.

Q. So, other than some pricing --

A. Uh-huh.

Q. -- having to do with what baseload offers might be, and some historical Februaries, you don't remember considering anything else in determining what the baseload gas amounts would be?

MR. SHANK: Objection; form.

THE WITNESS: Well, the -- I mean, a big concern, which is the baseline of it, is what the -- the weather was going to be, or how much we expected the -- the demand to be for a given month.

Q. BY MR. CALLAHAN: Okay. And you looked at historical figures Februaries for that; right, sir?

A. We --

MR. SHANK: Objection; form.

THE WITNESS: We looked at historical as well as, you know, forecasts.

Q. BY MR. CALLAHAN: What -- what forecasts -- what weather forecasts specifically did you consider in January of 2021 when determining a baseload amount, if any, that you remember?

A. Well, I remember that we would have, like, a handful of different weather, you know, prognostications that -- that -- that we would see and hope that that help be a guideline for us.

But -- but, you know, the February's, kind of -- you know, so many months were challenging. Like in February, you know, the first weeks in it's in the 70's, you know. And usually in Texas, by the time you get to mid-February, you know, I mean, sometimes it's -- the -- the cold weather has long since gone by then, so.

Q. After -- in early February, in early February of 2021 --

A. Uh-huh.

Q. -- after there were indications that a freeze was on its way --

A. Uh-huh.

Q. -- did you personally reach out to any gas suppliers to get -- to see if CPS could buy

ENTERPRISE PRODUCTS OPERATING, LLC, Plaintiff, CITY OF SAN ANTONIO ACTING BY AND THROUGH THE CITY PUBLIC SERVICE BOARD (CPS ENERGY), Defendant.	IN THE DISTRICT COURT 334TH JUDICIAL DISTRICT HARRIS COUNTY, TEXAS

HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

****

REPORTER'S CERTIFICATE

ORAL AND VIDEOTAPED DEPOSITION OF

WILLIAM KENNETH SKAER, III

AUGUST 11, 2022

****

I, PAMELA SUE PETERSON, Certified Shorthand Reporter in and for the State of Texas, hereby certify to the following:

That the witness, WILLIAM KENNETH SKAER, III, was duly sworn by the officer and that the transcript

of the deposition is a true record of the testimony given by the witness;

That the deposition transcript was submitted on September 7, 2022 to the witness or to the attorney for the witness for examination, signature and return to me by September 27, 2022;

That the amount used by each party at the deposition is as follows:

CODY W. STAFFORD (03h50m)
Attorney for Enterprise Products Operating, LLC
BRYCE CALLAHAN (02h08m)
Attorney for Energy Transfer
DAVID SHANK (00h01m)
Attorney for CPS Energy
DYLAN FEDDERMAN (00h00m)
Attorney for CPS Energy

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

MR. CODY W. STAFFORD, Attorney for Enterprise Products Operating, LLC;
MR. BRYCE CALLAHAN, Attorney for Energy Transfer;
MR. DAVID SHANK, Attorney for CPS Energy;
MR. DYLAN FEDDERMAN, Attorney for CPS Energy;

I further certify that I am neither counsel for, related to, nor employed by any of the parties

or attorneys to the action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of this action.

Further certification requirements pursuant to Rule 203 of TRCP will be certified to after they have occurred.

Certified to by me on this 7th day of September, 2022.

PAMELA SUE PETERSON, CSR

FURTHER CERTIFICATION UNDER RULE 203 TRCP

The original deposition was/[redacted] returned to the deposition officer on September 30, 2022;

If returned, the attached Changes and Signature page contains any changes and the reasons therefore;

If returned, the original deposition was delivered to CODY W. STAFFORD, Custodial Attorney;

That $4,588.30 is the deposition officer's charges to ENTERPRISE PRODUCTS OPERATING, LLC, for preparing the original deposition transcript and any copies of exhibits.

That the deposition transcript was delivered in accordance with Rule 203.3, and that a copy of this certificate was served on all parties shown herein on September 30, 2022 and filed with the Clerk.

Certified to by me this 30th day of September, 2022.

know, business model risk, difference between a public business model versus investor-owned business model --

(Reporter requested clarification.)

THE WITNESS: Public-owned business model versus investor-owned business model.

A There were also discussions around, you know, generation-planning decisions, new technologies that were coming into play, which was all very common back then.

Q (By Mr. McHazlett) What are some of the differences between a public business model, public company, utility company, versus an investor-owned or -backed company.

A The major thing that we often discuss is that we are owned by the City of San Antonio, which means that our citizens have, you know, an ownership stake. And as part of that benefit, you know, they get a different level of input. And our pricing model is one of cost recovery and not of profit or margin. And so that is, you know, one of the primary discussions that we have with our community; and I think that's why our community, you know, has enjoyed it for as long as it has.

Q And what are some of the limitations involved with being a publicly owned or owned by the City of San Antonio based company?

A How do you mean "limitations"?

is right.

What are the other items or units that CPS Energy uses to generate electricity other than natural gas?

MR. SHANK: Objection, form.

A We have coal plants, (unintelligible) plant --

(Reporter requested clarification.)

THE WITNESS: A nuclear plant.

A -- and then some wind and solar.

Q (By Mr. McHazlett) What percentage would you say of the electricity that is generated comes from the use of natural gas?

MR. SHANK: Objection, form.

A On an annual basis, it's in the 20 percent-ish range from what I recall.

Q (By Mr. McHazlett) If CPS recovers the full amount that it pays for natural gas, does CPS ever -- is CPS's, I guess, profit margin always based off of just its cost or does CPS -- can it incur a loss or does it profit any?

MR. SHANK: Objection, form.

A Our -- our business model doesn't have a profit. We're a cost recovery business.

Q (By Mr. McHazlett) So CPS's whole business model is just recover whatever our costs are?

MR. SHANK: Objection, form.

A Correct.

Q (By Mr. McHazlett) How, then, does CPS have, I believe we mentioned earlier, you know, the money on hand to pay all -- all of these invoices? Where does y'all's liquidity come from?

MR. SHANK: Objection, form.

A Yeah, I'm -- I'm not sure. How do you mean where does it come from?

Q (By Mr. McHazlett) Well, if y'all have standing cash available or other liquid assets --

A Uh-huh.

Q -- how do y'all have -- assumingly, that comes from previous profits. If y'all are a cost recovery-based entity, where do y'all get y'all's standing cash from?

MR. SHANK: Objection, form.

A We receive it from our customers.

Q (By Mr. McHazlett) And so if y'all only ever recovered y'all's costs, wouldn't y'all have zero liquidity available?

A No.

Q Can you explain. I'm -- I'm -- I was a philosophy major. I don't have the same background.

A Part of the cost of doing business is to have

And so is CPS's purpose, you know, just to make sure the customers have gas and electricity? Is it to, you know, profit to a certain extent? What is -- what is the goal?

MR. SHANK: Objection, form.

A I would say in my personal opinion, which would -- I -- I wouldn't speak for all of CPS proper. But I believe CPS is established ultimately to provide electric and gas services for the broader community; and, pretty simply put, I mean, that's its goal and objective.

Q (By Mr. McHazlett) So if the goal and objective is to provide gas and electricity, wouldn't it make sense to have a larger portion covered by hedges so you have that security?

MR. SHANK: Objection, form.

A I mean, that's a very kind of subjective suggestion, I suppose. I think we document in here kind of what -- what we feel is balanced.

Q (By Mr. McHazlett) But for events like the winter storm when there are an increase in prices, does having a larger portion of your needs covered by hedging transactions help save CPS money?

A Again, it would depend.

Q On what?

A On the hedge positions that you had.

Q So the amount -- it is your view that the amount of baseload gas -- strike that.

Is it your view that the amount of baseload gas and swing gas that CPS purchases in any month is going to depend on the weather of that month?

MS. DITTY: Objection, form.

A You asked two different questions. The amount of baseload -- I mean the amount of swing gas that CPS Energy purchases will be determined primarily by the weather in that month. The amount of baseload gas CPS Energy may purchase will be somewhat determined by historical weather forecasts and historical demand.

Q (BY MR. DOWNING) So baseload purchases are made during bid day in the month prior to the actual delivery of the gas, correct?

MS. DITTY: Objection, form.

A They can be but not always.

Q (BY MR. DOWNING) But in CPS's case, that's what happened in 2021, correct?

A I'm not entirely sure how CPS Energy made its baseload purchases.

Q You don't know the process by which CPS Energy acquires baseload gas?

MS. DITTY: Objection, form.

A I cannot recall the exact process on how

three-quarters of their minimum daily low they -- they've had in February.

Q (BY MR. DOWNING) And it would be roughly one-tenth of the average daily high consumption for February, correct?

MS. DITTY: Objection, form.

Q (BY MR. DOWNING) Less than one-tenth, in fact?

A (Reviewing document.)

Assuming, again, that 32,000 per day of baseload gas was all the baseload gas they purchased, which I cannot confirm right now, but if that were the case, then, yes, it would be roughly one-tenth of the average high consumption. However, CPS Energy would not know the kind of consumption month the coming February would be, and the market consensus did not suggest that February was going to be a cold or an above-average month.

In addition, this is the daily average of all the days within February. So it does not take into account the low days. And when deciding on your baseload level, it's the minimum amount of usage you can expect in a month.

Q Do you agree that any gas not purchased as baseload gas is subject to price swings up or down over the course of a month?

beyond their minimum low consumption for the month of March.

Q (BY MR. DOWNING) Doesn't that raise the downside risk for them that they're going to get -- get more baseload gas than they actually burn --

MS. DITTY: Objection, form.

Q (BY MR. DOWNING) -- which you lay out in your report in several places?

MS. DITTY: Objection, form.

A We would need to go to my sections of the report where I lay that out, and we can discuss those.

Q (BY MR. DOWNING) So in Paragraph 89, you're talking about -- you're talking about in the context of storage, but you're saying in the final sentence [as read]: CPS -- utilities such as CPS would prefer to avoid such situations, as selling physical gas creates a burden for CPS Energy as explained in more detail below.

Do you see that?

A Yes.

Q Okay. So isn't the downside risk to CPS that they would get too much baseload gas and they'd have to sell it?

MS. DITTY: Objection, form.

A (Reviewing document.)

To make that assessment, I would need to

please?

Q (BY MR. DOWNING) Just do you see the -- on the top of Page 42, you say [as read]: De Laval's theoretical trade exceeded set maximum volume limits.

You see that?

A Yes.

Q Okay. Can you tell me where those volume limits come from? I think you said it down there, but do you remember?

A (Reviewing document.)

Those volume limits would be set by either the CPS Energy Strategy and Operations Manual for Energy Risk Management or it would be set in the energy price risk management policy.

(Exhibit 429 was marked.)

Q (BY MR. DOWNING) Okay. Let's look at the strategy operations manual. I've marked that as 429. So can you turn with me to Page 35?

A Sure.

Q Are those the limits you're referring to in that paragraph of your report?

A (Reviewing document.)

Yes.

Q So is there anything that prevented CPS from executing this BALMO trade up to the limits set forth

here on Page 35 of -- of Exhibit 429?

MS. DITTY: Objection, form.

A Well, there were a lot of things that would have prevented CPS Energy from transacting this BALMO -- hypothetical BALMO trade that De Laval brings forward.

Q (BY MR. DOWNING) Okay. So apart from the limits that you've specified, what else would prevent them from executing this trade?

A Well, for starters, this trade is -- this type of trade is not described in the -- the Strategy and Operations Manual for Energy Price Risk Management. That type of trade is not into the -- is not in the -- let me make sure I've got the wording correctly -- the EPRM, which is the energy price risk management strategy, for the year.

In addition, CPS Energy would need time to do the analysis to see if this trade was reasonable for them. In addition, CPS Energy would have to get the infrastructure in place to execute such a trade such as making sure they fulfilled all the credit requirements.

CPS Energy would also need to look at bids for this trade. And I don't -- I don't see any suggestion to believe that CPS Energy was considering doing this trade.

And further, my analysis shows that,

historically, when there is a price spike in the Houston Ship Channel market, that prices have fallen. So such a trade would carry a lot of risk for CPS Energy.

Q Could CPS Energy trade out of a hedge like that if prices fell?

MS. DITTY: Objection, form.

A First, that is a hypothetical because CPS Energy did not enter into such a trade. Assuming that they had gone through all the proper protocols to approve the trade and believe that the trade was necessary and warranted and within their risk profile, CPS Energy -- whoever holds that trade in normal markets would have some ability to exit the trade; however, exiting the trade could have considerable cost.

So if the trade had fallen in value, there would be a loss associated with that trade.

Q (BY MR. DOWNING) In Paragraph 120, you have the list of required steps to execute the trade. There's no citation to any of these steps. So is this your interpretation of Exhibit 429 and what it requires, or is this procedure laid out somewhere specifically in Exhibit 429?

MS. DITTY: Objection, form.

A (Reviewing document.)

The steps I lay out in -- in Paragraph 120

Q (BY MR. DEBAUCHE) It -- it -- it's really -- I'm not trying to make it more complicated than it should be.

A Sure.

Q Have you crunched the numbers and figured out what financial risk would have been posed to CPS Energy by having excess storage?

MS. DITTY: Objection, form.

A Again, I do not know what you mean by "excess storage." Can you give me an amount, please?

Q (BY MR. DEBAUCHE) I'm just -- have you done any calculation to figure out what it would have cost CPS Energy to, let's say, maintain 1.5 Bcf of storage prior to Winter Storm Uri?

MS. DITTY: Objection, form.

Q (BY MR. DEBAUCHE) Or 2?

MS. DITTY: Same objection.

Q (BY MR. DEBAUCHE) Or any number?

A Would that include keeping it at 1.5 Bcf the entire time?

Q I'm just saying: Have you calculated what the cost would have been --

MS. DITTY: Objection, form.

Q (BY MR. DEBAUCHE) -- or what the cost was?

A I'm still not clear on your question. I've not

made calculations regarding hypotheticals of having different layers of storage.

MS. DITTY: We can stop there.

MR. DEBAUCHE: All right. Done. Thank you.

MS. DITTY: Let's go --

MR. DEBAUCHE: Appreciate it.

MS. DITTY: -- off the record. We'll take just a break. We want to confer and then get back on the record --

MR. DEBAUCHE: Okay.

MS. DITTY: -- and finish up.

THE VIDEOGRAPHER: 5:08. Off the record.

(Recess from 5:08 p.m. to 5:11 p.m.)

MS. DITTY: We reserve our questions for trial.

(Proceedings concluded at 5:11 p.m.)

REPORTER'S CERTIFICATION

ORAL AND VIDEOTAPED DEPOSITION OF KENT C. BAYAZITOGLU

JANUARY 18, 2024

I, Marcy Clark, Certified Shorthand Reporter in and for the State of Texas, hereby certify to the following:

That the witness, KENT C. BAYAZITOGLU, was duly sworn by the officer and that the transcript of the oral deposition is a true record of the testimony given by the witness;

That the deposition transcript was submitted on January 31, 2024 to the witness or to the

attorney for the witness for examination, signature and return to me by February 20, 2024.

That the amount of time used by each party at the deposition is as follows:

By Mr. Downing - 4 hours, 6 minutes;

By Mr. DeBauche - 1 hour, 56 minutes;

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

ON BEHALF OF PLAINTIFF, ENTERPRISE PRODUCTS OPERATING, LLC:

Thomas "Tal" DeBauche, Esq.
Lario J. Albarrán, Esq.
DOBROWSKI STAFFORD & PIERCE LLP
4601 Washington Avenue

General Terms and Conditions
Base Contract for Sale and Purchase of Natural Gas

SECTION 1. PURPOSE AND PROCEDURES

1.1. These General Terms and Conditions are intended to facilitate purchase and sale transactions of Gas on a Firm or Interruptible basis. "Buyer" refers to the party receiving Gas and "Seller" refers to the party delivering Gas. The entire agreement between the parties shall be the Contract as defined in Section 2.9.

The parties have selected either the "Oral Transaction Procedure" or the "Written Transaction Procedure" as indicated on the Base Contract.

Oral Transaction Procedure:

1.2. The parties will use the following Transaction Confirmation procedure. Any Gas purchase and sale transaction may be effectuated in an EDI transmission or telephone conversation with the offer and acceptance constituting the agreement of the parties. The parties shall be legally bound from the time they so agree to transaction terms and may each rely thereon. Any such transaction shall be considered a "writing" and to have been "signed". Notwithstanding the foregoing sentence, the parties agree that Confirming Party shall, and the other party may, confirm a telephonic transaction by sending the other party a Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means within three Business Days of a transaction covered by this Section 1.2 (Oral Transaction Procedure) provided that the failure to send a Transaction Confirmation shall not invalidate the oral agreement of the parties. Confirming Party adopts its confirming letterhead, or the like, as its signature on any Transaction Confirmation as the identification and authentication of Confirming Party. If the Transaction Confirmation contains any provisions other than those relating to the commercial terms of the transaction (i.e., price, quantity, performance obligation, delivery point, period of delivery and/or transportation conditions), which modify or supplement the Base Contract or General Terms and Conditions of this Contract (e.g., arbitration or additional representations and warranties), such provisions shall not be deemed to be accepted pursuant to Section 1.3 but must be expressly agreed to by both parties; provided that the foregoing shall not invalidate any transaction agreed to by the parties.

Written Transaction Procedure:

1.2. The parties will use the following Transaction Confirmation procedure. Should the parties come to an agreement regarding a Gas purchase and sale transaction for a particular Delivery Period, the Confirming Party shall, and the other party may, record that agreement on a Transaction Confirmation and communicate such Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means, to the other party by the close of the Business Day following the date of agreement. The parties acknowledge that their agreement will not be binding until the exchange of nonconflicting Transaction Confirmations or the passage of the Confirm Deadline without objection from the receiving party, as provided in Section 1.3.

1.3. If a sending party's Transaction Confirmation is materially different from the receiving party's understanding of the agreement referred to in Section 1.2, such receiving party shall notify the sending party via facsimile, EDI or mutually agreeable electronic means by the Confirm Deadline, unless such receiving party has previously sent a Transaction Confirmation to the sending party. The failure of the receiving party to so notify the sending party in writing by the Confirm Deadline constitutes the receiving party's agreement to the terms of the transaction described in the sending party's Transaction Confirmation. If there are any material differences between timely sent Transaction Confirmations governing the same transaction, then neither Transaction Confirmation shall be binding until or unless such differences are resolved including the use of any evidence that clearly resolves the differences in the Transaction Confirmations. In the event of a conflict among the terms of (i) a binding Transaction Confirmation pursuant to Section 1.2, (ii) the oral agreement of the parties which may be evidenced by a recorded conversation, where the parties have selected the Oral Transaction Procedure of the Base Contract, (iii) the Base Contract, and (iv) these General Terms and Conditions, the terms of the documents shall govern in the priority listed in this sentence.

1.4. The parties agree that each party may electronically record all telephone conversations with respect to this Contract between their respective employees, without any special or further notice to the other party. Each party shall obtain any necessary consent of its agents and employees to such recording. Where the parties have selected the Oral Transaction Procedure in Section 1.2 of the Base Contract, the parties agree not to contest the validity or enforceability of telephonic recordings entered into in accordance with the requirements of this Base Contract.

SECTION 2. DEFINITIONS

The terms set forth below shall have the meaning ascribed to them below. Other terms are also defined elsewhere in the Contract and shall have the meanings ascribed to them herein.

2.1. "Additional Event of Default" shall mean Transactional Cross Default or Indebtedness Cross Default, each as and if selected by the parties pursuant to the Base Contract.

2.2. "Affiliate" shall mean, in relation to any person, any entity controlled, directly or indirectly, by the person, any entity that controls, directly or indirectly, the person or any entity directly or indirectly under common control with the person. For this purpose, "control" of any entity or person means ownership of at least 50 percent of the voting power of the entity or person.

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY
ETP_000000691

2.3. "Alternative Damages" shall mean such damages, expressed in dollars or dollars per MMBtu, as the parties shall agree upon in the Transaction Confirmation, in the event either Seller or Buyer fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer.

2.4. "Base Contract" shall mean a contract executed by the parties that incorporates these General Terms and Conditions by reference; that specifies the agreed selections of provisions contained herein; and that sets forth other information required herein and any Special Provisions and addendum(s) as identified on page one.

2.5. "British thermal unit" or "Btu" shall mean the International BTU, which is also called the Btu (IT).

2.6. "Business Day(s)" shall mean Monday through Friday, excluding Federal Banking Holidays for transactions in the U.S.

2.7. "Confirm Deadline" shall mean 5:00 p.m. in the receiving party's time zone on the second Business Day following the Day a Transaction Confirmation is received or, if applicable, on the Business Day agreed to by the parties in the Base Contract; provided, if the Transaction Confirmation is time stamped after 5:00 p.m. in the receiving party's time zone, it shall be deemed received at the opening of the next Business Day.

2.8. "Confirming Party" shall mean the party designated in the Base Contract to prepare and forward Transaction Confirmations to the other party.

2.9. "Contract" shall mean the legally-binding relationship established by (i) the Base Contract, (ii) any and all binding Transaction Confirmations and (iii) where the parties have selected the Oral Transaction Procedure in Section 1.2 of the Base Contract, any and all transactions that the parties have entered into through an EDI transmission or by telephone, but that have not been confirmed in a binding Transaction Confirmation, all of which shall form a single integrated agreement between the parties.

2.10. "Contract Price" shall mean the amount expressed in U.S. Dollars per MMBtu to be paid by Buyer to Seller for the purchase of Gas as agreed to by the parties in a transaction.

2.11. "Contract Quantity" shall mean the quantity of Gas to be delivered and taken as agreed to by the parties in a transaction.

2.12. "Cover Standard", as referred to in Section 3.2, shall mean that if there is an unexcused failure to take or deliver any quantity of Gas pursuant to this Contract, then the performing party shall use commercially reasonable efforts to (i) if Buyer is the performing party, obtain Gas, (or an alternate fuel if elected by Buyer and replacement Gas is not available), or (ii) if Seller is the performing party, sell Gas, in either case, at a price reasonable for the delivery or production area, as applicable, consistent with: the amount of notice provided by the nonperforming party; the immediacy of the Buyer's Gas consumption needs or Seller's Gas sales requirements, as applicable; the quantities involved; and the anticipated length of failure by the nonperforming party.

2.13. "Credit Support Obligation(s)" shall mean any obligation(s) to provide or establish credit support for, or on behalf of, a party to this Contract such as cash, an irrevocable standby letter of credit, a margin agreement, a prepayment, a security interest in an asset, guaranty, or other good and sufficient security of a continuing nature.

2.14. "Day" shall mean a period of 24 consecutive hours, coextensive with a "day" as defined by the Receiving Transporter in a particular transaction.

2.15. "Delivery Period" shall be the period during which deliveries are to be made as agreed to by the parties in a transaction.

2.16. "Delivery Point(s)" shall mean such point(s) as are agreed to by the parties in a transaction.

2.17. "EDI" shall mean an electronic data interchange pursuant to an agreement entered into by the parties, specifically relating to the communication of Transaction Confirmations under this Contract.

2.18. "EFP" shall mean the purchase, sale or exchange of natural Gas as the "physical" side of an exchange for physical transaction involving gas futures contracts. EFP shall incorporate the meaning and remedies of "Firm", provided that a party's excuse for nonperformance of its obligations to deliver or receive Gas will be governed by the rules of the relevant futures exchange regulated under the Commodity Exchange Act.

2.19. "Firm" shall mean that either party may interrupt its performance without liability only to the extent that such performance is prevented for reasons of Force Majeure; provided, however, that during Force Majeure interruptions, the party invoking Force Majeure may be responsible for any Imbalance Charges as set forth in Section 4.3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by the Transporter.

2.20. "Gas" shall mean any mixture of hydrocarbons and noncombustible gases in a gaseous state consisting primarily of methane.

2.21. "Guarantor" shall mean any entity that has provided a guaranty of the obligations of a party hereunder.

2.22. "Imbalance Charges" shall mean any fees, penalties, costs or charges (in cash or in kind) assessed by a Transporter for failure to satisfy the Transporter's balance and/or nomination requirements.

2.23. "Indebtedness Cross Default" shall mean if selected on the Base Contract by the parties with respect to a party, that it or its Guarantor, if any, experiences a default, or similar condition or event however therein defined, under one or more agreements or instruments, individually or collectively, relating to indebtedness (such indebtedness to include any obligation whether present or future, contingent or otherwise, as principal or surety or otherwise) for the payment or repayment of borrowed money in an aggregate amount greater than the threshold specified in the Base Contract with respect to such party or its Guarantor, if any, which results in such indebtedness becoming immediately due and payable.

Copyright © 2006 North American Energy Standards Board, Inc.
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

2.24. "Interruptible" shall mean that either party may interrupt its performance at any time for any reason, whether or not caused by an event of Force Majeure, with no liability, except such interrupting party may be responsible for any Imbalance Charges as set forth in Section 4.3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by Transporter.

2.25. "MMBtu" shall mean one million British thermal units, which is equivalent to one dekatherm.

2.26. "Month" shall mean the period beginning on the first Day of the calendar month and ending immediately prior to the commencement of the first Day of the next calendar month.

2.27. "Payment Date" shall mean a date, as indicated on the Base Contract, on or before which payment is due Seller for Gas received by Buyer in the previous Month.

2.28. "Receiving Transporter" shall mean the Transporter receiving Gas at a Delivery Point, or absent such receiving Transporter, the Transporter delivering Gas at a Delivery Point.

2.29. "Scheduled Gas" shall mean the quantity of Gas confirmed by Transporter(s) for movement, transportation or management.

2.30. "Specified Transaction(s)" shall mean any other transaction or agreement between the parties for the purchase, sale or exchange of physical Gas, and any other transaction or agreement identified as a Specified Transaction under the Base Contract.

2.31. "Spot Price " as referred to in Section 3.2 shall mean the price listed in the publication indicated on the Base Contract, under the listing applicable to the geographic location closest in proximity to the Delivery Point(s) for the relevant Day; provided, if there is no single price published for such location for such Day, but there is published a range of prices, then the Spot Price shall be the average of such high and low prices. If no price or range of prices is published for such Day, then the Spot Price shall be the average of the following: (i) the price (determined as stated above) for the first Day for which a price or range of prices is published that next precedes the relevant Day; and (ii) the price (determined as stated above) for the first Day for which a price or range of prices is published that next follows the relevant Day.

2.32. "Transaction Confirmation" shall mean a document, similar to the form of Exhibit A, setting forth the terms of a transaction formed pursuant to Section 1 for a particular Delivery Period.

2.33. "Transactional Cross Default" shall mean if selected on the Base Contract by the parties with respect to a party, that it shall be in default, however therein defined, under any Specified Transaction.

2.34. "Termination Option" shall mean the option of either party to terminate a transaction in the event that the other party fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer for a designated number of days during a period as specified on the applicable Transaction Confirmation.

2.35. "Transporter(s)" shall mean all Gas gathering or pipeline companies, or local distribution companies, acting in the capacity of a transporter, transporting Gas for Seller or Buyer upstream or downstream, respectively, of the Delivery Point pursuant to a particular transaction.

SECTION 3. PERFORMANCE OBLIGATION

3.1. Seller agrees to sell and deliver, and Buyer agrees to receive and purchase, the Contract Quantity for a particular transaction in accordance with the terms of the Contract. Sales and purchases will be on a Firm or Interruptible basis, as agreed to by the parties in a transaction.

The parties have selected either the "Cover Standard" or the "Spot Price Standard" as indicated on the Base Contract.

Cover Standard:

3.2. The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the positive difference, if any, between the purchase price paid by Buyer utilizing the Cover Standard and the Contract Price, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually delivered by Seller for such Day(s) excluding any quantity for which no replacement is available; or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in the amount equal to the positive difference, if any, between the Contract Price and the price received by Seller utilizing the Cover Standard for the resale of such Gas, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually taken by Buyer for such Day(s) excluding any quantity for which no sale is available; and (iii) in the event that Buyer has used commercially reasonable efforts to replace the Gas or Seller has used commercially reasonable efforts to sell the Gas to a third party, and no such replacement or sale is available for all or any portion of the Contract Quantity of Gas, then in addition to (i) or (ii) above, as applicable, the sole and exclusive remedy of the performing party with respect to the Gas not replaced or sold shall be an amount equal to any unfavorable difference between the Contract Price and the Spot Price, adjusted for such transportation to the applicable Delivery Point, multiplied by the quantity of such Gas not replaced or sold. Imbalance Charges shall not be recovered under this Section 3.2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4.3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated.

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

Spot Price Standard:

3.2. The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the Contract Price from the Spot Price; or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the applicable Spot Price from the Contract Price. Imbalance Charges shall not be recovered under this Section 3.2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4.3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated.

3.3. Notwithstanding Section 3.2, the parties may agree to Alternative Damages in a Transaction Confirmation executed in writing by both parties.

3.4. In addition to Sections 3.2 and 3.3, the parties may provide for a Termination Option in a Transaction Confirmation executed in writing by both parties. The Transaction Confirmation containing the Termination Option will designate the length of nonperformance triggering the Termination Option and the procedures for exercise thereof, how damages for nonperformance will be compensated, and how liquidation costs will be calculated.

SECTION 4. TRANSPORTATION, NOMINATIONS, AND IMBALANCES

4.1. Seller shall have the sole responsibility for transporting the Gas to the Delivery Point(s). Buyer shall have the sole responsibility for transporting the Gas from the Delivery Point(s).

4.2. The parties shall coordinate their nomination activities, giving sufficient time to meet the deadlines of the affected Transporter(s). Each party shall give the other party timely prior Notice, sufficient to meet the requirements of all Transporter(s) involved in the transaction, of the quantities of Gas to be delivered and purchased each Day. Should either party become aware that actual deliveries at the Delivery Point(s) are greater or lesser than the Scheduled Gas, such party shall promptly notify the other party.

4.3. The parties shall use commercially reasonable efforts to avoid imposition of any Imbalance Charges. If Buyer or Seller receives an invoice from a Transporter that includes Imbalance Charges, the parties shall determine the validity as well as the cause of such Imbalance Charges. If the Imbalance Charges were incurred as a result of Buyer's receipt of quantities of Gas greater than or less than the Scheduled Gas, then Buyer shall pay for such Imbalance Charges or reimburse Seller for such Imbalance Charges paid by Seller. If the Imbalance Charges were incurred as a result of Seller's delivery of quantities of Gas greater than or less than the Scheduled Gas, then Seller shall pay for such Imbalance Charges or reimburse Buyer for such Imbalance Charges paid by Buyer.

SECTION 5. QUALITY AND MEASUREMENT

All Gas delivered by Seller shall meet the pressure, quality and heat content requirements of the Receiving Transporter. The unit of quantity measurement for purposes of this Contract shall be one MMBtu dry. Measurement of Gas quantities hereunder shall be in accordance with the established procedures of the Receiving Transporter.

SECTION 6. TAXES

The parties have selected either "Buyer Pays At and After Delivery Point" or "Seller Pays Before and At Delivery Point" as indicated on the Base Contract.

Buyer Pays At and After Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas at the Delivery Point(s) and all Taxes after the Delivery Point(s). If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes. Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof.

Seller Pays Before and At Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s) and all Taxes at the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas after the Delivery Point(s). If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes. Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof.

SECTION 7. BILLING, PAYMENT, AND AUDIT

7.1. Seller shall invoice Buyer for Gas delivered and received in the preceding Month and for any other applicable charges, providing supporting documentation acceptable in industry practice to support the amount charged. If the actual quantity delivered is not known by the billing date, billing will be prepared based on the quantity of Scheduled Gas. The invoiced quantity will then be adjusted to the actual quantity on the following Month's billing or as soon thereafter as actual delivery information is available.

Copyright © 2006 North American Energy Standards Board, Inc.
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

7.2. Buyer shall remit the amount due under Section 7.1 in the manner specified in the Base Contract, in immediately available funds, on or before the later of the Payment Date or 10 Days after receipt of the invoice by Buyer; provided that if the Payment Date is not a Business Day, payment is due on the next Business Day following that date. In the event any payments are due Buyer hereunder, payment to Buyer shall be made in accordance with this Section 7.2.

7.3. In the event payments become due pursuant to Sections 3.2 or 3.3, the performing party may submit an invoice to the nonperforming party for an accelerated payment setting forth the basis upon which the invoiced amount was calculated. Payment from the nonperforming party will be due five Business Days after receipt of invoice.

7.4. If the invoiced party, in good faith, disputes the amount of any such invoice or any part thereof, such invoiced party will pay such amount as it concedes to be correct; provided, however, if the invoiced party disputes the amount due, it must provide supporting documentation acceptable in industry practice to support the amount paid or disputed without undue delay. In the event the parties are unable to resolve such dispute, either party may pursue any remedy available at law or in equity to enforce its rights pursuant to this Section.

7.5. If the invoiced party fails to remit the full amount payable when due, interest on the unpaid portion shall accrue from the date due until the date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum; or (ii) the maximum applicable lawful interest rate.

7.6. A party shall have the right, at its own expense, upon reasonable Notice and at reasonable times, to examine and audit and to obtain copies of the relevant portion of the books, records, and telephone recordings of the other party only to the extent reasonably necessary to verify the accuracy of any statement, charge, payment, or computation made under the Contract. This right to examine, audit, and to obtain copies shall not be available with respect to proprietary information not directly relevant to transactions under this Contract. All invoices and billings shall be conclusively presumed final and accurate and all associated claims for under- or overpayments shall be deemed waived unless such invoices or billings are objected to in writing, with adequate explanation and/or documentation, within two years after the Month of Gas delivery. All retroactive adjustments under Section 7 shall be paid in full by the party owing payment within 30 Days of Notice and substantiation of such inaccuracy.

7.7. Unless the parties have elected on the Base Contract not to make this Section 7.7 applicable to this Contract, the parties shall net all undisputed amounts due and owing, and/or past due, arising under the Contract such that the party owing the greater amount shall make a single payment of the net amount to the other party in accordance with Section 7; provided that no payment required to be made pursuant to the terms of any Credit Support Obligation or pursuant to Section 7.3 shall be subject to netting under this Section. If the parties have executed a separate netting agreement, the terms and conditions therein shall prevail to the extent inconsistent herewith.

SECTION 8. TITLE, WARRANTY, AND INDEMNITY

8.1. Unless otherwise specifically agreed, title to the Gas shall pass from Seller to Buyer at the Delivery Point(s). Seller shall have responsibility for and assume any liability with respect to the Gas prior to its delivery to Buyer at the specified Delivery Point(s). Buyer shall have responsibility for and assume any liability with respect to said Gas after its delivery to Buyer at the Delivery Point(s).

8.2. Seller warrants that it will have the right to convey and will transfer good and merchantable title to all Gas sold hereunder and delivered by it to Buyer, free and clear of all liens, encumbrances, and claims. EXCEPT AS PROVIDED IN THIS SECTION 8.2 AND IN SECTION 15.8, ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR ANY PARTICULAR PURPOSE, ARE DISCLAIMED.

8.3. Seller agrees to indemnify Buyer and save it harmless from all losses, liabilities or claims including reasonable attorneys' fees and costs of court ("Claims"), from any and all persons, arising from or out of claims of title, personal injury (including death) or property damage from said Gas or other charges thereon which attach before title passes to Buyer. Buyer agrees to indemnify Seller and save it harmless from all Claims, from any and all persons, arising from or out of claims regarding payment, personal injury (including death) or property damage from said Gas or other charges thereon which attach after title passes to Buyer.

8.4. The parties agree that the delivery of and the transfer of title to all Gas under this Contract shall take place within the Customs Territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States 19 U.S.C. §1202, General Notes, page 3); provided, however, that in the event Seller took title to the Gas outside the Customs Territory of the United States, Seller represents and warrants that it is the importer of record for all Gas entered and delivered into the United States, and shall be responsible for entry and entry summary filings as well as the payment of duties, taxes and fees, if any, and all applicable record keeping requirements.

8.5. Notwithstanding the other provisions of this Section 8, as between Seller and Buyer, Seller will be liable for all Claims to the extent that such arise from the failure of Gas delivered by Seller to meet the quality requirements of Section 5.

SECTION 9. NOTICES

9.1. All Transaction Confirmations, invoices, payment instructions, and other communications made pursuant to the Base Contract ("Notices") shall be made to the addresses specified in writing by the respective parties from time to time.

9.2. All Notices required hereunder shall be in writing and may be sent by facsimile or mutually acceptable electronic means, a nationally recognized overnight courier service, first class mail or hand delivered.

9.3. Notice shall be given when received on a Business Day by the addressee. In the absence of proof of the actual receipt date, the following presumptions will apply. Notices sent by facsimile shall be deemed to have been received upon the sending party's receipt of its facsimile machine's confirmation of successful transmission. If the day on which such facsimile is received is

Copyright © 2006 North American Energy Standards Board, Inc.
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

not a Business Day or is after five p.m. on a Business Day, then such facsimile shall be deemed to have been received on the next following Business Day. Notice by overnight mail or courier shall be deemed to have been received on the next Business Day after it was sent or such earlier time as is confirmed by the receiving party. Notice via first class mail shall be considered delivered five Business Days after mailing.

9.4. The party receiving a commercially acceptable Notice of change in payment instructions or other payment information shall not be obligated to implement such change until ten Business Days after receipt of such Notice.

SECTION 10. FINANCIAL RESPONSIBILITY

10.1. If either party ("X") has reasonable grounds for insecurity regarding the performance of any obligation under this Contract (whether or not then due) by the other party ("Y") (including, without limitation, the occurrence of a material change in the creditworthiness of Y or its Guarantor, if applicable), X may demand Adequate Assurance of Performance. "Adequate Assurance of Performance" shall mean sufficient security in the form, amount, for a term, and from an issuer, all as reasonably acceptable to X, including, but not limited to cash, a standby irrevocable letter of credit, a prepayment, a security interest in an asset or guaranty. Y hereby grants to X a continuing first priority security interest in, lien on, and right of setoff against all Adequate Assurance of Performance in the form of cash transferred by Y to X pursuant to this Section 10.1. Upon the return by X to Y of such Adequate Assurance of Performance, the security interest and lien granted hereunder on that Adequate Assurance of Performance shall be released automatically and, to the extent possible, without any further action by either party.

10.2. In the event (each an "Event of Default") either party (the "Defaulting Party") or its Guarantor shall: (i) make an assignment or any general arrangement for the benefit of creditors; (ii) file a petition or otherwise commence, authorize, or acquiesce in the commencement of a proceeding or case under any bankruptcy or similar law for the protection of creditors or have such petition filed or proceeding commenced against it; (iii) otherwise become bankrupt or insolvent (however evidenced); (iv) be unable to pay its debts as they fall due; (v) have a receiver, provisional liquidator, conservator, custodian, trustee or other similar official appointed with respect to it or substantially all of its assets; (vi) fail to perform any obligation to the other party with respect to any Credit Support Obligations relating to the Contract; (vii) fail to give Adequate Assurance of Performance under Section 10.1 within 48 hours but at least one Business Day of a written request by the other party; (viii) not have paid any amount due the other party hereunder on or before the second Business Day following written Notice that such payment is due; or ix) be the affected party with respect to any Additional Event of Default; then the other party (the "Non-Defaulting Party") shall have the right, at its sole election, to immediately withhold and/or suspend deliveries or payments upon Notice and/or to terminate and liquidate the transactions under the Contract, in the manner provided in Section 10.3, in addition to any and all other remedies available hereunder.

10.3. If an Event of Default has occurred and is continuing, the Non-Defaulting Party shall have the right, by Notice to the Defaulting Party, to designate a Day, no earlier than the Day such Notice is given and no later than 20 Days after such Notice is given, as an early termination date (the "Early Termination Date") for the liquidation and termination pursuant to Section 10.3.1 of all transactions under the Contract, each a "Terminated Transaction". On the Early Termination Date, all transactions will terminate, other than those transactions, if any, that may not be liquidated and terminated under applicable law ("Excluded Transactions"), which Excluded Transactions must be liquidated and terminated as soon thereafter as is legally permissible, and upon termination shall be a Terminated Transaction and be valued consistent with Section 10.3.1 below. With respect to each Excluded Transaction, its actual termination date shall be the Early Termination Date for purposes of Section 10.3.1.

The parties have selected either "Early Termination Damages Apply" or "Early Termination Damages Do Not Apply" as indicated on the Base Contract.

Early Termination Damages Apply:

10.3.1. As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, (i) the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3.2), for which payment has not yet been made by the party that owes such payment under this Contract and (ii) the Market Value, as defined below, of each Terminated Transaction. The Non-Defaulting Party shall (x) liquidate and accelerate each Terminated Transaction at its Market Value, so that each amount equal to the difference between such Market Value and the Contract Value, as defined below, of such Terminated Transaction(s) shall be due to the Buyer under the Terminated Transaction(s) if such Market Value exceeds the Contract Value and to the Seller if the opposite is the case; and (y) where appropriate, discount each amount then due under clause (x) above to present value in a commercially reasonable manner as of the Early Termination Date (to take account of the period between the date of liquidation and the date on which such amount would have otherwise been due pursuant to the relevant Terminated Transactions).

For purposes of this Section 10.3.1, "Contract Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the Contract Price, and "Market Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the market price for a similar transaction at the Delivery Point determined by the Non-Defaulting Party in a commercially reasonable manner. To ascertain the Market Value, the Non-Defaulting Party may consider, among other valuations, any or all of the settlement prices of NYMEX Gas futures contracts, quotations from leading dealers in energy swap contracts or physical gas trading markets, similar sales or purchases and any other bona fide third-party offers, all adjusted for the length of the term and differences in transportation costs. A party shall not be required to enter into a replacement transaction(s) in order to determine the Market Value. Any extension(s) of the term of a transaction to which parties are not bound as of the Early Termination Date (including but not limited to "evergreen provisions") shall not be considered in determining Contract Values and

Copyright © 2006 North American Energy Standards Board, Inc.
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

Market Values. For the avoidance of doubt, any option pursuant to which one party has the right to extend the term of a transaction shall be considered in determining Contract Values and Market Values. The rate of interest used in calculating net present value shall be determined by the Non-Defaulting Party in a commercially reasonable manner.

Early Termination Damages Do Not Apply:

10.3.1. As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3.2), for which payment has not yet been made by the party that owes such payment under this Contract.

The parties have selected either "Other Agreement Setoffs Apply" or "Other Agreement Setoffs Do Not Apply" as indicated on the Base Contract.

Other Agreement Setoffs Apply:

Bilateral Setoff Option:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3.1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party is hereby authorized to setoff any Net Settlement Amount against (i) any margin or other collateral held by a party in connection with any Credit Support Obligation relating to the Contract; and (ii) any amount(s) (including any excess cash margin or excess cash collateral) owed or held by the party that is entitled to the Net Settlement Amount under any other agreement or arrangement between the parties.

Triangular Setoff Option:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3.1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option, and without prior Notice to the Defaulting Party, the Non-Defaulting Party is hereby authorized to setoff (i) any Net Settlement Amount against any margin or other collateral held by a party in connection with any Credit Support Obligation relating to the Contract; (ii) any Net Settlement Amount against any amount(s) (including any excess cash margin or excess cash collateral) owed by or to a party under any other agreement or arrangement between the parties; (iii) any Net Settlement Amount owed to the Non-Defaulting Party against any amount(s) (including any excess cash margin or excess cash collateral) owed by the Non-Defaulting Party or its Affiliates to the Defaulting Party under any other agreement or arrangement; (iv) any Net Settlement Amount owed to the Defaulting Party against any amount(s) (including any excess cash margin or excess cash collateral) owed by the Defaulting Party to the Non-Defaulting Party or its Affiliates under any other agreement or arrangement; and/or (v) any Net Settlement Amount owed to the Defaulting Party against any amount(s) (including any excess cash margin or excess cash collateral) owed by the Defaulting Party or its Affiliates to the Non-Defaulting Party under any other agreement or arrangement.

Other Agreement Setoffs Do Not Apply:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3.1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party may setoff any Net Settlement Amount against any margin or other collateral held by a party in connection with any Credit Support Obligation relating to the Contract.

10.3.3. If any obligation that is to be included in any netting, aggregation or setoff pursuant to Section 10.3.2 is unascertained, the Non-Defaulting Party may in good faith estimate that obligation and net, aggregate or setoff, as applicable, in respect of the estimate, subject to the Non-Defaulting Party accounting to the Defaulting Party when the obligation is ascertained. Any amount not then due which is included in any netting, aggregation or setoff pursuant to Section 10.3.2 shall be discounted to net present value in a commercially reasonable manner determined by the Non-Defaulting Party.

10.4. As soon as practicable after a liquidation, Notice shall be given by the Non-Defaulting Party to the Defaulting Party of the Net Settlement Amount, and whether the Net Settlement Amount is due to or due from the Non-Defaulting Party. The Notice shall include a written statement explaining in reasonable detail the calculation of the Net Settlement Amount, provided that failure to give such Notice shall not affect the validity or enforceability of the liquidation or give rise to any claim by the Defaulting Party against the Non-Defaulting Party. The Net Settlement Amount as well as any setoffs applied against such amount pursuant to Section 10.3.2, shall be paid by the close of business on the second Business Day following such Notice, which date shall not be earlier than the Early Termination Date. Interest on any unpaid portion of the Net Settlement Amount as adjusted by setoffs, shall accrue from the date due until the date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum; or (ii) the maximum applicable lawful interest rate.

10.5. The parties agree that the transactions hereunder constitute a "forward contract" within the meaning of the United States Bankruptcy Code and that Buyer and Seller are each "forward contract merchants" within the meaning of the United States Bankruptcy Code.

10.6. The Non-Defaulting Party's remedies under this Section 10 are the sole and exclusive remedies of the Non-Defaulting Party with respect to the occurrence of any Early Termination Date. Each party reserves to itself all other rights, setoffs, counterclaims and other defenses that it is or may be entitled to arising from the Contract.

All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

10.7. With respect to this Section 10, if the parties have executed a separate netting agreement with close-out netting provisions, the terms and conditions therein shall prevail to the extent inconsistent herewith.

SECTION 11. FORCE MAJEURE

11.1. Except with regard to a party's obligation to make payment(s) due under Section 7, Section 10.4, and Imbalance Charges under Section 4, neither party shall be liable to the other for failure to perform a Firm obligation, to the extent such failure was caused by Force Majeure. The term "Force Majeure" as employed herein means any cause not reasonably within the control of the party claiming suspension, as further defined in Section 11.2.

11.2. Force Majeure shall include, but not be limited to, the following: (i) physical events such as acts of God, landslides, lightning, earthquakes, fires, storms or storm warnings, such as hurricanes, which result in evacuation of the affected area, floods, washouts, explosions, breakage or accident or necessity of repairs to machinery or equipment or lines of pipe; (ii) weather related events affecting an entire geographic region, such as low temperatures which cause freezing or failure of wells or lines of pipe; (iii) interruption and/or curtailment of Firm transportation and/or storage by Transporters; (iv) acts of others such as strikes, lockouts or other industrial disturbances, riots, sabotage, insurrections or wars, or acts of terror; and (v) governmental actions such as necessity for compliance with any court order, law, statute, ordinance, regulation, or policy having the effect of law promulgated by a governmental authority having jurisdiction. Seller and Buyer shall make reasonable efforts to avoid the adverse impacts of a Force Majeure and to resolve the event or occurrence once it has occurred in order to resume performance.

11.3. Neither party shall be entitled to the benefit of the provisions of Force Majeure to the extent performance is affected by any or all of the following circumstances: (i) the curtailment of interruptible or secondary Firm transportation unless primary, in-path, Firm transportation is also curtailed; (ii) the party claiming excuse failed to remedy the condition and to resume the performance of such covenants or obligations with reasonable dispatch; or (iii) economic hardship, to include, without limitation, Seller's ability to sell Gas at a higher or more advantageous price than the Contract Price, Buyer's ability to purchase Gas at a lower or more advantageous price than the Contract Price, or a regulatory agency disallowing, in whole or in part, the pass through of costs resulting from this Contract; (iv) the loss of Buyer's market(s) or Buyer's inability to use or resell Gas purchased hereunder, except, in either case, as provided in Section 11.2; or (v) the loss or failure of Seller's gas supply or depletion of reserves, except, in either case, as provided in Section 11.2. The party claiming Force Majeure shall not be excused from its responsibility for Imbalance Charges.

11.4. Notwithstanding anything to the contrary herein, the parties agree that the settlement of strikes, lockouts or other industrial disturbances shall be within the sole discretion of the party experiencing such disturbance.

11.5. The party whose performance is prevented by Force Majeure must provide Notice to the other party. Initial Notice may be given orally; however, written Notice with reasonably full particulars of the event or occurrence is required as soon as reasonably possible. Upon providing written Notice of Force Majeure to the other party, the affected party will be relieved of its obligation, from the onset of the Force Majeure event, to make or accept delivery of Gas, as applicable, to the extent and for the duration of Force Majeure, and neither party shall be deemed to have failed in such obligations to the other during such occurrence or event.

11.6. Notwithstanding Sections 11.2 and 11.3, the parties may agree to alternative Force Majeure provisions in a Transaction Confirmation executed in writing by both parties.

SECTION 12. TERM

This Contract may be terminated on 30 Day's written Notice, but shall remain in effect until the expiration of the latest Delivery Period of any transaction(s). The rights of either party pursuant to Section 7.6, Section 10, Section 13, the obligations to make payment hereunder, and the obligation of either party to indemnify the other, pursuant hereto shall survive the termination of the Base Contract or any transaction.

SECTION 13. LIMITATIONS

FOR BREACH OF ANY PROVISION FOR WHICH AN EXPRESS REMEDY OR MEASURE OF DAMAGES IS PROVIDED, SUCH EXPRESS REMEDY OR MEASURE OF DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY. A PARTY'S LIABILITY HEREUNDER SHALL BE LIMITED AS SET FORTH IN SUCH PROVISION, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED. IF NO REMEDY OR MEASURE OF DAMAGES IS EXPRESSLY PROVIDED HEREIN OR IN A TRANSACTION, A PARTY'S LIABILITY SHALL BE LIMITED TO DIRECT ACTUAL DAMAGES ONLY. SUCH DIRECT ACTUAL DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED. UNLESS EXPRESSLY HEREIN PROVIDED, NEITHER PARTY SHALL BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL, PUNITIVE, EXEMPLARY OR INDIRECT DAMAGES, LOST PROFITS OR OTHER BUSINESS INTERRUPTION DAMAGES, BY STATUTE, IN TORT OR CONTRACT, UNDER ANY INDEMNITY PROVISION OR OTHERWISE. IT IS THE INTENT OF THE PARTIES THAT THE LIMITATIONS HEREIN IMPOSED ON REMEDIES AND THE MEASURE OF DAMAGES BE WITHOUT REGARD TO THE CAUSE OR CAUSES RELATED THERETO, INCLUDING THE NEGLIGENCE OF ANY PARTY, WHETHER SUCH NEGLIGENCE BE SOLE, JOINT OR CONCURRENT, OR ACTIVE OR PASSIVE. TO THE EXTENT ANY DAMAGES REQUIRED TO BE PAID HEREUNDER ARE LIQUIDATED, THE PARTIES ACKNOWLEDGE THAT THE DAMAGES ARE DIFFICULT OR IMPOSSIBLE TO DETERMINE, OR OTHERWISE OBTAINING AN ADEQUATE REMEDY IS INCONVENIENT AND THE DAMAGES CALCULATED HEREUNDER CONSTITUTE A REASONABLE APPROXIMATION OF THE HARM OR LOSS.

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

SECTION 14. MARKET DISRUPTION

If a Market Disruption Event has occurred then the parties shall negotiate in good faith to agree on a replacement price for the Floating Price (or on a method for determining a replacement price for the Floating Price) for the affected Day, and if the parties have not so agreed on or before the second Business Day following the affected Day then the replacement price for the Floating Price shall be determined within the next two following Business Days with each party obtaining, in good faith and from non-affiliated market participants in the relevant market, two quotes for prices of Gas for the affected Day of a similar quality and quantity in the geographical location closest in proximity to the Delivery Point and averaging the four quotes. If either party fails to provide two quotes then the average of the other party's two quotes shall determine the replacement price for the Floating Price. "Floating Price" means the price or a factor of the price agreed to in the transaction as being based upon a specified index. "Market Disruption Event" means, with respect to an index specified for a transaction, any of the following events: (a) the failure of the index to announce or publish information necessary for determining the Floating Price; (b) the failure of trading to commence or the permanent discontinuation or material suspension of trading on the exchange or market acting as the index; (c) the temporary or permanent discontinuance or unavailability of the index; (d) the temporary or permanent closing of any exchange acting as the index; or (e) both parties agree that a material change in the formula for or the method of determining the Floating Price has occurred. For the purposes of the calculation of a replacement price for the Floating Price, all numbers shall be rounded to three decimal places. If the fourth decimal number is five or greater, then the third decimal number shall be increased by one and if the fourth decimal number is less than five, then the third decimal number shall remain unchanged.

SECTION 15. MISCELLANEOUS

15.1. This Contract shall be binding upon and inure to the benefit of the successors, assigns, personal representatives, and heirs of the respective parties hereto, and the covenants, conditions, rights and obligations of this Contract shall run for the full term of this Contract. No assignment of this Contract, in whole or in part, will be made without the prior written consent of the non-assigning party (and shall not relieve the assigning party from liability hereunder), which consent will not be unreasonably withheld or delayed; provided, either party may (i) transfer, sell, pledge, encumber, or assign this Contract or the accounts, revenues, or proceeds hereof in connection with any financing or other financial arrangements, or (ii) transfer its interest to any parent or Affiliate by assignment, merger or otherwise without the prior approval of the other party. Upon any such assignment, transfer and assumption, the transferor shall remain principally liable for and shall not be relieved of or discharged from any obligations hereunder.

15.2. If any provision in this Contract is determined to be invalid, void or unenforceable by any court having jurisdiction, such determination shall not invalidate, void, or make unenforceable any other provision, agreement or covenant of this Contract.

15.3. No waiver of any breach of this Contract shall be held to be a waiver of any other or subsequent breach.

15.4. This Contract sets forth all understandings between the parties respecting each transaction subject hereto, and any prior contracts, understandings and representations, whether oral or written, relating to such transactions are merged into and superseded by this Contract and any effective transaction(s). This Contract may be amended only by a writing executed by both parties.

15.5. The interpretation and performance of this Contract shall be governed by the laws of the jurisdiction as indicated on the Base Contract, excluding, however, any conflict of laws rule which would apply the law of another jurisdiction.

15.6. This Contract and all provisions herein will be subject to all applicable and valid statutes, rules, orders and regulations of any governmental authority having jurisdiction over the parties, their facilities, or Gas supply, this Contract or transaction or any provisions thereof.

15.7. There is no third party beneficiary to this Contract.

15.8. Each party to this Contract represents and warrants that it has full and complete authority to enter into and perform this Contract. Each person who executes this Contract on behalf of either party represents and warrants that it has full and complete authority to do so and that such party will be bound thereby.

15.9. The headings and subheadings contained in this Contract are used solely for convenience and do not constitute a part of this Contract between the parties and shall not be used to construe or interpret the provisions of this Contract.

15.10. Unless the parties have elected on the Base Contract not to make this Section 15.10 applicable to this Contract, neither party shall disclose directly or indirectly without the prior written consent of the other party the terms of any transaction to a third party (other than the employees, lenders, royalty owners, counsel, accountants and other agents of the party, or prospective purchasers of all or substantially all of a party's assets or of any rights under this Contract, provided such persons shall have agreed to keep such terms confidential) except (i) in order to comply with any applicable law, order, regulation, or exchange rule, (ii) to the extent necessary for the enforcement of this Contract , (iii) to the extent necessary to implement any transaction, (iv) to the extent necessary to comply with a regulatory agency's reporting requirements including but not limited to gas cost recovery proceedings; or (v) to the extent such information is delivered to such third party for the sole purpose of calculating a published index. Each party shall notify the other party of any proceeding of which it is aware which may result in disclosure of the terms of any transaction (other than as permitted hereunder) and use reasonable efforts to prevent or limit the disclosure. The existence of this Contract is not subject to this confidentiality obligation. Subject to Section 13, the parties shall be entitled to all remedies available at law or in equity to enforce, or seek relief in connection with this confidentiality obligation. The terms of any transaction hereunder shall be kept confidential by the parties hereto for one year from the expiration of the transaction.

In the event that disclosure is required by a governmental body or applicable law, the party subject to such requirement may disclose the material terms of this Contract to the extent so required, but shall promptly notify the other party, prior to disclosure,

All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

and shall cooperate (consistent with the disclosing party's legal obligations) with the other party's efforts to obtain protective orders or similar restraints with respect to such disclosure at the expense of the other party.

15.11. The parties may agree to dispute resolution procedures in Special Provisions attached to the Base Contract or in a Transaction Confirmation executed in writing by both parties

15.12. Any original executed Base Contract, Transaction Confirmation or other related document may be digitally copied, photocopied, or stored on computer tapes and disks (the "Imaged Agreement"). The Imaged Agreement, if introduced as evidence on paper, the Transaction Confirmation, if introduced as evidence in automated facsimile form, the recording, if introduced as evidence in its original form, and all computer records of the foregoing, if introduced as evidence in printed format, in any judicial, arbitration, mediation or administrative proceedings will be admissible as between the parties to the same extent and under the same conditions as other business records originated and maintained in documentary form. Neither Party shall object to the admissibility of the recording, the Transaction Confirmation, or the Imaged Agreement on the basis that such were not originated or maintained in documentary form. However, nothing herein shall be construed as a waiver of any other objection to the admissibility of such evidence.

DISCLAIMER: The purposes of this Contract are to facilitate trade, avoid misunderstandings and make more definite the terms of contracts of purchase and sale of natural gas. Further, NAESB does not mandate the use of this Contract by any party. **NAESB DISCLAIMS AND EXCLUDES, AND ANY USER OF THIS CONTRACT ACKNOWLEDGES AND AGREES TO NAESB'S DISCLAIMER OF, ANY AND ALL WARRANTIES, CONDITIONS OR REPRESENTATIONS, EXPRESS OR IMPLIED, ORAL OR WRITTEN, WITH RESPECT TO THIS CONTRACT OR ANY PART THEREOF, INCLUDING ANY AND ALL IMPLIED WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS OR SUITABILITY FOR ANY PARTICULAR PURPOSE (WHETHER OR NOT NAESB KNOWS, HAS REASON TO KNOW, HAS BEEN ADVISED, OR IS OTHERWISE IN FACT AWARE OF ANY SUCH PURPOSE), WHETHER ALLEGED TO ARISE BY LAW, BY REASON OF CUSTOM OR USAGE IN THE TRADE, OR BY COURSE OF DEALING. EACH USER OF THIS CONTRACT ALSO AGREES THAT UNDER NO CIRCUMSTANCES WILL NAESB BE LIABLE FOR ANY DIRECT, SPECIAL, INCIDENTAL, EXEMPLARY, PUNITIVE OR CONSEQUENTIAL DAMAGES ARISING OUT OF ANY USE OF THIS CONTRACT.**

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

Appendix "1"
Special Provisions "A"

Houston Pipe Line Company LP and **City of San Antonio acting by and through its City Public Service Board (CPS Energy)** hereby agree effective as of the 1st day of February, 2012 to the following Special Provisions ("Special Provisions") to the NAESB Base Contract for Sale and Purchase of Natural Gas ("Base Contract"), which hereby modifies and amends the Base Contract dated and effective as of February 1, 2012. Unless specifically agreed otherwise in a Transaction Confirmation, the Base Contract, as modified by these Special Provisions, shall apply to all transactions for the purchase and sale of Gas (each a "Transaction") between the Parties. All capitalized terms not otherwise defined herein shall have the meaning set forth in the Base Contract.

1. The second sentence of Section 1.2 Oral Transaction Procedure is amended by deleting the words "effectuated in an EDI transmission or telephone conversation with the offer and acceptance" and replacing them with "effectuated in an EDI transmission, telephone conversation or other mutually acceptable electronic means of communication indicating the offer and acceptance" and by adding the following sentence to the end of Section 1.2: "All Transactions are entered into in reliance of the fact that this Base Contract (including any Special Provisions and any Addenda hereto agreed upon by the parties) and all Transactions hereunder form a single integrated agreement between the parties and the parties would not otherwise enter into any Gas purchase and sale transactions."

2. In order to clarify the intentions of both Parties in Section 1.3, Section 1.3 is amended by replacing the last two sentences thereof with the following:

> "If there are any material differences between timely sent Transaction Confirmations governing the same transaction, then the oral agreement reached under Section 1.2 shall be controlling and satisfy the statute of frauds. In the event of a conflict among the terms of (i) a Transaction Confirmation that is signed or passage of the Confirm Deadline without objection from the receiving party, (ii) the oral agreement of the parties which may be evidenced as set forth in Section 1.2, where the parties have selected the Oral Transaction Procedure in the Base Contract, (iii) the Base Contract, and (iv) these General Terms and Conditions, the terms of the documents shall govern in the priority listed in this sentence, absent manifest error in the Transaction Confirmation referenced in item (i). In the event a Transaction Confirmation referenced in item (i) contains a manifest error and the parties have selected "Oral Transaction Procedure", the oral agreement specified in clause (ii) will have priority over such Transaction Confirmation."

3. Section 1 is further amended by adding the following new Section 1.5:

> "1.5 All transactions are entered into in reliance on the fact that all elements of the Contract described in its definition (Section 2.9) constitute a single agreement between the parties, and, in absence of the same forming a single agreement, the parties would not otherwise enter into any transactions hereunder."

4. Section 1.4 is amended by adding the following sentence between the second and third sentences in that section:

> "No party may knowingly destroy or erase a recording once the possessing party becomes aware of an actual dispute in which the recording may reasonably be anticipated to be discoverable."

5. Delete Sections 2.1 "Additional Event of Default", 2.23 "Indebtedness Cross Default", 2.30 "Specified Transaction" and 2.33 "Transactional Cross Default".

6. Section 7 is hereby further amended by adding the following new Section 7.8:

> "As to all transactions under this Contract where CPS Energy is Buyer,
>
> (i) Buyer acknowledges, agrees and represents to Seller that this Contract is a "contract subject to this subchapter" within the meaning of Section 271.151(2), Texas Local Government Code, that by entering into this Contract, Buyer waives sovereign immunity to suit for the purpose of adjudicating a claim for breach of this Contract, subject to the terms and conditions of Subchapter I, Chapter 271, Texas Local Government Code, and that Buyer enjoys no sovereign immunity from liability for breach of this Contract. It shall be the duty of the Treasurer of Buyer to transfer funds of Buyer as required from time to time to make all payment due from Buyer hereunder. It is further agreed and represented that Buyer

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY ETP_000000702

expressly authorizes that the prevailing party in any adjudication between the parties hereto related to a breach of this Contract may recover its reasonable and necessary attorney's fees as specified in Texas Local Government Code Section 271.153(a)(3), and

(ii) Seller acknowledges and agrees that, notwithstanding anything herein to the contrary, (i) the obligations of Buyer under this Contract are payable solely from and to the extent of revenues available from Buyer's gas and electric utility systems, (ii) Buyer's obligations hereunder shall never constitute a pledge of Buyer's taxing powers or be payable from funds raised or to be raised by taxation and (iii) the performance by Buyer of all duties and obligations imposed upon it hereby, the exercise of all powers granted to it hereunder, the carrying out of all covenants, agreements, and promises made by it hereunder, and liability of Buyer for all warranties and other covenants herein shall be limited solely to the revenues of Buyer's gas and electric utility systems."

7. Section 8.6 is added as a new section under Section 8 -Title, Warranty and Indemnity, as follows:

"8.6 Intrastate Warranty. The following representations and warranties shall apply to Transactions if Houston Pipe Line Company LP is Buyer, Seller represents and warrants to Buyer that all Gas will have been produced (a) within the state of Texas and will not have been commingled with other Gas which is or may be sold, consumed, transported or otherwise utilized in interstate commerce in such manner which would subject an intrastate Transporter to the jurisdiction of the Federal Energy Regulatory Commission or any successor authority under the Natural Gas Act of 1938 or (b) outside of the state of Texas with any transportation on an interstate pipeline having been conducted under Section 311 (a)(1) of the Natural Gas Policy Act. "

8. Section 9.3 is amended by deleting all but the first sentence and inserting the following at the end of the first sentence:

"Notices sent by facsimile shall be deemed to have been received upon the sending party's receipt of its facsimile machine's confirmation of successful transmission. If the day on which Notice is received is not a Business Day or if such Notice is received after five p.m. on a Business Day, then such Notice shall be deemed to have been received on the next following Business Day."

9. Section 10.1 is amended (i) by deleting "If" in the line and replacing it with "Notwithstanding Section 3.2, if" and (ii) by deleting from the second sentence thereof "or guaranty" and inserting in its place ", or other mutually acceptable forms".

10. Section 10.2 is amended by deleting the phrase "within 48 hours but at least one Business Day" and replacing it with the phrase "within two (2) Business Days" and is further amended by deleting item (ix) and replacing it with the new item (ix) as follows: "(ix) consolidate or amalgamate with, or merge with or into, or transfer all or substantially all of its assets to, another entity and, at the time of such consolidation, amalgamation, merger or transfer, the resulting, surviving or transferee entity fails to assume all the obligations of such party under this Contract to which it or its predecessor was a party by operation of law or the resulting, surviving or transferee entity is materially weaker from a credit perspective as determined by the other party acting in good faith and in a commercially reasonable manner."

11. The following provision is added as the third paragraph of Section 10.3.1:

"The Non-Defaulting Party shall also aggregate Costs that the Non-Defaulting Party incurs in connection with the termination, acceleration and/or liquidation of each Terminated Transaction. As used herein, "Costs" means, with respect to the Non-Defaulting Party, (a) losses associated with transportation/transmission for the Terminated Transactions pursuant to this Contract incurred by the Non-Defaulting Party which cannot be avoided through the Non-Defaulting Party's reasonable efforts; and (b) commercially reasonable external attorneys' fees and court costs, if any, incurred in connection with enforcing its rights in respect of the Terminated Transactions provided however that such Costs shall only be payable if the Non-Defaulting Party ultimately prevails in enforcing its rights hereunder."

12. Section 10.5 is amended by deleting the existing text in its entirety and replacing it with the following:

"10.5 Each party acknowledges and agrees that: (i) the transactions hereunder constitute a "forward contract" within the meaning of Title 11 of the United States Code (the "Code"); (ii) each party hereto is a "forward

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY ETP_000000703

contract merchant" within the meaning of the Code with respect to any transaction that constitutes a "forward contract"; (iii) all payments made or to be made pursuant to this Contract constitute "settlement payments" within the meaning of the Code; (iv) all transfers of Adequate Assurance of Performance pursuant to this Contract constitute "margin payments" within the meaning of the Code; (v) each party's rights under Sections 10.2, 10.3, and 10.4 of this Contract constitute "contractual rights to liquidate" the transactions within the meaning of the Code, (vi) it is an "eligible commercial entity" as defined in Section 1a (11) of the Commodity Exchange Act, and it is an "eligible contract participant" within the meaning of Section 1(a)12 of the Commodities Exchange Act, as amended, and (vii) it has entered into this Contract (and each transaction forming part hereof) in connection with the conduct of its business and it has the capacity or ability to make or take delivery of the Gas referred to in any transaction hereunder to which it is a party and the material economic terms of each transaction are subject to individual negotiation by the parties."

13. Section 11.1 is amended by deleting the second sentence therein and replacing it with the following:

The term "Force Majeure" as employed herein means an event not anticipated as of the date hereof, which is not within the reasonable control of the Party, or in the case of third party obligations or facilities, the third party, claiming suspension, and which by the exercise of due diligence such Party, or third party, is unable to overcome or obtain or cause to be obtained a commercially reasonable substitute performance therefore. Subject to the foregoing sentence, events of Force Majeure shall include the events as further defined in Section 11.2 and shall include an event of Force Majeure occurring with respect to the facilities or services of Buyer's or Seller's Transporter and declared by such Transporter."

14. Section 11.2 is amended by adding the following after the last sentence of the section as follows:

"Seller shall be excused from the performance of any obligation that Seller is unable to perform due to necessary pipeline integrity activities, the necessity or desirability of repairing, altering, maintaining, inspecting, replacing, changing the size of, substituting or removing pipelines or appurtenant facilities. Such excuse of performance shall continue only for such time as interruption of service may be reasonable and unavoidable; and Seller shall give Buyer reasonable notice of its intention to suspend performance hereunder, except in cases of emergency where such notice is impracticable, and shall endeavor to arrange such interruption so as to inconvenience Buyer as little as possible. Service interruptions as sanctioned by the provisions hereof are expressly included in the definition of "force majeure" for the purpose of this Agreement; provided however, the requirement that Seller shall have been unable to prevent such service interruptions by the exercise of due diligence and planning, as required in Section 11.1 above, shall not apply to such service interruptions. Seller and Buyer shall make reasonable efforts to avoid the adverse impacts of a Force Majeure and to resolve the event or occurrence once it has occurred in order to resume performance."

15. Section 11.3 is amended by deleting (v) in the first sentence thereof and replacing them with (v), (vi), and (vii) as follows:

"(v) the loss or failure of Seller's Gas supply, including, without limitation, depletion of reserves or other failure of production, (vi) increases or decreases in gas supply due to allocation or reallocation of production by well operators, pipelines, or third parties other than regulatory agencies, except, as provided in Section 11.2.; or (vii) interruption of specific supply or markets at "pooling points" or "hubs" without the hub or pooling point operator claiming Force Majeure."

16. Section 14 is amended by deleting the second sentence, reading as follows, "If either party fails to provide two quotes then the average of the other party's two quotes shall determine the replacement price for the Floating Price.", and inserting the following text in its place:

"If either party shall be unable to provide two quotes then the average of the remaining quotes shall determine the replacement price for the Floating Price."

17. Section 15 is modified by deleting 15.11 and replacing it with the following new Section 15.11:

"Section 15.11 **EACH PARTY IRREVOCABLY WAIVES, TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY**

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

SUIT, ACTION OR PROCEEDING RELATING TO THIS CONTRACT, ANY TRANSACTION, OR ANY CREDIT SUPPORT DOCUMENT HEREUNDER."

18. Section 15.13 Both Parties agree that the obligations under this Agreement are performable in Bexar County, Texas.

IN WITNESS WHEREOF, the Parties have executed these Special Provisions to supplement and, where applicable, to modify and supersede the Base Contract by and between the Parties.

General Terms and Conditions
Base Contract for Sale and Purchase of Natural Gas

SECTION 1. PURPOSE AND PROCEDURES

1.1. These General Terms and Conditions are intended to facilitate purchase and sale transactions of Gas on a Firm or Interruptible basis "Buyer" refers to the party receiving Gas and "Seller" refers to the party delivering Gas The entire agreement between the parties shall be the Contract as defined in Section 2 7

The parties have selected either the "Oral Transaction Procedure" or the "Written Transaction Procedure" as indicated on the Base Contract.

Oral Transaction Procedure:

1.2. The parties will use the following Transaction Confirmation procedure Any Gas purchase and sale transaction may be effectuated in an EDI transmission or telephone conversation with the offer and acceptance constituting the agreement of the parties The parties shall be legally bound from the time they so agree to transaction terms and may each rely thereon. Any such transaction shall be considered a "writing" and to have been "signed" Notwithstanding the foregoing sentence, the parties agree that Confirming Party shall, and the other party may, confirm a telephonic transaction by sending the other party a Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means within three Business Days of a transaction covered by this Section 1 2 (Oral Transaction Procedure) provided that the failure to send a Transaction Confirmation shall not invalidate the oral agreement of the parties Confirming Party adopts its confirming letterhead, or the like, as its signature on any Transaction Confirmation as the identification and authentication of Confirming Party If the Transaction Confirmation contains any provisions other than those relating to the commercial terms of the transaction (i e , price, quantity, performance obligation, delivery point, period of delivery and/or transportation conditions), which modify or supplement the Base Contract or General Terms and Conditions of this Contract (e g , arbitration or additional representations and warranties), such provisions shall not be deemed to be accepted pursuant to Section 1 3 but must be expressly agreed to by both parties, provided that the foregoing shall not invalidate any transaction agreed to by the parties

Written Transaction Procedure:

1 2 The parties will use the following Transaction Confirmation procedure Should the parties come to an agreement regarding a Gas purchase and sale transaction for a particular Delivery Period, the Confirming Party shall, and the other party may, record that agreement on a Transaction Confirmation and communicate such Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means, to the other party by the close of the Business Day following the date of agreement The parties acknowledge that their agreement will not be binding until the exchange of nonconflicting Transaction Confirmations or the passage of the Confirm Deadline without objection from the receiving party, as provided in Section 1 3

1.3. If a sending party's Transaction Confirmation is materially different from the receiving party's understanding of the agreement referred to in Section 1 2, such receiving party shall notify the sending party via facsimile, EDI or mutually agreeable electronic means by the Confirm Deadline, unless such receiving party has previously sent a Transaction Confirmation to the sending party The failure of the receiving party to so notify the sending party in writing by the Confirm Deadline constitutes the receiving party's agreement to the terms of the transaction described in the sending party's Transaction Confirmation. If there are any material differences between timely sent Transaction Confirmations governing the same transaction, then neither Transaction Confirmation shall be binding until or unless such differences are resolved including the use of any evidence that clearly resolves the differences in the Transaction Confirmations In the event of a conflict among the terms of (i) a binding Transaction Confirmation pursuant to Section 1.2, (ii) the oral agreement of the parties which may be evidenced by a recorded conversation, where the parties have selected the Oral Transaction Procedure of the Base Contract, (iii) the Base Contract, and (iv) these General Terms and Conditions, the terms of the documents shall govern in the priority listed in this sentence

1.4. The parties agree that each party may electronically record all telephone conversations with respect to this Contract between their respective employees, without any special or further notice to the other party Each party shall obtain any necessary consent of its agents and employees to such recording Where the parties have selected the Oral Transaction Procedure in Section 1 2 of the Base Contract, the parties agree not to contest the validity or enforceability of telephonic recordings entered into in accordance with the requirements of this Base Contract However, nothing herein shall be construed as a waiver of any objection to the admissibility of such evidence

SECTION 2. DEFINITIONS

The terms set forth below shall have the meaning ascribed to them below. Other terms are also defined elsewhere in the Contract and shall have the meanings ascribed to them herein

2.1. "Alternative Damages" shall mean such damages, expressed in dollars or dollars per MMBtu, as the parties shall agree upon in the Transaction Confirmation, in the event either Seller or Buyer fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer

2.2. "Base Contract" shall mean a contract executed by the parties that incorporates these General Terms and Conditions by reference, that specifies the agreed selections of provisions contained herein, and that sets forth other information required herein and any Special Provisions and addendum(s) as identified on page one

Copyright © 2002 North American Energy Standards Board
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

2.3. "British thermal unit" or "Btu" shall mean the International BTU, which is also called the Btu (IT)

2.4. "Business Day" shall mean any day except Saturday, Sunday or Federal Reserve Bank holidays

2.5. "Confirm Deadline" shall mean 5 00 p m in the receiving party's time zone on the second Business Day following the Day a Transaction Confirmation is received or, if applicable, on the Business Day agreed to by the parties in the Base Contract, provided, if the Transaction Confirmation is time stamped after 5 00 p m in the receiving party's time zone, it shall be deemed received at the opening of the next Business Day

2.6. "Confirming Party" shall mean the party designated in the Base Contract to prepare and forward Transaction Confirmations to the other party

2.7. "Contract" shall mean the legally-binding relationship established by (i) the Base Contract, (ii) any and all binding Transaction Confirmations and (iii) where the parties have selected the Oral Transaction Procedure in Section 1 2 of the Base Contract, any and all transactions that the parties have entered into through an EDI transmission or by telephone, but that have not been confirmed in a binding Transaction Confirmation

2.8. "Contract Price" shall mean the amount expressed in U S Dollars per MMBtu to be paid by Buyer to Seller for the purchase of Gas as agreed to by the parties in a transaction.

2.9. "Contract Quantity" shall mean the quantity of Gas to be delivered and taken as agreed to by the parties in a transaction

2.10. "Cover Standard", as referred to in Section 3 2, shall mean that if there is an unexcused failure to take or deliver any quantity of Gas pursuant to this Contract, then the performing party shall use commercially reasonable efforts to (i) if Buyer is the performing party, obtain Gas, (or an alternate fuel if elected by Buyer and replacement Gas is not available), or (ii) if Seller is the performing party, sell Gas, in either case, at a price reasonable for the delivery or production area, as applicable, consistent with the amount of notice provided by the nonperforming party, the immediacy of the Buyer's Gas consumption needs or Seller's Gas sales requirements, as applicable, the quantities involved; and the anticipated length of failure by the nonperforming party

2.11. "Credit Support Obligation(s)" shall mean any obligation(s) to provide or establish credit support for, or on behalf of, a party to this Contract such as an irrevocable standby letter of credit, a margin agreement, a prepayment, a security interest in an asset, a performance bond, guaranty, or other good and sufficient security of a continuing nature

2.12. "Day" shall mean a period of 24 consecutive hours, coextensive with a "day" as defined by the Receiving Transporter in a particular transaction.

2.13. "Delivery Period" shall be the period during which deliveries are to be made as agreed to by the parties in a transaction

2.14. "Delivery Point(s)" shall mean such point(s) as are agreed to by the parties in a transaction

2.15. "EDI" shall mean an electronic data interchange pursuant to an agreement entered into by the parties, specifically relating to the communication of Transaction Confirmations under this Contract.

2.16. "EFP" shall mean the purchase, sale or exchange of natural Gas as the "physical" side of an exchange for physical transaction involving gas futures contracts EFP shall incorporate the meaning and remedies of "Firm", provided that a party's excuse for nonperformance of its obligations to deliver or receive Gas will be governed by the rules of the relevant futures exchange regulated under the Commodity Exchange Act

2.17. "Firm" shall mean that either party may interrupt its performance without liability only to the extent that such performance is prevented for reasons of Force Majeure; provided, however, that during Force Majeure interruptions, the party invoking Force Majeure may be responsible for any Imbalance Charges as set forth in Section 4.3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by the Transporter.

2.18. "Gas" shall mean any mixture of hydrocarbons and noncombustible gases in a gaseous state consisting primarily of methane

2.19. "Imbalance Charges" shall mean any fees, penalties, costs or charges (in cash or in kind) assessed by a Transporter for failure to satisfy the Transporter's balance and/or nomination requirements.

2.20. "Interruptible" shall mean that either party may interrupt its performance at any time for any reason, whether or not caused by an event of Force Majeure, with no liability, except such interrupting party may be responsible for any Imbalance Charges as set forth in Section 4 3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by Transporter

2.21. "MMBtu" shall mean one million British thermal units, which is equivalent to one dekatherm

2.22. "Month" shall mean the penod beginning on the first Day of the calendar month and ending immediately prior to the commencement of the first Day of the next calendar month

2.23. "Payment Date" shall mean a date, as indicated on the Base Contract, on or before which payment is due Seller for Gas received by Buyer in the previous Month

2.24. "Receiving Transporter" shall mean the Transporter receiving Gas at a Delivery Point, or absent such receiving Transporter, the Transporter delivering Gas at a Delivery Point

2.25. "Scheduled Gas" shall mean the quantity of Gas confirmed by Transporter(s) for movement, transportation or management

2.26. "Spot Price " as referred to in Section 3 2 shall mean the price listed in the publication indicated on the Base Contract, under the listing applicable to the geographic location closest in proximity to the Delivery Point(s) for the relevant Day; provided, if there is no

Copyright © 2002 North American Energy Standards Board, Inc
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

single price published for such location for such Day, but there is published a range of prices, then the Spot Price shall be the average of such high and low prices If no price or range of prices is published for such Day, then the Spot Price shall be the average of the following (i) the price (determined as stated above) for the first Day for which a price or range of prices is published that next precedes the relevant Day, and (ii) the price (determined as stated above) for the first Day for which a price or range of prices is published that next follows the relevant Day

2.27. "Transaction Confirmation" shall mean a document, similar to the form of Exhibit A, setting forth the terms of a transaction formed pursuant to Section 1 for a particular Delivery Period

2.28. "Termination Option" shall mean the option of either party to terminate a transaction in the event that the other party fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer for a designated number of days during a period as specified on the applicable Transaction Confirmation

2.29. "Transporter(s)" shall mean all Gas gathering or pipeline companies, or local distribution companies, acting in the capacity of a transporter, transporting Gas for Seller or Buyer upstream or downstream, respectively, of the Delivery Point pursuant to a particular transaction

SECTION 3. PERFORMANCE OBLIGATION

3.1. Seller agrees to sell and deliver, and Buyer agrees to receive and purchase, the Contract Quantity for a particular transaction in accordance with the terms of the Contract Sales and purchases will be on a Firm or Interruptible basis, as agreed to by the parties in a transaction

The parties have selected either the "Cover Standard" or the "Spot Price Standard" as indicated on the Base Contract.

Cover Standard.

3.2. The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the positive difference, if any, between the purchase price paid by Buyer utilizing the Cover Standard and the Contract Price, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually delivered by Seller for such Day(s), or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in the amount equal to the positive difference, if any, between the Contract Price and the price received by Seller utilizing the Cover Standard for the resale of such Gas, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually taken by Buyer for such Day(s), or (iii) in the event that Buyer has used commercially reasonable efforts to replace the Gas or Seller has used commercially reasonable efforts to sell the Gas to a third party, and no such replacement or sale is available, then the sole and exclusive remedy of the performing party shall be any unfavorable difference between the Contract Price and the Spot Price, adjusted for such transportation to the applicable Delivery Point, multiplied by the difference between the Contract Quantity and the quantity actually delivered by Seller and received by Buyer for such Day(s). Imbalance Charges shall not be recovered under this Section 3 2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4.3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated

Spot Price Standard:

3 2 The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the Contract Price from the Spot Price, or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the applicable Spot Price from the Contract Price Imbalance Charges shall not be recovered under this Section 3 2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4 3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated.

3.3. Notwithstanding Section 3 2, the parties may agree to Alternative Damages in a Transaction Confirmation executed in writing by both parties

3.4. In addition to Sections 3 2 and 3 3, the parties may provide for a Termination Option in a Transaction Confirmation executed in writing by both parties The Transaction Confirmation containing the Termination Option will designate the length of nonperformance triggering the Termination Option and the procedures for exercise thereof, how damages for nonperformance will be compensated, and how liquidation costs will be calculated

SECTION 4. TRANSPORTATION, NOMINATIONS, AND IMBALANCES

4.1. Seller shall have the sole responsibility for transporting the Gas to the Delivery Point(s) Buyer shall have the sole responsibility for transporting the Gas from the Delivery Point(s)

4.2. The parties shall coordinate their nomination activities, giving sufficient time to meet the deadlines of the affected Transporter(s) Each party shall give the other party timely prior Notice, sufficient to meet the requirements of all Transporter(s) involved in the transaction, of the quantities of Gas to be delivered and purchased each Day Should either party become aware that actual deliveries at the Delivery Point(s) are greater or lesser than the Scheduled Gas, such party shall promptly notify the other party.

Copyright © 2002 North American Energy Standards Board, Inc
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

4.3. The parties shall use commercially reasonable efforts to avoid imposition of any Imbalance Charges If Buyer or Seller receives an invoice from a Transporter that includes Imbalance Charges, the parties shall determine the validity as well as the cause of such Imbalance Charges If the Imbalance Charges were incurred as a result of Buyer's receipt of quantities of Gas greater than or less than the Scheduled Gas, then Buyer shall pay for such Imbalance Charges or reimburse Seller for such Imbalance Charges paid by Seller If the Imbalance Charges were incurred as a result of Seller's delivery of quantities of Gas greater than or less than the Scheduled Gas, then Seller shall pay for such Imbalance Charges or reimburse Buyer for such Imbalance Charges paid by Buyer

SECTION 5. QUALITY AND MEASUREMENT

All Gas delivered by Seller shall meet the pressure, quality and heat content requirements of the Receiving Transporter The unit of quantity measurement for purposes of this Contract shall be one MMBtu dry Measurement of Gas quantities hereunder shall be in accordance with the established procedures of the Receiving Transporter

SECTION 6. TAXES

The parties have selected either "Buyer Pays At and After Delivery Point" or "Seller Pays Before and At Delivery Point" as indicated on the Base Contract.

Buyer Pays At and After Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas at the Delivery Point(s) and all Taxes after the Delivery Point(s). If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes. Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof

Seller Pays Before and At Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s) and all Taxes at the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas after the Delivery Point(s) If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof

SECTION 7. BILLING, PAYMENT, AND AUDIT

7.1. Seller shall invoice Buyer for Gas delivered and received in the preceding Month and for any other applicable charges, providing supporting documentation acceptable in industry practice to support the amount charged If the actual quantity delivered is not known by the billing date, billing will be prepared based on the quantity of Scheduled Gas. The invoiced quantity will then be adjusted to the actual quantity on the following Month's billing or as soon thereafter as actual delivery information is available.

7.2. Buyer shall remit the amount due under Section 7.1 in the manner specified in the Base Contract, in immediately available funds, on or before the later of the Payment Date or 10 Days after receipt of the invoice by Buyer, provided that if the Payment Date is not a Business Day, payment is due on the next Business Day following that date. In the event any payments are due Buyer hereunder, payment to Buyer shall be made in accordance with this Section 7 2

7.3. In the event payments become due pursuant to Sections 3 2 or 3 3, the performing party may submit an invoice to the nonperforming party for an accelerated payment setting forth the basis upon which the invoiced amount was calculated Payment from the nonperforming party will be due five Business Days after receipt of invoice

7.4. If the invoiced party, in good faith, disputes the amount of any such invoice or any part thereof, such invoiced party will pay such amount as it concedes to be correct; provided, however, if the invoiced party disputes the amount due, it must provide supporting documentation acceptable in industry practice to support the amount paid or disputed In the event the parties are unable to resolve such dispute, either party may pursue any remedy available at law or in equity to enforce its rights pursuant to this Section.

7.5. If the invoiced party fails to remit the full amount payable when due, interest on the unpaid portion shall accrue from the date due until the date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum, or (ii) the maximum applicable lawful interest rate

7.6. A party shall have the right, at its own expense, upon reasonable Notice and at reasonable times, to examine and audit and to obtain copies of the relevant portion of the books, records, and telephone recordings of the other party only to the extent reasonably necessary to verify the accuracy of any statement, charge, payment, or computation made under the Contract This right to examine, audit, and to obtain copies shall not be available with respect to proprietary information not directly relevant to transactions under this Contract All invoices and billings shall be conclusively presumed final and accurate and all associated claims for under- or overpayments shall be deemed waived unless such invoices or billings are objected to in writing, with adequate explanation and/or documentation, within two years after the Month of Gas delivery All retroactive adjustments under Section 7 shall be paid in full by the party owing payment within 30 Days of Notice and substantiation of such inaccuracy

7.7. Unless the parties have elected on the Base Contract not to make this Section 7.7 applicable to this Contract, the parties shall net all undisputed amounts due and owing, and/or past due, arising under the Contract such that the party owing the greater amount shall make a single payment of the net amount to the other party in accordance with Section 7, provided that no payment required to be made pursuant to the terms of any Credit Support Obligation or pursuant to Section 7 3 shall be subject to netting under this Section If the parties have executed a separate netting agreement, the terms and conditions therein shall prevail to the extent inconsistent herewith

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

SECTION 8. TITLE, WARRANTY, AND INDEMNITY

8.1. Unless otherwise specifically agreed, title to the Gas shall pass from Seller to Buyer at the Delivery Point(s) Seller shall have responsibility for and assume any liability with respect to the Gas prior to its delivery to Buyer at the specified Delivery Point(s) Buyer shall have responsibility for and any liability with respect to said Gas after its delivery to Buyer at the Delivery Point(s)

8.2. Seller warrants that it will have the right to convey and will transfer good and merchantable title to all Gas sold hereunder and delivered by it to Buyer, free and clear of all liens, encumbrances, and claims. EXCEPT AS PROVIDED IN THIS SECTION 8 2 AND IN SECTION 14 8, ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR ANY PARTICULAR PURPOSE, ARE DISCLAIMED

8.3. Seller agrees to indemnify Buyer and save it harmless from all losses, liabilities or claims including reasonable attorneys' fees and costs of court ("Claims"), from any and all persons, arising from or out of claims of title, personal injury or property damage from said Gas or other charges thereon which attach before title passes to Buyer Buyer agrees to indemnify Seller and save it harmless from all Claims, from any and all persons, arising from or out of claims regarding payment, personal injury or property damage from said Gas or other charges thereon which attach after title passes to Buyer.

8.4. Notwithstanding the other provisions of this Section 8, as between Seller and Buyer, Seller will be liable for all Claims to the extent that such arise from the failure of Gas delivered by Seller to meet the quality requirements of Section 5

SECTION 9. NOTICES

9.1. All Transaction Confirmations, invoices, payments and other communications made pursuant to the Base Contract ("Notices") shall be made to the addresses specified in writing by the respective parties from time to time

9.2. All Notices required hereunder may be sent by facsimile or mutually acceptable electronic means, a nationally recognized overnight courier service, first class mail or hand delivered

9.3. Notice shall be given when received on a Business Day by the addressee In the absence of proof of the actual receipt date, the following presumptions will apply Notices sent by facsimile shall be deemed to have been received upon the sending party's receipt of its facsimile machine's confirmation of successful transmission If the day on which such facsimile is received is not a Business Day or is after five p m on a Business Day, then such facsimile shall be deemed to have been received on the next following Business Day Notice by overnight mail or courier shall be deemed to have been received on the next Business Day after it was sent or such earlier time as is confirmed by the receiving party Notice via first class mail shall be considered delivered five Business Days after mailing

SECTION 10. FINANCIAL RESPONSIBILITY

10.1. If either party ("X") has reasonable grounds for insecurity regarding the performance of any obligation under this Contract (whether or not then due) by the other party ("Y") (including, without limitation, the occurrence of a material change in the creditworthiness of Y), X may demand Adequate Assurance of Performance. "Adequate Assurance of Performance" shall mean sufficient security in the form, amount and for the term reasonably acceptable to X, including, but not limited to, a standby irrevocable letter of credit, a prepayment, a security interest in an asset or a performance bond or guaranty (including the issuer of any such security).

10.2. In the event (each an "Event of Default") either party (the "Defaulting Party") or its guarantor shall. (i) make an assignment or any general arrangement for the benefit of creditors, (ii) file a petition or otherwise commence, authorize, or acquiesce in the commencement of a proceeding or case under any bankruptcy or similar law for the protection of creditors or have such petition filed or proceeding commenced against it, (iii) otherwise become bankrupt or insolvent (however evidenced); (iv) be unable to pay its debts as they fall due, (v) have a receiver, provisional liquidator, conservator, custodian, trustee or other similar official appointed with respect to it or substantially all of its assets, (vi) fail to perform any obligation to the other party with respect to any Credit Support Obligations relating to the Contract; (vii) fail to give Adequate Assurance of Performance under Section 10 1 within 48 hours but at least one Business Day of a written request by the other party, or (viii) not have paid any amount due the other party hereunder on or before the second Business Day following written Notice that such payment is due, then the other party (the "Non-Defaulting Party") shall have the right, at its sole election, to immediately withhold and/or suspend deliveries or payments upon Notice and/or to terminate and liquidate the transactions under the Contract, in the manner provided in Section 10 3, in addition to any and all other remedies available hereunder

10.3. If an Event of Default has occurred and is continuing, the Non-Defaulting Party shall have the right, by Notice to the Defaulting Party, to designate a Day, no earlier than the Day such Notice is given and no later than 20 Days after such Notice is given, as an early termination date (the "Early Termination Date") for the liquidation and termination pursuant to Section 10 3 1 of all transactions under the Contract, each a "Terminated Transaction" On the Early Termination Date, all transactions will terminate, other than those transactions, if any, that may not be liquidated and terminated under applicable law or that are, in the reasonable opinion of the Non-Defaulting Party, commercially impracticable to liquidate and terminate ("Excluded Transactions"), which Excluded Transactions must be liquidated and terminated as soon thereafter as is reasonably practicable, and upon termination shall be a Terminated Transaction and be valued consistent with Section 10 3 1 below With respect to each Excluded Transaction, its actual termination date shall be the Early Termination Date for purposes of Section 10 3 1

Copyright © 2002 North American Energy Standards Board, Inc
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

The parties have selected either "Early Termination Damages Apply" or "Early Termination Damages Do Not Apply" as indicated on the Base Contract.

Early Termination Damages Apply.

10.3.1. As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, (i) the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3 2), for which payment has not yet been made by the party that owes such payment under this Contract and (ii) the Market Value, as defined below, of each Terminated Transaction The Non-Defaulting Party shall (x) liquidate and accelerate each Terminated Transaction at its Market Value, so that each amount equal to the difference between such Market Value and the Contract Value, as defined below, of such Terminated Transaction(s) shall be due to the Buyer under the Terminated Transaction(s) if such Market Value exceeds the Contract Value and to the Seller if the opposite is the case, and (y) where appropriate, discount each amount then due under clause (x) above to present value in a commercially reasonable manner as of the Early Termination Date (to take account of the period between the date of liquidation and the date on which such amount would have otherwise been due pursuant to the relevant Terminated Transactions)

For purposes of this Section 10 3.1, "Contract Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the Contract Price, and "Market Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the market price for a similar transaction at the Delivery Point determined by the Non-Defaulting Party in a commercially reasonable manner. To ascertain the Market Value, the Non-Defaulting Party may consider, among other valuations, any or all of the settlement prices of NYMEX Gas futures contracts, quotations from leading dealers in energy swap contracts or physical gas trading markets, similar sales or purchases and any other bona fide third-party offers, all adjusted for the length of the term and differences in transportation costs A party shall not be required to enter into a replacement transaction(s) in order to determine the Market Value Any extension(s) of the term of a transaction to which parties are not bound as of the Early Termination Date (including but not limited to "evergreen provisions") shall not be considered in determining Contract Values and Market Values For the avoidance of doubt, any option pursuant to which one party has the right to extend the term of a transaction shall be considered in determining Contract Values and Market Values The rate of interest used in calculating net present value shall be determined by the Non-Defaulting Party in a commercially reasonable manner

Early Termination Damages Do Not Apply:

10 3 1 As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3 2), for which payment has not yet been made by the party that owes such payment under this Contract

The parties have selected either "Other Agreement Setoffs Apply" or "Other Agreement Setoffs Do Not Apply" as indicated on the Base Contract.

Other Agreement Setoffs Apply:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10 3 1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party may setoff (i) any Net Settlement Amount owed to the Non-Defaulting Party against any margin or other collateral held by it in connection with any Credit Support Obligation relating to the Contract, or (ii) any Net Settlement Amount payable to the Defaulting Party against any amount(s) payable by the Defaulting Party to the Non-Defaulting Party under any other agreement or arrangement between the parties.

Other Agreement Setoffs Do Not Apply:

10.3 2 The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3 1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount") At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party may setoff any Net Settlement Amount owed to the Non-Defaulting Party against any margin or other collateral held by it in connection with any Credit Support Obligation relating to the Contract

10.3.3. If any obligation that is to be included in any netting, aggregation or setoff pursuant to Section 10 3 2 is unascertained, the Non-Defaulting Party may in good faith estimate that obligation and net, aggregate or setoff, as applicable, in respect of the estimate, subject to the Non-Defaulting Party accounting to the Defaulting Party when the obligation is ascertained Any amount not then due which is included in any netting, aggregation or setoff pursuant to Section 10 3 2 shall be discounted to net present value in a commercially reasonable manner determined by the Non-Defaulting Party

10.4. As soon as practicable after a liquidation, Notice shall be given by the Non-Defaulting Party to the Defaulting Party of the Net Settlement Amount, and whether the Net Settlement Amount is due to or due from the Non-Defaulting Party The Notice shall include a written statement explaining in reasonable detail the calculation of such amount, provided that failure to give such Notice shall not affect the validity or enforceability of the liquidation or give rise to any claim by the Defaulting Party against the Non-Defaulting Party The Net Settlement Amount shall be paid by the close of business on the second Business Day following such Notice, which date shall not be earlier than the Early Termination Date Interest on any unpaid portion of the Net Settlement Amount shall accrue from the date due until the

Copyright © 2002 North American Energy Standards Board, Inc
All Rights Reserved

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum, or (ii) the maximum applicable lawful interest rate

10.5. The parties agree that the transactions hereunder constitute a "forward contract" within the meaning of the United States Bankruptcy Code and that Buyer and Seller are each "forward contract merchants" within the meaning of the United States Bankruptcy Code

10.6. The Non-Defaulting Party's remedies under this Section 10 are the sole and exclusive remedies of the Non-Defaulting Party with respect to the occurrence of any Early Termination Date Each party reserves to itself all other rights, setoffs, counterclaims and other defenses that it is or may be entitled to arising from the Contract

10.7. With respect to this Section 10, if the parties have executed a separate netting agreement with close-out netting provisions, the terms and conditions therein shall prevail to the extent inconsistent herewith

SECTION 11. FORCE MAJEURE

11.1. Except with regard to a party's obligation to make payment(s) due under Section 7, Section 10 4, and Imbalance Charges under Section 4, neither party shall be liable to the other for failure to perform a Firm obligation, to the extent such failure was caused by Force Majeure The term "Force Majeure" as employed herein means any cause not reasonably within the control of the party claiming suspension, as further defined in Section 11.2.

11.2. Force Majeure shall include, but not be limited to, the following (i) physical events such as acts of God, landslides, lightning, earthquakes, fires, storms or storm warnings, such as hurricanes, which result in evacuation of the affected area, floods, washouts, explosions, breakage or accident or necessity of repairs to machinery or equipment or lines of pipe; (ii) weather related events affecting an entire geographic region, such as low temperatures which cause freezing or failure of wells or lines of pipe, (iii) interruption and/or curtailment of Firm transportation and/or storage by Transporters, (iv) acts of others such as strikes, lockouts or other industrial disturbances, riots, sabotage, insurrections or wars, and (v) governmental actions such as necessity for compliance with any court order, law, statute, ordinance, regulation, or policy having the effect of law promulgated by a governmental authority having jurisdiction Seller and Buyer shall make reasonable efforts to avoid the adverse impacts of a Force Majeure and to resolve the event or occurrence once it has occurred in order to resume performance

11.3. Neither party shall be entitled to the benefit of the provisions of Force Majeure to the extent performance is affected by any or all of the following circumstances. (i) the curtailment of interruptible or secondary Firm transportation unless primary, in-path, Firm transportation is also curtailed, (ii) the party claiming excuse failed to remedy the condition and to resume the performance of such covenants or obligations with reasonable dispatch, or (iii) economic hardship, to include, without limitation, Seller's ability to sell Gas at a higher or more advantageous price than the Contract Price, Buyer's ability to purchase Gas at a lower or more advantageous price than the Contract Price, or a regulatory agency disallowing, in whole or in part, the pass through of costs resulting from this Agreement, (iv) the loss of Buyer's market(s) or Buyer's inability to use or resell Gas purchased hereunder, except, in either case, as provided in Section 11 2, or (v) the loss or failure of Seller's gas supply or depletion of reserves, except, in either case, as provided in Section 11 2 The party claiming Force Majeure shall not be excused from its responsibility for Imbalance Charges.

11.4. Notwithstanding anything to the contrary herein, the parties agree that the settlement of strikes, lockouts or other industrial disturbances shall be within the sole discretion of the party experiencing such disturbance

11.5. The party whose performance is prevented by Force Majeure must provide Notice to the other party Initial Notice may be given orally, however, written Notice with reasonably full particulars of the event or occurrence is required as soon as reasonably possible Upon providing written Notice of Force Majeure to the other party, the affected party will be relieved of its obligation, from the onset of the Force Majeure event, to make or accept delivery of Gas, as applicable, to the extent and for the duration of Force Majeure, and neither party shall be deemed to have failed in such obligations to the other during such occurrence or event

11.6. Notwithstanding Sections 11 2 and 11.3, the parties may agree to alternative Force Majeure provisions in a Transaction Confirmation executed in writing by both parties

SECTION 12. TERM

This Contract may be terminated on 30 Day's written Notice, but shall remain in effect until the expiration of the latest Delivery Penod of any transaction(s) The rights of either party pursuant to Section 7 6 and Section 10, the obligations to make payment hereunder, and the obligation of either party to indemnify the other, pursuant hereto shall survive the termination of the Base Contract or any transaction

SECTION 13. LIMITATIONS

FOR BREACH OF ANY PROVISION FOR WHICH AN EXPRESS REMEDY OR MEASURE OF DAMAGES IS PROVIDED, SUCH EXPRESS REMEDY OR MEASURE OF DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY A PARTY'S LIABILITY HEREUNDER SHALL BE LIMITED AS SET FORTH IN SUCH PROVISION, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED IF NO REMEDY OR MEASURE OF DAMAGES IS EXPRESSLY PROVIDED HEREIN OR IN A TRANSACTION, A PARTY'S LIABILITY SHALL BE LIMITED TO DIRECT ACTUAL DAMAGES ONLY SUCH DIRECT ACTUAL DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED. UNLESS EXPRESSLY HEREIN PROVIDED, NEITHER PARTY SHALL BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL, PUNITIVE, EXEMPLARY OR INDIRECT DAMAGES, LOST PROFITS OR OTHER BUSINESS INTERRUPTION DAMAGES, BY STATUTE, IN TORT OR CONTRACT, UNDER ANY INDEMNITY PROVISION OR OTHERWISE IT IS THE INTENT OF THE PARTIES THAT THE LIMITATIONS HEREIN IMPOSED ON REMEDIES AND THE MEASURE OF DAMAGES BE WITHOUT REGARD TO THE CAUSE OR CAUSES RELATED THERETO, INCLUDING THE NEGLIGENCE OF ANY PARTY, WHETHER SUCH NEGLIGENCE BE SOLE, JOINT OR CONCURRENT, OR ACTIVE OR PASSIVE

HIGHLY CONFIDENTIAL – ATTORNEY'S EYES ONLY

TO THE EXTENT ANY DAMAGES REQUIRED TO BE PAID HEREUNDER ARE LIQUIDATED, THE PARTIES ACKNOWLEDGE THAT THE DAMAGES ARE DIFFICULT OR IMPOSSIBLE TO DETERMINE, OR OTHERWISE OBTAINING AN ADEQUATE REMEDY IS INCONVENIENT AND THE DAMAGES CALCULATED HEREUNDER CONSTITUTE A REASONABLE APPROXIMATION OF THE HARM OR LOSS

SECTION 14. MISCELLANEOUS

14.1. This Contract shall be binding upon and inure to the benefit of the successors, assigns, personal representatives, and heirs of the respective parties hereto, and the covenants, conditions, rights and obligations of this Contract shall run for the full term of this Contract No assignment of this Contract, in whole or in part, will be made without the prior written consent of the non-assigning party (and shall not relieve the assigning party from liability hereunder), which consent will not be unreasonably withheld or delayed, provided, either party may (i) transfer, sell, pledge, encumber, or assign this Contract or the accounts, revenues, or proceeds hereof in connection with any financing or other financial arrangements, or (ii) transfer its interest to any parent or affiliate by assignment, merger or otherwise without the prior approval of the other party Upon any such assignment, transfer and assumption, the transferor shall remain principally liable for and shall not be relieved of or discharged from any obligations hereunder

14.2. If any provision in this Contract is determined to be invalid, void or unenforceable by any court having jurisdiction, such determination shall not invalidate, void, or make unenforceable any other provision, agreement or covenant of this Contract

14.3. No waiver of any breach of this Contract shall be held to be a waiver of any other or subsequent breach

14.4. This Contract sets forth all understandings between the parties respecting each transaction subject hereto, and any prior contracts, understandings and representations, whether oral or written, relating to such transactions are merged into and superseded by this Contract and any effective transaction(s) This Contract may be amended only by a writing executed by both parties.

14.5. The interpretation and performance of this Contract shall be governed by the laws of the jurisdiction as indicated on the Base Contract, excluding, however, any conflict of laws rule which would apply the law of another jurisdiction

14.6. This Contract and all provisions herein will be subject to all applicable and valid statutes, rules, orders and regulations of any governmental authority having jurisdiction over the parties, their facilities, or Gas supply, this Contract or transaction or any provisions thereof

14.7. There is no third party beneficiary to this Contract

14.8. Each party to this Contract represents and warrants that it has full and complete authority to enter into and perform this Contract Each person who executes this Contract on behalf of either party represents and warrants that it has full and complete authority to do so and that such party will be bound thereby

14.9. The headings and subheadings contained in this Contract are used solely for convenience and do not constitute a part of this Contract between the parties and shall not be used to construe or interpret the provisions of this Contract

14.10. Unless the parties have elected on the Base Contract not to make this Section 14 10 applicable to this Contract, neither party shall disclose directly or indirectly without the prior written consent of the other party the terms of any transaction to a third party (other than the employees, lenders, royalty owners, counsel, accountants and other agents of the party, or prospective purchasers of all or substantially all of a party's assets or of any rights under this Contract, provided such persons shall have agreed to keep such terms confidential) except (i) in order to comply with any applicable law, order, regulation, or exchange rule, (ii) to the extent necessary for the enforcement of this Contract , (iii) to the extent necessary to implement any transaction, or (iv) to the extent such information is delivered to such third party for the sole purpose of calculating a published index Each party shall notify the other party of any proceeding of which it is aware which may result in disclosure of the terms of any transaction (other than as permitted hereunder) and use reasonable efforts to prevent or limit the disclosure The existence of this Contract is not subject to this confidentiality obligation Subject to Section 13, the parties shall be entitled to all remedies available at law or in equity to enforce, or seek relief in connection with this confidentiality obligation The terms of any transaction hereunder shall be kept confidential by the parties hereto for one year from the expiration of the transaction

In the event that disclosure is required by a governmental body or applicable law, the party subject to such requirement may disclose the material terms of this Contract to the extent so required, but shall promptly notify the other party, prior to disclosure, and shall cooperate (consistent with the disclosing party's legal obligations) with the other party's efforts to obtain protective orders or similar restraints with respect to such disclosure at the expense of the other party

14 11 The parties may agree to dispute resolution procedures in Special Provisions attached to the Base Contract or in a Transaction Confirmation executed in writing by both parties

DISCLAIMER The purposes of this Contract are to facilitate trade, avoid misunderstandings and make more definite the terms of contracts of purchase and sale of natural gas Further, NAESB does not mandate the use of this Contract by any party **NAESB DISCLAIMS AND EXCLUDES, AND ANY USER OF THIS CONTRACT ACKNOWLEDGES AND AGREES TO NAESB'S DISCLAIMER OF, ANY AND ALL WARRANTIES, CONDITIONS OR REPRESENTATIONS, EXPRESS OR IMPLIED, ORAL OR WRITTEN, WITH RESPECT TO THIS CONTRACT OR ANY PART THEREOF, INCLUDING ANY AND ALL IMPLIED WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS OR SUITABILITY FOR ANY PARTICULAR PURPOSE (WHETHER OR NOT NAESB KNOWS, HAS REASON TO KNOW, HAS BEEN ADVISED, OR IS OTHERWISE IN FACT AWARE OF ANY SUCH PURPOSE), WHETHER ALLEGED TO ARISE BY LAW, BY REASON OF CUSTOM OR USAGE IN THE TRADE, OR BY COURSE OF DEALING EACH USER OF THIS CONTRACT ALSO AGREES THAT UNDER NO CIRCUMSTANCES WILL NAESB BE LIABLE FOR ANY DIRECT, SPECIAL, INCIDENTAL, EXEMPLARY, PUNITIVE OR CONSEQUENTIAL DAMAGES ARISING OUT OF ANY USE OF THIS CONTRACT.**

ADDENDUM NUMBER ONE
SPECIAL PROVISIONS TO BASE CONTRACT FOR
PURCHASE AND SALE OF NATURAL GAS

City of San Antonio acting by and through its City Public Service Board (CPS Energy) and Texas Energy Transfer Company, Ltd. hereby agree as of the 1st day of November, 2009, to the following Special Provisions ("Special Provisions") to the Base Contract for the Purchase and Sale of Natural Gas ("Base Contract"), which hereby modifies and amends the Base Contract dated and effective as of the November 1, 2009 Unless specifically agreed otherwise in a Transaction Confirmation, the Base Contract, as modified by these Special Provisions, shall apply to all transactions for the Purchase and Sale of Natural Gas (each a "Transaction") between the Parties All capitalized terms not otherwise defined herein shall have the meaning set forth in the Base Contract.

1 The second sentence of Section 1 2 Oral Transaction Procedure is amended by deleting the words "effectuated in an EDI transmission or telephone conversation with the offer and acceptance" and replacing them with "effectuated in an EDI transmission, telephone conversation or other mutually acceptable electronic means of communication indicating the offer and acceptance" and by adding the following sentence to the end of Section 1 2: "All Transactions are entered into in reliance of the fact that this Base Contract (including any Special Provisions and any Addenda hereto agreed upon by the parties) and all Transactions hereunder form a single integrated agreement between the parties and the parties would not otherwise enter into any Gas purchase and sale transactions "

2 In order to clarify the intentions of both Parties in Section 1.3, Section 1 3 is amended by replacing the last two sentences thereof with the following

"If there are any material differences between timely sent Transaction Confirmations governing the same transaction, then the oral agreement reached under Section 1 2 shall be controlling and satisfy the statute of frauds In the event of a conflict among the terms of (i) a Transaction Confirmation that is signed or passage of the Confirm Deadline without objection from the receiving party, (ii) the oral agreement of the parties which may be evidenced by a recorded conversation, where the parties have selected the Oral Transaction Procedure in the Base Contract, (iii) the Base Contract, and (iv) these General Terms and Conditions, the terms of the documents shall govern in the priority listed in this sentence, absent manifest error in the Transaction Confirmation referenced in item (i). In the event a Transaction Confirmation referenced in item (i) contains a manifest error and the parties have selected "Oral Transaction Procedure", the oral agreement specified in clause (ii) will have priority over such Transaction Confirmation "

3 Section 1 4 is amended by adding the following sentence between the second and third sentences in that section.

"No party may knowingly destroy or erase a recording once the possessing party becomes aware of an actual dispute in which the recording may reasonably be anticipated to be discoverable

4 Section 8 5 is added as a new section under Section 8 -Title, Warranty and Indemnity, as follows

"8 5 Intrastate Warranty The following representations and warranties shall apply to Transactions if Texas Energy Transfer Company, Ltd. is Buyer, Seller represents and warrants to Buyer that all Gas will have been produced (a) within the state of Texas and will not have been commingled with other Gas which is or may be sold, consumed, transported or otherwise utilized in interstate commerce in such manner which would subject an intrastate Transporter to the jurisdiction of the Federal Energy Regulatory Commission or any successor authority under the Natural Gas Act of 1938 or (b) outside of the state of Texas with any transportation on an interstate pipeline having been conducted under Section 311 (a)(1) of the Natural Gas Policy Act "

5 Section 9 3 is amended by deleting all but the first sentence and inserting the following at the end of the first sentence

"Notices sent by facsimile shall be deemed to have been received upon the sending party's receipt of its facsimile machine's confirmation of successful transmission. If the day on which Notice is received is not a Business Day or if such Notice is received after five p.m on a Business Day, then such Notice shall be deemed to have been received on the next following Business Day."

6 Section 10 1 is amended by deleting "If" in the line and replacing it with "Notwithstanding section 3.2, if".

7 Section 10 1 is further amended by deleting from the second sentence thereof "or a performance bond or guaranty" and inserting in its place ", or other mutually acceptable forms"

8 Section 10 2 is amended by deleting the phrase "within 48 hours but at least one Business Day" and replacing it with the phrase "within two (2) Business Days" and is further amended by the addition of item (ix) in the following manner Delete the word "or" prior to item (viii) and add, between the "," at the end of item (viii) and prior to the word "then", the words

"(ix) consolidate or amalgamate with, or merge with or into, or transfer all or substantially all of its assets to, another entity and, at the time of such consolidation, amalgamation, merger or transfer, the resulting, surviving or transferee entity fails to assume all the obligations of such party under this Contract to which it or its predecessor was a party by operation of law or the resulting, surviving or transferee entity is materially weaker from a credit perspective as determined by the other party acting in good faith and in a commercially reasonable manner "

9 Section 11 1 is amended by deleting the second sentence therein and replacing it with the following

The term "Force Majeure" as employed herein means an event not anticipated as of the date hereof, which is not within the reasonable control of the Party, or in the case of third party obligations or facilities, the third party, claiming suspension, and which by the exercise of due diligence such Party, or third party, is unable to overcome or obtain or cause to be obtained a commercially reasonable substitute performance therefore. Subject to the foregoing sentence, events of Force Majeure shall include the events as further defined in Section 11 2 and shall include an event of Force Majeure occurring with respect to the facilities or services of Buyer's or Seller's Transporter and declared by such Transporter "

10 Section 11.3 is amended by deleting (v) in the first sentence thereof and replacing them with (v), (vi), and (vii) as follows

"(v) the loss or failure of Seller's Gas supply, including, without limitation, depletion of reserves or other failure of production, (vi) increases or decreases in gas supply due to allocation or reallocation of production by well operators, pipelines, or third parties other than regulatory agencies, except, as provided in Section 11 2 ; or (vii) interruption of specific supply or markets at "pooling points" or "hubs" without the hub or pooling point operator claiming Force Majeure The party claiming Force Majeure shall not be excused from its responsibility for Imbalance Charges "

11 Section 14 is modified by inserting the following new Sections 14 12, 14 13 and 14 14·

"Section 14.12 If a Market Disruption Event has occurred then the parties shall negotiate in good faith to agree on a replacement price for the Floating Price (or on a method for determining a replacement price for the Floating Price) for the affected Day, and if the parties have not so agreed on or before the second Business Day following the affected Day then the replacement price for the Floating Price shall be determined within the next two following Business Days with each party obtaining, in good faith and from non-affiliated market participants in the relevant market, two quotes for prices of Gas for the affected Day of a similar quality and quantity in the geographical location closest in proximity to the Delivery Point and averaging the four quotes If either party shall be unable to provide two quotes then the average of the remaining quotes shall determine the replacement price for the Floating Price "Floating Price" means the price or a factor of the price agreed to in the transaction as being based upon a specified index. "Market Disruption Event" means, with respect to an index specified for a transaction, any of the following events· (a) the failure of the index to announce or publish information necessary for determining the Floating Price, (b) the failure of trading to commence or the permanent discontinuation or material suspension of trading on the exchange or market acting as the index, (c) the temporary or permanent discontinuance or unavailability of the index; (d) the temporary or permanent closing of any exchange acting as the index, or (e) both parties agree that a material change in the formula for or the method of determining the Floating Price has occurred. For the purposes of the calculation of a replacement price for the Floating Price, all numbers shall be rounded to three decimal places If the fourth decimal number is five or greater, then the third decimal number shall be increased by one and if the fourth decimal number is less than five, then the third decimal number shall remain unchanged

Section 14 13 Both Parties agree that the obligations under this Agreement are performable in Bexar County, Texas

Section 14 14 **EACH PARTY IRREVOCABLY WAIVES, TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY SUIT, ACTION OR PROCEEDING RELATING TO THIS CONTRACT, ANY TRANSACTION, OR ANY CREDIT SUPPORT DOCUMENT HEREUNDER."**

IN WITNESS WHEREOF, the Parties have executed these Special Provisions to supplement and where applicable, to modify and supersede the Base Contract by and between the Parties.

Q. Okay. And was one of the things that you were supposed to learn how CPS decides how much baseload gas to purchase?

A. No. I wouldn't say I was supposed to learn. I was being copied on a litany of things to just familiarize myself with the department. I wasn't asked specifically about anything.

Q. And I think you testified that today you purchase -- you participate in cash trades, but not in baseload purchases?

A. Correct.

Q. Is that correct? How do baseload and cash trades interact? Like what is the relationship between baseload purchases and cash trading, in your understanding?

A. Baseload purchases are trades done in the month prior to the month of flow that are going to flow for each day for the entirety of the month. And cash purchases are the incremental volumes purchased on the day ahead or same-day market to fill in as demand requires.

Q. Okay. So if you purchased more baseload gas, then you don't need to purchase as much gas on the spot market theoretically?

MR. FEDDERMAN: Objection. Form.

ASSIGNMENT

THE STATE OF TEXAS §
§ KNOW ALL MEN BY THESE PRESENTS:
COUNTY OF HARRIS §

THAT TEXAS ENERGY TRANSFER COMPANY, LTD, a Texas limited partnership (herein called "Assignor") for and in consideration of the sum of Ten Dollars ($10.00) and other valuable consideration in hand paid by Assignee, the receipt and sufficiency of which are hereby acknowledged, does hereby TRANSFER, ASSIGN, CONVEY, and DELIVER unto OASIS PIPELINE, LP, a Texas limited partnership (herein called "Assignee") all of its right, title, and interest in and to the contracts and agreements identified in the listing attached hereto as Exhibit "A".

As part of the consideration for this assignment, Assignee expressly assumes and agrees to be bound by all of the obligations imposed upon Assignor under the provisions of said contracts and agreements.

TO HAVE AND TO HOLD the same, together with all and singular all rights, interest and privileges in anywise belonging, unto the said OASIS PIPELINE, LP, its successors and assigns.

IN WITNESS WHEREOF, the parties hereto have caused this instrument to be executed in multiple originals on this the 10th day of January, 2011 but effective as of February 1, 2011.

TEXAS ENERGY TRANSFER COMPANY, LTD.

ETC-Maypearl	ETC-Maypearl	East Texas, NGPL, Texok zone	East Texas, NGPL, Texok zone		
ETC-Tiger Gas (receipt)	ETC-Tiger Gas Pipeline (receipt) (receipt gas East or West of Hwy 789, including pool gas, seller's choice)	Louisiana/Southeast, Columbia Gulf, mainline	Louisiana/Southeast, Columbia Gulf, mainline		
FGT-CG	Florida Gas Transmission Co. - Citygate	Louisiana/Southeast, Florida Gas, zone 3	Louisiana/Southeast, Florida Gas, zone 3		
FGT-Z1	Florida Gas Transmission - Zone 1 (non-constrained pool gas only)	East Texas, Florida Gas, zone 1	East Texas, Florida Gas, zone 1		
FGT-Z2	Florida Gas Transmission - Zone 2 (non-constrained pool gas only)	Louisiana/Southeast, Florida Gas, zone 2	Louisiana/Southeast, Florida Gas, zone 2		
FGT-Z3	Florida Gas Transmission - Zone 3 (downstream of station 10)	Louisiana/Southeast, Florida Gas, zone 3	Louisiana/Southeast, Florida Gas, zone 3		Yes
GCX Waha Hub	Gulf Coast Express Pipeline - Waha Hub (buyer's choice, contact Kinder Morgan for applicable rates)	Southwest, Waha	Southwest, Waha		
Gillis Hub	Gillis Hub – Contact Sempra LNG for applicable rates	Louisiana/Southeast, Henry Hub	Louisiana/Southeast, Henry Hub		
Golden Triangle	Golden Triangle Storage & Hub (Contact GTS&H for applicable rates.)				
GLGT-St.Clair	Great Lakes Gas Transmission - St. Clair				
GTN-Kingsgate	Gas Transmission Northwest Pipeline - Kingsgate	Rockies/Northwest, GTN, Kingsgate		California, Malin	Yes
GTN-Malin	Gas Transmission Northwest Pipeline - Malin	Rockies/Northwest, PG&E, Malin		California, Malin	Yes
GTN-Stanfield	Gas Transmission Northwest Pipeline - Stanfield	Rockies/Northwest, Stanfield, Ore.		California, Malin	Yes
Guardian Hub	Guardian Pipeline - Guardian Hub	Upper Midwest, Chicago city-gates		Midwest, Chicago Citygate	
Gulf S. Pool 16	Gulf South Pipeline - Pool Area #16	East Texas, ICE Gulf South, Pool Area #16	East Texas, Houston Ship Channel		
Gulf South - Perryville	Gulf South Pipeline - Perryville Exchange Point	Louisiana/Southeast, Columbia Gulf, mainline	Louisiana/Southeast, Columbia Gulf, mainline		
Henry	Henry Hub (IHT)	Louisiana/Southeast, Henry Hub	Louisiana/Southeast, Henry Hub		Yes
HPL-ETX Pool	HPL-East Texas Pool (Contact ETC for applicable rates.)				
HSC-HPL Pool	Houston Ship Channel - Houston Pipe Line Pool (contact ETC for applicable rates)	East Texas, Houston Ship Channel	East Texas, Houston Ship Channel		Yes
HSC-Kinder Morgan	Houston Ship Channel - Kinder Morgan Pipeline Company (contact Kinder Morgan for applicable rates)	East Texas, Houston Ship Channel	East Texas, Houston Ship Channel		
Iroquois (into)	Iroquois Gas Transmission System & TransCanada Pipelines - Interconnect (U.S.)	Northeast, Iroquois, receipts	Northeast, Iroquois, receipts		Yes
Iroquois-Z1	Iroquois - Zone 1 (Delivered excl. Waddington)	Northeast, Iroquois, zone 1			
Iroquois-Z2	Iroquois - Zone 2 (non-Hunts Point/Eastchester Lateral)	Northeast, Iroquois, zone 2	Northeast, Iroquois, zone 2		
Iroquois-Z2 Hunts Pt	Iroquois - Zone 2 Hunts Point/Eastchester Lateral	Northeast, Iroquois, zone 2			
Jefferson Island	Jefferson Island Storage and Hub (Contact Jefferson Island Storage and Hub for applicable rates.)		Louisiana/Southeast, Henry Hub		
Katy-Enstor Pool	Katy - ENSTOR Pool (all interconnects excl. Kinder Morgan Texas Pipeline)	East Texas, Katy			Yes
Katy-Lonestar Inter	Katy - Lonestar Interstate	East Texas, Katy			
Katy-Lonestar Intra	Katy - Lonestar (Warranted as Intrastate)	East Texas, Katy			
Katy-Oasis	Katy - Oasis Pipeline	East Texas, Katy			Yes

Physical Hub Name	Delivery point description for NG Firm Phys, FP and NG Firm Phys BS, LD1	Gas Daily Index Reference for NG Firm Phys, ID, GDD	Inside FERC index reference for NG Firm Phys, ID, IF	Natural Gas Intelligence index reference for NG Firm Phys, ID, NGI	ICE NGX Clearable?
Katy-Enstor Pool (HSC id)	Katy - ENSTOR Pool (all interconnects excl. Kinder Morgan Texas Pipeline) (Houston Ship Channel index)		East Texas, Houston Ship Channel		Yes
Katy-Lonestar Inter (HSC id)	Katy - Lonestar Interstate (Houston Ship Channel index)		East Texas, Houston Ship Channel		
Katy-Lonestar Intra (HSC id)	Katy - Lonestar (Warranted as Intrastate) (Houston Ship Channel index)		East Texas, Houston Ship Channel		
Katy-Oasis (HSC id)	Katy - Oasis Pipeline (Houston Ship Channel index)		East Texas, Houston Ship Channel		Yes
Katy-Enstor Pool (Katy id)	Katy - ENSTOR Pool (all interconnects excl. Kinder Morgan Texas Pipeline) (Katy index)		East Texas, Katy		Yes
Katy-Lonestar Inter (Katy id)	Katy - Lonestar Interstate (Katy index)		East Texas, Katy		
Katy-Lonestar Intra (Katy id)	Katy - Lonestar (Warranted as Intrastate) (Katy index)		East Texas, Katy		
Katy-Oasis (Katy id)	Katy - Oasis Pipeline (Katy index)		East Texas, Katy		Yes
KRGT-Del Pool	Kern River Gas Transmission Co. - on system delivery (excl. Wheeler, Kramer, Daggett and delivery points with incremental IT fees)	Southwest, Kern River, delivered		California, Southern Cal. Border Avg.	Yes
KRGT-Rec Pool	Kern River Gas Transmission Co. - on system receipt (see list below)	Rockies/Northwest, Kern River, Opal	Rockies/Northwest, Northwest, Rocky Mountains		Yes
Lebanon	Lebanon delivered - generic location as agreed upon by buyer and seller	Appalachia, Lebanon Hub	Appalachia, Lebanon Hub		
Leidy	Leidy delivered - generic location as agreed upon by buyer and seller	Appalachia, Leidy Hub	Appalachia, Leidy Hub		
Leidy-Transco	Leidy-Transco - Leidy production point to station 505, receipt points	Appalachia, Transco, Leidy Line receipts	Appalachia, Transco, Leidy Line receipts		Yes
M&N US	Maritimes and Northeast Pipeline US (buyer's choice delivered)				
MEP-Lamar	Midcontinent Express Pipeline - Lamar	East Texas, NGPL, Texok zone	East Texas, NGPL, Texok zone		
Michcon	Michigan Consolidated Citygate	Upper Midwest, Mich Con city-gate	Upper Midwest, Mich Con city-gate		Yes
Midship (receipt)	Midship Pipeline - receipt gas into Midship Pipeline, seller's choice	Midcontinent, Oneok, Okla.	Midcontinent, Oneok, Okla.		
Millennium	Millennium Pipeline - buyers' choice delivered				
Millennium-Ramapo	Millennium Pipeline - Ramapo - receipts into Algonquin Gas Transmission at the Ramapo interconnect	Northeast, Tx. Eastern, M-3	Northeast, Texas Eastern, M-3		
Millennium East Pool	Millennium East Pool - receipts into Millennium Pipeline, east of Corning	Appalachia, Millennium, East receipts	Appalachia, Millennium, East receipts		Yes
Moss Bluff Inter	Moss Bluff Interconnect (buyers' choice delivered excludes in-ground transfer)				Yes
Moss Bluff Stor	Moss Bluff Storage (In-ground transfers only)				
MountainWest-North	MountainWest Pipeline - North Pool	Rockies/Northwest, MountainWest, Rocky Mountains			
MountainWest-South	MountainWest Pipeline - South Pool	Rockies/Northwest, MountainWest, Rocky Mountains			
MS Hub	MS Hub Storage	Louisiana/Southeast, Southern Natural, La.	Louisiana/Southeast, Southern Natural, La.		
NBPL-Bakken (receipt)	Northern Border Pipeline - Bakken (receipt) (receipt gas into Northern Border Pipeline west of the Glen Ulin compressor station, including Port of Morgan, seller's choice)	Upper Midwest, Northern, Ventura	Upper Midwest, Northern, Ventura		
NBPL-Harper	Northern Border Pipeline - Harper Transfer Point	Midcontinent, NGPL, Midcontinent	Midcontinent, NGPL, Midcontinent		
NBPL-Nicor	Northern Border Pipeline - Nicor Interconnect	Upper Midwest, Chicago city-gates		Midwest, Chicago Citygate	
NBPL-Vector	Northern Border Pipeline - Vector Interconnect	Upper Midwest, Chicago city-gates		Midwest, Chicago Citygate	
NBPL-Ventura	Northern Border Pipeline - Ventura Transfer Point	Upper Midwest, Northern Border, Ventura TP	Upper Midwest, Northern, Ventura		Yes
NBPL-Will County	Northern Border Pipeline - Will County	Upper Midwest, Chicago city-gates		Midwest, Chicago Citygate

Change Log for Physical Gas Market Additions, Removals and Other Changes

March 1, 2024 - KRGT-Receipt Points table updated

March 1, 2024 - 'ID, GDD' product added for 'PNGTS' location

March 1, 2024 - Inside FERC reference index changed to 'Tennessee, zone 1' for the 'NG Firm , ID, IF - TGP-Z1 Sta-87' market

March 1, 2024 - 'ID, IF' product added for 'TGP-Z1 100L' location

October 23, 2023 - Transco-65 (Z3 id) added for 'ID, GDD' and 'ID, IF' products

October 23, 2023 - Transco-65 (65 id) added for 'ID, GDD' and 'ID, IF' products

October 9, 2023 - Questar-South changed to MountainWest-South

October 9, 2023 - Questar-North changed to MountainWest-North

September 18, 2023 - ETC-Tiger Gas (receipt) added as a new bilateral-only market

September 18, 2023 - NBPL-Bakken (receipt) added as a new bilateral-only market

October 17, 2022 - NGX Clearing added to REX-East NGPL, Midwestern, PEPL and Trunkline locations

July 18, 2022 - PG&E Citygate Monthly Imbalance added as a new bilateral-only market

June 1, 2022 - NGPL-TXOK East Stor added as a new bilateral-only market

November 1, 2021 - REX-Z3 Del Pool added as a new bilateral-only market

July 1, 2021 - Dominion-North name changed to Eastern Gas-North

July 1, 2021 - Dominion-South name changed to Eastern Gas-South

July 1, 2021 - Cove Point delivery point description updated to 'Cove Point - on system delivery'

April 12, 2021 - REX W-NGPL added as a new location

April 12, 2021 - Bay Gas Storage added as a new location

April 5, 2021 - Socal-Citygate Monthly Imbalance market added as a new location

October 19, 2020 - 'HSC-Kinder Morgan' added as a new location

October 19, 2020 - 'REX Cheyenne Comp Pool' became an ICE NGX cleared location

October 5, 2020 - 'PG&E-Topock' became an ICE NGX cleared location, 'seller's choice' added to market definition

September 1, 2020 - 'Midship (receipt)' added as a new location

July 20, 2020 - 'REX Cheyenne Comp Pool' added as a new location.

April 6, 2020 - 'Transco-River Road' added as a new location. This location was launched as NGX cleared.

April 6, 2020 - 'MEP-Lamar' added as a new location

April 6, 2020 - 'ID, GDD' products added for 'Tres Palacios (inj)' and 'Tres Palacios (w/d)' locations

November 18, 2019 - 'TGP-Z0 Border Pool' added as a new location

October 2, 2019 - 'Gillis Hub' added as a new location

September 30, 2019 - Gas Daily and Inside Ferc indexes updated for 'Pine Prairie Hub' 'ID, GDD' ad 'ID, IF' products

September 30, 2019 - 'Pine Prairie Hub' became ICE NGX cleared location

July 1, 2019 - 'TCO-A08 Pool' added as a new location

May 1, 2019 - 'EP-Anadarko' added as a new location

April 1, 2019 - reference/anchor index for 'NG Firm Phys, ID, GDD - TW-Panhandle' market changed from 'TW Permian' index to 'Panhandle' index

March 4, 2019 - 'EP-Keystone (EP Perm id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'EP-Keystone (EP WTX id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'EP-Plains Pool (EP Perm id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'EP-Plains Pool (EP Plains id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'EP-Waha Pool (EP Perm id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'EP-Waha Pool (EP WTX id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'NNG-Mid 1-7 (EP Perm id)' added for 'ID, GDD' and 'ID, IF' products

March 4, 2019 - 'NNG-Mid 1-7 (EP WTX id)' added for 'ID, GDD' and 'ID, IF' products

November 5, 2018 - reference/anchor index for 'NG Firm Phys, ID, GDD - Iroquois-Z1' market changed from 'Iroquois (into)' index to 'Iroquois Zone 1' index

November 1, 2018 - ' Arena WTX Pool' added as a new location

November 1, 2018 - 'Banquete Hub' added as a new location

November 1, 2018 - 'NG Firm Phys, ID, GDD - TGP-Z5 200L' added as a new market to complement exusting suite of fixed price and physical basis markets

October 29, 2018 - 'Leidy-Transco' became ICE NGX cleared location

October 22, 2018 - reference/anchor index for 'NG Firm Phys, ID, GDD - FGT-CG' market changed from 'Florida Gas, zone 3' index to 'Florida city-gates' index

October 1, 2018 - 'AB Pool (intra)' added as a new location

October 1, 2018 - 'NG Firm Phys, ID, GDD - Agua Dulce Hub' and 'NG Firm Phys, ID, IF - Agua Dulce Hub' added as new markets to complement existing suite of fixed price and physical basis markets

October 1, 2018 - 'TGP-Z1 800L Pool' added as a new location

October 1, 2018 - 'TGP-Z6 200L North' added as a new location

October 1, 2018 - 'TGP-Z6 200L South' added as a new location

July 16, 2018 - 'FGT-Z3' became an ICE NGX cleared location

July 16, 2018 - 'NGPL-Nipsco' became an ICE NGX cleared location

August 6, 2018 - ICE NGX added Same Day clearing to all ICE NGX locations

Sept 17, 2018 - 'AB Pool (inter)' added as a new location

Sept 17, 2018 - 'Cove Point' added as a new location

Sept 17, 2018 - 'ENT-STX Map' added as a new location

Sept 17, 2018 - 'NGPL-IA/IL AM Pool' added as a new location

Sept 17, 2018 - 'NGPL-IA/IL AM Stor' added as a new location

Sept 17, 2018 - 'NGPL-IA/IL GC Pool' added as a new location

Sept 17, 2018 - 'NGPL-IA/IL GC Stor' added as a new location

Sept 17, 2018 - 'NG Firm Phys, ID, GDD - Pine Prairie' added as a new market to complement exusting suite of fixed price and physical basis markets

Sept 17, 2018 - 'REX-Z3 (receipt)' added as a new location

Sept 17, 2018 - 'Rover (receipt)' added as a new location

June 17, 2018 - 'Rover-PEPL' added as a new location

June 17, 2018 - 'Rover-ANR' added as a new location

FIRM INTRASTATE
GAS TRANSPORTATION AGREEMENT

THIS FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT the ("Agreement") made and entered into effective and operative as of the 1st day of July, 2007, by and between CITY OF SAN ANTONIO acting by and through the CITY PUBLIC SERVICE BOARD, hereinafter referred to as ("Shipper"), and HOUSTON PIPE LINE COMPANY LP, hereinafter referred to as ("Transporter"). Transporter and Shipper are sometimes collectively referred to herein as the ("Parties"), and individually as a ("Party").

W I T N E S S E T H :

THAT WHEREAS, Shipper owns and/or controls certain quantities of Gas produced in Texas and desires to have Transporter transport certain quantities of natural Gas for Shipper from time to time; and

WHEREAS, Transporter has available pipeline facilities in Texas and agrees to receive and transport said gas for Shipper as hereinafter provided.

NOW, THEREFORE, in consideration of the sum of Ten Dollars ($10.00) cash in hand paid by Shipper to Transporter and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto have agreed as follows:

1. DEFINITIONS

The following definitions shall apply hereunder:

1.1 "Adequate Assurance of Performance" is defined in Section 13.1.

1.2 "Authorized Overrun Fee" is defined in Section 6.2.

1.3 "Btu" The term "Btu" shall mean British Thermal Unit.

1.4 "Business Day" shall mean any day except Saturday, Sunday or Federal Reserve Bank holidays.

1.5 "CCT" The term "CCT" shall mean Central Clock Time and is defined as current time in the Central Time Zone taking into consideration the seasonal changes back and forth between Daylight Savings and Standard time.

1.6 "Commodity Fee" is defined in Section 6.2.

1.7 "Cumulative Operational Gas Imbalance Account" is defined in Section 4.5.

1.8 "Cumulative Operational Imbalance Fee" is defined in Section 4.5.

1.9 "Cumulative Operational Imbalance Tolerance" is defined in Section 4.5.

1.10 "Day" shall mean a period of time beginning at 9:00 a.m. Central Clock Time (CCT) on each calendar Day and ending at 9:00 a.m. CCT on the next succeeding calendar Day.

1.11 "Delivery Point(s)" is defined in Section 3.2.

1.12 "Demand Fee" is defined in Section 6.1.

1.13 "Firm" or "Firm Service" as used herein means that Shipper's Reserved Capacity is not subject to a prior claim by another shipper or class of shipper or service.

1.14 "Gas" shall mean natural Gas as produced from wells classified as Gas wells or oil wells.

1.15 "Gas Daily Houston Ship Channel index (midpoint) posting" means the Spot Price (Midpoint) set forth in Gas Daily® (Platts, a division of McGraw-Hill Companies), or successor publication, in the column "Daily Price Survey" under Houston Ship Channel as posted for the Flow Date(s) pricing period in which the day of flow occurred.

1.16 "Gas Daily Katy index (midpoint) posting" means the Spot Price (Midpoint) set forth in Gas Daily® (Platts, a division of McGraw-Hill Companies), or successor publication, in the column "Daily Price Survey" under Houston Ship Channel as posted for the Flow Date(s) pricing period in which the day of flow occurred.

1.17 "Gross Heating Value" shall mean the number of Btu's liberated by the complete combustion, at constant pressure, of one (1) cubic foot of Gas at a base temperature of sixty degrees Fahrenheit (60°F.) and a referenced pressure base of fourteen and sixty-five hundredths (14.65) Psia with air of the same temperature and pressure of the Gas, after products of combustion are cooled to the initial temperature of the Gas, and after the water of the combustion is condensed to the liquid state. The Gross Heating Value of the Gas shall be corrected for the water vapor content of Gas being delivered provided, however, that if the water vapor content of the Gas is seven (7) pounds or less per one million (1,000,000) cubic feet the Gas shall be assumed to be dry and no correction shall be made.

1.18 "Gas Imbalance Account" means the aggregate daily imbalances that may occur on a daily basis.

1.19 "Inside FERC HSC Price" means the Market Center Spot-Gas Prices, East Texas, Houston Ship Channel Index as published in the first publication of the Month in Inside F.E.R.C.'s Gas Market Report published bi-Monthly by The McGraw-Hill Companies, Inc., or successor publisher.

1.20 "Interruptible" or "Interruptible Service" as used herein means that Transporter, in its sole and unfettered discretion, shall have the right to interrupt, curtail or suspend the receipt, transportation or delivery of Gas hereunder at any time and from time to time without any liability to Shipper by reason thereof.

1.21 "Maximum Hourly Quantity" or "MaxHQ" is defined in Section 4.2.

1.22 "Minimum Hourly Quantity" or "MinHQ" is defined in Section 4.2.

1.23 "Mcf" shall mean one thousand (1,000) cubic feet of Gas measured at a base temperature of sixty degrees Fahrenheit (60°F), and at a pressure base of fourteen and sixty-five one-hundredths (14.65) pounds per square inch absolute.

1.24 "MMBtu" shall mean one million (1,000,000) British Thermal Units.

1.25 "Month" shall mean a period of time beginning at 9:00 a.m. CCT on the first Day of a calendar month and ending at 9:00 a.m. CCT on the first Day of the next succeeding calendar month.

1.26 "Psia" shall mean pounds per square inch absolute.

1.27 "Psig" shall mean pounds per square inch gauge.

1.28 "Shipper's Reserved Capacity" means the aggregate daily transportation capacity (expressed in MMBtu's) reserved for Shipper in Transporter's transmission system under this Agreement.

1.29 "Ratable Basis" is defined in Section 3.2

1.30 "Receipt Point(s)" is defined in Section 3.1.

1.31 "Retention Volume" means the quantity of Gas retained by Transporter equal to the percentage(s) set forth in Section 3.1 of all volumes received at the Receipt Point(s) for any fuel, lost and other unaccounted for volumes.

2. OBLIGATIONS OF PARTIES

2.1 Transporter will receive Gas at the Receipt Point(s) as nominated and tendered by Shipper under the terms of this Agreement, transport the Gas, and deliver equivalent quantities of Gas to Shipper at the Delivery Point(s), as set forth herein, less the Retention Volumes. Transporter's obligations are subject to: (i) the maximum quantities (if any) stated in this Agreement; (ii) an event of Force Majeure; (iii) Shipper's failure or refusal to deliver Gas to, or receive Gas from, Transporter as required under this Agreement; (iv) any laws, rules, orders, or requirements of any governmental or regulatory authority, which limit, prevent, or interfere with Transporter's performance; and (v) as otherwise provided under any other terms and conditions of this Agreement.

2.2 Shipper will tender the quantities of Gas nominated under this Agreement at the Receipt Point(s), and accept the Gas, less the Retention Volumes, at the Delivery Point(s). Shipper's obligations set forth in the preceding sentence are subject to: (i) an event of Force Majeure; (ii) Transporter's failure or refusal to receive Gas from, or deliver Gas to, Shipper as required under this Agreement; (iii) any laws, rules, orders, or requirements of any governmental or regulatory authority, which limit, prevent, or interfere with Shipper's performance; and (iv) as otherwise provided under any other terms and conditions of this Agreement.

3. RECEIPT POINT(S) AND DELIVERY POINT(S)

3.1 (a) The Primary Receipt Point(s) for all Gas attributable to Shipper's Reserved Capacity delivered or caused to be delivered by Shipper to Transporter for transportation hereunder shall be at the receipt point(s) listed below. The Secondary Receipt Point(s) for Gas delivered or caused to be delivered by Shipper to Transporter for transportation hereunder shall be at such receipt point(s) as may be established by mutual agreement of the Parties. The Secondary Receipt Point(s) are to be provided to Shipper on an Interruptible basis; provided that in the event capacity at such Secondary Receipt Point(s) for the Days nominated by Shipper are confirmed by Transporter, then the Secondary Receipt Ponit(s) for such capacity shall be on Firm basis for the Days so nominated. The Primary Receipt Point(s) and the Secondary Receipt Point(s) are hereinafter called the ("Receipt Point(s)").

(b) Receipts at the following Receipt Points shall be on a ratable basis as specified below. Meter capacities shall be Firm for quantities nominated by 9:00 a.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Receipt Point and are a share of the total Meter Capacties. It is not intended to represent total meter capacity. Other mutually agreeable receipt point(s) may be added by Transporter and Shipper from time to time. Shipper or Shipper's designee shall be responsible to provide sufficient pressures to effectuate deliveries into Transporter's system at the Receipt Points listed below. Transporter shall not be obligated to provide compression or alter pipeline operations to effectuate the receipts of Gas into Transporter's system.

Location/Meter#	Meter Capacity MMBtu/d	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu
Oasis Katy #98-6780	75,000	0.25%	$0.02
Duke Katy #98-8740	20,000	0.25%	$0.03
HSC Pool #98-7342	20,000	0.25%	$0.02
Lone Star Katy #98-0067	20,000	0.25%	$0.03
Bammel #98-7367	15,000	0.25%	$0.06
Enstor Katy #98-0072	25,000	0.25%	$0.03

3.2 (a) The Primary Delivery Point for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at Transporter's Karnes Delivery Point measurement facilities (Meter # 98-1608) located in Karnes County, Texas. The Karnes Delivery Point capacity shall be a minimum of 10,000 MMBtu per day up to a maximum of 125,000 MMBtu per day. Transporter shall have the right ot require Shipper to reschedule up to 20,000 MMBtu per day of the Karnes Delivery Point volumes to the Oasis Delivery Point.

(b) The Secondary Delivery Point for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at the Oasis Pipe Line Company Texas LP CPS Delivery Point measurement facilities (Meter # 98-1483) located in Bexar County, Texas. The CPS Delivery Point is provided to Shipper on a firm basis; provided, however, Transporter may interrupt deliveries for days in which the physical movement of gas on the Oasis pipeline system flows from east to west or for days in which the Gas Daily Katy mid posting is less than the Gas Daily Waha mid posting. The CPS Delivery Point capacity shall be up to a maximum of 20,000 MMBtu per day. The parties may agree to add additional secondary delivery point(s) from time to time. Shipper shall nominate a like volume of gas at the Oasis Katy Receipt Point for redelivery to the CPS Delivery Point.

(c) The Primary Delivery Point and the Secondary Delivery Point are hereinafter called the ("Delivery Point(s)"). The combined Maximum Daily Quantity for both delivery points shall not exceed 125,000 MMBtu per day.

3.3 Shipper recognizes that quantities of Gas may be transported through the Receipt Point(s) and/or the Delivery Point(s) by third parties, and therefore, the measurement of Gas under this Agreement may involve the allocation of Gas receipts or deliveries. As between Transporter and Shipper, Transporter will, in its sole discretion, determine the allocation of all Gas deliveries hereunder. Each Party will furnish or cause to be furnished to the other Parties all data required to accurately account for all Gas received and delivered hereunder.

4. QUANTITY, NOMINATIONS, BALANCING

4.1 Notwithstanding Shipper's rights under Section 4.2, all quantities subject to this Agreement shall be balanced between the Receipt Point(s) and the Delivery Point(s) at consistent daily volumes based on the nominated volumes as specified herein. Shipper shall balance the receipt volumes (less Retention Volumes) with the delivery volumes on a daily basis.

4.2 Shipper's Reserved Capacity under this Agreement is a Maximum Daily Quantity ("MDQ") equal to 125,000 MMBtu per day and a Maximum Hourly Quantity ("MaxHQ") shall not exceed an instantaneous rate of 5,208 MMBtu per hour. However, in the event Shipper nominates any volume less than the MDQ for delivery to the Delivery Point(s) for any given Day during the term hereof,

then the MaxHQ instantaneous rate Transporter is obligated to deliver, and Shipper obligated to receive, shall equal Shipper's total nominated receipts at the Receipt Point(s) divided by twenty-four (24). Subject to the terms, conditions and limitations contained herein, Shipper agrees to deliver, or cause to be delivered, to the Receipt Point(s), and Transporter agrees to accept, or cause to be accepted, on a Firm basis those daily quantities of Shipper's Gas scheduled in accordance with this Section 4 and tendered daily at the Receipt Point(s), however, in no event shall Shipper tender volumes of Gas for transportation hereunder on any Day in excess of the volumes of transport Gas that Shipper has nominated at the Delivery Point(s) each Day. Subject to the terms, conditions and limitations contained herein, Shipper agrees to accept, or cause to be accepted, at the Delivery Point(s), and Transporter agrees to transport and redeliver, or cause to be transported and redelivered, on a Firm basis all volumes received for transportation to the Delivery Point(s) a scheduled hourly and daily volume of Gas, in terms of MMBtu, equal to the scheduled hourly and daily volume of Gas, in terms of MMBtu, delivered by or for the account of Shipper at the Receipt Point(s). Transporter and Shipper may agree for Transporter to transport or deliver quantities of Gas in excess of Shipper's Reserved Capacity or Shipper's daily nominated quantity, whichever is less, or the Maximum Hourly Quantity on an interruptible basis. Any variation will be confirmed in writing via fax or email by Transporter, with an acknowledgment returned to Transporter by Shipper.

4.3 Shipper must nominate prior to 9:00 a.m. (Central Clock Time) at the Receipt Point(s) and Delivery Point(s) each day, the gas volumes to be received and delivered the following day. Weekend and holiday deliveries shall be nominated no later than 9:00 a.m. of the Business Day prior to delivery. Shipper shall have the right to make not more than two (2) intra-day nomination changes between all Points, such change shall be made as soon as practical if, at Transporter's sole discretion, such change can be made without detriment to other volumes being handled by Transporter's pipeline facilities, with the last intra-day nomination change request due pror to 5:00 p.m. on the day of flow. Transporter will send Shipper a confirmation for each receipt or delivery point nomination requested by Shipper, Shipper must acknowledge such confirmation in writing, facsimile or by email and return same to Transporter before any nomination is valid. The deadline for submitting nominations for the first (1st) of each month is 9:00 a.m. (CCT) two (2) Business Days prior to the beginning of each month. Shipper has the right to nominate volumes up to Shipper's Reserved Capacity.

4.4 Notwithstanding Shipper's rights under Section 4.2, Shipper will balance, on a daily basis, between the Gas received by Transporter at the Receipt Point(s), less the Retention Volumes, and the Gas delivered at the Delivery Point(s). Shipper must monitor and adjust its nominations, deliveries, and receipts to maintain the daily balances between the Receipt Point(s) and Delivery Point(s), and notify within a reasonable amount of time Transporter of any imbalances or situations that may cause imbalances. If Transporter is unable to receive Gas at the Receipt Point(s) in the quantities scheduled, or deliver Gas at the Delivery Point(s) in the quantities scheduled, as provided for herein, Transporter will notify Shipper as soon as practicable. Notwithstanding Shipper's rights under Section 4.2, Transporter has no obligation to receive or deliver quantities of Gas on a daily basis that differ from the scheduled volumes.

4.5 After application of the Firm Intrastate Gas Transportation volumes, any remaining volumes of Gas delivered at the Delivery Point(s) during a given Day will be recorded in a Gas Imbalance Account identified as the "Cumulative Operational Gas Imbalance Account". If the absolute volume in the Cumulative Operational Gas Imbalance Account is greater than a plus or minus MMBtu tolerance equal to 15,000 MMBtu ("Cumulative Operational Imbalance Tolerance"), daily imbalances greater than or less than the Cumulative Operational Imbalance Tolerance shall be cashed out daily. Daily quantities that exceed the Cumulative Operational Imbalance Tolerance of 15,000 MMBtu (gas due Shipper) shall be purchased by Transporter priced at the lower of (i) 98.25% of the Gas Daily Katy index (midpoint) posting as posted for the Flow Date(s) pricing period in which the day of flow occurred less

$0.04, or (ii) 98.25% of the Gas Daily Katy index (midpoint) posting as posted for the Flow Date(s) pricing period after the Flow Date(s) pricing period in which the day of flow occurred less $0.04; and daily quantities less than the Cumulative Operational Imbalance Tolerance of (15,000) MMBtu (gas due Transporter) shall be sold to Shipper at the higher of (i) the Gas Daily Houston Ship Channel index (midpoint) posting as posted for the Flow Date(s) pricing period in which the day of flow occurred plus $0.04, or (ii) the Gas Daily Houston Ship Channel index (midpoint) posting as posted for the Flow Date(s) pricing period after the Flow Date(s) pricing period in which the day of flow occurred plus $0.04. Any physical flow adjustments for imbalance makeup will be made as mutually agreed to by the Parties (which shall be confirmed in writing via fax or email by Transporter, with an acknowledgment to be returned to Transporter by Shipper) to adequately control Imbalance levels. The daily and cumulative imbalance(s) will be determined at the end of each Gas Day and will be provided to Shipper upon request daily during normal business hours.

4.6 Notwithstanding Shipper's rights under Sections 4.1 or 4.2, Transporter may, at any time and from time to time, with notice to Shipper, restrict, interrupt, or reduce its receipts or deliveries of Gas at the Receipt Point(s) or Delivery Point(s), and direct Shipper to make adjustments in its receipts or deliveries, in order to maintain a daily and hourly balance or to correct an imbalance.

5. TERM

5.1 This Agreement shall become effective as of July 1, 2007 and shall continue through June 30, 2010. Notwithstanding the foregoing, the Transporter's obligation to transport Gas herender shall not commence until July 1, 2007. In the event there is an imbalance in the Cumulative Operational Gas Imbalance Account on the date of termination of this Agreement, then the imbalance volume will be cashed-out under the following terms. If gas is owed to Transporter, Shipper shall pay Transporter the Inside FERC HSC Price for the current month plus $0.10 per MMBtu. If gas is owed to Shipper, Transporter shall pay Shipper the Inside FERC HSC Price for the current month less $0.10 per MMBtu.

6. FEE

6.1 Demand Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Demand Fee each Day (the "Demand Fee") equal to $0.021 per MMBtu multiplied by the greater of either the receipt volume or Shipper's Reserved Capacity.

6.2 Commodity Fee. Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Commodity Fee each Day (the "Commodity Fee") equal to the applicable Commodity Fees per MMBtu set forth in Section 3.1(b) multiplied by the volumes received at the Receipt Point(s) for such Day and provide to Transporter a volume of Gas equal to the Retention Volume as set forth in Section 3.1.

6.3 Authorized Overrun Fee: In the event that Shipper receives authorization to overrun Shipper's Reserved Capacity, Shipper shall be subject to an authorized overrun charge per MMBtu as agreed to in writing at the time Transporter communicates its authorization to Shipper to overrun Shipper's Reserved Capacity (the "Authorized Overrun Fee").

6.4 In addition to the other fees and charges set forth in this Agreement, upon thirty (30) day advance notice, Shipper will pay, in advance, all applicable filing, reporting, and application fees, if any, that will be required of Transporter, or any other Party, including Shipper, in providing transportation services hereunder. At the time of this Agreement, Transporter is unaware of any applicable fees or charges under this Section 6.4.

7. PRESSURES

7.1 The Gas delivered by Shipper to the Receipt Point(s) hereunder shall be delivered at a pressure sufficient to overcome the operating pressure existing in Transporter's facilities from time to time; provided, however, in no event shall such pressures ever exceed the Maximum Allowable Operating Pressure ("MAOP") and Shipper shall at its sole cost and expense ensure that all documentation and data required by the applicable regulatory authority with regard to Shipper's or Shipper's supplier's overpressure protection facilities upstream of the Delivery Point(s) are made available and updated on an annual basis throughout the term of this Agreement. If Shipper fails to comply with the foregoing covenant, Transporter may, at Shipper's sole cost and expense, install such overpressure protection facilities (either upstream or downstream of the metering facilities, as Transporter may elect) in order to ensure compliance with applicable laws and regulations. The Gas delivered by Transporter to the Karnes and CPS Delivery Point(s) shall be delivered at a minimum pressure of 600 psig.

8. QUALITY

8.1 Shipper agrees that all Gas received by Transporter at the Receipt Point(s) hereunder and Transporter agrees that all Gas delivered hereunder to or for the account of Shipper at the Delivery Point(s) hereunder shall be merchantable Gas which shall:

a. Have a total heating value of not less than nine hundred fifty (950) British Thermal Units per cubic foot when saturated with water vapor (gross basis);

b. Be commercially free of all dust, hydrocarbon liquids, water, suspended matter, all gums and gum forming constituents and any other objectionable substances;

c. Not contain more than two (2) grains of total sulfur, nor more than one-fourth (1/4) grain of hydrogen sulfide per one hundred (100) standard cubic feet;

d. Contain no more than two percent (2%) by volume of carbon dioxide, two tenths of one percent (0.2%) by volume of oxygen, and three percent (3%) by volume of total inerts;

e. Have a temperature of not more than one hundred twenty degrees Fahrenheit (120°F.) or less than forty degrees Fahrenheit (40°F.);

f. Not contain more than seven (7) pounds of entrained water vapor per million cubic feet; and

g. Have a hydrocarbon dewpoint of 45°F or less at pipeline operating pressures between 200 psig and 1100 psig.

8.2 Shipper shall be responsible for odorizing any part of the Gas delivered hereunder at the Delivery Point(s) which is diverted and/or used for any purpose for which odorization is required pursuant to regulations of the Texas Railroad Commission.

8.3 Should the Gas delivered to either party hereunder fail to meet the quality specifications above, either party shall notify the other and the party responsible for the deficiency shall make a diligent effort to correct such failure. The party receiving the deficient Gas shall have the right to refuse to accept such Gas for so long as the other party is unable to deliver Gas conforming to such specifications, or either party may accept delivery of such Gas or any part thereof during such period. Should either party's tender of deficient Gas hereunder extend for a period greater than sixty (60) Days, the receiving party shall have the right and option at the end of such sixty (60) Days, and as long thereafter as the other

party continues to tender such non-conforming Gas, to terminate this Agreement on twenty-four (24) hours advance written notice to the other party stating the effective date of such termination.

8.4 Notwithstanding the foregoing, Transporter expressly reserves the right, at any time in the future, upon at least ninety (90) Days prior written notice to Shipper, to institute new, and from time to time revise, the quality specifications set forth above. Any modifications to the quality specifications set forth above will be applied on a nondiscriminatory basis for all similarly situated Shippers. Upon such modification of any such quality specifications by Transporter, Shipper will have the right to terminate this Agreement on the effective date of the modification by giving thirty (30) Days prior written notice to Transporter. If accepted by the Shipper, upon the effective date, such new quality specifications will supersede and replace the quality specifications set forth above.

9. METERING FACILITIES AND MEASUREMENT STANDARDS

9.1 Except as otherwise agreed by Transporter, the metering facilities to measure the volumes of Gas delivered at each Receipt Point(s) and Delivery Point(s) shall be maintained and operated or caused to be maintained and operated by Transporter. Measurement facilities shall include orifice, turbine, ultrasonic, or displacement meters or any other method that is mutually agreed upon by both parties and will be constructed and operated in accordance with the applicable standard identified below. Gas volumes shall be measured, meters and instruments calibrated, corrections undertaken, and measurement settlement adjustments made by Transporter in accordance with industry accepted practices. Such facilities and measurement data with respect to the Gas covered hereby shall at all reasonable times be subject to joint inspection by the parties hereto.

9.2 Gas volumes measured with the use of orifice meters shall be determined in accordance with the provisions of the Gas Measurement Committee Report No. 3 of the American Gas Association, dated 2000, as amended and/or supplemented from time to time or as mutually agreed upon by both parties. Gas volumes measured with the use of turbine meters shall be determined on the basis of Gas Measurement Committee Report No. 7 of the American Gas Association, dated 1996, as amended and/or supplemented from time to time or as mutually agreed upon by both parties. Gas volumes measured with the use of ultrasonic meters shall be determined in accordance with the provisions of the Gas Measurement Committee Report No. 9 of the American Gas Association, dated 1998, as amended and/or supplemented thereafter from time to time or as mutually agreed upon by both parties. Gas volumes measured with the use of positive meters shall be determined on the basis of Gas Measurement Committee Report No. 6 of the American Gas Association, dated 1971, as amended and/or supplemented from time to time or as mutually agreed upon by both parties.

9.3 The unit of volume for measurement of Gas delivered hereunder shall be one (1) cubic foot of Gas at a base temperature of sixty degrees Fahrenheit (60°F.) and at an absolute pressure of fourteen and sixty-five one hundredths (14.65) pounds per square inch absolute (psia) with volume reported in Mcf and energy reported in Dth (MMBtu). Atmospheric pressure for each of the Receipt or Delivery Point(s), or another point(s) selected by Transporter, shall be assumed to be the pressure value determined by the Transporter for the county in which such point is located pursuant to generally accepted industry practices (but not less than 14.1 psia nor more than 14.7 psia) irrespective of the actual atmospheric pressure at such points from time to time.

9.4 If electronic flow measurement (EFM) is used, the EFM device shall perform flow calculations as defined above and data logging requirements as recommended in the American Petroleum Institute, Manual of Petroleum Measurement Standards, Chapter 21, Section 1 – Electronic Gas Measurement (API Chapter 21).

9.5 Samples of the flowing gas stream shall be used for determining the relative density,

heating value, and compressibility. The compressibility factor shall be determined in accordance with the American Gas Association Report No. 8, as amended and/or supplemented from time to time or by other mutually agreeable methods. Sampling of the flowing gas stream shall be by on-line chromatograph, continuous sampling device, or spot sample at intervals determined to be appropriate by Transporter, but in no event less frequently than once every ninety (90) Days. Sampling shall be in accordance with Gas Producers Association (GPA) Standard 2166, as amended and/or supplemented from time to time or by other mutually agreeable methods. The determination of the chemical composition of the sample shall be in accordance with Gas Producers Association Standard 2261, as amended and/or supplemented from time to time or by other mutually agreeable methods. Component values shall be in accordance with the latest edition of Gas Producers Association Standard 2145, as amended and/or supplemented from time to time or by other mutually agreeable methods. Determination of relative density and heating value shall be in accordance with Gas Producers Association (GPA) Standard 2172, as amended and/or supplemented from time to time or by other mutually agreeable methods. Gas analysis results from a continuous sample or on line chromatograph shall be used to calculate volumes delivered during the same period in which the sample or analysis was conducted or accumulated. Gas analysis results from a spot sample shall be used to calculate volumes during the subsequent period until another sample is taken. The volume of Gas measured and reported in Mcf shall be multiplied by the applicable Btu factor for such Gas to determine the total energy content of the Gas in Dth (MMBtu).

10. METER TEST AND MEASUREMENT ERRORS.

10.1 At intervals determined to be appropriate by the measuring party, orifice and other types of meters and appurtenant instruments shall be calibrated in the presence of representatives of the other party. If the aggregate error in any measurement devices is found on test to register not more than one percent (1%) fast or slow in volume, then they shall be deemed to be correct. All measuring devices shall be adjusted upon test to register accurately within the tolerance allowed by their respective manufacturers. If the aggregate error in any measurement devices is more than one percent (1%) fast or slow in volume, adjustments shall be made by applying the percentage of error to the volume involved during the time the metering equipment was out of calibration, if this period can be ascertained. If the length of time the metering equipment was out of calibration cannot be ascertained, then the percentage of error will be applied to the volume delivered for one-half of the time elapsed since the date of the last calibration. During the time any meter is out of repair or is being tested, or in the event of a sudden failure of any meter to register for any period accurately within the one percent (1%) variation allowed herein, and if it is not feasible to install another meter, then the volume of Gas flowed shall be estimated with the mutual concurrence of both parties until a new or repaired meter is installed. Adjustment and settlement shall be made at the regular monthly periods on the basis of the best available data using the first of the following methods which is feasible:

a. By using the registration of any check measuring equipment, if installed and registering;

b. By correcting the error if the percentage of error is ascertainable by calibration, test or mathematical calculations; and

c. By estimating the quantity of deliveries by deliveries during preceding periods under similar conditions when the meter was registering accurately.

10.2 The measuring party shall give the other party notice of the time of all tests of meters and appurtenant instruments sufficiently in advance of the holding of such tests so that the other party may conveniently have its representatives present; provided, however, if the measuring party has given such notice to the other party and the other party is not present at the time specified, then the measuring party

may proceed with the tests as though the other party were present, and the results there from shall be deemed correct and accurate.

10.3 If Transporter determines that any measurement error results from pulsation, Shipper shall cause the owner of the facilities that are causing the pulsation to (at its or their expense), within sixty (60) Days of its receipt of notification, reduce the pulsation to a level such that the square root error in respect of pulsation is not greater than one percent (1%).

11. FORCE MAJEURE

11.1 Definition. An event of "Force Majeure" shall mean a restraint on Transporter's performance of one or more of its obligations under this Agreement ("Obligation" or "Obligations") resulting from a cause not within the control of Transporter (including, but not limited to, acts of negligence or willful misconduct of third parties, whether or not under the control, contract or supervision of Transporter) and which, by the exercise of due diligence and planning, that Transporter was unable to prevent. In this Section 11, the expression "due diligence and planning" shall mean that the standards and practices generally prevailing among operators of similar intrastate pipeline facilities in the United States have been adhered to.

11.2 Suspension. If, due to an event of Force Majeure, Transporter is unable to perform any Obligation in whole or in part, it shall be entitled, *unless otherwise* provided to the contrary in this Agreement, to claim suspension of that Obligation to the extent of and for the duration of the event of Force Majeure; *provided, however, that* Transporter gives written notice to Shipper, setting out the details of such Force Majeure event and its expected duration (if known) as soon as reasonably possible after the commencement of the event of Force Majeure.

11.3 Mitigation. When Transporter has claimed suspension of an Obligation under Subsection 11.2 above, Transporter shall be relieved of its commitment to perform that Obligation to the extent and for the period that the event of Force Majeure restrains Transporter's performance of that Obligation, *provided, however, that*:

i. Transporter effects those measures that are commercially reasonable in the circumstances to mitigate the cause of and effect of Force Majeure;

ii. Transporter recommences performance of such Obligation to the extent reasonably possible during the cessation of and upon the conclusion of the event of Force Majeure; and

iii. as soon as reasonably possible after the conclusion of the event of Force Majeure, gives notice to Shipper of the date of such conclusion.

11.4 Labor Disputes. Notwithstanding the above, the settlement of a strike, lockout or other industrial disturbance shall be entirely within the discretion of the Transporter.

11.5 Dependent Obligations. If pursuant to the provisions of Subsection 11.2 above, an Obligation of Transporter is suspended in whole or in part, the Obligations of Shipper (other than Shipper's payment obligations hereunder) shall also be suspended if and to the extent that such Obligations of Shipper are dependent upon or are a consequence of the performance of that Obligation. Notwithstanding the foregoing, should a Force Majeure event render Transporter unable to satisfy its obligations to Shipper for at least seven (7) consecutive days, then Transporter shall, for the remainder of the Force Majeure event, waive the Demand Fee for the obligations that cannot be satisfied by Transporter; provided, however, such waiver shall be effective only if (i) mutually acceptable alternative Primary and/or secondary Receipt Point(s) and/or Delivery Point(s) to satisfy the obligations of both parties are not available, (ii) Shipper is not in breach of this Agreement, and (iii) Shipper is not obligated to make payments of Demand Fees as set forth in Subsection 11.6 below.

11.6 Extended Force Majeure. If, due to any event of Force Majeure, Transporter cannot perform its Obligations fully or partially during any period of ninety (90) consecutive day, at Transporter's request, Shipper shall either, (i) resume payments of all Demand Fees, or (ii) agree to reduce the Maximum Daily Transportation Quantity and the Maximum Daily Delivery Quantities hereunder by the quantities that Transporter has consistently been unable to receive, transport and deliver in response to Shipper's nominations made during the preceding 90 day period.

11.7 Exclusions. Transporter shall not be entitled to the benefit of the provisions of Force Majeure hereunder if: (i) the failure resulting in an event of Force Majeure was caused by the gross negligence of Transporter; (ii) the failure was caused or extended by Transporter where Transporter failed to remedy the event by making all reasonable efforts (short of litigation, if such remedy would require litigation); or (iii) the failure was caused by lack of funds.

11.8 Service Interruptions. Transporter shall be excused from the performance of any Obligation that Transporter is unable to perform due to the necessity or desirability of repairing, altering, maintaining, inspecting, replacing, changing the size of, substituting or removing pipelines or appurtenant facilities. Such excuse of performance shall continue only for such time as interruption of service may be reasonable and unavoidable; and Transporter shall give Shipper reasonable notice of its intention to suspend performance hereunder, except in cases of emergency where such notice is impracticable, and shall endeavor to arrange such interruption so as to inconvenience Shipper as little as possible. Service interruptions as sanctioned by the provisions of this Subsection 11.8 are expressly included in the definition of "force majeure" for the purpose of this Agreement; provided however, the requirement that Transporter shall have been unable to prevent such service interruptions by the exercise of due diligence and planning, as required in Subsection 11.1 above, shall not apply to such service interruptions.

12. WARRANTIES, INDEMNIFICATIONS

12.1 Shipper warrants title to all Gas delivered by it hereunder and that it has the right to deliver the same hereunder and that such Gas is free from liens and adverse claims of every kind. Shipper shall be deemed to be in control and possession of the Gas prior to the receipt of the Gas by Transporter at the Receipt Point(s). Transporter shall be deemed to be in control and possession of the Gas after its receipt by Transporter at the Receipt Point(s) and prior to its delivery to Shipper or for Shipper's account at the Delivery Point(s). The Party in control and possession of the Gas will be responsible for and shall indemnify the other Party with respect to any losses, injuries, claims, liabilities or damages caused thereby or on account of royalties, taxes, payments, or other charges applicable and occurring while the Gas is in its possession. Each Party hereto covenants that with respect to the Gas delivered or redelivered by it hereunder, it will indemnify and save the other Party harmless from and against any and all suits, actions, causes of action, claims and demands arising from or out of any adverse claims by third parties claiming ownership of or an interest in the Gas so delivered or redelivered. Notwithstanding the foregoing, neither Party shall be indemnified for its own negligence, and the Parties acknowledge and agree that Shipper shall at all times have title to all Gas transported hereunder.

12.2 Shipper represents and warrants to Transporter (i) that all Gas delivered to Transporter hereunder will be produced in the State of Texas from reserves not dedicated or committed to interstate commerce, and (ii) that the Gas which Shipper delivers or receives hereunder will not have been or be sold, consumed, transported or otherwise utilized in interstate commerce at any point upstream of the Receipt Point(s) or downstream of the Delivery Point(s), nor have been or be commingled at any point upstream of the Receipt Point(s) or downstream of the Delivery Point(s) with other Gas which is or may be sold, consumed, transported or otherwise utilized in interstate commerce in such a manner which will subject the Gas subject to this Agreement or Transporter's or its designee's pipeline system, or any

portion thereof, to the jurisdiction of the Federal Energy Regulatory Commission or any successor authority under the Natural Gas Act. Shipper agrees to indemnify and hold Transporter harmless from and against any and all suits, actions, damages, costs, losses and expenses sustained by Transporter relative to any breach by Shipper of the covenants herein expressed.

12.3 THE PARTIES HERETO AGREE THAT NEITHER PARTY SHALL BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL, EXEMPLARY, PUNITIVE, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER, INCLUDING BUT NOT LIMITED TO THE LOSS OF USE, LOST PROFITS, ADDITIONAL OUT OF POCKET EXPENSES INCURRED BY THE OTHER PARTY, TORT AND CONTRACT CLAIMS, OR CONSEQUENT PROPERTY DAMAGES SUFFERED BY THE OTHER PARTY, IRRESPECTIVE OF WHETHER CLAIMS OR ACTIONS FOR SUCH DAMAGES ARE BASED ON CONTRACT, WARRANTY, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE; PROVIDED HOWEVER TRANSPORTER MAY RECOVER CONSEQUENTIAL DAMAGES RESULTING FROM THE DELIVERY BY SHIPPER OF GAS THAT DOES NOT CONFORM TO THE QUALITY SPECIFICATIONS IN SECTION 8 HEREOF OR BREACH OF SECTION 12.2 ABOVE.

13. CREDIT ASSURANCE

13.1 In the event Transporter determines Shipper's credit to be unsatisfactory in Transporter's sole reasonable opinion at any time during the term of this Agreement, Transporter may demand "Adequate Assurance of Performance" which shall mean sufficient security in an amount and for a term determined solely by Transporter and shall meet the requirements of this Section 13.1. Shipper, at its option, may provide one of the following forms of security:

(a) Post an irrevocable standby letter of credit in a form and from a bank reasonably satisfactory to Transporter, or

(b) Provide a prepayment or deposit for services.

13.2 Transporter will not be required to perform or continue to perform service hereunder in the event Shipper (i) makes an assignment or any general arrangement for the benefit of creditors; (ii) has voluntarily filed for bankruptcy protection under any chapter of the Bankruptcy Code; (iii) is the subject of an involuntary petition of bankruptcy under any chapter of the Bankruptcy Code, and such involuntary petition has not been settled or otherwise dismissed within ninety (90) Days of such filing; (iv) otherwise becomes insolvent, whether by an inability to meet its debts as they come due in the ordinary course of business or because its liabilities exceed its assets on a balance sheet test; and/or however such liabilities may otherwise be evidenced; or (v) fails to pay any amount due Tansporter hereunder on or before the second Business Day following written notice that such payment is due.

13.3 Should Shipper fail to provide Adequate Assurance of Performance to Transporter within two (2) Business Days after receipt of written demand for such assurance, then Transporter shall have the right to suspend performance under this Agreement until such time as Shipper furnishes Adequate Assurance of Performance. If such assurance is not provided by Shipper within ten (10) Business Days from written demand, Shipper may terminate this Agreement in addition to having any and all other remedies available hereunder.

14. BILLING, PAYMENT AND NOTICES

14.1 On or before the fifteenth (15th) Day of each calendar month, Transporter will render, a statement to Shipper setting forth, in terms of Mcf's and MMBtu's, the total quantity of Gas received hereunder at the Receipt Point(s), the quantity of Gas retained by Transporter, and the quantity of Gas delivered hereunder at the Delivery Point(s) during the immediately preceding calendar month and the amount payable therefore. Shipper agrees to pay Transporter by wire transfer (identifying the invoice number) the full amount payable according to such statement on or before ten (10) Days following the receipt thereof by Shipper. In the event such quantities are estimated for any period, corrected statements shall be rendered by Transporter to Shipper and paid by Shipper, or refunded or credited by Transporter, as the case may be, in each instance in which the actual quantity received or delivered hereunder with respect to a month shall be determined to be at variance with the estimated quantity theretofore made the basis of billing and payment hereunder. If an error is discovered in the amount billed in any statement rendered by Transporter, then such error will be adjusted within thirty (30) Days of the discovery of the error.

14.2 If a bonafide dispute arises as to the amount payable in any statement rendered, then Shipper will nevertheless pay the undisputed amount payable to Transporter under the statement rendered pending resolution of the dispute. Upon resolution of such dispute, Shipper will pay any monies owed Transporter per the terms of this Section 14.

14.3 In addition to all other remedies available to Transporter, should Shipper fail to pay any amount when the same becomes due, interest shall accrue thereon at a rate equal to the prime rate from time to time in effect and charged by the Citibank, N.A., New York, New York, plus two percent (2%) per annum, (but in no event greater than the maximum rate of interest permitted by law) with adjustments in such rate to be made on the same Day as any change in such prime rate, for any period during which the same shall be overdue, such interest to be paid when the amount past due is paid. Each Party hereto or its representative shall have the right at all reasonable times to examine the books and records of the other Party to the extent necessary to verify the accuracy of any statement, charge, computation or demand made under or pursuant to this Agreement. If any such examination shall reveal or if either Party shall discover, any error in its own or the other Party's statements, calculation, or determinations, then proper adjustments and correction thereof shall be made promptly as practicable thereafter. Any statement shall be final as to all Parties unless questioned within two (2) years after payment thereof has been made. Any notice, request or statement provided pursuant to this Agreement shall be in writing and shall be considered as having been given if delivered personally or, if mailed by United States mail, postage prepaid, or if sent by express mail or overnight delivery or electronic mail or if sent be facsimile to the other Party when sent to the following:

15. ASSIGNMENT

15.1 This Agreement shall be binding upon and inure to the benefit of the successors, assigns and legal representatives of the Parties hereto; provided, however, Shipper shall not assign this Agreement, or any portion hereof, or any of its rights and obligations hereunder, by merger or otherwise, without first securing the prior written consent of Transporter which will not be unreasonably withheld. Notwithstanding the foregoing, either Party may assign this Agreement to an affiliated entity without consent.

16. TAXES

16.1 Shipper agrees to reimburse Transporter upon invoice for the full amount of any taxes or charges (of every kind and character except franchise and excess profits taxes and taxes measured by net income) levied, assessed or fixed by any municipal or governmental authority against Transporter or its business in connection with or attributable to the volumes, value or gross receipts from the transportation of the Gas received from Shipper hereunder or against such Gas itself or the act, right or privilege of ownership, production, severance, handling, transmission, compression, treating, distribution, sale, delivery or redelivery of such Gas, whether such tax or charge is based upon the volume, value or gross receipts from the transportation of such Gas or upon some other basis.

17. GOVERNMENTAL REGULATIONS

17.1 This Agreement and the transportation arrangement hereunder are subject to all valid existing and future laws, orders, rules, regulations and proclamations of duly constituted governmental authorities having jurisdiction or control over the parties hereto or the subject matter hereof. If at any time any such governmental authority shall take any action which is, with respect to or as a result of the transportation service provided for under this Agreement, designed to subject or otherwise subjects either party or any of its pipeline or related facilities to any greater or different regulation or jurisdiction than that existing on the date hereof (or thereafter as such regulation or jurisdiction may have changed and been accepted by such party), then upon written notice to the other, the party so affected may at any time thereafter or effective one (15) Day prior to the effective date of such action terminate this Agreement without further obligation to the other party except in the case of Shipper to make payment for services

rendered hereunder and, in the case of either Transporter or Shipper, to correct any Gas imbalance existing on the date of such termination.

17.2 In the event any governmental or regulatory body exercising jurisdiction over the service hereunder establishes fees for applications or reports filed in conjunction with such service, Shipper shall reimburse or cause to be reimbursed Transporter upon billing for any fees so paid by Transporter, and to the extent that such fees are imposed on the aggregate number of shippers or on a volumetric basis, these fees shall be charged on a prorate basis or based on volume.

18. MISCELLANEOUS

18.1 This Agreement contains the entire agreement between the Parties hereto on the date hereof, respecting the subject matter hereof, and there are no prior or contemporaneous agreements or representations affecting such subject matter other than those therein expressed.

18.2 It is further agreed that no modification or change herein shall be enforceable unless reduced to writing and executed by both Parties.

18.3 No waiver by either Party hereto of any one or more defaults by the other in the performance of any of the provisions of this Agreement shall operate or be construed as a waiver of any future default or defaults whether of a like kind or different nature.

18.4 This Agreement shall be construed, enforced and performed in accordance with the laws of the State of Texas, disregarding any conflict of laws principles that would refer to the laws of any different jurisdiction for any interpretation or construction of this Agreement. If any provision hereof conflicts with such laws or with public policy that cannot be or is not waived hereby, then to the extent of such conflict this Agreement shall be deemed modified to conform therewith.

18.5 Except with respect to specific enforcement of any confidentiality obligation or a request for injunctive relief, any and all claims, demands, causes of action, disputes, controversies and other matters arising out of or relating to this Agreement, and of its provisions or the relationship between the Parties created by this Agreement, whether sounding in tort, contract, or the common law, for damages or any other relief, shall be resolved by binding, self-administered arbitration pursuant to the Commercial Arbitration Rules of the American Arbitration Association ("AAA") and all such proceedings shall be subject to the Federal Arbitration Act. There shall be three arbitrators. Each Party shall designate an arbitrator, who needs not be neutral, within thirty (30) days of receiving notification of the filing with the AAA of a demand for arbitration. If either Party fails to designate an arbitrator within thirty (30) days, the other Party may have an arbitrator appointed by applying to the senior active United States District Judge for the Southern District of Texas. The two arbitrators shall select a third arbitrator. If the two arbitrators chosen by the Parties fail to agree upon the third arbitrator, both or either of the Parties may apply to the senior active United States District Judge for the Southern District of Texas for the appointment of a third arbitrator. The third arbitrator shall take an oath of neutrality. The third arbitrator must have knowledge of and over five years of professional experience in connection with similar transactions and must not have had been employed or retained by either Party and must not have a direct or indirect interest in either Party or the subject matter of the arbitration. Such arbitration shall be held in Houston, Texas. The rules of the AAA shall apply to the extent not inconsistent with the rules herein specified. The arbitration shall be conducted according to the following procedures: (a) the arbitration hearing shall commence no later than one hundred twenty (120) days after the selection of the third arbitrator; (b) not lather than seven (7) Days prior to the hearing date set by the arbitrators each Party shall submit a brief detailing its factual and legal position and a final offer for settlement of the dispute including a dollar amount, if appropriate; (c) the hearing shall be conducted on a confidential basis without continuance or adjournment; (d) the arbitrators shall be limited to selecting only one (1) of the

two (2) offers or, if applicable, one (1) of the dollar amounts submitted by the Parties; (e) each Party shall divide equally the cost of the third arbitrator and the hearing and each Party shall be responsible for its own expenses and those of its arbitrator, counsel and representatives; and (f) evidence concerning the financial position of the Parties, any offer made or the details of any negotiation prior to arbitration and the cost to the Parties of their representatives and counsel shall not be permissible. The award of the arbitrators shall be made no later than thirty (30) days after the date of closing of the hearing, or if oral hearings have been waived, after the date of transmitting the final statements and proof to the arbitrators. The decision of the arbitrators shall be final and binding on the Parties, enforceable in any state court, and shall not be appealed by either Party. The arbitrators shall apply the substantive laws of the State of Texas (excluding Texas choice-of-law principles that might call for application of the law of some other state). Only damages allowed pursuant to this Agreement may be awarded and the arbitrators shall have no authority to award treble, exemplary or punitive damages of any type under any circumstances regardless of whether such damages may be available under Texas law.

18.6 The provisions of this Agreement shall not impart rights enforceable by any person, firm or organization not a Party or not bound as a Party, or not a successor or assignee of a Party bound to this Agreement.

18.7 This Agreement was prepared jointly by the Parties hereto. This Agreement was prepared with each of the Parties having access to their own legal counsel, and the Parties waive any claim they may have now or in the future based on this Agreement not having been prepared jointly by the Parties.

IN WITNESS WHEREOF, the Parties hereto have caused this instrument to be executed in multiple originals effective and operative as of the date first hereinabove written.

AMENDMENT
TO
FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT

THIS AMENDMENT TO FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT ("Amendment") is made and entered into on this the ___ day of June, 2010, but effective and operative as of July 1, 2010 (the "Effective Date"), by and between City of San Antonio acting by and through the City Public Service Board ("Shipper") and Houston Pipe Line Company LP, a Delaware limited partnership, ("Transporter") (each a "Party" and collectively, "Parties").

W I T N E S S E T H :

WHEREAS Shipper and Transporter have entered into that certain Firm Intrastate Gas Transportation Agreement effective and operative as of the 1st day of July, 2007 (the "Agreement"), governing the transportation of natural gas by Transporter for Shipper that is not subject to the Federal Energy Regulatory Commission's ("FERC") regulations under the Natural Gas Act of 1938, as amended ("NGA"); and

WHEREAS, Shipper and Transporter desire to and hereby agree to amend the Agreement as hereinafter provided.

NOW, THERFORE, in consideration of the sum of One Dollar ($1.00) and the mutual covenants and agreements herein set forth, the parties agree that the Agreement is amended as follows:

A. **Amendments**. Shipper and Transporter agree that:

1. The following definitions are modified in or added to Article 1:

   a. Section 1.15 is amended to insert the words "or "Gas Daily HSC mid posting"" following the words ""Gas Daily Houston Ship Channel index (midpoint) posting"".

   b. Section 1.16 is amended to insert the words "or "Gas Daily Katy mid posting"" following the words ""Gas Daily Katy index (midpoint) posting""

   c. 1.32 "ICE" shall mean the electronic interface operated as part of the electronic exchange relating to energy commodities including natural gas, facilitated by the Intercontinental Exchange or its successor or assign.

2. Paragraph 3.1 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

> "(b) Receipts at the following Receipt Points shall be on a ratable basis as specified below. Meter capacities shall be Firm for quantities nominated by 11:30 a.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Receipt Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable receipt point(s) may be added by Transporter and Shipper from time to time. Shipper or

Attorneys Eyes Only CPSE-MDL_000026208

Shipper's designee shall be responsible to provide sufficient pressures to effectuate deliveries into Transporter's system at the Receipt Points listed below. Transporter shall not be obligated to provide compression or alter pipeline operations to effectuate the receipts of Gas into Transporter's system.

Location/Meter#	Meter Capacity MMBtu/d	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu
Oasis Katy #98-6780	75,000	0.25%	$0.02
Duke Katy #98-8740	20,000	0.25%	$0.03
HSC Pool #98-7342	20,000	0.25%	$0.02
Lone Star Katy #98-0067	20,000	0.25%	$0.03
Bammel #98-7367	15,000	0.25%	$0.05
Enstor Katy #98-0072	25,000	0.25%	$0.03
Freeport LNG #98-8470	10,000	0.50%	$0.08
Copano Sheridan #98-7443	10,000	0.25%	$0.05
Lobo Aqua Dulce #98-7038	5,000	1.00%	$0.06
King Ranch Tailgate #98-84892	5,000	1.25%	$0.06

3. Paragraph 3.2 (a) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to wit:

"(a) The Primary Delivery Point for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at Transporter's Karnes Delivery Point measurement facilities (Meter # 98-7357) located in Karnes County, Texas. The Karnes Delivery Point capacity shall be a minimum of 10,000 MMBtu per day up to a maximum of 125,000 MMBtu per day."

4. Paragraph 3.2 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"(b) The Secondary Delivery for Gas that Transporter transports or causes to be redelivered for the account of Shipper shall be at the HPL Bammel Delivery Point (HPL Meter #98-7367) located in Harris County, Texas. The HPL Bammel Delivery Point is provided to Shipper on a firm basis for up to a maximum of 30,000 MMBtu per day provided that Shipper has entered into a Firm Intrastate Gas Storage Agreement with Transporter."

5. Paragraph 4.3 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.3 Shipper must nominate prior to 11:30 a.m. (Central Clock Time) the Receipt Point(s) and Delivery Point(s) each day, the gas volumes to be received and delivered the following day. Weekend and ICE recognized holiday deliveries shall be nominated no later than the applicable 11:30 a.m. of the Business Day prior to delivery. Any intra-day nomination changes between Receipt Point(s) and Delivery Point(s), if notified during normal business hours at least one and one-half hours prior to the time such change is to take effect, shall be made as soon as practical if, at Transporter's sole discretion, such change can be made without detriment to other volumes being handled by

Attorneys Eyes Only CPSE-MDL_000026209

Transporter's pipeline facilities. In the event that Transporter establishes a Web-based online nomination system, Shipper shall submit nominations using that system. Transporter will schedule and confirm Shipper's Nomination with upstream and downstream operators. The deadline for submitting nominations for the first (1st) of each month is 11:30 a.m. (CCT), as applicable by points, two (2) Business Days prior to the beginning of each month. Shipper has the right to nominate volumes up to Shipper's Reserved Capacity."

6. Paragraph 4.4 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.4 Shipper will balance, on an hourly and daily basis, between the Gas received by Transporter at the Receipt Point(s), less the Retention Volumes, and the Gas delivered at the Delivery Point(s). If Shipper's imbalance exceeds the imbalance tolerances as defined in this Agreement, then Shipper remains responsible for such imbalances in accordance with the imbalance provisions of this Agreement providing such imbalance was not caused by Transporter. Imbalances caused by Transporter will be scheduled as payback as soon as practical. If Transporter is unable to receive Gas at any Receipt Point in the quantities scheduled, or deliver Gas at any Delivery Point in the quantities scheduled, as provided for herein, Transporter will notify Shipper as soon as practicable."

7. Paragraph 4.5 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.5 After application of the scheduled volumes any remaining variance or imbalance between the volumes of Gas received at the Receipt Point(s) and delivered at the Delivery Point(s) during a given Day will be recorded in a Gas Imbalance Account. If the absolute volume in the Gas Imbalance Account is greater than a plus or minus MMBtu tolerance equal to 20,000 MMBtu ("Cumulative Operational Imbalance Tolerance"), imbalances greater than or less than the Cumulative Tolerance shall be cashed out on a daily basis. Daily quantities that exceed the Cumulative Tolerance noted above (gas due Shipper) shall be purchased by Transporter priced at the lower of (i) 98.25% of the Gas Daily Katy or Gas Daily HSC mid posting for the day of flow less $0.04, or (ii) 98.25% of the next Gas Daily Katy or Gas Daily HSC mid postings published the day after flow less $0.04.; and daily quantities less than the Cumulative Operational Imbalance Tolerance of noted above (gas due Transporter) shall be sold to Shipper at the higher of (i) the Gas Daily Katy or Gas Daily HSC mid posting for the day of flow plus $0.04, (ii) the next Gas Daily Katy or Gas Daily HSC mid postings published after the day of flow plus $0.04. Any physical flow adjustments for imbalance makeup will be made as mutually agreed to by the Parties (which shall be confirmed in writing via fax or email by Transporter, with an acknowledgment to be returned to Transporter by Shipper) to adequately control Imbalance levels. The daily and cumulative imbalance(s) will be determined at the end of each Gas Day and will be made available to Shipper upon request. Imbalance information shall be based on the best data then available to Transporter, including, but not limited to, nominations, allocations, electronic measurement data, and meter observations. The provision of such information by Transporter shall not relieve Shipper of its obligations under this Agreement to avoid, correct and eliminate actual imbalances."

8. Paragraph 5.1 of Article 5, Term, of the Agreement is amended by deleting the first sentence in its entirety and substituting the following in lieu thereof, to-wit:

Attorneys Eyes Only CPSE-MDL_000026210

"This Agreement shall become effective as of July 1, 2007 and shall continue through June 30, 2013."

9. Paragraph 6.1 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.1 Demand Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Demand Fee each Day (the "Demand Fee") equal to $0.04 per MMBtu multiplied by the greater of either the receipt volume or Shipper's Reserved Capacity.

B. **Miscellaneous**

1. Entire Agreement. This Amendment constitutes the entire agreement and understanding of the parties with respect to its subject matter, and except as amended herein, the Agreement shall remain in full force and effect as written.

2. Non-reliance. Each Party acknowledges that in agreeing to this Amendment it has not relied on any oral or written representation, warranty or other assurance and waives all rights and remedies which might otherwise be available to it in respect thereof, except that nothing in this Amendment will limit or exclude any liability of a Party for fraud.

3. Headings. The headings used in this Amendment are for convenience of reference only and are not to affect the construction of or to be taken into consideration in interpreting this Amendment.

4. Governing Law. This Amendment will be governed by and construed in accordance with the law specified to govern the Agreement.

5. Counterparts. This Amendment (and each amendment, modification and waiver in respect of it) may be executed and delivered in any number of counterparts (including by facsimile transmission or PDF files) and all of such counterparts taken together shall be deemed to constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties hereto have executed this Amendment to take effect as of the Effective Date stated above.

SECOND AMENDMENT
TO
FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT

THIS SECOND AMENDMENT TO FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT ("Amendment") is made and entered into effective and operative as of April 18, 2012 (the "Effective Date"), by and between City of San Antonio acting by and through its City Public Service Board ("Shipper") and Houston Pipe Line Company LP, a Delaware limited partnership, ("Transporter") (each a "Party" and collectively, "Parties").

W I T N E S S E T H :

WHEREAS Shipper and Transporter have entered into that certain Firm Intrastate Gas Transportation Agreement effective and operative as of the 1st day of July, 2007, as heretofore amended, (the "Agreement"), governing the transportation of natural gas by Transporter for Shipper that is not subject to the Federal Energy Regulatory Commission's ("FERC") regulations under the Natural Gas Act of 1938, as amended ("NGA"); and

WHEREAS, Shipper and Transporter desire to and hereby agree to further amend the Agreement as hereinafter provided.

NOW, THERFORE, in consideration of the sum of One Dollar ($1.00) and the mutual covenants and agreements herein set forth, the parties agree that the Agreement is amended as follows:

A. **Amendments.** Shipper and Transporter agree that:

1. Paragraph 3.1 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

> "3.1 (b) Receipts at the following Receipt Points shall be on a ratable basis as specified below. Meter capacities shall be Firm for quantities nominated by 11:30 a.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Receipt Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable receipt point(s) may be added by Transporter and Shipper from time to time. Shipper or Shipper's designee shall be responsible to provide sufficient pressures to effectuate deliveries into Transporter's system at the Receipt Points listed below. Transporter shall not be obligated to provide compression or alter pipeline operations to effectuate the receipts of Gas into Transporter's system.

Location/Meter#	Meter Capacity MMBtu/d	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu
Oasis Katy #98-6780	100,000	0.25%	$0.02
Duke Katy #98-8740	20,000	0.25%	$0.03
HSC Pool #98-7342	60,000	0.25%	$0.02
Lone Star Katy #98-0067	20,000	0.25%	$0.03
Bammel #98-7367	50,000	0.25%	$0.04
Enstor Katy #98-0072	25,000	0.25%	$0.03

Attorneys Eyes Only

Freeport LNG #98-8470	10,000	0.50%	$0.08
Copano Sheridan #98-7443	10,000	0.25%	$0.05
Lobo Aqua Dulce #98-7038	10,000	1.00%	$0.06
King Ranch Tailgate #98-9643	10,000	1.25%	$0.06"

2. Paragraph 3.2 (a) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to wit:

"3.2 (a) Deliveries at the following Primary Delivery Points shall be on a ratable basis except as otherwise specified below. Meter capacities shall be Firm for quantities nominated by 11:30 a.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Delivery Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable delivery point(s) may be added by Transporter and Shipper from time to time.

Primary Delivery Points

Location/Meter#	**Meter Capacity MMBtu/d**	**Commodity Fee/MMBtu**
*HPL Rio Nogales #98-1621	135,000	$0.06
*Oasis Rio Nogales #1702	135,000	$0.06
Enterprise Karnes #98-1451	20,000	$0.01
HPL Karnes #98-7357	150,000	$0.00
Bammel #98-7367	25,000	$0.00

*The Non-Ratable Delivery Point(s) (Nominated Volume divided by 16) for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at the above Rio Nogales Delivery Point(s) measurement facilities located in Guadalupe County, Texas, such Rio Nogales Delivery Point(s) being the only non-ratable points – nominated volume divided by 16. The combined Rio Nogales Delivery Point(s) capacity shall be a maximum of 135,000 MMBtu per day with deliveries thereat shall be on a non-ratable basis and the Maximum Hourly Quantity shall be the scheduled volume divided by 16 capped at 5,800 MMbtu per hour. Transporter agrees to operate on pressure control at the Rio Nogales Delivery Point(s) and maintain an operating pressure of not less than 600 psig."

3. Paragraph 3.2 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"(b) The Gas that Transporter transports or causes to be redelivered for the account of Shipper at the Oasis Rio Nogales Delivery Point shall be used for HPL operational issues only. The Oasis Rio Nogales Delivery Point is provided to Shipper on a firm basis and Shipper shall have no obligation to nominate the volumes or pay any additional fees for volumes that Transporter delivers thereat."

4. Paragraph 3.2 (c) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"(c) The Primary Delivery Points identified in paragraphs (a) and (b) above are hereinafter called the ("Delivery Points"). The combined Maximum Daily Quantity for all delivery points shall not exceed 150,000 MMBtu per day."

Attorneys Eyes Only CPSE-MDL_000026214

5. Paragraph 4.2, of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.2 Shipper's Reserved Capacity under this Agreement is a Maximum Daily Quantity ("MDQ") equal to 150,000 MMBtu per day. In the event Shipper nominates any volume less than the MDQ for delivery to the Rio Nogales Delivery Point(s) for any given Day during the term hereof, then the Maximum Hourly Quantity (MaxHQ) Transporter is obligated to deliver, and Shipper is obligated to receive, shall equal Shipper's total nominated deliveries at the Rio Nogales Delivery Point(s) divided by sixteen (16) capped at 5,800 MMBtu per hour plus Shipper's total nominated deliveries at the other Delivery Point(s) divided by twenty four (24), plus the available storage withdrawal quantity divided by twenty-four (24). Subject to the terms, conditions and limitations contained herein, Shipper agrees to deliver, or cause to be delivered, to the Receipt Point(s), and Transporter agrees to accept, or cause to be accepted, those daily quantities of Shipper's Gas scheduled in accordance with this Article 4 and tendered daily at the Receipt Point(s), however, in no event shall Shipper tender volumes of Gas for transportation hereunder on any Day in excess of the volumes of transport Gas that Shipper has nominated at the Delivery Point(s) each Day, balanced with available storage injections and withdrawals. Subject to the terms, conditions and limitations contained herein, Shipper agrees to accept, or cause to be accepted, at the Delivery Point(s), and Transporter agrees to transport and redeliver, or cause to be transported and redelivered, on a Firm basis all volumes received, up to the MDQ, for transportation to the Delivery Point(s), the scheduled daily volume of Gas, in terms of MMBtu, equal to the scheduled daily volume of Gas, in terms of MMBtu, delivered by or for the account of Shipper at the Receipt Point(s), balanced with available storage injections and withdrawals. Transporter and Shipper may agree for Transporter to transport or deliver quantities of Gas in excess of the MDQ or Shipper's daily nominated quantity, whichever is less, or the Maximum Hourly Quantity on an interruptible basis. Any variation will be confirmed in writing via fax or email by Transporter, with an acknowledgment returned to Transporter by Shipper."

6. Paragraph 4.4 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.4 (a) Shipper will balance, on an hourly and daily basis, between the Gas received by Transporter at the Receipt Point(s), less the Retention Volumes, and the Gas delivered at the Delivery Point(s) as described herein. If Shipper's imbalance exceeds the imbalance tolerances as defined in this Agreement, then Shipper remains responsible for such imbalances in accordance with the imbalance provisions of this Agreement providing such imbalance was not caused by Transporter. Imbalances caused by Transporter will be scheduled as payback as soon as practical. If Transporter is unable to receive Gas at any Receipt Point in the quantities scheduled, or deliver Gas at any Delivery Point in the quantities scheduled, as provided for herein, Transporter will notify Shipper as soon as practicable.

"(b) An hourly imbalance shall exist if the quantities of Gas delivered at an hourly rate to a Delivery Point(s) for the account of Shipper are more than the quantities of Gas received at the Receipt Point(s) adjusted for the non-ratable 16 hour swing provision provided for the account of Shipper, less the Retention Volume and adjusted with available storage withdrawals. If upon Transporter's notice, Shipper does not adjust

Attorneys Eyes Only

its hourly flows to be within the defined tolerances within this Agreement as to the MaxHQ, then in addition to any other remedies available to Transporter, Shipper may be assessed an hourly fee equal to (i) twenty-five ($0.25) per MMBtu for hourly imbalances of greater than ten percent (10) of the MaxHQ or (ii) fifty cents ($0.50) per MMBtu for hourly imbalances of greater than twenty-five percent (25%) of the MaxHQ, such fees to be applied to over-delivered quantities (the "Hourly Imbalance Fee"). (See the attached schedule for an example of the treatment of hourly imbalances.)

"(c) Notwithstanding Shipper's rights under Section 4.2, Shipper will balance, on a daily basis, between the Gas received by Transporter at the Receipt Point(s), less the Retention and Fuel Volume, and the Gas delivered at the Delivery Point(s) balanced with available storage injections and withdrawals. Any imbalances, hourly, daily, and cumulative, accrued under this Agreement will be first reduced by available injections or withdrawals utilizing Shipper's Master Intrastate Gas Storage Agreement of even date herewith. To the extent that there are sufficient capacities available under Shipper's Master Intrastate Gas Storage Agreement to balance receipts and deliveries under this Agreement, then Transporter shall utilize without notice such capacities to balance Shipper's receipts and deliveries on an hourly and a daily basis and Shipper will not be responsible or liable for otherwise applicable daily balancing charges for the volumes of storage activity that is utilized to reduce or eliminate imbalances. For purposes of balancing daily, Shipper will only be charged for the net of the combined hourly injections and withdrawals, resulting in either a net injection or a net withdrawal for the Day. However, if resulting from Shipper exceeding the maximum daily quantities set forth in Shipper's Master Intrastate Gas Storage Agreement, Shipper's imbalance exceeds the imbalance tolerances as defined in this Agreement, then Shipper remains responsible for such imbalances in accordance with the imbalance provisions of this Agreement. Shipper must monitor and adjust its nominations, deliveries, and receipts to maintain the daily balances between the Receipt Point(s) and Delivery Point(s) adjusted for the no notice service provisions under this Agreement. Notwithstanding Shipper's rights under Section 4.2, Transporter has no obligation to receive or deliver quantities of Gas on a daily basis that differ from the scheduled volumes as adjusted for the no notice service described herein."

7. Paragraph 4.5 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.5 After application of the scheduled receipt volumes, previous Day's Gas Imbalance Account volumes and available storage injection and withdrawal volumes, any remaining variance or imbalance during a given Day will be recorded in a "Gas Imbalance Account". If the absolute volume in Gas Imbalance Account is greater than a plus or minus MMBtu tolerance equal to 15,000 MMBtu (the "Daily Operational Imbalance Tolerance") or 30,000 MMBtu (the "Cumulative Operational Imbalance Tolerance") , then imbalances greater than or less than the Cumulative or Daily Operational Imbalance Tolerance shall be cashed out on a daily basis. Daily quantities that exceed the Cumulative or Daily Operational Imbalance Tolerance noted above (gas due Shipper) shall be purchased by Transporter priced at the lower of (i) 98.25% of the Gas Daily Katy or Gas Daily HSC mid posting for the day of flow less $0.04, or (ii) 98.25% of the next Gas Daily Katy or Gas Daily HSC mid postings published the day after flow less $0.04.; and daily quantities less than the Cumulative or Daily Operational Imbalance Tolerance noted above (gas due Transporter) shall be sold to Shipper at the higher of (i) the Gas Daily Katy or Gas Daily HSC mid posting for the day of flow plus $0.04, (ii) the next Gas Daily Katy or Gas Daily HSC mid postings published after the day of flow plus $0.04.

Attorneys Eyes Only

Any physical flow adjustments for imbalance makeup will be made as mutually agreed to by the Parties (which shall be confirmed in writing via fax or email by Transporter, with an acknowledgment to be returned to Transporter by Shipper) to adequately control Imbalance levels. The daily and cumulative imbalance(s) will be determined at the end of each Gas Day and will be made available to Shipper upon request. Imbalance information shall be based on the best data then available to Transporter, including, but not limited to, nominations, allocations, electronic measurement data, and meter observations. The provision of such information by Transporter shall not relieve Shipper of its obligations under this Agreement to avoid, correct and eliminate actual imbalances."

8. Paragraph 5.1 of Article 5, Term, of the Agreement is amended by deleting the first sentence in its entirety and substituting the following in lieu thereof, to-wit:

"This Agreement shall become effective as of July 1, 2007 and shall continue through March 31, 2015."

9. Paragraph 6.1 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.1 Demand Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Demand Fee each Day (the "Demand Fee") equal to $0.06 per MMBtu multiplied by the greater of either the receipt volume or Shipper's Reserved Capacity."

10. Paragraph 6.2 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.2 Commodity Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Commodity Fee each Day (the "Commodity Fee") equal to the applicable Commodity Fees per MMBtu set forth in Section 3.1(b) and 3.2(a) multiplied by volumes received at the Receipt Point(s) or delivered at the Delivery Point(s), as applicable, for such Day and provide to Transporter a volume of Gas equal to the Retention Volume as set forth in Section 3.1."

B. Miscellaneous

1. Entire Agreement. This Amendment constitutes the entire agreement and understanding of the parties with respect to its subject matter, and except as amended herein, the Agreement shall remain in full force and effect as written.

2. Non-reliance. Each Party acknowledges that in agreeing to this Amendment it has not relied on any oral or written representation, warranty or other assurance and waives all rights and remedies which might otherwise be available to it in respect thereof, except that nothing in this Amendment will limit or exclude any liability of a Party for fraud.

3. Headings. The headings used in this Amendment are for convenience of reference only and are not to affect the construction of or to be taken into consideration in interpreting this Amendment.

4. Governing Law. This Amendment will be governed by and construed in accordance with the law specified to govern the Agreement.

Attorneys Eyes Only CPSE-MDL_000026217

5. Counterparts. This Amendment (and each amendment, modification and waiver in respect of it) may be executed and delivered in any number of counterparts (including by facsimile transmission or PDF files) and all of such counterparts taken together shall be deemed to constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties hereto have executed this Amendment to take effect as of the Effective Date stated above.

THIRD AMENDMENT
TO
FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT
(Contract Number 97001347)

THIS THIRD AMENDMENT TO FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT ("Amendment") is made and entered into effective and operative as of April 1, 2015 (the "Effective Date"), by and between City of San Antonio acting by and through the City Public Service Board ("Shipper") and Houston Pipe Line Company LP, a Delaware limited partnership, ("Transporter") (each a "Party" and collectively, "Parties").

W I T N E S S E T H :

WHEREAS Shipper and Transporter have entered into that certain Firm Intrastate Gas Transportation Agreement effective and operative as of the 1st day of July, 2007, as heretofore amended, (the "Agreement"), governing the transportation of natural gas by Transporter for Shipper that is not subject to the Federal Energy Regulatory Commission's ("FERC") regulations under the Natural Gas Act of 1938, as amended ("NGA"); and

WHEREAS, Shipper and Transporter desire to and hereby agree to further amend the Agreement as hereinafter provided.

NOW, THERFORE, in consideration of the sum of One Dollar ($1.00) and the mutual covenants and agreements herein set forth, the parties agree that the Agreement is amended as follows:

A. **Amendments**. Shipper and Transporter agree that:

1. Paragraph 3.1 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

> "3.1 (b) Receipts at the following Receipt Points shall be on a ratable basis as specified below. Meter capacities shall be Firm for quantities nominated by 11:30 a.m. (CCT) one (1) Business Day prior to the period of flow. Other mutually agreeable receipt point(s) may be added by Transporter and Shipper from time to time. Shipper or Shipper's designee shall be responsible to provide sufficient pressures to effectuate deliveries into Transporter's system at the Receipt Points listed below. Transporter shall not be obligated to provide compression or alter pipeline operations to effectuate the receipts of Gas into Transporter's system.

Location/Meter#	**Fuel Requirements per MMBtu (Retention Volume)**	**Commodity Fee/MMBtu**
Zone 1 – Katy Area Receipt Points – an aggregate quantity of 105,000 MMBtu per day		
Oasis Katy #98-6780	0.5%	$0.02
HSC Pool #98-7342	0.5%	$0.02
Lone Star Katy #98-0067	0.5%	$0.03
Bammel #98-7367*	0.5%	$0.04

Enstor Katy #98-0072	0.5%	$0.03

*Receipts from Shipper's Storage Account only.

Location/Meter#	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu

Zone 2 – South Texas Receipt Points – an aggregate quantity of 15,000 MMBtu per day

DCP Three Rivers Plant #98-9948	0.75%	$0.04
ETC Kenedy Plant #98-4598	0.50%	$0.06
DCP – Dewville into MidTex*	0.50%	$0.03

* If use is requested by Shipper and associated costs are reviewed in advance and approved in writing by Shipper, Shipper shall reimburse Transporter for the capital cost to install the interconnect facilities between the "South Texas 30" and the DCP Guadalupe system. The upstream pipeline shall be required to provide the necessary compression to effectuate deliveries into Transporter's South Texas 30" system.

Location/Meter#	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu

Zone 3 – Agua Dulce Area Receipt Points – an aggregate quantity of 15,000 MMBtu per day

Conoco Lobo AD #98-7038	0.75%	$0.02
NET AD #98-0114	0.75%	$0.03
DCP Gulf Plains #98-6363	0.75%	$0.02
Teak AD #98-0113	0.75%	$0.02
ETC King Ranch #98-9643	0.75%	$0.01

Location/Meter#	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu

Zone 4 – Waha Area Receipt Points – an aggregate quantity of 25,000 MMBtu per day

Oasis/HPL Prairie Lea #98-7101*	0.00%	$0.00

*Receipts from Shippers Oasis transport agreement #28-10318-02-201 and 28-10318-02-101

The quantity of gas available for receipt at each of the Receipt Point(s) listed above is subject to available capacity as agreed by the parties in accordance with the Nomination procedures." Total receipts under this agreement, Houston Pipe Line Company NGPA 311 confirmation # 103180401, Oasis NGPA 311 confirmation # 28-10318-02-201 and Oasis confirmation # 28-10318-02-101 shall not exceed 150,000 MMBtu per day.

2. Paragraph 3.2 (a) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to wit:

"3.2 (a) Deliveries at the following Primary Delivery Points shall be on a ratable basis except as otherwise specified below. Meter capacities shall be Firm for quantities nominated by 11:30 a.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Delivery Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable delivery point(s) may be added by Transporter and Shipper from time to time.

Primary Delivery Points

Location/Meter#	Meter Capacity MMBtu/d	Commodity Fee/MMBtu
*HPL Rio Nogales #98-1621	135,000	$0.00
*Oasis Rio Nogales #1702	135,000	$0.00
Enterprise Karnes #98-1451	50,000	$0.00
HPL CPS Karnes #98-7357	135,000	$0.00
Bammel #98-7367	35,000	$0.00

*The Non-Ratable Delivery Point(s) (Nominated Volume divided by 16) for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at the above Rio Nogales Delivery Point(s) measurement facilities located in Guadalupe County, Texas, such Rio Nogales Delivery Point(s) being the only non-ratable points – nominated volume divided by 16. The combined Rio Nogales Delivery Point(s) capacity shall be a maximum of 135,000 MMBtu per day with deliveries thereat shall be on a non-ratable basis and the Maximum Hourly Quantity shall be the scheduled volume divided by 16 capped at 5,800 MMBtu per hour (plus a 10% hourly imbalance tolerance per hour provided on an as available basis only). Transporter agrees to operate on pressure control at the Rio Nogales Delivery Point(s) and maintain an operating pressure of not less than 600 psig."

3. Paragraph 4.2, of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the first sentence thereof in its entirety and substituting the following in lieu thereof, to-wit:

"Shipper's Reserved Capacity under this Agreement and under HPL Transport Confirmation Number 103180401 is an aggregate Maximum Daily Quantity ("MDQ") equal to 150,000 MMBtu per day."

4. Paragraph 5.1 of Article 5, Term, of the Agreement is amended by deleting the first sentence in its entirety and substituting the following in lieu thereof, to-wit:

"This Agreement shall become effective as of July 1, 2007 and shall continue through June 30, 2018."

5. Paragraph 6.1 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.1 Demand Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Demand Fee each Day (the "Demand Fee") equal to $0.105 per MMBtu multiplied by the greater of either the receipt volume or Shipper's Reserved Capacity."

6. Paragraph 6.2 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.2 Commodity Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Commodity Fee each Day (the "Commodity Fee") equal to the applicable Commodity Fees per MMBtu set forth in Section 3.1(b) multiplied by

volumes received at the Receipt Point(s), for such Day and provide to Transporter a volume of Gas equal to the Retention Volume as set forth in Section 3.1."

7. Paragraph 8.1 of Article 8, Quality, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"8.1 Shipper agrees that all Gas received by Transporter at the Receipt Point(s) hereunder and Transporter agrees that all Gas delivered hereunder to or for the account of Shipper at the Delivery Point(s) hereunder shall be merchantable gas which shall:

a. Have a total heating value of not less than nine hundred fifty (950) Btu per cubic foot nor more than eleven hundred (1,100) Btu per cubic foot when saturated with water vapor (gross basis).

b. Be commercially free of all dust, gum, gum-forming constituents, gasoline, liquid hydrocarbons, water, and any other substance of any kind that may become separated from the Gas during the handling thereof or that may cause injury to or interference with proper operation of the lines, meters, regulators, or other appliances through which it flows;

c. Not contain more than five (5) grains of total sulfur nor more than one-fourth (1/4) grain of hydrogen sulfide per one hundred (100) standard cubic feet;

d. Not contain more than ten (10) parts per million of oxygen, and shall not contain more than two percent (2%) by volume of carbon dioxide, not contain more than three percent (3%) by volume of nitrogen or three percent (3%) by volume of total inert gases;

e. Have a temperature of not more than one hundred twenty degrees Fahrenheit (120°F) nor less than forty degrees Fahrenheit (40°F);

f. Not contain more than seven (7) pounds of entrained water vapor per one million (1,000,000) standard cubic feet; and

g. Have a hydrocarbon dew point below forty degrees Fahrenheit (40°F)."

B. Miscellaneous

1. Entire Agreement. This Amendment constitutes the entire agreement and understanding of the parties with respect to its subject matter, and except as amended herein, the Agreement shall remain in full force and effect as written.

2. Non-reliance. Each Party acknowledges that in agreeing to this Amendment it has not relied on any oral or written representation, warranty or other assurance and waives all rights and

remedies which might otherwise be available to it in respect thereof, except that nothing in this Amendment will limit or exclude any liability of a Party for fraud.

3. Headings. The headings used in this Amendment are for convenience of reference only and are not to affect the construction of or to be taken into consideration in interpreting this Amendment.

4. Governing Law. This Amendment will be governed by and construed in accordance with the law specified to govern the Agreement.

5. Counterparts. This Amendment (and each amendment, modification and waiver in respect of it) may be executed and delivered in any number of counterparts (including by facsimile transmission or PDF files) and all of such counterparts taken together shall be deemed to constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties hereto have executed this Amendment to take effect as of the Effective Date stated above.

FOURTH AMENDMENT
TO
FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT
(Contract Number 97001347)

THIS FOURTH AMENDMENT TO FIRM INTRASTATE GAS TRANSPORTATION AGREEMENT ("Amendment") is made and entered into effective and operative as of July 1, 2018 (the "Effective Date"), by and between City of San Antonio acting by and through the City Public Service Board ("Shipper") and Houston Pipe Line Company LP, a Delaware limited partnership, ("Transporter") (each a "Party" and collectively, "Parties").

W I T N E S S E T H :

WHEREAS, Shipper and Transporter have entered into that certain Firm Intrastate Gas Transportation Agreement effective and operative as of the 1st day of July, 2007 (Transporter Contract No. 97001347), as heretofore amended, (the "Agreement"), governing the transportation of natural gas by Transporter for Shipper that is not subject to the Federal Energy Regulatory Commission's ("FERC") regulations under the Natural Gas Act of 1938, as amended ("NGA"); and

WHEREAS, the parties hereby desire to amend the Agreement as provided herein.

NOW, THEREFORE, in consideration of the mutual covenants and agreements herein set forth, the parties hereby agree to amend the Agreement effective as of the date first hereinabove written, as follows:

1. All capitalized terms used in the recitals above and the succeeding provisions of this Amendment which are not defined herein shall have the meaning ascribed to such terms in the Agreement.

2. Paragraph 3.1 (b) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"3.1 (b) Receipts at the following Receipt Points shall be on a ratable basis as specified below. Meter capacities shall be Firm for quantities nominated by 1:30 p.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Receipt Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable receipt point(s) may be added by Transporter and Shipper from time to time. Shipper or Shipper's designee shall be responsible to provide sufficient pressures to effectuate deliveries into Transporter's system at the Receipt Points listed below. Transporter shall not be obligated to provide compression or alter pipeline operations to effectuate the receipts of Gas into Transporter's system.

Zone 1 – Katy Area Receipt Points – the use of these Receipt Points is limited to an aggregate quantity of Gas up to 125,000 MMBtu per Day under this Agreement and NGPA 311 Confirmation 103180402

Location/Meter#	**Fuel Requirements per MMBtu (Retention Volume)**	**Commodity Fee/MMBtu**
Oasis Katy #98-6780	0.5%	$0.02
HSC Pool #98-7342	0.5%	$0.02
Lone Star Katy #98-0067	0.5%	$0.02
*Bammel #98-7367W	0.5%	$0.04
Enstor Katy #98-0072	0.5%	$0.02

*Receipts from Shipper's Storage account only.

Zone 2 – South Texas Receipt Points – an aggregate quantity of 15,000 MMBtu per day

Location/Meter#	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu
Targa T2 98-4651	0.25%	$0.02
ETC Kenedy Plant #98-4598	0.50%	$0.06
KM Sheridan 98-7443	0.35%	$0.03
*CPS Karnes 98-7357	0.25%	$0.03

*Note: This Receipt Point will only be available by displacement until such time that Transporter has completed the necessary construction to make the Receipt Point bi-directional and Shipper has reimbursed Transporter for any and all such costs of such construction.

Zone 3 – Agua Dulce Area Receipt Points – the use of these Receipt Points is limited to an aggregate quantity of 15,000 MMBtu per day under this Agreement and NGPA 311 Confirmation 103180402

Location/Meter#	Fuel Requirements per MMBtu (Retention Volume)	Commodity Fee/MMBtu
Conoco Lobo AD #98-7038	0.75%	$0.02
NET AD #98-0114	0.75%	$0.03
Teak AD #98-0113	0.75%	$0.02
ETC King Ranch #98-9643	0.75%	$0.03

The quantity of gas available for receipt at each of the Receipt Point(s) in Zones 1, 2 and 3 listed above is subject to available capacity as agreed to by the parties in accordance with the Nomination procedures."

3. Paragraph 3.2 (a) of Article 3, Receipt Point(s) and Delivery Point(s), of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to wit:

"3.2 (a) Deliveries at the following Primary Delivery Points shall be on a ratable basis except as otherwise specified below. Meter capacities shall be Firm for quantities nominated by 1:30 p.m. (CCT) one (1) Business Day prior to the period of flow. The below mentioned Meter Capacities represent Shipper's Firm measurement capacity for each Delivery Point and are a share of the total Meter Capacities. It is not intended to represent total meter capacity. Other mutually agreeable delivery point(s) may be added by Transporter and Shipper from time to time.

Primary Delivery Points

Location/Meter#	Meter Capacity MMBtu/d
*HPL Rio Nogales #98-1621	139,000
*Oasis Rio Nogales #1702	139,000
**HPL to Oasis Prairie Lea 98-7101	50,000
HPL CPS Karnes #98-7357	135,000
***Bammel #98-7367I	35,000

*The Non-Ratable Delivery Point(s) (Nominated Volume divided by 16) for Gas that Transporter transports or causes to be redelivered for the account of Shipper hereunder shall be at the above Rio Nogales Delivery Point(s) measurement facilities located in Guadalupe County, Texas, such

Rio Nogales Delivery Point(s) being the only non-ratable points – nominated volume divided by 16. The combined Rio Nogales Delivery Point(s) capacity shall be a maximum of 139,000 MMBtu per day with deliveries thereat shall be on a non-ratable basis and the Maximum Hourly Quantity shall be the scheduled volume divided by 16 capped at 5,800 MMBtu per hour (plus a 10% hourly imbalance tolerance per hour provided on an as available basis only). Transporter agrees to operate on pressure control at the Rio Nogales Delivery Point(s) and maintain an operating pressure of not less than 600 psig.

** The use of this Delivery Point is only available for Gas that will be transported under the Oasis Intrastate Confirmation No. 028-10318-02-102."

***Deliveries to Shippers Storage account only.

4. Paragraph 4.2, of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the first sentence thereof in its entirety and substituting the following in lieu thereof, to-wit:

"Shipper's Reserved Capacity is an aggregate quantity of Gas of 150,000 MMBtu per Day corresponding to a Maximum Daily Contract Quantity ("MDCQ") of Gas shared among the Related Agreements referenced in Paragraph 5.1 of Article 5 hereof. The Maximum Hourly Quantity ("MaxHQ") shall not exceed an instantaneous rate of 8,200 MMBtu per hour in the aggregate among the Related Agreements."

5. Paragraph 4.3 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.3 Shipper must nominate prior to 1:30 p.m. (Central Clock Time) the Receipt Point(s) and Delivery Point(s) each day, the gas volumes to be received and delivered the following day. Weekend and ICE recognized holiday deliveries shall be nominated no later than 1:30 p.m. (CCT) of the Business Day prior to delivery. Any intra-day nomination changes between Receipt Point(s) and Delivery Point(s), if notified during normal business hours at least one and one-half hours prior to the time such change is to take effect, shall be made as soon as practical if, at Transporter's sole discretion, such change can be made without detriment to other volumes being handled by Transporter's pipeline facilities. In the event that Transporter establishes a Web-based online nomination system, Shipper shall submit nominations using that system. Transporter will schedule and confirm Shipper's Nomination with upstream and downstream operators. The deadline for submitting nominations for the first (1st) of each month is 1:30 p.m. (CCT), as applicable by points, one (1) Business Day prior to the beginning of each month. Shipper has the right to nominate volumes up to Shipper's Reserved Capacity."

6. Paragraph 4.5 of Article 4, Quantity, Nominations, Balancing, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"4.5 After application of the scheduled receipt volumes, previous Day's Gas Imbalance Account volumes and available storage injection and withdrawal volumes, any remaining variance or imbalance during a given Day will be recorded in a "Gas Imbalance Account". If the absolute volume in Gas Imbalance Account is greater than a plus or minus MMBtu tolerance equal to 15,000 MMBtu (the "Daily Operational Imbalance Tolerance") or 25,000 MMBtu (the "Cumulative Operational Imbalance Tolerance"), then imbalances greater than or less than the Cumulative or Daily Operational Imbalance Tolerance shall be cashed out on a daily basis.

Daily quantities that exceed the Cumulative or Daily Operational Imbalance Tolerance noted above (gas due Shipper) shall be purchased by Transporter priced at the lowest of (i) 98.25% of

the Gas Daily HSC mid posting that is posted for the Day that the imbalance occurred less $0.18 per MMBtu; or (ii) 98.25% of the Gas Daily Katy mid posting that is posted for the Day the imbalance occurred less $0.18 per MMBtu; or (iii) 98.25% of the Gas Daily HSC mid posting that is posted for the next Flow Date(s) published in the next publication after the Day in which the imbalance occurred less $0.18 per MMBtu; or (iv) 98.25% of the Gas Daily Katy mid posting that is posted for the next Flow Date(s) published in the next publication after the Day in which the imbalance occurred less $0.18 per MMBtu; (v) 98.25% of the Gas Daily HSC mid posting that is posted for the next Flow Date(s) published in the second publication after the Day in which the imbalance occurred less $0.18 per MMBtu; or (vi) 98.25% of the Gas Daily Katy mid posting that is posted for the next Flow Date(s) published in the second publication after the Day in which the imbalance occurred less $0.18 per MMBtu.

Daily quantities that exceed the Cumulative or Daily Operational Imbalance Tolerance noted above (gas due Transporter) shall be purchased by Shipper priced at the highest of (i) 100% of the Gas Daily HSC mid posting that is posted for the Day that the imbalance occurred plus $0.18 per MMBtu; or (ii) 100% of the Gas Daily Katy mid posting that is posted for the Day the imbalance occurred plus $0.18 per MMBtu; or (iii) 100% of the Gas Daily HSC mid posting that is posted for the next Flow Date(s) published in the next publication after the Day in which the imbalance occurred plus $0.18 per MMBtu; or (iv) 100% of the Gas Daily Katy mid posting that is posted for the next Flow Date(s) published in the next publication after the Day in which the imbalance occurred plus $0.18 per MMBtu; (v) 100% of the Gas Daily HSC mid posting that is posted for the next Flow Date(s) published in the second publication after the Day in which the imbalance occurred plus $0.18 per MMBtu; or (iv) 100% of the Gas Daily Katy mid posting that is posted for the next Flow Date(s) published in the second publication after the Day in which the imbalance occurred plus $0.18 per MMBtu.

Any physical flow adjustments for imbalance makeup will be made as mutually agreed to by the Parties (which shall be confirmed in writing via fax or email by Transporter, with an acknowledgment to be returned to Transporter by Shipper) to adequately control Imbalance levels. The daily and cumulative imbalance(s) will be determined at the end of each Gas Day and will be made available to Shipper upon request. Imbalance information shall be based on the best data then available to Transporter, including, but not limited to, nominations, allocations, electronic measurement data, and meter observations. The provision of such information by Transporter shall not relieve Shipper of its obligations under this Agreement to avoid, correct and eliminate actual imbalances"

7. Paragraph 5.1 of Article 5, Term, of the Agreement is amended by deleting the first sentence in its entirety and substituting the following in lieu thereof, to-wit:

"This Agreement shall become effective as of July 1, 2007 and shall continue through June 30, 2021. The Parties agree that the terms of this Agreement (as amended hereby), NGPA 311 Confirmation 103180402 and Oasis Intrastate Confirmation 028-10318-02-102 (the "**Related Agreements**") are coterminous and the Parties may not extend or terminate any of the Related Agreements without extending or terminating all of the Related Agreements."

8. Paragraph 6.1 of Article 6, Fee, of the Agreement is amended by deleting the same in its entirety and substituting the following in lieu thereof, to-wit:

"6.1 Demand Fee: Subject to the terms and conditions of this Agreement, Shipper shall pay Transporter a Demand Fee each Day (the "Demand Fee") equal to $0.115 per MMBtu multiplied by the greater of (i) the aggregate quantity of Gas delivered at the Receipt Points each Day under this Agreement and NGPA 311 Confirmation 103180402; or (ii) Shipper's Reserved Capacity."

9. Miscellaneous

a. Entire Agreement. This Amendment constitutes the entire agreement and understanding of the parties with respect to its subject matter, and except as amended herein, the Agreement shall be and remain in full force and effect.

b. Non-reliance. Each Party acknowledges that in agreeing to this Amendment it has not relied on any oral or written representation, warranty or other assurance and waives all rights and remedies which might otherwise be available to it in respect thereof, except that nothing in this Amendment will limit or exclude any liability of a Party for fraud.

c. Headings. The headings used in this Amendment are for convenience of reference only and are not to affect the construction of or to be taken into consideration in interpreting this Amendment.

d. Governing Law. This Amendment will be governed by and construed in accordance with the law specified to govern the Agreement.

e. Counterparts. This Amendment (and each amendment, modification and waiver in respect of it) may be executed and delivered in any number of counterparts (including by facsimile transmission or PDF files) and all of such counterparts taken together shall be deemed to constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties hereto have executed this Amendment to take effect as of the Effective Date stated above.

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR INTRASTATE SERVICE NO. 5546FTSA

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July 2020 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement for Intrastate Service No. 5546FTSA, dated July 1, 2011 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

> "This Agreement for Firm Intrastate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2011 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2022."

2. **Exhibit "A-07-2020-1"** and "**Attachment 1**" attached hereto shall supersede and replace Exhibit "A-07-2017-1" and "Attachment 1" of the Agreement.

3. **Exhibits "B-07-2020-1"** attached hereto shall supersede and replace Exhibit "B-07-2017-1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

Attachment 1

1. The CPSB Delivery Aggregation Point shall include meter stations identified as CPS South Gate (meter 491320), CPS Wilson County (meter 491325), CPS Cibolo (meter 491101), CPS Sommers (meter 491370), CPS Braunig Power Plant (meter 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001), CPS Big Country (meter 491043), CPS North Hampton (meter 491053), CPS Highway 181 (meter 491109), Leon Creek (meter 491060), CPS Smithson Valley (meter 491106), CPS FM 471 (meter 491400), CPS Sedona (meter 491330), CPS Boerne (meter 491107), CPS Somerset (meter 491309 representing the summation of distribution customer meters on the Somerset tap), CPS Martinez Losoya (meter 491409), and CPS Other (meter 491509 representing the summation of distribution customer meters on the following taps: CPS Casias Road, CPS Hildebrandt Road and CPS 17500 Donop Road (SARA), CPS Pittman Road and CPS 11696 Highway 16 South. Shipper's hourly and daily deliveries shall be the aggregate of the above meter's volumes.

2. Transporter shall deliver Gas for Shipper's account at the pressures existing from time to time in Transporter's pipeline system at the Point(s) of Delivery; however, Transporter shall use best efforts that such pressure shall not be less than 550 psig for high pressure operation and 240 psig for low pressure operation at CPS South Gate (meter 491320), 600 psig at CPS Wilson County (meter 491325), 400 psig at CPS Cibolo (meter station 491101), 150 psig at CPS Sommers (meter 491370), CPS Braunig (meters 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001) and 550 psig at Leon Creek (meter 491060).

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 135,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 80,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day. The combined MDO at Duke New Braufels (meter 491085) and CPS Cibolo (meter 491101) will be 80,000 MMbtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

Daily Imbalances:

Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

Hourly Fluctuations in Flow:

Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR NGPA SECTION 311 SERVICE NO. 5547FTSE

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July 2020 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement for NGPA Section 311 Service No. 5547FTSE, dated July 1, 2011 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

> "This Agreement for Firm Interstate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2011 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2022."

2. **Exhibit "A-07-2020-1"** and **"Attachment 1"** attached hereto shall supersede and replace Exhibit "A-07-2017-1" and "Attachment 1" of the Agreement.

3. **Exhibits "B-07-2020-1"** attached hereto shall supersede and replace Exhibit "B-07-2017-1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

Attachment 1

1. The CPSB Delivery Aggregation Point shall include meter stations identified as CPS South Gate (meter 491320), CPS Wilson County (meter 491325), CPS Cibolo (meter 491101), CPS Sommers (meter 491370), CPS Braunig Power Plant (meter 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001), CPS Big Country (meter 491043), CPS North Hampton (meter 491053), CPS Highway 181 (meter 491109), Leon Creek (meter 491060), CPS Smithson Valley (meter 491106), CPS FM 471 (meter 491400), CPS Sedona (meter 491330), CPS Boerne (meter 491107), CPS Somerset (meter 491309 representing the summation of distribution customer meters on the Somerset tap), CPS Martinez Losoya (meter 491409), and CPS Other (meter 491509 representing the summation of distribution customer meters on the following taps: CPS Casias Road, CPS Hildebrandt Road and CPS 17500 Donop Road (SARA), CPS Pittman Road and CPS 11696 Highway 16 South. Shipper's hourly and daily deliveries shall be the aggregate of the above meter's volumes.

2. Transporter shall deliver Gas for Shipper's account at the pressures existing from time to time in Transporter's pipeline system at the Point(s) of Delivery; however, Transporter shall use best efforts that such pressure shall not be less than 550 psig for high pressure operation and 240 psig for low pressure operation at CPS South Gate (meter 491320), 600 psig at CPS Wilson County (meter 491325), 400 psig at CPS Cibolo (meter station 491101), 150 psig at CPS Sommers (meter 491370), CPS Braunig (meters 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001) and 550 psig at Leon Creek (meter 491060).

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 135,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 80,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day. The combined MDO at Duke New Braufels (meter 491085) and CPS Cibolo (meter 491101) will be 80,000 MMbtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

Daily Imbalances:

Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

Hourly Fluctuations in Flow:

Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

Exhibit A-27

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR INTRASTATE SERVICE NO. 7921FTSA

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July 2020 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement for Intrastate Service No. 7921FTSA, dated July 1, 2011 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

   "This Agreement for Firm Intrastate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2011 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2023."

2. **Exhibit "A-07-2020-1"** and **"Attachment 1"** attached hereto shall supersede and replace Exhibit "A-07-2017-1" and "Attachment 1"of the Agreement.

3. **Exhibits "B-07-2020-1"** attached hereto shall supersede and replace Exhibit "B-07-2017-1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

1. The CPSB Delivery Aggregation Point shall include meter stations identified as CPS South Gate (meter 491320), CPS Wilson County (meter 491325), CPS Cibolo (meter 491101), CPS Sommers (meter 491370), CPS Braunig Power Plant (meter 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001), CPS Big Country (meter 491043), CPS North Hampton (meter 491053), CPS Highway 181 (meter 491109), Leon Creek (meter 491060), CPS Smithson Valley (meter 491106), CPS FM 471 (meter 491400), CPS Sedona (meter 491330), CPS Boerne (meter 491107), CPS Somerset (meter 491309 representing the summation of distribution customer meters on the Somerset tap), CPS Martinez Losoya (meter 491409), and CPS Other (meter 491509 representing the summation of distribution customer meters on the following taps: CPS Casias Road, CPS Hildebrandt Road and CPS 17500 Donop Road (SARA), CPS Pittman Road and CPS 11696 Highway 16 South. Shipper's hourly and daily deliveries shall be the aggregate of the above meter's volumes.

2. Transporter shall deliver Gas for Shipper's account at the pressures existing from time to time in Transporter's pipeline system at the Point(s) of Delivery; however, Transporter shall use best efforts that such pressure shall not be less than 550 psig for high pressure operation and 240 psig for low pressure operation at CPS South Gate (meter 491320), 600 psig at CPS Wilson County (meter 491325), 400 psig at CPS Cibolo (meter station 491101), 150 psig at CPS Sommers (meter 491370), CPS Braunig (meters 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001) and 550 psig at Leon Creek (meter 491060).

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 135,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 80,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day. The combined MDO at Duke New Braufels (meter 491085) and CPS Cibolo (meter 491101) will be 80,000 MMbtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

Daily Imbalances:

Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

Hourly Fluctuations in Flow:

Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

Exhibit A-28

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR NGPA SECTION 311 SERVICE NO. 7921FTSE

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July 2020 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement for NGPA Section 311 Service No. 7921FTSE, dated July 1, 2011 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

   "This Agreement for Firm Interstate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2011 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2023."

2. **Exhibit "A-07-2020-1"** and **"Attachment 1"** attached hereto shall supersede and replace Exhibit "A-07-2017-1" and "Attachment 1" of the Agreement.

3. **Exhibits "B-07-2020-1**attached hereto shall supersede and replace Exhibit "B-07-2017-1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

Attachment 1

1. The CPSB Delivery Aggregation Point shall include meter stations identified as CPS South Gate (meter 491320), CPS Wilson County (meter 491325), CPS Cibolo (meter 491101), CPS Sommers (meter 491370), CPS Braunig Power Plant (meter 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001), CPS Big Country (meter 491043), CPS North Hampton (meter 491053), CPS Highway 181 (meter 491109), Leon Creek (meter 491060), CPS Smithson Valley (meter 491106), CPS FM 471 (meter 491400), CPS Sedona (meter 491330), CPS Boerne (meter 491107), CPS Somerset (meter 491309 representing the summation of distribution customer meters on the Somerset tap), CPS Martinez Losoya (meter 491409), and CPS Other (meter 491509 representing the summation of distribution customer meters on the following taps: CPS Casias Road, CPS Hildebrandt Road and CPS 17500 Donop Road (SARA), CPS Pittman Road and CPS 11696 Highway 16 South. Shipper's hourly and daily deliveries shall be the aggregate of the above meter's volumes.

2. Transporter shall deliver Gas for Shipper's account at the pressures existing from time to time in Transporter's pipeline system at the Point(s) of Delivery; however, Transporter shall use best efforts that such pressure shall not be less than 550 psig for high pressure operation and 240 psig for low pressure operation at CPS South Gate (meter 491320), 600 psig at CPS Wilson County (meter 491325), 400 psig at CPS Cibolo (meter station 491101), 150 psig at CPS Sommers (meter 491370), CPS Braunig (meters 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001) and 550 psig at Leon Creek (meter 491060).

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 135,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 80,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day. The combined MDO at Duke New Braufels (meter 491085) and CPS Cibolo (meter 491101) will be 80,000 MMbtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

Daily Imbalances:

Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

Hourly Fluctuations in Flow:

Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

Exhibit A-29

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR INTRASTATE SERVICE NO. 7304FTSA

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July, 2018 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement For Intrastate Service No. 7304FTSA, dated July 1, 2005 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

> "This Agreement for Firm Intrastate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2005 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2021."

2. Exhibit "A-07-2018-1" and "Attachment 1" attached hereto shall supersede and replace Exhibit "A-07-2015-1" and "Attachment 1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 140,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 100,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

   Daily Imbalances:

   Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

   Hourly Fluctuations in Flow:

   Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

Exhibit A-30

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR NGPA SECTION 311 SERVICE NO. 7304FTSE

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July, 2018 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement For NGPA Section 311 Service No. 7304FTSE, dated July 1, 2005 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

> "This Agreement for Firm Interstate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2005 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2021."

2. Exhibit "A-07-2018-1" and "Attachment 1" attached hereto shall supersede and replace Exhibit "A-07-2015-1" and "Attachment 1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

THIRD AMENDMENT TO FIRM GAS TRANSPORTATION AGREEMENT FOR INTRASTATE SERVICE NO. 5546FTSA

This Third Amendment to the Firm Gas Transportation Agreement (the "Amendment"), effective as of the 1st day of July 2020 (the "Amendment Effective Date"), is made by and between Enterprise Texas Pipeline LLC ("Enterprise") and City of San Antonio, Texas, Acting By and Through Its City Public Service Board (CPS Energy).

BACKGROUND

Enterprise and CPS Energy entered into a Firm Gas Transportation Agreement for Intrastate Service No. 5546FTSA, dated July 1, 2011 (as previously amended, the "Agreement").

Enterprise and CPS Energy desire to amend the Agreement as specified in this Amendment.

AMENDMENTS

Effective as of the Amendment Effective Date, the Agreement is amended as follows:

1. The term provision of the Agreement is deleted in its entirety and is replaced with the following:

> "This Agreement for Firm Intrastate Transportation Service is entered into effective as of nine o'clock (9:00) a.m. Central Clock time on July 1, 2011 and shall continue in full force and effect for a primary term until nine o'clock (9:00) a.m. Central Clock time on July 1, 2022."

2. **Exhibit "A-07-2020-1"** and "**Attachment 1**" attached hereto shall supersede and replace Exhibit "A-07-2017-1" and "Attachment 1" of the Agreement.

3. **Exhibits "B-07-2020-1"** attached hereto shall supersede and replace Exhibit "B-07-2017-1" of the Agreement.

MISCELLANEOUS

Enterprise and CPS Energy may execute this Amendment in multiple counterparts, each of which constitutes an original, and all of which, collectively, constitute one agreement. The signatures of both parties need not appear on the same counterpart, and delivery of an executed counterpart signature page by facsimile or electronic mail is as effective as signing and delivering this Amendment in the presence of the other party.

Except as expressly amended hereby, the provisions of the Agreement remain in full force and effect.

Authorized representatives of Enterprise and CPS Energy have signed this Amendment to be effective on the Amendment Effective Date.

Attachment 1

1. The CPSB Delivery Aggregation Point shall include meter stations identified as CPS South Gate (meter 491320), CPS Wilson County (meter 491325), CPS Cibolo (meter 491101), CPS Sommers (meter 491370), CPS Braunig Power Plant (meter 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001), CPS Big Country (meter 491043), CPS North Hampton (meter 491053), CPS Highway 181 (meter 491109), Leon Creek (meter 491060), CPS Smithson Valley (meter 491106), CPS FM 471 (meter 491400), CPS Sedona (meter 491330), CPS Boerne (meter 491107), CPS Somerset (meter 491309 representing the summation of distribution customer meters on the Somerset tap), CPS Martinez Losoya (meter 491409), and CPS Other (meter 491509 representing the summation of distribution customer meters on the following taps: CPS Casias Road, CPS Hildebrandt Road and CPS 17500 Donop Road (SARA), CPS Pittman Road and CPS 11696 Highway 16 South. Shipper's hourly and daily deliveries shall be the aggregate of the above meter's volumes.

2. Transporter shall deliver Gas for Shipper's account at the pressures existing from time to time in Transporter's pipeline system at the Point(s) of Delivery; however, Transporter shall use best efforts that such pressure shall not be less than 550 psig for high pressure operation and 240 psig for low pressure operation at CPS South Gate (meter 491320), 600 psig at CPS Wilson County (meter 491325), 400 psig at CPS Cibolo (meter station 491101), 150 psig at CPS Sommers (meter 491370), CPS Braunig (meters 491010), CPS Eastgate (meter 491005), CPS Westgate (meter 491001) and 550 psig at Leon Creek (meter 491060).

3. Transporter shall test meter stations 491001, 491005, 491010, 491101, 491320, 491325 and 491370 on a monthly basis and shall test meter stations 491043 and 491053 on a quarterly basis.

4. The Maximum Delivery Obligation ("MDO") for the Primary Point(s) of Delivery shall be 135,000 MMBtu per day at CPS South Gate (meter 491320), 160,000 MMBtu per day at CPS Wilson County (meter 491325), 200,000 MMBtu per day at CPS Sommers (meter 491370) and 200,000 MMBtu per day at CPS Braunig (meter 491010), 175,000 MMBtu per day at CPS Eastgate (meter 491005) and 175,000 MMBtu per day at CPS Westgate (meter 491001), 80,000 MMBtu per day at CPS Cibolo (meter 491101) and 80,000 MMBtu per day at CPS Leon Creek (meter 491060). However, the sum of all the MDO's hereunder shall not exceed the Maximum Daily Quantity under Shipper's firm transportation service agreements. The sum of CPS Sommers, Braunig, Eastgate and Westgate shall not exceed 450,000 MMBtu per day. The combined MDO at Duke New Braufels (meter 491085) and CPS Cibolo (meter 491101) will be 80,000 MMbtu per day.

5. Transporter and Shipper agree to coordinate nominations between all transportation, storage and parking and lending agreements between Shipper and Transporter ("All Agreements") to resolve daily and hourly fluctuations as set forth in such Agreements as below:

Daily Imbalances:

Transporter and Shipper agree to utilize Shipper's storage service agreements to balance receipts and deliveries under Shipper's transportation service agreements provided Shipper has sufficient Gas available in storage and provided Shipper does not exceed the maximum quantities under its storage service agreements. Transporter and Shipper further agree that to the extent Shipper does not have sufficient quantities of Gas under its storage agreement to balance daily receipts and deliveries, Shipper's parking and lending service agreements will be utilized to resolve daily imbalances automatically on an interruptible basis in accordance with Appendix A.

Hourly Fluctuations in Flow:

Transporter and Shipper agree that services provided under All Agreements contemplate uniform hourly rates of flow. To resolve hourly fluctuations in flow in lieu of penalties set forth in Appendix A, Transporter and Shipper agree to utilize capacities available and Gas stored under Shipper's storage service agreements to permit hourly fluctuations in flow up to 1/24th of Shipper's MDQ under its transportation service agreements for "load following". Provided however, if Shipper does not have sufficient Gas or quantities under its storage agreements for "load following", Shipper will be subject to penalties as set forth in Appendix A and its transportation services agreements, and such hourly fluctuations in flow will only be permitted on an interruptible basis.

6. Pursuant to Article XVIII, Nominations and Scheduling, Section 18.6 of ENTERPRISE's Statement of Operating Conditions for Transportation Services, Shipper shall have the ability to schedule transportation to and from the Wilson Storage Facility up to one hour prior to the end of the Gas Day (8:00 am) or at some other mutually agreeable time after or during the Gas Day to balance actual deliveries at Point(s) of Delivery.

Appendix I Definitions
Exhibit "A" Form of Storage Confirmation

MASTER INTRASTATE
GAS STORAGE AGREEMENT

This Master Intrastate Gas Storage Agreement (this "Agreement") is made and entered into effective as of the 18th day of April, 2012 by and between Houston Pipe Line Company LP, a Delaware limited partnership and an "intrastate pipeline", hereinafter referred to as "Operator", and CITY OF SAN ANTONIO acting by and through its CITY PUBLIC SERVICE BOARD, hereinafter referred to as "Customer". Operator and Customer may hereinafter be referred to collectively as the "Parties" and individually as a "Party".

ARTICLE 1.
DEFINITIONS

1.1. Definitions. Except as otherwise indicated by the context all capitalized terms used in this Agreement have the meanings hereinafter set forth in Appendix I hereto.

1.2. Divisions, Headings and Index. The division of this Agreement into articles, sections and subsections, and the insertion of headings and any table of contents or index, if any, are for convenience of reference only, and shall not affect the construction or interpretation hereof.

1.3. Industry Usage. Words, phrases or expressions which are not defined herein and which, in the usage or custom of the business of the transportation, storage, distribution or sale of Gas have an accepted meaning, shall have that meaning.

1.4. Extended Meaning. Unless the context otherwise requires, words implying the singular include the plural and vice versa, and words implying gender include all genders. The words "herein", and "hereunder" and words of a similar nature refer to the entirety of this Agreement, including the Confirmations and any Exhibits, Schedules and Appendices incorporated into this Agreement, and not only to the section in which such use occurs.

1.5. Conflict. In the event of any conflict between the provisions of this Agreement and those of any Confirmation or any Exhibit, Schedule or Appendix, the provisions of a Confirmation containing an active term shall prevail over the provisions of this Agreement, and the provisions of this Agreement shall prevail over those of other Exhibit, Schedule or Appendix.

ARTICLE 2.
STORAGE QUANTITIES

2.1. Quantities. Operator agrees to provide storage service at the Storage Facility for Customer on a Firm Basis or on an Interruptible Basis, depending on the service selected by Customer and confirmed by Operator on a written confirmation in a form adequate at law and having the basic terms and format set forth on Exhibit "A" attached hereto (the "Confirmation"). The service shall consist of (i) the storage capacity up to the Maximum Storage Quantity, as set forth in the Confirmation; (ii) subject to Section 2.2, the injection of Working Gas owned by Customer up to the MDIQ, as set forth in the Confirmation; and (iii) the withdrawal and delivery of Working Gas owned by Customer up to the MDWQ, as set forth in the Confirmation.

2.2. Receipt and Delivery of Gas. Operator shall from time-to-time (a) receive Gas from Customer at the Receipt Point(s) for injection into the Storage Facility for storage and (b) deliver Gas to Customer at the Delivery Point(s), all in accordance with the Nomination Procedures; *provided, however, that* Operator shall not be obligated to (i) receive from Customer any quantity of Gas for injection which (A) would cause Customer's Gas Storage Inventory Account to exceed Customer's then current MSQ, or (B) is at a rate greater than the then current MDIQ, (ii) deliver to Customer any quantity of Gas that (A) is in excess of the then current balance in Customer's Gas Storage Inventory Account or (B) is at a rate greater than the then current MDWQ or (iii) receive Gas at any Receipt Point(s), or deliver Gas at any Delivery Point(s), at an hourly rate of flow that is less than the minimum rate of flow at which Operator's metering facilities can measure accurately, unless Operator agrees otherwise.

2.3. Cushion Gas. Operator shall make all arrangements necessary to provide the quantity of Cushion Gas necessary to support Customer's MSQ under this Agreement from time to time.

2.4. Operational Imbalances. Operator and Customer recognize and agree that from time to time and when circumstances may require, Operator shall have the right to withdraw and utilize Customer's Gas for operational (balancing) purposes on a pro rata basis with all of Operator's Firm Basis storage customers without prior notice to Customer, provided that (i) such withdrawals shall not affect the Parties' rights and obligations under this Agreement, (ii) absent an event of Force Majeure, Operator shall remain liable to meet the daily delivery obligations, up to the MDWQ, according to the terms of the applicable Confirmation, and (iii) Operator shall, as soon as practicable and at its sole cost, risk and expense, reinject into the Storage Facility for Customer's account a quantity of Gas equal to any quantities withdrawn according to the terms of this Section 2.4.

ARTICLE 3.
RATES

Customer agrees to pay (i) the fee for the reservation of storage capacity to store the Working Gas set forth in the Confirmation (the "Storage Fee"), plus (ii) the fee for injection of Working Gas set forth in the Confirmation (the "Injection Fee"), plus (iii) the fee for withdrawal of Working Gas set forth in the Confirmation (the "Withdrawal Fee"). Operator may at any time adjust the above referenced fees in whatever manner is necessary to implement discounts or other fee adjustments as agreed by the parties.

ARTICLE 4.
RELATED TRANSACTIONS AND END OF TERM MATTERS

4.1. Related Transactions. Customer shall be responsible for all matters arising from or ancillary to the purchase and sale of Gas to be stored on its behalf in the Storage Facility and for the transportation of such Gas to the Receipt Point(s) and from the Delivery Point(s), including, without limitation, securing and maintaining all necessary transportation services with Transporting Pipelines, complying with all reporting requirements and payment obligations

Attorneys Eyes Only CPSE-MDL_000028824

arising in respect of Gas sales proceeds, paying or delivering all royalties and other third party interests, securing and maintaining all required permits and authorizations and paying all taxes, levies and charges associated with its purchase hereunder of storage services or its nominating from time-to-time for injection and withdrawal of Gas from the Storage Facility.

4.2. End of Term Matters. Except as otherwise provided in the Confirmation, if upon expiration of the term hereof Customer's Gas Storage Inventory Account is greater than zero, then Operator may choose to either (i) extend the term of this Agreement for the number of Days as designated by Operator to allow Customer to withdraw from storage such Gas remaining in Customer's Gas Storage Inventory Account at rates and conditions of delivery determined by Operator or (ii) purchase the remaining quantities of Working Gas left in storage at the end of term at a price per MMBtu equal to the lowest of (A) the Platts (A Division of The McGraw-Hill Companies, Inc.) Monthly Inside FERC published index price for East Texas, Houston Ship Channel, Katy Market Center location (IFHSC) less $0.15 for the month following the expiration of the term hereof or (B) the IFHSC index posting for the month in which the term hereof expired less $0.15 or (C) the lowest Gas Daily Midpoint Price stated in Gas Daily® (Platts, a division of The McGraw-Hill Companies, Inc.) or successor publication, in the column "Daily Price Survey" for Houston Ship Channel less $0.15 for any day during the next month after expiration of the term hereof. In addition to the charges and rates provided in Article 3 (Rates), Should Operator decide to extend the term, Customer shall pay Operator each Month, or portion thereof, during any extended term a fee of twice the then current Storage Fee per MMBtu computed on the MSQ then in effect (the "Extended Term Storage Fee"). If any of Customer's Working Gas shall remain in storage after expiration of the extended term or if Customer fails to pay the Extended Term Storage Fee to Operator within 10 Days of receipt of Operator's invoice therefor, then Operator, acting as Customer's duly authorized agent, shall have the right, but not the obligation, to dispose of all or any portion of such Working Gas on behalf of Customer on terms and conditions satisfactory to Operator. Customer's execution of this Agreement shall constitute its appointment of Operator as its agent for the limited purpose only set forth in the previous sentence.

4.3 Notwithstanding anything in this Agreement to the contrary, and in the event HPL elects to extend the term hereof as permitted in Article 4.2. above, if after such extension period, Customer still has Working Gas remaining in the Storage Facilities, title to all said Working Gas remaining in the Storage Facilities shall automatically be transferred to HPL at the expiration of such extension period as compensation for Customer's failure to properly nominate and accept delivery of such Working Gas and Customer will have no further rights with regard thereto. To the extent that the foregoing title transfer provision may be deemed to constitute liquidated damages, the Parties agree that HPL's damages from Customer's failure to nominate and accept delivery of gas, which may include but not be limited to lost opportunity costs, are difficult or impossible to determine and that such title transfer constitutes a reasonable approximation of such damages.

Attorneys Eyes Only CPSE-MDL_000028825

ARTICLE 5.
RECEIPT POINT(S) AND DELIVERY POINT(S)

5.1. Receipt Point(s). The Receipt Point(s) for all Working Gas tendered by Customer to Operator for storage hereunder shall be at the mutually agreeable existing point or points at or near the Storage Facility, as more specifically set forth in the applicable Confirmation.

5.2. Delivery Point(s). The Delivery Point(s) for all Working Gas delivered by Operator to Customer out of storage shall be at the mutually agreeable existing point or points at or near the Storage Facility, as more specifically set forth in the applicable Confirmation.

ARTICLE 6.
QUALITY, PRESSURE, AND SCHEDULED MAINTENANCE

6.1. Quality. The specifications of the Gas from time-to-time delivered by Customer at the Receipt Point(s) and redelivered by Operator at the Delivery Point(s) shall comply with the minimum standards then specified in the transportation tariff of any Transporting Pipeline through which the Gas is to be transported.

6.2. Pressure. Customer shall deliver such Gas at a pressure sufficient to overcome the operating pressure existing from time-to-time in Operator's Storage Facility at such point(s). Operator shall deliver such Gas to or for the account of Customer at the pressure available from time-to-time in Operator's Storage Facility at such point(s).

6.3. Scheduled Maintenance. During any period that Operator is conducting Scheduled Maintenance, the MDIQ, MDWQ, and (if necessary) the MSQ of all Firm Basis storage customers shall be adjusted downward on a pro rata basis with all of Operator's Firm Basis storage customers and/or suspended to the extent reasonably necessary. The MDIQ, MDWQ and MSQ of Customer's Interruptible Basis storage service shall be adjusted downward or interrupted in whatever manner Operator deems necessary.

ARTICLE 7.
MEASUREMENT

7.1. Unit of Measure. The unit of volume for measurement of all quantities of Gas hereunder shall be one cubic foot of Gas. Atmospheric pressure shall be assumed to be 14.7 pounds per square inch absolute at the Receipt Point(s) and Delivery Point(s) irrespective of the actual atmospheric pressure at such points from time-to-time. Adjustments shall be made for flowing temperature and specific gravity as determined from instruments located at the Receipt Point(s) and Delivery Point(s). Applied Automation Total Flow electronic flow computers will serve as the primary means for Gas measurement on each meter tube. Chart recorders will be provided for back up measurement.

7.2. Temperature Measurement. The flowing temperature of Gas being metered shall be determined continuously during periods of flow by means of a recording thermometer of standard make, and the arithmetic average of the temperature recorded during periods of flow

Attorneys Eyes Only

only shall be deemed the Gas temperature. Temperature so determined shall be used in computing the quantities of Gas delivered or tendered hereunder.

7.3. Other Measurement. The specific gravity, gross Heating Value and degree of saturation by water vapor of the Gas delivered or tendered hereunder shall be determined by using an on-line Gas chromatograph or by such other method as Operator may reasonably determine. The values so determined shall be used in computing the volumes of Gas delivered or tendered hereunder.

7.4. Maintenance and Operation of Measurement Equipment. Operator shall operate and maintain or cause to be operated and maintained existing and future measuring facilities to measure the quantity of Gas delivered or tendered hereunder at the Receipt Point(s) and Delivery Point(s).

ARTICLE 8.
ASSIGNMENTS AND TRANSFERS

8.1. Consent. Neither Party shall assign this Agreement or its obligations hereunder without the prior written consent of the other Party. Upon any assignment made in compliance with this Section 8.1, this Agreement shall inure to and be binding upon the successors and assigns of the Parties. Notwithstanding the foregoing, Operator may assign this Agreement to an Affiliate without the prior consent of Customer, and Operator or its Affiliate shall have the right to pledge or mortgage its rights hereunder for security of its indebtedness without the prior written consent of Customer, provided however that no such transfer shall operate to relieve the transferor of its obligations hereunder.

8.2. Customer Assignment. It is a condition of any assignment by Customer of any interest in this Agreement that such assignment include all of, or the same proportionate interests in each of, the MDIQ, MDWQ and MSQ. The Parties acknowledge it is their intention that the rights of injection, storage and withdrawal service are bundled rights of service which are to be held together and not separately.

ARTICLE 9.
NOMINATIONS

9.1. General. Operator shall make available at all times a dispatcher who shall be authorized (subject to Operator's operating requirements pertaining to the Storage Facility) (i) to accept nominations from Customer respecting quantities of Working Gas it desires to tender for injection into the Storage Facility or to withdraw therefrom in accordance with this Agreement and (ii) to furnish to Customer any operating information which may affect the quantities of Working Gas to be tendered for injection by or withdrawn for Customer.

9.2. Procedures. Unless otherwise provided herein, at any time during the term of this Agreement, Customer shall give Operator its nomination for injections or withdrawals in writing or via electronic bulletin board in a form prescribed by the Operator from time-to-time,

Attorneys Eyes Only CPSE-MDL_000028827

transmitted to Operator in accordance with Article 14 (Notices) hereof and subject to Article 2 (Storage Quantities) hereof. The procedures set forth in the preceding sentence shall be hereinafter referred to as the "Nomination Procedures". All nominations are subject to Confirmation by the Transporting Pipelines on which the nomination is made and in accordance with such Transporting Pipeline's nomination procedures. Nominations will be based on MMBtu values provided by Operator. Operator shall promptly endorse Customer's nomination and confirm same in accordance with Article 14 (Notices) hereof. A nomination given and confirmed in accordance with the foregoing shall be binding upon the Parties.

9.3. Nomination Form Terms. A nomination must include:

(a) Customer Name

(b) Customer Contact (Name and Phone No.)

(c) Effective date and time

(d) Downstream and/or Upstream Transporting Pipeline

(e) Current Nomination in MMBtu

(f) New Nomination in MMBtu

If nominations do not include all of the aforementioned information or if nominations are not made in the form prescribed by Operator from time-to-time, Operator shall have no obligation to accept such nomination. Requests for changes in flow rate must be made by written nomination in accordance with the foregoing Nomination Procedures.

9.4. Modification of Nomination Procedures. Modification of the Nomination Procedures set forth in this Article 9 (Nominations) shall be made from time to time so that they shall comply with or take full commercial advantage of newly enacted regulatory requirements or then prevailing Transporting Pipeline standards, as contemplated by the terms and provisions of this Agreement.

ARTICLE 10.
TERM

10.1. General. Subject to Section 4.2 and this Article 10, this Agreement shall be effective as of the date first hereinabove written, and shall continue in full force and effect from Month to Month unless terminated by either Customer or Operator upon not less than thirty (30) Days' prior written notice of such termination given to the other; *provided, however, that* this Agreement shall nevertheless continue to govern all then outstanding Confirmations for the periods therein set forth. Operator shall have the right, subject to Section 4.2, to terminate or suspend any Interruptible Basis storage service hereunder at any time.

10.2. Tariff and Rates. This Agreement is expressly made subject to any and all tariff and other rate filings made by Operator and approved by any federal or state regulatory body. Customer agrees to support Operator in any such tariff or rate filing so long as Operator does not seek to obtain approval of any minimum rate in excess of those set forth in any then current Confirmation. In the event Operator, for any reason, is not permitted by applicable laws, rules,

Attorneys Eyes Only CPSE-MDL_000028828

orders, regulations or decisions of agencies or courts, to collect or retain all or any portion of the charges or rates provided hereunder, then Operator shall have the right to terminate this Agreement and any Confirmation hereunder, subject to the balancing of all accounts relative to monies or Working Gas due either Party as of the effective date of such termination, in the event Operator, on a non-discriminatory basis, shall concurrently terminate all Firm Basis Intrastate storage service provided at the Storage Facility.

10.3. Governmental Action. It is understood that performance hereunder shall be subject to all valid laws and lawful orders, rules and regulations of duly constituted governmental authorities having jurisdiction or control over the Parties hereto or the subject matter hereof. If at any time during the term hereof any state or federal governmental authority shall take any action which is designed to subject or otherwise subjects Operator, or the Storage Facilities, to any regulation or jurisdiction which is unacceptably or undesirably burdensome or costly to Operator with respect to the storage service provided hereunder, or which subjects any transaction to conditions or restraints that in the judgment of Operator are unduly burdensome or unacceptably detrimental with respect to the storage service provided hereunder, then upon written notice to Customer, Operator may cancel and terminate the affected portion(s) of the Confirmations and this Agreement effective as of a date specified in such notice, but in no event earlier than one Day prior to the effective date of such governmental action, and all subject to the balancing of all accounts relative to monies or Working Gas due either Party as of the effective date of such termination. Each of the Parties hereto confirms to the other that the cessation of service on termination of this Agreement is an important consideration to it and, to this end, each of the Parties agrees that it will not take any action that may be construed by any regulatory official or body that has jurisdiction as a basis for requiring performance by any Party after the termination of this Agreement. Each of the Parties agrees that at all times it will take appropriate action, and cooperate with the other, to the end that performance may be abandoned at the termination of this Agreement and that the termination of this Agreement, for whatever reason, shall constitute authority to abandon service.

ARTICLE 11.
REPRESENTATIONS, WARRANTIES AND RISK OF LOSS

11.1. Representations and Warranties. As a material inducement to entering into this Agreement, each Party, with respect to itself, hereby represents and warrants to the other Party continuing throughout the term of this Agreement as follows:

(a) there are no suits, proceedings, judgments, rulings or orders by or before any court or any governmental authority that materially and adversely affect its ability to perform this Agreement or the rights of the other Party under this Agreement,

(b) it is duly organized, validly existing and in good standing under the laws of the jurisdiction of its formation, and it has the legal right, power and authority and is qualified to conduct its business, and to execute and deliver this Agreement and perform its obligations under the same, and all

Attorneys Eyes Only CPSE-MDL_000028829

regulatory authorizations have been maintained as necessary for it to legally perform its obligations hereunder,

(c) the making of this Agreement and performance by it hereunder is within its powers, has been duly authorized by all necessary action on its part, and does not and will not violate any provision of law or any rule, regulation, order, writ, judgment, decree or other determination presently in effect applicable to it or its governing documents,

(d) this Agreement when entered into constitutes a legal, valid and binding act and obligation of it, enforceable against it in accordance with its terms, subject to bankruptcy, insolvency, reorganization and other laws affecting creditor's rights generally, and with regard to equitable remedies, to the discretion of the court before which proceedings to obtain same may be pending,

(e) there are no bankruptcy, insolvency, reorganization, receivership or other arrangement proceedings pending or being contemplated by it, or to its knowledge threatened against it,

(f) it has assets of $5,000,000 or more according to its most recent financial statements prepared in accordance with generally accepted accounting principles, consistently applied, and knowledge and experience in financial matters that enable it to evaluate the merits and risks of this Agreement, and

(g) it is not in a disparate bargaining position with the other Party.

11.2. Title. Customer represents and warrants to Operator that Customer has title to all Working Gas delivered to Operator hereunder, that Customer has the authority to deliver such Working Gas to Operator, and that such Working Gas is free from any and all liens, charges, adverse claims and encumbrances. In addition to any other rights, remedies or indemnities herein contained, Customer shall indemnify, defend and hold harmless Operator from and against any and all suits, actions, claims, demands, damages, costs, losses and expenses, including reasonable attorney's fees and related expenses arising from or out of any adverse claims to or against such title in and/or right to the Working Gas or any interest therein or in the value thereof. Title to and ownership of Customer's Working Gas in storage shall at all times be and remain in Customer, unless Operator shall specifically agree otherwise.

11.3. Intrastate Warranty. Customer represents and warrants to Operator that all gas which Operator delivers or receives hereunder (i) will have been produced in the State of Texas from reserves not dedicated or committed to interstate commerce, (ii) will not be or have been received from or transported through any interstate pipeline company or any intrastate pipeline company which claims exemption from the provisions of the Natural Gas Act pursuant to Section 1(c) thereof, and (iii) will not have been or be commingled at any point upstream from the Receipt Point(s) or downstream of the Delivery Point(s) with gas which is received from or transported through any interstate pipeline company or any intrastate pipeline company which claims exemption from the provisions of the Natural Gas Act pursuant to Section 1(c) thereof, or

Attorneys Eyes Only CPSE-MDL_000028830

with gas which is or may be sold, consumed, transported or otherwise utilized in interstate commerce in such a manner which will subject the gas delivered by Customer hereunder, any gas owned by Operator or any of Operator's or its affiliate's pipeline, transmission, storage or related facilities, or any portion thereof, to the jurisdiction of the Federal Energy Regulatory Commission or any successor authority under Section 1(b) or Section 1(c) of the Natural Gas Act. Nothing in this provision shall preclude the delivery of gas produced in Texas which has been transported under the provisions of Section 311(a) of the Natural Gas Policy Act of 1978. Customer shall fully indemnify Operator and any affiliate of Operator for any and all consequences of any breach of the warranty expressed in this Section 11.3.

11.4. Risk of Loss. As between Customer and Operator, Customer shall be in control and possession of the Gas covered by this Agreement (i) prior to receipt by Operator for injection at the relevant Receipt Point(s) and (ii) after delivery by Operator to Customer at the relevant Delivery Point(s), and Customer shall indemnify and hold Operator harmless from any damage or injury caused thereby. Operator shall be in control and possession of the Gas covered hereby from the receipt thereof for injection at the relevant Receipt Point(s) until delivery is made to Customer at the relevant Delivery Point(s), and Operator shall indemnify and hold Customer harmless from any damage or injury caused thereby, except for damages and injuries caused by the negligence or willful misconduct of Customer. The risk of loss for all Gas injected into, stored in, and withdrawn from the Facilities shall be and remain with Customer, and Operator shall not be liable to Customer for any loss of gas, except as may be occasioned due to the intentional or grossly negligent acts or omissions by Operator. Any losses of gas, unless due to the intentional or grossly negligent acts or omissions of Operator shall be shared proportionally by all customers, based on each customer's gas storage inventory in relation to the total gas storage inventory on the day of the loss.

ARTICLE 12.
BILLING AND PAYMENT

12.1. Billing. Operator shall on or before the 20th Day of each Month, submit to Customer a statement showing the following information with regard to storage service provided in the prior month:

(a) the number of MMBtu and Mcf of Gas received by Operator from Customer at the Receipt Point(s) during the Month;

(b) the number of MMBtu and Mcf of Gas delivered by Operator to or on behalf of Customer at the Delivery Point(s) during the Month;

(c) the number of MMBtu of Gas comprising the Customer's Gas Storage Inventory Account at the beginning and at the end of the Month;

(d) the amount of any adjustment applicable to any Month prior to the Billing Month; and

(e) the amount payable by Customer to Operator for services rendered hereunder, and for the various taxes and charges that are payable by Customer but that have been charged to Operator.

Attorneys Eyes Only CPSE-MDL_000028831

12.2. Payment. Customer shall pay, or cause to be paid, to Operator by wire transfer at Wachovia Bank, Winston-Salem, NC, Acct. No. 2079900565247, ABA No. 053000219 for credit to: Houston Pipe Line Company LP, the amount shown as due by the statement described in Section 12.1 above, on or before 10 Days after receipt thereof by Customer.

12.3. Interest. In addition to all other remedies available to Operator, should Customer fail to pay any amount due Operator when the same is due, interest thereon shall accrue at the rate of the prime interest rate charged by Citibank, N.A., New York, New York, plus two percent per annum, not to exceed the maximum legal rate, from the date when such amount is due until the same is paid

12.4. Defaults and Mutual Setoff Rights. If Customer fails to pay in full any amount owing Operator within twenty-five (25) Days of when such amount became payable, then, in addition to all other remedies available to it at law or in equity, Operator may refuse to accept any further deliveries of Gas from Customer at the Receipt Point(s), refuse to redeliver Gas to Customer at the Delivery Point(s), or both, until Customer corrects such default in full; *provided, however, that* before Operator may exercise its remedies under this Section 12.4, it must first have provided Customer with written notice, to be effective upon receipt, of its intention to effect such suspension. If Operator fails to pay in full any amount owing Customer within twenty-five (25) Days of when such amount became payable, then in addition to all other remedies available to it at law or in equity, Customer may set off such amount against amounts otherwise owing hereunder by Customer to Operator.

12.5. Accounting Adjustment of Billing Errors. If the Parties discover any overcharge (other than as a result of measurement or allocation adjustments arising pursuant to Article 7 (Measurement)) and the invoice therefor has been paid, the Party which received the overpayment shall pay to the other within thirty (30) Days after the final determination thereof, the amount which it was overpaid, along with interest from the date of such overpayment calculated in accordance with Section 12.3; *provided, however, that* no retroactive adjustment shall be made beyond a period of twenty-four (24) Months following the date of such overpayment unless such retroactive adjustment is made necessary by measurement or allocation adjustments instigated by the Transporting Pipeline, in which case, such twenty-four (24) Month limitation shall not apply.

12.6. If Operator has commercially reasonable grounds for insecurity regarding the performance of any obligation under this Agreement (whether or not then due) by Customer, including, without limitation, the occurrence of a material change in creditworthiness, Adequate Assurance of Performance may be required. "Adequate Assurance of Performance" shall mean sufficient security in an amount and for a term reasonably determined by Operator and shall meet the requirements of this Section. Customer, at its option, may provide one of the following forms of security:

(a) An irrevocable standby letter of credit in a form and from a bank reasonably satisfactory to Operator;

(b) A prepayment or deposit for services paid to Operator;

Attorneys Eyes Only CPSE-MDL_000028832

12.7. Operator will not be required to perform or continue to perform service hereunder in the event Customer: (i) makes an assignment or any general arrangement for the benefit of creditors; (ii) has voluntarily filed for bankruptcy protection under any chapter of the U. S. Bankruptcy Code, 11 U.S.C., as amended, modified or supplemented, including as amended by the Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 (the "Bankruptcy Code"); (iii) is the subject of an involuntary petition of bankruptcy under any chapter of the Bankruptcy Code, and such involuntary petition has not been settled or otherwise dismissed within ninety (90) Days of such filing; or (iv) is unable to meet its debts as they come due in the ordinary course of business; or (v) fails to pay any undisputed amount due Operator hereunder on or before the second Business Day following written notice that such payment is due.

12.8. Should Customer fail to provide Adequate Assurance of Performance to Operator within two (2) business Days after receipt of written demand for such assurance, then Operator shall have the right to suspend performance under this Agreement until such time as Customer furnishes Adequate Assurance of Performance. If such assurance is not provided by Customer within ten (10) Days from written demand, Operator may terminate this Agreement in addition to having any and all other remedies available hereunder.

ARTICLE 13.
FORCE MAJEURE

13.1. Definition. An event of "Force Majeure" shall mean a restraint on Operator's performance of one or more of its obligations under this Agreement ("Obligation" or "Obligations") resulting from a cause not within the control of Operator (including, but not limited to, acts of negligence or willful misconduct of third parties) and which, by the exercise of due diligence and planning, the Operator was unable to prevent. In this Article 13 (Force Majeure), the expression "due diligence and planning" shall mean that the standards and practices generally prevailing among operators of similar storage facilities in the United States have been adhered to.

13.2. Suspension. If, due to an event of Force Majeure, Operator is unable to perform any Obligation in whole or in part, it shall be entitled, *unless otherwise* provided to the contrary in this Agreement, to claim suspension of that Obligation to the extent of and for the duration of the event of Force Majeure; *provided, however, that* Operator gives written notice to Customer, setting out the details of such Force Majeure event and its expected duration (if known) as soon as reasonably possible after the commencement of the event of Force Majeure.

13.3. Mitigation. When Operator has claimed suspension of an Obligation under Section 13.2, Operator shall be relieved of its commitment to perform that Obligation to the extent and for the period that the event of Force Majeure restrains Operator's performance of that Obligation, *provided, however, that*:

(a) Operator effects those measures that are commercially reasonable under the circumstances to mitigate the cause of and effect of Force Majeure;

Attorneys Eyes Only CPSE-MDL_000028833

(b) Operator recommences performance of such Obligation to the extent reasonably possible during the cessation of and upon the conclusion of the event of Force Majeure; and

(c) as soon as reasonably possible after the conclusion of the event of Force Majeure, Operator gives notice to Customer of the date of such conclusion.

13.4. Labor Disputes. Notwithstanding any other provision hereof, the settlement of a strike, lockout or other industrial disturbance shall be entirely within the discretion of the Operator.

13.5. Dependent Obligations. If pursuant to the provisions of Section 13.2, an Obligation of Operator is suspended in whole or in part, the Obligations of Customer shall also be suspended if and to the extent that such Obligations of Customer are dependent upon or are a consequence of the performance of that Obligation by Operator.

13.6. Demand Charges. It is expressly understood and agreed that if and for so long as Operator is unable due to an event of Force Majeure to fully perform its Obligations for a period of seven (7) consecutive Days in response to a nomination for injection or withdrawal of Gas properly made by Customer hereunder, then for so long as and to the extent that Operator is so restrained, the Storage Fee payable by Customer shall be reduced proportionately.

13.7. Extended Force Majeure. If, due to an event of Force Majeure, Operator cannot perform its Obligations fully or partially during any period of ninety (90) consecutive Days, then within a further period of thirty (30) Days but not thereafter, either Party may give the other written notice reducing the MSQ, the MDIQ and MDWQ hereunder by the quantities that Operator has consistently been unable to receive and redeliver in response to Customer's nominations made during such period; *provided, however, that* the MSQ, the MDIQ, and the MDWQ must bear the same relationship proportionately to one another after such reduction as before.

13.8. Pro rating. In an event of Force Majeure, the MDIQ and/or MDWQ corresponding to Customer's Firm Basis storage service shall be reduced on a pro rata basis with all of Operator's Firm Basis Storage customers. The MDIQ and/or MDWQ corresponding to Customer's Interruptible Basis storage service may be reduced in whatever manner may be required by Operator to deal with an event of Force Majeure.

13.9. Exclusions. Operator shall not be entitled to the benefit of the provisions of Force Majeure hereunder if any or all of the following circumstances prevail: (i) the failure resulting in an event of Force Majeure was caused by the gross negligence of Operator; (ii) the failure was caused or extended by Operator where Operator failed to remedy the event by making all reasonable efforts (short of litigation, if such remedy would require litigation); or (iii) the failure was caused by lack of funds.

13.10 Service Interruptions. Subject to Section 13.7 above, Operator shall be excused from the performance of any Obligation that Operator is unable to perform due to the necessity or desirability of repairing, altering, maintaining, inspecting, replacing, changing the size of, substituting or removing pipelines or appurtenant facilities. Such excuse of performance shall

Attorneys Eyes Only CPSE-MDL_000028834

continue only for such time as interruption of service may be reasonable and unavoidable; and Operator shall give Customer reasonable notice of its intention to suspend performance hereunder, except in cases of emergency where such notice is impracticable, and shall endeavor to arrange such interruption so as to inconvenience Customer as little as possible. Service interruptions as sanctioned by the provisions of this Section are expressly included in the definition of "force majeure" for the purpose of this Agreement; provided however, the requirement that Operator shall have been unable to prevent such service interruptions by the exercise of due diligence and planning, as required in 13.1 above, shall not apply to such service interruptions.

ARTICLE 14.
NOTICES

14.1. Notices. Any notice required or permitted to be given by one Party to another pursuant to this Agreement shall be in writing and may be delivered by hand, transmitted by telecopy or email or sent by U.S. mail addressed in accordance with the particulars for notices set forth in the applicable Confirmation. A Party shall have the right to change any of the particulars of its address by giving a notice in accordance with this Article.

14.2. Receipt. Any notice given in accordance with the foregoing provisions shall be conclusively deemed received;

(a) if delivered by hand: if given to the person to whose attention such notice is addressed, at the time of receipt or if given to a responsible person at the address of the Party to which the notice is directed, four (4) hours following such receipt except for nominations and confirmations which shall be deemed received immediately upon delivery in accordance with the Nomination Procedures of Article 9 (Nominations), *provided, however, that* if such time of deemed receipt is not within the hours during which business is normally conducted by the recipient Party, then such notice shall be deemed received at the commencement of the next Business Day;

(b) if telecopied/emailed: if the time of transmission is stated in such notice, four (4) hours following the time so stated except for nominations and confirmations which shall be deemed received immediately upon delivery in accordance with the Nomination Procedures of Article 9 (Nominations); *provided, however, that* if such time of deemed receipt is not within the hours during which business is normally conducted by the recipient Party, then such notice shall be deemed received at the commencement of the next Business Day. If the time of transmission is not so stated in such notice, then such notice shall be deemed received at the commencement of the next Business Day.

14.3. Payment. Notwithstanding the provisions of this Article 14 (Notices) any payment required to be made pursuant to this Agreement shall be made by wire transfer to the

Attorneys Eyes Only CPSE-MDL_000028835

account of the recipient Party as stated in Article 12 (Billing) or in the most recent Confirmation, if stated therein.

14.4. Addresses. Whenever any notice, request, demand, statement or payment is required or permitted to be given under any provision of this Agreement, unless expressly provided otherwise, the same shall be in writing, signed by or on behalf of the notifying Party, and shall be deemed to have been given and received upon the earlier of: (i) actual receipt by the person or persons to whom such notice is to be given (including the receipt of a telecopy, email or facsimile of such notice with answer back, or (ii) three (3) Days following deposit of the same in the United States Mail postage prepaid, certified, return receipt requested, at the address of the applicable Party as follows:

Operating communications made by telephone or other mutually agreeable means may be confirmed in writing or by telecopy or email promptly following same. The addresses of the Parties may be revised upon written notice given in accordance herewith, by designating in writing the new address of the Party.

ARTICLE 15.
TAXES, INSURANCE, LIABILITY AND SECURITY

15.1. Taxes. Customer agrees to render, negotiate and pay directly to the taxing authorities all ad valorem taxes assessed on Customer's Working Gas. Additionally, Customer agrees to reimburse Operator promptly upon invoice for the full amount of any applicable gross receipts, gross income, ad valorem or other taxes or charges (except franchise and excess profits taxes and taxes measured by net income which may be levied on Operator) levied, assessed or fixed by any authority against in connection with or attributable to the gas volumes, revenue or storage services provided hereunder.

15.2. Insurance. Each Party shall be responsible for providing its own insurance coverage with respect to Gas in the Storage Facility.

15.3. Operator Liability. Subject to the provisions of Sections 11.4 and15.4 hereof, Operator shall be liable for and agrees to indemnify and save Customer harmless from and against all claims, demands, suits, actions, debts, accounts, damages, costs, losses, liabilities and expenses of any kind and however made or incurred, arising out of the failure by Operator to perform any covenant or requirement under this Agreement ("claims"); ***provided, however, that*** **in no event shall Operator be liable to Customer for any special, indirect, incidental, or consequential claims of any character, including without limitation, loss of use, lost profits or revenues, cost of capital, cancellation of permits, unabsorbed transportation charges or termination of contracts, additional out-of-pocket expenses incurred by Customer, tort or contract claims other than contract claims arising out of this Agreement, lost production or consequential property damages suffered by Customer, and irrespective of whether claims for such damages are based upon contract, warranty, negligence, strict liability or otherwise.**

15.4. Customer Liability. Subject to the provisions of Sections 11.4 and 15.3 hereof, Customer shall be liable for and agrees to indemnify and save Operator harmless from and

Attorneys Eyes Only CPSE-MDL_000028837

against any and all claims, demands, suits, actions, debts, accounts, damages, costs, losses, liabilities and expenses of any kind and however made or incurred, arising out of the failure by Customer to perform any covenant or requirement under this Agreement ("claims"); ***provided, however, that*** **in no event shall Customer be liable to Operator for any special, indirect, incidental, or consequential claims of any character including without limitation, loss of use, lost profits or revenues, cost of capital, cancellation or permits, unabsorbed transportation charges or termination of contracts, additional out-of-pocket expenses incurred by Operator, tort or contract claims other than contract claims arising out of this Agreement, lost production or consequential property damages suffered by Operator, and irrespective of whether claims for such damages are based upon control, warranty, negligence, strict liability or otherwise.**

15.5. Liquidated Damages. Notwithstanding the provision of Section 15.3 hereof, the Parties have agreed upon certain liquidated damages in settlement of any and all claims which could be advanced by Customer against Operator should a Delivery Default or a Receipt Default (as each is hereinafter defined) from time-to-time occur:

(a) "Delivery Default" means the failure by Operator not otherwise permitted or excused pursuant to the provisions of this Agreement, to discharge its obligations to deliver Gas to Customer at the applicable Delivery Point(s) from Customer's Gas Storage Inventory Account, following Customer's proper nomination for such delivery pursuant to the provisions of this Agreement.

(b) "Receipt Default" means the failure by Operator not otherwise permitted or excused pursuant to the provisions of this Agreement, to discharge its obligations to receive Gas made available by Customer at the applicable Receipt Point(s), following Customer's proper nomination for such receipt pursuant to the provisions of this Agreement.

(c) "Replacement Gas" means in the case of a Delivery Default, the number of MMBtu of Gas in fact purchased by Customer during a given Day (adjusted for transportation differences) to replace Gas not delivered to Customer by Operator because of such Delivery Default; and in the case of a Receipt Default, means the number of MMBtu of Gas in fact made available for injection at the Receipt Point(s) by Customer during a given Day but not injected by Operator because of such Receipt Default.

(d) "Replacement Price" means the Spot Price for the Day(s) in which the Delivery Default or the Receipt Default occurred, including transportation adjustments.

(e) If a Delivery Default occurs and Customer elects to advance a claim in respect thereof, Customer shall within ten (10) Days following the end of the Month in which such default occurred, give written notice thereof to Operator and Operator shall on the twentieth (20th) Day of the Month in which such notice is so given, pay Customer an amount equal to the product of the Replacement Price determined for the Month in which

Attorneys Eyes Only

such default occurred and the Replacement Gas. On payment of such monies by Operator to Customer, the Customer's Gas Storage Inventory Account shall be decreased by the amount of such Replacement Gas.

(f) If a Receipt Default occurs and Customer elects to advance a claim in respect thereof, Customer shall within ten (10) Days following the end of the Month in which such default occurred, give written notice thereof to Operator and Customer shall on the twentieth (20th) Day of the Month in which such notice is so given, pay Operator an amount equal to the product of the Replacement Price determined for the Month in which such default occurred and the Replacement Gas. On payment of such monies by Customer to Operator, the Customer's Gas Storage Inventory Account shall be increased by the amount of such Replacement Gas.

ARTICLE 16.
MISCELLANEOUS

16.1. Joint Effort. This Agreement was prepared jointly by the Parties hereto. This Agreement was prepared with each of the Parties having access to their own counsel, and the Parties waive any claim they may have now or in the future based on this Agreement not having been prepared jointly by the Parties.

16.2. No Waiver. The failure of either Party to insist upon strict performance of any provision hereof shall not constitute a waiver of, or estoppel against asserting, the right to require such performance in the future, nor shall a waiver or estoppel in any one instance constitute a waiver or estoppel with respect to a later breach of a similar nature or otherwise. Each of the Parties to this Agreement shall be entitled to waive, in whole or in part, the performance or default by the other Party in respect of any term or condition of this Agreement which is for its benefit, without prejudice to any rights it may have in the event of any other non-performance or non-fulfillment of any other term or condition, *provided, however, that* each such waiver shall be in writing.

16.3. Time of Essence. Time is of the essence with regard to all obligations to be performed on or by a specified date if any are herein contained.

16.4. Laws. **THIS AGREEMENT SHALL BE GOVERNED BY AND CONSTRUED IN ACCORDANCE WITH THE LAWS OF THE STATE OF TEXAS, EXCLUDING ANY CONFLICTS-OF-LAW RULE OR PRINCIPLE WHICH MIGHT REFER TO THE LAWS OF ANOTHER STATE. FURTHER, THE PARTIES STIPULATE THAT THIS AGREEMENT IS DEEMED TO HAVE BEEN MADE AND ENTERED INTO BY THEM IN THE STATE OF TEXAS.** This Agreement and the respective rights and obligations of the Parties hereto are subject to all present and future valid laws, orders, rules and regulations of any competent legislative body, or duly constituted authority now or hereafter having jurisdiction and this Agreement shall be varied and amended to comply with or conform to any valid order or direction of any board, tribunal or administrative

Attorneys Eyes Only CPSE-MDL_000028839

agency which affects any of the provisions of this Agreement. Notwithstanding the foregoing, in the event that any regulatory authority having jurisdiction should, by rule or order, deny recovery or pass through by Customer of part or all of any payments made by Customer to Operator that are required by the terms and conditions of this Agreement, or in any other way rules adversely to Customer in any manner whatsoever in respect of Customer's having entered into this Agreement with Operator, Customer's obligations to make all payments to Operator as provided for in this Agreement shall nevertheless remain unaltered and in full force and effect unless and until this Agreement is terminated pursuant to the terms and provisions hereof.

16.5. Forum and Jurisdiction. With respect to any suit, action or proceedings relating to this Agreement (the "Proceedings"), each Party irrevocably submits to the exclusive jurisdiction of the courts of the state of Texas and the United States District Court located in Bexar County, Texas, and irrevocably waives any objection which it may have at any time to the laying of venue of any Proceedings brought in any such court, waives any claim that such Proceedings have been brought in an inconvenient forum and further waives the right to object, with respect to such Proceedings, that such court does not have jurisdiction over such Party. Nothing in this Agreement precludes either Party from enforcing in any jurisdiction any judgment, order or award obtained in any such court.

16.6. Fees. In the event any governmental or regulatory body exercising jurisdiction over the service hereunder establishes fees for applications or reports filed in conjunction with such service, Customer shall reimburse Operator upon billing for a portion of any fees so paid by Operator in an amount proportionate to Customer's MSQ.

16.7. Further Assurances. Each of the Parties to this Agreement shall provide such data and information, execute and deliver such further documents and instruments, give such further assurances and perform such acts as may be reasonably required by the other Party to this Agreement in order to carry out the purposes, intentions and provisions of this Agreement. Without limiting the generality of the foregoing, Customer agrees, upon any reasonable request, to execute such consent or other agreement or acknowledgment in favor of Operator's lender(s) in connection with Operator's project financing, if any.

16.8. Severability. If one or more provisions contained in this Agreement are invalid, illegal or unenforceable in any respect under any applicable law such provision or provisions shall be adjusted rather than voided in order to achieve to the extent possible the intent of the Parties to this Agreement and to place such Parties in the economic position they would have been in had such provision or provisions been in effect, and the validity, legality and enforceability of the remaining provisions throughout shall not be affected or impaired thereby.

16.9. Binding on Successors and Assigns. This Agreement shall bind and inure to the benefit of the successors and permitted assigns of each Party.

16.10. Entire Agreement. This Agreement together with the Confirmation, the Appendices and Exhibits attached hereto, if any, set forth the entire agreement among the Parties relating to the subject matter hereof and supersede and replace all previous discussions, undertakings and agreements regarding the subject matter of this Agreement. In the event of a conflict between a Confirmation and the text of this portion of the Agreement, the Confirmation shall govern.

Attorneys Eyes Only CPSE-MDL_000028840

16.11. Amendments. Except as otherwise expressly provided, this Agreement shall not be amended other than by written agreement of the Parties.

16.12. Counterparts. This Agreement may be executed in any number of counterparts, each of which when so executed shall be deemed to be an originally executed copy, and it shall not be necessary in making proof of this Agreement to produce all of such counterparts.

16.13. Recordings. Each Party may record all telephone conversations between them and neither Party may challenge the admissibility of any such recording.

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed in multiple originals as of the first date written above.

APPENDIX I
DEFINITIONS

"Affiliate" means in relation to any Party, any entity controlled, directly or indirectly, by such Party, by a subsidiary of such Party, or by such Party's parent. For this purpose, "control" of any entity or Party means ownership of a majority of the voting power of such entity or Party.

"Btu" means British Thermal Unit.

"Business Day" means any day other than a Saturday, a Sunday, or a holiday on which national banking associations in the state of Texas are closed.

"Confirmation" shall have the meaning defined in Section 2.1.

"Cushion Gas" means that Gas which is in place in the Storage Facility from time to time and which serves as the pressure base for the Working Gas.

"Day" means a period of 24 consecutive hours commencing at 9:00 a.m., local time.

"Delivery Point(s)" means the points specified on the applicable Confirmation at which Operator shall tender Gas withdrawn from the Storage Facility to Customer.

"Firm Basis" means that injections and withdrawals of Working Gas into or out of the Storage Facility during the term of the applicable Confirmation shall not be subject to interruption, curtailment or suspension by Operator for any reason, except as may be excused in accordance with the declaration of a Force Majeure event (as herein defined), and that Operator is obligated to inject, store and withdraw the quantity of Gas nominated by Owner for injection or withdrawal by Operator at the applicable Receipt Point(s) or Delivery Point(s).

"Gas" means natural gas in its natural state, produced from wells, including casinghead gas produced with crude oil, natural gas from gas wells, vaporized liquefied natural gas, and residue gas resulting from processing both casinghead gas and gas well gas, which equals or exceeds the quality specifications set forth in Article 6 (Quality) hereof.

"Gas Storage Inventory Account" means the quantity of Working Gas in the Storage Facility designated for Customer's account.

"General Terms and Conditions" means all provisions of this Agreement except the price, rate and term provisions, and any other provision which would normally be set forth in a Confirmation.

"Heating Value" means the quantity of heat, measured in Btu, produced by the combustion in air of one cubic foot of anhydrous Gas at a temperature of sixty degrees Fahrenheit (60°F.) and a constant pressure of fifteen and twenty-five thousandths pounds per

square inch absolute (15.025 psia), the air being at the same temperature and pressure as the Gas after the products of combustion are cooled to the initial temperature of the Gas and air and after condensation of the water formed by combustion.

"Injection Fee" means the fee paid by Customer for the injection of Gas into the Storage Facility, as set forth on the applicable Confirmation.

"Injection and Withdrawal Capacity" means the maximum quantity of Gas that Operator may physically receive from all customers and inject in, or withdraw from, the Storage Facility and redeliver to all customers each Day.

"Interruptible Basis" means that Operator shall have the right at any and all times during the term of the applicable Confirmation to decrease or to temporarily or permanently suspend or discontinue the storage service thereunder, with the understanding that neither this Agreement nor the applicable Confirmation electing the Interruptible Basis storage service shall create or be deemed to document an undertaking or obligation of Operator to ensure firm injections or withdrawals of Working Gas into or from the Storage Facility except when Operator is able to and elects to do so.

"MDIQ" or "Maximum Daily Injection Quantity" means the aggregate maximum quantity of Gas specified in the applicable Confirmation that Customer may nominate and deliver and Operator shall receive at the Receipt Point(s) for injection into the Storage Facility each Day at constant hourly rates of flow over the course of such Day; *provided, however, that* if Customer requires injection at constant rates of flow into the Storage Facility over time periods of less than one Day in order to comply with or meet the prevailing industry practice or regulatory requirements in effect from time to time during the term hereof, Operator shall, within the scheduling and operations capabilities of the applicable Transporting Pipeline, accept quantities from Customer at the Receipt Point(s) for injection into the Storage Facility at such cost rates of flow as may be required by Customer from time to time; *provided, further, that* Operator shall not be required to accept Gas from Customer for injection at an instantaneous rate of flow which, if continued over the course of twenty-four (24) consecutive hours, would result in deliveries by Customer in excess of the then effective MDIQ.

"MDWQ" or "Maximum Daily Withdrawal Quantity" means the aggregate maximum quantity of Gas specified in the applicable Confirmation that Customer may nominate and that Operator will withdraw from the Storage Facility and tender to Customer at the Delivery Point(s) each Day at constant hourly rates of flow over the course of such Day; *provided, however, that* if Customer requires delivery at constant rates of flow over time periods of less than one Day in order to comply with or meet the prevailing industry practice or regulatory requirements in effect from time-to-time during the term hereof, Operator shall within the scheduling and operating capabilities of the applicable Transporting Pipeline, deliver quantities from the Storage Facility to Customer at the Delivery Point(s) at such constant rates of flow as may be required by Customer from time-to-time; *provided, further, that* Operator shall not be required to deliver Gas to Customer at an instantaneous rate of flow which, if continued over the course of twenty-four

Attorneys Eyes Only

(24) consecutive hours, would result in deliveries to Customer in excess of the then effective MDWQ.

"MSQ" or "Maximum Storage Quantity" means that quantity of Gas specified in the applicable Confirmation which Customer may have in its Gas Storage Inventory Account at any given time under the terms of this Agreement.

"Mcf" means the quantity of Gas occupying a volume of one thousand cubic feet at a temperature of sixty degrees Fahrenheit (60°F.) at a pressure of fourteen and sixty-five hundredths pounds per square inch absolute (14.65 psia).

"MMBtu" means one million Btu.

"Month" means a period of one calendar Month commencing at 9:00 a.m., local time, on the first Day of a calendar Month and ending at 9:00 a.m. on the first Day of the following calendar Month.

"Nomination Procedures" shall have the meaning set forth in Article 9 above.

"Receipt Point(s)" means the points specified on the applicable Confirmation at which Operator shall receive Gas from Customer for injection into the Storage Facility.

"Scheduled Maintenance" means a period of up to fourteen (14) consecutive or non-consecutive days during any twelve consecutive Month period which are identified to Customer by Operator upon thirty (30) days prior written notice and during which Customer's Firm Basis storage service entitlements shall be suspended and/or reduced in accordance herewith.

"Spot Price" means the "Midpoint" price for Houston Ship Channel for each Gas Day stated in Gas Daily® (Platts, a division of The McGraw-Hill Companies, Inc.), or successor publication, in the column "Daily Price Survey" for the relevant Gas Day. If there is no single price published for that particular Gas Day, but there is published a range of prices under the above column and listing, then the Spot Price shall be the average of such high and low prices. In the event that no price or range of prices is published for that particular Gas Day, then the Spot Price shall be the average of the following: the price (determined as stated above) for each of the first Gas Days immediately preceding and following the Gas Day in which the default occurred for which a Spot Price can be determined. If any or all of the indices used to determine the Spot Price are not available in the future, the Parties agree to promptly negotiate a mutually satisfactory alternate index for the Spot Price (an "Alternate Price"). If the Parties cannot agree by the end of the first Month for which the Spot Price could not be determined, then Operator and Customer shall each prepare a prioritized list of up to five alternative published reference postings or prices representative of spot prices for Gas delivered in the same geographic area. Each Party shall submit its list to the other within 10 Days after the end of the first Month for which the price could not be determined. The first listed index appearing in Seller's list that also

Attorneys Eyes Only

appears in Buyer's list shall constitute the replacement index. If no common indices appear on the lists, each Party shall submit a new list adding two indices within 10 Days. If either Party fails to provide timely a list, such Party's list shall not be considered. From and after the "Renegotiation Date," which shall be the date the Spot Price is no longer available, until the Alternate Price is determined, the Alternate Price shall be the average of the Spot Price(s) in effect during the 12 Months preceding the Month in which the Renegotiation Date occurred, which price shall be effective until the Alternate Price is determined. Upon determination of a new Alternate Price or the Spot Price, as applicable, will be adjusted retroactively to the Renegotiation Date.

"Storage Capacity" means the maximum quantity of working Gas which may be stored by all customers in the Storage Facility at a given time.

"Storage Facility" means the Bammel Storage Facility, being the gas storage facility in the Bammel Sand covering approximately 7,000 acres located in Northwest Harris County, Texas, which facility and acreage is more particularly described and depicted in Exhibits "A" through "C" attached to that certain Unit Agreement, Bammel Gas Unit, Harris County, Texas, a counterpart of which is recorded in Volume 1925, Page 283, of the Contract Records, Harris County, Texas as amended by those certain Second and Third Amendments of Unit Agreement, Bammel Gas Unit, Harris County, Texas, counterparts of which are recorded in Volume 2119, Page 336, and Volume 2130, Page 516, respectively, of the Contract Records of Harris County, Texas.

"Storage Fee" means the fee paid by Customer and set forth on the applicable Confirmation for the purpose of reserving capacity in the Storage Facility, as the same may be automatically adjusted pursuant to Section 3.1 hereof.

"Transporting Pipeline" means the pipeline that (a) delivers Working Gas to the Receipt Point(s) for injection into the Storage Facility for storage and/or (b) accepts Working Gas withdrawn from the Storage Facility at the Delivery Point(s), in accordance with this Agreement.

"Withdrawal Fee" means the fee paid by Customer to Operator for the withdrawal of Gas from the Storage Facility, as set forth on the applicable Confirmation.

"Working Gas" means Gas (in MMBtu) that is not Cushion Gas and which is injected by Customer for its own account, or for the account of others, into the Storage Facility.

"Year" means a period of 365 consecutive Days, or 366 consecutive Days if the intervening period contains a February 29, with the first Year commencing at 9:00 a.m. local time on the Effective Date, and with each subsequent Year commencing at 9:00 a.m. local time on the anniversary thereof.

EXHIBIT "A"
FORM OF STORAGE CONFIRMATION

_____, 2012

City Public Service Board
145 Navarro
San Antonio, Texas 78296

Attention: _____

Re: Storage Confirmation "-"

Gentlemen:

Reference is herein made to that certain Master Intrastate Gas Storage Agreement dated effective as of April 1, 2012 (the "Contract"), Houston Contract No. 103180300, between HOUSTON PIPE LINE COMPANY LP, as Operator, and CITY OF SAN ANTONIO acting by or through the CITY PUBLIC SERVICE BOARD, as Customer, covering certain intrastate natural gas storage services by Operator for Customer at Operator's Storage Facility.

In accordance with the provisions of the Contract, the parties hereby confirm the following volume(s), Receipt Point(s) and Delivery Point(s), price(s) and term to be applicable under this Confirmation:

Type of Service:	Firm/Interruptible
Term:	
Maximum Storage Quantity (MSQ):	_____ MMBtu
Maximum Daily Injection Quantity (MDIQ):	_____ MMBtu
Maximum Daily Withdrawal Quantity (MDWQ):	_____ MMBtu
Firm Service Rates:	
A. Capacity Reservation Fee:	_____ times MSQ per month.
B. Deliverability Reservation Fee:	_____ times MDWQ per month.
C. Injection Fee:	_____ per MMBtu.
D. Storage Fee:	_____
E. Withdrawal Fee:	_____ per MMBtu.
F. Fuel (actual in kind on injections only):	___% of all Gas Injection
Delivery Point(s):	_____ interconnect with Operator's Storage Facility

Receipt Point(s): _____ interconnect with Operator's Storage Facility

If the foregoing represents your understanding of our agreement, please so indicate in the space provided below and return two (2) fully executed copies for our records.

Very truly yours,

HOUSTON PIPE LINE COMPANY LP

CAROL DE LEON
Certified Shorthand Reporter

Q. Got it. During Winter Storm Uri, did you believe personally that CPS Energy did not have enough natural gas storage available?

A. I don't have -- I don't have an opinion on that.

Q. Are you -- in your group today, are you responsible for overseeing the storage balance that CPS Energy has with Enterprise and now Conoco and what, Tenaska?

A. It's part of my -- it's part of my business unit, correct.

Q. All right. Is there any -- earlier you were telling us, and we got off on this topic because you were telling us about the different strategies, power generation, resale, wholesale power and storage.

On the storage strategy, is there any -- what's the strategy related to how much natural gas CPS Energy wants to have in physical storage throughout the year?

A. To be clear, are you talking about the hedge portion?

Q. I'm talking about the physical side. How much do you -- how much does CPS Energy actually want in the ground available to use throughout the year?

MS. VALKENAAR: Objection, form.

A. It varies. It varies each month.
Q. (BY MR. STAFFORD) Based on what?
A. Based on injection and withdrawal times and -- and operational swing.
Q. Is there a written policy as the storage strategy at CPS?
A. On the physical side?
Q. Yes, sir.
A. I don't know if -- I don't recall. I don't -- I don't know if there's a specific document to a storage strategy. There is a storage strategy.
Q. Okay. It may or may not be documented?
A. Our storage strategy is documented.
Q. Where is that document kept?
A. It's a -- it's a document on the -- on the storage plan on our -- on an Excel spreadsheet.
Q. Then you have a separate written storage strategy for the hedging side?
A. Yes.
Q. Is that a -- is that also an Excel spreadsheet, or is that -- how is that kept?
A. No, that's a document.
Q. Got you. Does your -- does your group track the -- the physical storage -- I want to say capacity. Does your -- does your group track physically how much

I, BUCK GUINN, have read the foregoing deposition and hereby affix my signature that same is true and correct, except as noted above.

REPORTER'S CERTIFICATION
DEPOSITION OF BUCK GUINN
AUGUST 12, 2022

****

I, Carol De Leon, Certified Shorthand Reporter in and for the State of Texas, hereby certify to the following:

That the witness, BUCK GUINN, was duly sworn by the officer and that the transcript of the oral deposition is a true record of the testimony given by the witness;

That the amount of time used by each party at the deposition is as follows:

MR. STAFFORD - (3 hours 34 minutes)

MR. CALLAHAN - (2 hours 11 minutes)

MS. VALKENAAR - (0 hours 1 minutes)

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

Cody W. Stafford, Paul J. Dobrowski, Thomas De Bauche, John A. Garza, Kara Nichols, Attorneys for Plaintiff

Lauren A. Valkenaar, Blake W. Stribling, Dylan Fedderman, Lauren Ditty, Adam Kiehne, Attorneys for Defendant, City of San Antonio Acting by and through the City Public Service Board, CPS Energy

Bryce Callahan, Attorney for Energy Transfer

I further certify that I am neither counsel for, related to, nor employed by any of the parties or attorneys in the action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of the action.

Further certification requirements pursuant to Rule 203 of TRCP will be certified to after they have occurred. Certified to by me this 30th day of August, 2022.

THE VIDEOGRAPHER:

Terry Lindemann

the 38.83 threshold?

MS. VALKENAAR: Objection, form.

A The traders definitely didn't know about 38.83, no.

Q (BY MR. STAFFORD) Did anyone else at CPS know about 38.83 during Winter Storm Uri besides the traders?

A Not to my knowledge, no.

Q Mr. Perryman, the expert that CPS Energy hired, has now, we've established, changed his number from 38.83 to 38.74, correct?

A That's what I understand, correct.

Q Okay. What does CPS Energy contend that 38.74 represents?

MS. VALKENAAR: Objection, form. Outside the scope.

A As I understand it, it's a -- it's just a change in calculation of what he put as a placeholder.

Q (BY MR. STAFFORD) Sorry. Bad question.

38.74 that Mr. Perryman comes up with -- disregard the change. Whether we use 38.74 or 38.83, what does CPS Energy contend that that number represents?

MS. VALKENAAR: Objection, form.

A We -- we never had an intent not to pay. We had to come up with -- under our rights under 7.4. It's a placeholder, if you will. And that's the price we came

up with.

Q (BY MR. STAFFORD) What is it a placeholder for?

A It's a placeholder under contractually to pay you -- to pay Enterprise -- excuse me -- and then contest the 14 transactions at the price that we transacted at.

Q And at what point do we have a number that's not a placeholder?

A That's -- that's the reason we're here today, right? I mean, that's what -- the process we're going through.

Q Okay. Does CPS Energy contend that either 38.83 or 38.74 is the highest conscionable price that could be for gas during Winter Storm Uri?

MS. VALKENAAR: Objection, form.

A Ask that one more time.

Q (BY MR. STAFFORD) Sure.

Does CPS Energy contend that -- let me back up.

"Conscionable" is probably not a fair term to use for you. What would you like to say? "Reasonable"?

MS. VALKENAAR: Objection, form.

A I'm -- I'm -- just ask the question.

Q (BY MR. STAFFORD) Okay.

A I'm good with "conscionable," yeah.

confirmations during Winter Storm Uri that were unconscionable or unenforceable?

MS. VALKENAAR: Objection, form.

A Not to my knowledge.

Q (BY MR. STAFFORD) All right. Let's go to -- you mentioned 7.4 earlier, and it's on Page 4 of 10.

A Got it.

Q And as I understand your testimony, 38.83 or now 38.74 is a placeholder under this 7.4, correct?

MS. VALKENAAR: Objection, form.

A As I understand it, 7.4 gives us the right to do this, yes.

Q (BY MR. STAFFORD) Okay. And I know you're not a lawyer. But if you look at it, it says [as read]: If the invoice party in good faith disputes the amount of any such invoice or any part thereof, such invoice party will pay such amount as it concedes to be correct.

Right?

A That's what it says, yes.

Q Does CPS Energy concede that the prices up to $38.83 per MMBtu in the invoices were correct?

MS. VALKENAAR: Objection, form. Again, he can speak to facts, not legal conclusions.

A We dispute the amount that was transacted. That's what we're -- that's what we're disputing.

A I do.
Q What date is it?
A March 18th, 2021.
Q So that would be after the communications that you were just referencing with Mr. Stafford in Exhibit 391 and 392; is that correct?
A That's correct.
Q In those exhibits, in 391 and 392, you were discussing with Mr. Stafford the language that says [as read]: Short pay vendors - need to speak with them.
That's from 392, correct?
A Correct. And I want to clarify something that I remember that Cory said to me, if I can.
Q Okay.
A One -- as we went through this document, short-pay did not -- short-pay -- he was talking about paying over time. That's what he said to me.
Q So he understood "short-pay" to mean to work out some kind of a financing arrangement with the vendors?
A To -- financing -- again, financing -- he didn't say financing but to -- when I asked about that, again, I remember him saying this is one of many options and that was intended for contacting the suppliers about paying over time.

categorizing certain natural gas suppliers as strategic partners after Winter Storm Uri?

A I --

MS. VALKENAAR: Objection, form.

A I'd have to see the -- the document that you're referencing, where it was used.

Q (BY MR. YOUNG) Okay. Did you -- did you do any independent investigation into this topic?

A Yes.

Q What investigation was that?

A There were -- there's a reference what -- where it -- where it was used, the strategic partner.

Q You -- you reviewed a document where it was used?

A I did.

Q And what -- what do you recall from your review of that document?

A Strategic partner in this document that I viewed was -- I don't -- I don't know what the presenter was saying at the time now. It was referencing DCP pipeline and strategic partner, yes, because at this point, Energy Transfer wasn't going to sell us any more gas and we needed to supply Rio Nogales. So using that in reference in that presentation, they're strategic.

Q So did "strategic partners" refer to suppliers

that CPS Energy hoped to rely on after the lawsuits?

MS. VALKENAAR: Objection, form.

A That's not what I said. That's a mischaracterization of what I said. I said in the -- what I looked at at the time where this is referenced, this -- specifically DCP pipeline, which at the time, the integrity of running Rio Nogales was depending on strategically putting something in place with them.

Q (BY MR. YOUNG) Okay. Was there any concern that you're aware of about being able to purchase natural gas in a future winter storm after CPS challenged the invoices during Winter Storm Uri?

MS. VALKENAAR: Objection, form.

A No. After the storm, correct?

Q (BY MR. YOUNG) Correct.

A No.

Q Is there any concern about a future storm leading to prices above 38.83 which might cause gas suppliers to not sell gas to CPS Energy in a -- during a future weather event?

MS. VALKENAAR: Objection, form. Outside the scope.

If you can answer --

A Yeah, I --

MS. VALKENAAR: -- in your personal --

gas?

A Offers or selling?

Q Sorry. Bids. Let me reask the question.

Did CPS Energy ever show any bids to Energy Transfer for spot market gas during Winter Storm Uri?

MS. VALKENAAR: Objection, form.

A Yes.

Q (BY MR. YOUNG) Okay. Do you know what those were?

A Not without seeing them. I -- I -- I -- not without seeing the chats or the correspondence.

Q And so you're basing your response on chats or correspondence that you believe you recollect?

A That are factual. We did -- there were offers made by Energy Transfer. We bid. It was refused. Never did y'all -- never did Energy Transfer adjust their offers.

Q Okay.

A In fact, they took them up.

Q You testified about baseload gas before the month starts, is how you defined that gas, right? That -- that has to be purchased during the bid week?

A Correct.

Q And the idea of baseload gas is to have sort of

a set amount of gas that will flow every day that's locked in at a price determined before the month starts?

A Correct.

Q And so I think your point that you made in your exchange with counsel was that you couldn't purchase baseload gas after a month had started, correct?

A Not by definition, no.

Q However, energy -- or sorry.

However, CPS Energy could have purchased a higher percentage of its gas as a baseload purchase leading into any particular month prior to Winter Storm Uri, correct?

MS. VALKENAAR: Objection, form.

A Specifically to your question, open-ended, yes, you could.

Q (BY MR. YOUNG) Okay. And, obviously, you didn't know Winter Storm Uri was coming; but as a general matter, having a higher percentage of baseload gas would mean that you would have a lower percentage of spot market gas, correct?

MS. VALKENAAR: Objection, form.

A If -- yes. Correct.

Q (BY MR. YOUNG) And if you had a lower percentage of spot market gas, it would reduce your customers' exposure to variations in the spot market gas

REPORTER'S CERTIFICATION
ORAL AND VIDEOTAPED DEPOSITION OF BUCK COLE GUINN
AS CORPORATE REPRESENTATIVE OF CPS ENERGY
DECEMBER 4, 2023

I, Marcy Clark, Certified Shorthand Reporter in and for the State of Texas, hereby certify to the following:

That the witness, BUCK COLE GUINN AS CORPORATE REPRESENTATIVE OF CPS ENERGY, was duly sworn by the officer and that the transcript of the oral deposition is a true record of the testimony given by the witness;

That the deposition transcript was submitted on December 15, 2023 to the witness or to the and attorney for the witness for examination, return to Hanna & Hanna, Inc. by January 18, 2024.

That the amount of time used by each party at the deposition is as follows:

By Mr. Stafford - 4 hours, 17 minutes;
By Mr. Young - 1 hour, 44 minutes;
By Ms. Valkenaar - 7 minutes;

That pursuant to information given to the deposition officer at the time said testimony was taken, the following includes counsel for all parties of record:

ON BEHALF OF ENTERPRISE PRODUCTS OPERATING, LLC:

Cody W. Stafford, Esq.
DOBROWSKI STAFFORD LLP
4601 Washington Avenue, Suite 300
Houston, Texas 77007
713.659.2900
cstafford@doblaw.com

ON BEHALF OF THE CITY OF SAN ANTONIO ACTING BY AND THROUGH THE CITY PUBLIC SERVICE BOARD (CPS ENERGY):

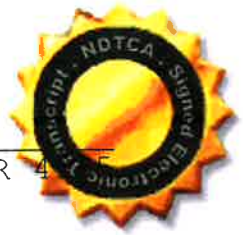
Lauren A. Valkenaar, Esq.
Dylan Fedderman, Esq.
CHASNOFF MUNGIA VALKENAAR PEPPING & STRIBLING, LLP
1020 N.E. Loop 410, Suite 150
San Antonio, Texas 78209
210.469.4155
lvalkenaar@chasnoffstribling.com
dfedderman@chasnoffstribling.com

-and-

Lauren Ditty, Esq.
David D. Shank, Esq.
SCOTT DOUGLASS McCONNICO LLP
303 Colorado Street, Suite 2400
Austin, Texas 78701
512.495.6361
dshank@scottdoug.com

IN-HOUSE COUNSEL FOR CPS ENERGY:

Adam Kiehne, Esq.
CPS ENERGY
500 McCullough Avenue
San Antonio, Texas 78215
210.353.5598
akiehne@cpsenergy.com



ON BEHALF OF HOUSTON PIPE LINE COMPANY, LP, AND OASIS PIPELINE, LP:

Tyler P. Young, Esq.
YETTER COLEMAN LLP
811 Main Street
Suite 4100
Houston, Texas 77002
713.632.8000
tyoung@yettercoleman.com

I further certify that I am neither counsel for, related to, nor employed by any of the parties or attorneys in the action in which this proceeding was taken, and further that I am not financially or otherwise interested in the outcome of the action.

Further certification requirements pursuant to Rule 203 of TRCP will be certified to after they have occurred.

Certified to by me this 15th day of December, 2023.

Introduction

S&P Global Commodity Insights' Platts methodologies are designed to produce price assessments and indices that are representative of market value, and of the particular markets to which they relate. Methodology documents describe the specifications for various products reflected by Platts assessments and indices, the processes and standards Platts adheres to in collecting data, and the methods by which Platts arrives at final values for publication.

Platts discloses publicly the days of publication for its price assessments and indices, and the times during each trading day in which Platts considers transactions in determining its assessments and index levels. This schedule of publication is available on the Platts website, at the following link: Pricing Holiday Schedule | S&P Global Commodity Insights (spglobal.com).

The dates of publication and the assessment periods are subject to change in the event of circumstances that affect Platts ability to adhere to its normal publication schedule. Such circumstances include network outages, power failures, acts of terrorism and other situations that result in an interruption in Platts operations at one or more of its worldwide offices. In the event that any such circumstance occurs, Platts will endeavor, whenever feasible, to communicate publicly any changes to its publication schedule and assessment periods, with as much advance notice as possible.

Platts methodologies have evolved to reflect changing market conditions through time, and will continue to evolve as markets change. A revision history, a cumulative summary of changes to this and previous updates, is included at the end of the methodology and specification documents. Methodology is reviewed regularly to ensure it reflects current market activity.

Such reviews are carried out by Platts reporters and their managers, supplemented and supported by price methodology specialists who operate separately from other teams. Platts follows a clearly defined process for public consultation on material changes to its methodologies. This process is based on full transparency and communication with industry stakeholders aimed at gaining market acceptance for any proposed introduction or changes to methodology. For more information on the review and approval procedures, please visit: Methodology Review & Change | S&P Global Commodity Insights (spglobal.com).

All Platts methodologies reflect Platts commitment to maintaining best practices in price reporting.

How this methodology statement is organized

This description of methodology for indices and assessments is divided into seven major parts (I-VII) that parallel the entire process of producing price values for the specified market period (daily or monthly).

- Part I describes what goes into Platts indices and price values, including details on what data market participants are expected to submit, the process for submitting data and criteria for timeliness of market data submissions.
- Part II describes any security and confidentiality practices that Platts uses in handling and treating data.
- Part III is a detailed account of how Platts collects market data, and what Platts does with the data to formulate its indices and assessments. It includes descriptions of the methods that Platts uses for reviewing data, and the methods used to convert raw data into indices or assessments, including the procedures used to identify anomalous data. This section describes how and when judgment is applied in this process, the basis upon which transaction data may be excluded from an index, and the relative importance assigned to each criterion used in forming the index or price assessment. This section describes the minimum amount of transaction data required for a particular price assessment to be published, and the criteria for determining which values are indices, and which are assessments, based on reported transactions and other market information.
- Part IV explains the process for verifying that published prices comply with Platts standards.
- Part V lays out the verification and correction process for revising published prices and the criteria Platts uses to determine when it publishes a correction.
- Part VI explains how users of Platts assessments and indices can contact Platts for clarification of data that has been published, or to register a complaint. It also describes how to find out more about Platts complaint policies. Part VII is a list of detailed specifications for the trading locations for which Platts publishes indices or assessments.

Part I: Data quality and data submission

Platts objective is to ensure that the submission of transactional information and other data inputs that editors use as the basis for their price index and assessments is of the highest quality. This is crucial to maintaining the integrity of Platts pricing processes.

Platts encourages entities that submit any market data for consideration in its pricing processes to submit all transactional data that they have. Under price reporting guidelines issued by the US Federal Energy Regulatory Commission (FERC) in 2003, which apply to US natural gas markets, companies should report each bilateral, arm's-length transaction between non-affiliated companies in the physical markets at all trading locations.

In North American gas markets, Platts establishes reporting relationships with market participants in which data is submitted from a central point in the mid- or back office (a segment of the reporting entity that does not have a commercial interest in the reported prices). Platts expects

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035498

that a price submitter is making a good-faith effort to submit data completely and accurately, and will have staff assigned to respond to questions concerning data submissions. The entity also is obligated to make reasonable efforts to inform Platts of any errors or omissions.

For price indices and assessments at locations in Canada, which fall outside FERC jurisdiction, Platts still expects entities will submit data under the same reporting guidelines.

What to report

For final daily indices for Platts locations, report each business day all physical fixed-price deals completed prior to the industry nomination deadline (1:00 pm Central Time) for next-day pipeline delivery in North America. In addition, report all physical basis transactions at Florida city-gates at a differential to Florida Gas, Zone 3. Transactions done on Friday usually are for flow on Saturday, Sunday and Monday inclusive. Trading patterns may vary in the case of holidays or when the end of a month occurs on a weekend.

For final monthly indices for Platts locations, report all physical fixed-price and basis deals executed during bidweek. Physical basis deals are trades in which the price is set by the final settlement value of the NYMEX Henry Hub contract plus or minus the negotiated basis. Platts will accept bidweek trades transacted before 3:00 pm CT on day 3 of bidweek as this coincides with the deadline for trades done on the ICE exchange.

Trading in the North American natural gas market is relatively standardized. Traded gas packages are for pipeline-quality dry gas, with Btu content and other specifications generally specified by the pipeline companies. Gas is processed to those specifications before it is injected into the pipeline grid, removing the need for any normalization of specifications between supplies of varying gas quality. Prices are reported in US dollars per million Btu (MMBtu), except in the case of some Canadian locations where the units of measure are Canadian dollars per gigajoule (Gj). Volumes are stated as MMBtu/day or Gj/day.

All transactions submitted to Platts should be listed individually and should use either the point's common name or the pipeline and meter designation. In addition to the delivery point, the data should also include the price, volume, source (company name), buy/sell indicator, trade date, start flow date, end flow date, time of transaction, counterparty name and intermediary name (broker or trading platform). Platts accepts and uses data that does not include counterparty information. However, Platts firmly believes that counterparty data is the single best way to verify reported transactions and encourages market participants to report them.

As per FERC requirements, Platts expects physical trades to be reported for locations where it does not currently publish indices or assessments. If sufficient trading develops at a location and is sustained, Platts would consider adding that pricing point to its listed points. In addition, information on deals at those locations adds to Platts understanding of the market.

For both the daily and monthly indices, the Platts policy is not to include spread trades, with the exception of NGX Transport trades. Spread trades are excluded because the two counterparties are transacting based on the difference between the two linked transactions rather than on the outright values at the locations. Again, Platts encourages companies to report these transactions, provided they are clearly labeled as one leg of a spread transaction, in order for Platts to better understand market relationships, as well as to consider new pricing points for the marketplace. All spread trades, including NGX Transport trades, are subject to Platts anomalous data policies covered in this guide.

In the event that a data submitter has no trade information to submit, a notification stating that fact should be sent.

How to report

Reports should be compiled and sent to Platts by a non-commercial department of the company. Even in the case of small entities, FERC's standards state that prices should be provided by individuals separate from trading activities such as accounting or bookkeeping staff.

Price submitters should submit trades to Tradevision via file upload or API. If it isn't possible to submit trades directly to Tradevision an alternative is to submit via email in Excel or CSV format to gasprice_daily@spglobal.com and gasprice_daily2@spglobal.com for daily trades and gasprice_monthly@spglobal.com and gasprice_monthly2@spglobal.com for monthly trades.

The daily reporting deadline is 3:00 pm CT. The monthly reporting deadline is 2:00 pm CT on the day four of bidweek. Price submitters need to provide Platts with at least two contacts responsible for submissions who can answer questions about reported transactions. If a price submitter is unable to submit trade data by the submission deadline, it should notify Platts as soon as possible.

Part II: Security and confidentiality

Platts is willing to sign confidentiality agreements providing for non-disclosure of submitted data except in circumstances where it is legally required to disclose the data.

Price data is submitted via Tradevision or emailed to specific Platts e-mail addresses and enters a secure network where it is accessible only by the natural gas pricing team and designated administrators. Data is stored in a secure network, in accordance with Platts policies and procedures. Transaction-level price data is used only for constructing indices and assessments. Platts does not use price data from an individual source for news reporting or analytics purposes, and Platts

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035499

news reporters and analysts do not have access to individual entities' transaction data. Data aggregated from all reporting sources e.g., changes in prices and trading volumes over time, may be used as the basis for news stories and analysis.

Part III: Calculating indices and making assessments

The following section describes how Platts uses reported transactions and any other market information it has collected, in the manner described in Part I, to formulate its price indices and assessments.

Price assessment and index guidelines

As a publisher, Platts places independence and impartiality at the heart of its pricing process. Platts has no financial interest in the price of the products or commodities on which it reports. Platts overall objective is to reflect the transactable value of the commodity assessed.

For North American natural gas, Platts publishes prices in two discrete markets: the day-ahead and the monthly bidweek markets. Platts prices are available to any party who subscribes to the news or data services in which those prices are published. Platts prices are copyrighted and may not be distributed or used for commercial gain by any third party without an explicit agreement with Platts.

To ensure the published data is as robust as possible, Platts editorial systems are backed by a strong corporate structure that includes managerial and compliance oversight.

Daily market

For the daily market, Platts publishes three price components: the midpoint, the common range and the absolute range. The midpoint or index, also called the GDA (Gas Daily Average), is the volume-weighted average of all transactions submitted to Platts. The absolute range shows the absolute low and high of deals reported, excluding outliers that are not used (see section below on outliers). The common range is 50% of the absolute range and is built around the midpoint. Platts publishes prices to three decimal places for ranges and the midpoint, rounded to the nearest half-cent.

In the daily market, trading generally is done for gas to flow the next business day. Because gas volumes must be nominated to pipelines by 1:00 pm CT, the deadline established by the North American Energy Standards Board to schedule next-day delivery, that time is the cutoff used by Platts for its daily gas indices. Gas typically trades on Friday for delivery Saturday, Sunday and Monday; in cases of three-day holiday weekends, trading typically covers the extra flow day. At times when the end of a month falls on a weekend, the normal flow sequence may change. For instance, if the last day of the month falls on Saturday, gas will trade on Thursday for flow Friday-Saturday and on Friday, for flow Sunday-Monday. Platts publishes a daily gas flow date calendar in advance which can be found at: Methodology and Specifications Guide US and Canada Natural Gas | S&P Global Commodity Insights (spglobal.com). In the event of a Canadian holiday falling on a Monday, daily gas indices for Northwest, Can. Bdr. (Sumas) and Westcoast, station 2 deals done on the Friday trade date are usually for flow Saturday-Tuesday, depending on the observance of the holiday by trading companies. Indices for those locations based on deals done on Friday for Saturday-Tuesday flow would be in publications dated Friday and would be republished Monday.

Platts reports both trade date and flow date data. Platts also publishes weekly and monthly averages of the daily midpoints for each location, using flow date data.

A formula is used to calculate the common range for preliminary and final daily indices for Platts and ICE locations. In most markets, the formula establishes the common range at 50% of the absolute range and builds the range around the volume-weighted average price (the midpoint). A volume-weighted price located more toward either end of the range may narrow the range further, as explained below.

An example of a common range calculation: On a given day, the lowest price, or absolute low, reported at a point was $4.70/MMBtu and the high was $4.92/MMBtu. The actual volume-weighted average was $4.843/MMBtu. The calculation follows this sequence:

The volume-weighted average is rounded to the nearest half-cent, so $4.843/MMBtu becomes $4.845/MMBtu (the midpoint).

The width of the absolute range is calculated, so $4.920/MMBtu -$4.700/MMBtu = $0.220/MMBtu; that figure is divided by 4, which produces an increment of $0.055/MMBtu.

That increment is subtracted and added to the rounded volume-weighted average to produce a common low and high; so, $4.845/MMBtu-$0.055/MMBtu = $4.790/MMBtu, and $4.845/MMBtu+$0.055/MMBtu= $4.900/MMBtu.

As part of its North American Natural Gas agreement with ICE, Platts publishes preliminary and final daily indices for Platts locations, as well as final daily indices for ICE locations. The methodology used to derive indices for Platts locations is different than ICE locations.

Preliminary Daily Indices for Platts Locations:

Platts publishes preliminary daily indices for Platts locations shortly after the 1:00 pm CT market close. The only trade data used in these indices are ICE exchange trades from ICE. Both the buy and sell side of ICE exchange trades are counted in the indices, regardless of whether the counterparties are Platts price submitters. The trades are not screened for outliers and Platts does not assess prices for locations with no trades.

© 2022 by S&P Global Inc. All rights reserved.

Final Daily Indices for Platts Locations:

Platts publishes final daily indices for Platts locations around 5:00 pm CT. Platts price submitter trades and non-Platts price submitter ICE exchange trades are used in these indices.

Platts price submitter ICE trades are removed from the ICE trade data to eliminate double counting. Both the buy and sell side of ICE trades will be counted in the indices. For trades not done on ICE, only the buy or sell side reported by the price submitter will be counted in the indices. The trades are screened for outliers using existing mechanisms as well as verifying trade data that occurs outside of the transparent trading range observed on the ICE exchange. At locations with robust trading activity, the index is the volume-weighted average of all trades. However, the volume-weighted average price does not always represent the average of the trading activity. Therefore, in less liquid or highly volatile markets, Platts may publish an assessment rather than using the volume weighted average. Platts will examine other market information to determine whether it can publish an assessment. These assessments are clearly designated by asterisks in price tables and include an assessment rationale that describes how the price was derived Assessments are based on other market information, including but not limited to, an analysis of historical daily prices, locational spread relationships to values at related liquid pricing points, and ICE physical bids and offers. If that is not possible, Platts will not publish a price for the day.

Final Daily Indices for ICE Locations:

Platts publishes daily indices for ICE locations once each day at the same time that preliminary daily indices for Platts locations are published, or shortly after1:00 pm CT. The only trade data used in these indices are ICE exchange trades from ICE. Both the buy and sell side of ICE exchange trades are counted in the indices, regardless of whether the counterparties are Platts price submitters. The trades are not screened for outliers and Platts does not assess prices for locations with no trades.

Canadian OTC Daily Locations:

The daily OTC indices will be published as soon as all daily trades have been submitted by price submitters and Platts has reviewed the trades for anomalous data. Please note that transactions executed on the ICE NGX exchange will not be included in the indices as the intention behind these locations is to increase transparency around trading activity in the OTC markets in Canada. Platts publishes the OTC indices for the TCPL Alberta, AECO-C; Dawn, Ontario; Westcoast, Station 2 Northwest, Canadian Border (Sumas); and Emerson, Viking locations.

Monthly market

In the monthly market, gas is priced for flow on each day of the month at specified volumes. Transaction data is collected for the three days of bidweek , and Platts prices are published on the first business day of the month in which the gas will flow. Platts publishes two price components: the index and the absolute range. The index is the volume-weighted average of all the transactions submitted to Platts that are used to calculate the index for each point. The absolute range shows the absolute low and high of deals submitted, excluding outliers that are not used (see section below on outliers). Platts publishes fixed prices to two decimal places and basis prices to three decimal places.

In the monthly market Platts uses both physical fixed-price and physical basis transactions. In those basis transactions, the basis value is negotiated on any bidweek day and the price is set by the final settlement value of the NYMEX contract plus or minus the negotiated basis. The NYMEX futures contract typically expires on the third-to-last business day of the month.

As part of its North American Natural Gas agreement with ICE, Platts publishes preliminary and final monthly indices for Platts and ICE locations. The methodology used to derive indices for Platts locations is different than ICE locations.

Preliminary Monthly Indices for Platts and ICE Locations:

Platts publishes preliminary monthly indices for Platts and ICE locations at the end of each day during bidweek. The only trade data used in these indices are ICE exchange trades from ICE. Both the buy and sell side of ICE exchange trades are counted in the indices, regardless of whether the counterparties are Platts price submitters. The trades are not screened for outliers and Platts does not assess prices for locations with no trades.

Final Monthly Indices for Platts Locations:

Platts publishes final monthly indices for Platts locations around noon on the first business day of the month. Platts price submitter trades and non-Platts price submitter ICE exchange trades are used in these final indices.

Platts price submitter ICE trades are removed from the ICE trade data to eliminate double counting. Both the buy and sell side of ICE trades will be counted in the indices. For trades not done on ICE, only the buy or sell side submitted by the price submitter will be counted in the indices. Platts screens for outlying data using existing mechanisms as well as verifying trade data that occurs outside of the trading range observed on the ICE exchange. At locations with robust trading activity, the index is the volume-weighted average price of all trades. However, the volume-weighted average does not always represent the average of the trading activity. Therefore, in less liquid or highly volatile markets, Platts may publish an assessment rather than using the volume weighted average. Platts will examine other market information to determine whether it can publish an assessment. These assessments are clearly designated by asterisks in price tables and include an assessment rationale that describes how the price was derived. Assessments are based on other market information, including but not limited to, an analysis of historical daily prices, locational spread relationships to values at related liquid pricing points, and ICE physical bids and offers. If that is not possible, Platts will not publish a price for the month.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035501

Final Monthly Indices for ICE Locations:

Platts publishes monthly indices for ICE locations at the same time as the final monthly indices for Platts locations. The only trade data used in these indices are ICE exchange trades from ICE. Both the buy and sell side of ICE exchange trades are counted in the indices, regardless of whether the counterparties are Platts price submitters. The trades are not screened for outliers and Platts does not publish prices for locations with no trades.

To enhance market transparency, Platts publishes the volumes and number of transactions at each trading point in daily and monthly indices. To provide a broad overview of market liquidity, Platts locations are grouped into three tiers: tier 1, points with volumes of at least 100,000 MMBtu/day and at least 10 trades; tier 2, volumes of 25,000 to 99,999 MMBtu/day and at least five trades; and tier 3, points with volumes below 25,000 MMBtu/day and/or fewer than five trades. Volumes, deal counts, and tier level for all index locations are published in monthly tables found at GP0120 and NG0610 for daily locations and GP0121 and NG0611 for monthly locations.Platts also publishes the physical basis prices that are incorporated into the monthlyindices. The physical basis data shows the volume, deal count, low price, high price, average price, and cash equivalent price for each location at which physical basis deals are reported.

Canadian OTC Monthly Locations.

The monthly OTC indices are published on the last day of bidweek, as soon as all bidweek trades have been submitted by price submitters and Platts has reviewed the trades for anomalous data. Please note that transactions executed on the ICE NGX exchange are not included in the indices as the intention behind these locations is to increase transparency around trading activity in the OTC markets in Canada. Platts will publish the OTC indices for the TCPL Alberta, AECO-C; Dawn, Ontario; Westcoast, Station 2; Northwest, Canadian Border (Sumas); and Emerson, Viking locations.

Outliers

Platts analyses reported transactions in order to identify potential anomalous data that may be excluded from the index. This analysis includes a comparison of the trade price with bid, offer, and transaction data on the ICE exchange. Platts believes that ICE exchange data represents transparent and market tested values. Therefore, the ICE exchange trading range is a key indicator for identifying anomalous data. Other analysis includes, but is not limited to, standard deviation from the mean, volume, and gaps in trade prices. Platts editors will contact the price submitter for more specifics on the potential anomalous transaction.

Gaps in the market price are not inherently anomalous. They warrant closer analysis and may not be reflected in the final published indices. Examples of potentially anomalous data could include information that might be outside normal market practice, transactional data containing unusual contractual terms, information that is incomplete (lacking full confirmation, or important details), and/or information that otherwise deviates from the Platts methodology.

Part IV: Platts editorial standards

All Platts employees must adhere to the S&P Global Code of Business Ethics (COBE), which has to be signed annually. The COBE reflects S&P Global's commitment to integrity, honesty and acting in good faith in all its dealings.

In addition, Platts requires that all employees attest annually that they do not have any personal relationships or personal financial interests that may influence or be perceived to influence or interfere with their ability to perform their jobs in an objective, impartial and effective manner.

Market reporters are required to ensure adherence to published methodologies as well as internal standards that require accurate records are kept in order to document their work.

Platts has a Compliance function that is independent of the editorial group. The Compliance team is responsible for ensuring the quality and adherence to Platts policies, standards, processes and procedures. The Compliance team conducts regular assessments of editorial operations, including checks for adherence to published methodologies.

S&P Global Platts appoints an independent, external auditor with appropriate experience and capability to review and report on its adherence to this stated methodology. The annual report is published online at: https://www.spglobal.com/commodityinsights/en/about-commodityinsights/regulatory-engagement.

Part V: Corrections

Platts is committed to promptly correcting any material errors to published values. When corrections are made, they are generally based on data and information that was available when the index or assessment was originally calculated. Platts expects that data submissions are complete and accurate, and hence errors on either account may be considered a sufficient reason to correct the index.

Platts makes every effort to contact price submitters prior to publication in order to verify potential anomalous data. Should Platts be unable to contact a price submitter or receive confirmation, the attempts to do so are logged and a decision as to whether to include or exclude the data in the index will be made.

Data and information received after indices have been published may also be considered for an index correction, if the original transaction price, volume or location was incorrectly submitted, or the trade has been canceled or confirmed as non-standard.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035502

If Platts is notified of an error in a submission, after an index is calculated and published, it will assess the impact of that error. Platts will consider correcting an index, as a result of the error, typically up to and including 10 business days following the original date of publication of the index.

Errors that price submitters should report to Platts include but are not limited to, inaccuracies or omissions, in part or in full, in the attributes (price, volume, location, etc.) at the time the transaction was done and reported to Platts. They do not include operationally driven or after-the-fact changes in the nature of the transaction. For instance, if an interruption in transportation service forces two counterparties to alter flows and delivery points, Platts does not consider that those changes require an index to be corrected so long as the price, volume and location information originally submitted to Platts accurately reflected those attributes at the time the trade was made and submitted to Platts.

Part VI: Requests for clarifications of data and complaints

Platts strives to provide critical information of the highest standards, to facilitate greater transparency and efficiency in commodity markets.

Platts users raise questions about its methodologies and the approach taken in pricing, proposed methodology changes and other editorial decisions in relation to Platts price assessments or indices. Platts strongly values these interactions and encourages dialogue concerning any questions a market participant or stakeholder may have.

However, Platts recognizes that occasionally a market participant may not be satisfied with responses received or the services provided by Platts and wish to escalate matters. Full information about how to contact Platts to request a clarification around an assessment, or make a complaint, is available on the Platts website, at: Complaints | S&P Global Commodity Insights (spglobal.com).

CPSE-MDL_000035503

Part VII: Definitions of the trading locations for which Platts publishes daily and monthly indices or assessments

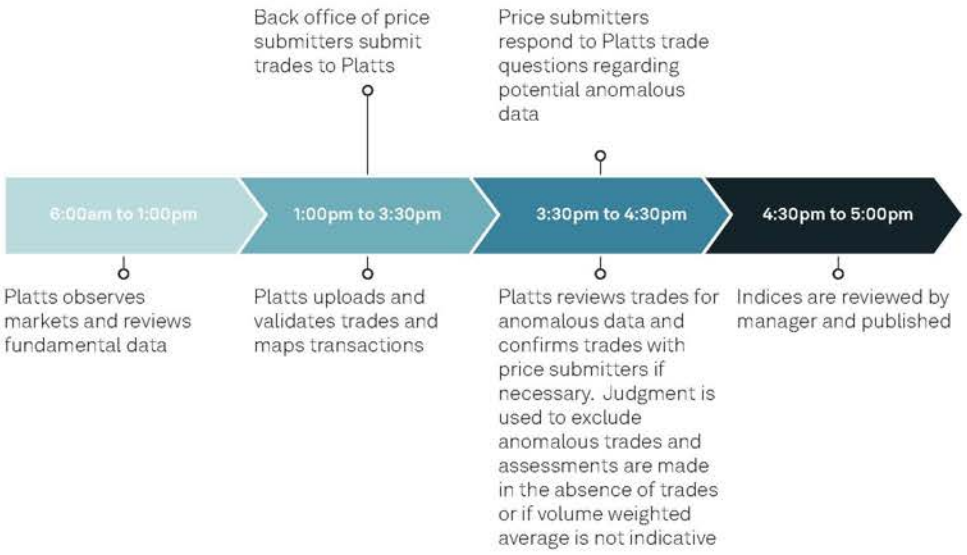
The following US and Canada natural gas specifications guide contains the primary price point specifications for Platts natural gas indices and assessments in US and Canada.

Price points common to both the daily and monthly markets and any differences in daily and monthly pricing methodology are noted in the descriptions.

Points are listed alphabetically within eight regions: Northeast, Appalachia, Midcontinent, Upper Midwest, East Texas, Louisiana/Southeast, Rockies/Northwest, and Southwest. For the daily market, symbols are listed for the common range (high, low, midpoint, volume), absolute range (high, low) and deal count for both the trade date and flow date(s), the weekly average and the monthly average. For the monthly market, symbols are listed for bidweek prices (high, low, index, volume) and the deal count, and for physical basis transactions, the high, low, average, volume, deal count and cash equivalent prices are listed. Symbols also are listed for the location's tier in the monthly market.

This methodology is current at the time of publication. Platts may issue further updates and enhancements to this methodology and will announce these to subscribers through its usual publications of record. A revision history, a cumulative summary of changes is included at the end of this section.

Regional and national averages



National and regional average prices are calculated in the daily and monthly markets. The regional prices represent a straight average of the index prices at all hubs listed within a region.

The following sublistings are not included in these calculations:

In the Northeast, the Transco, Zone 6 non-NY North index, Transco, zone 5 delivered North and Transco, zone 5 delivered South indices, and Tennessee, Zone 6, delivered North and Tennessee, Zone 6, delivered South indices are not included in the regional average because transactions at both locations are included in the Transco, Zone 6 Non-New York index, Transco, zone 5 delivered index, and the Tennessee, zone 6 delivered index, respectively. In the Upper Midwest, the three Chicago sublistings of Chicago-Nicor, Chicago-NIPSCO and Chicago-Peoples are not included because transactions at those locations are also included in the Chicago city-gates average. In the Southwest, the El Paso, West Texas sublisting is not included because transactions at this location are also included in the El Paso, Permian Basin index. In the Rockies/Northwest section, the prices at AECO and Westcoast, Station 2 are not included as trading is reported in Canadian dollars. For the monthly average only, Northwest, S of Green River and Northwest, Wyoming pool are not included in the average since both locations are included in the Northwest, Rocky Mountains index.

Natural gas daily indices methodology

Time zone: Central Time

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035504

Northeast

Algonquin, city-gates (daily and monthly market)

Deliveries from Algonquin Gas Transmission to all distributors and end-use facilities in Connecticut, Massachusetts, and Rhode Island. Trades done upstream of the Cromwell Compressor station are not included.

Algonquin, receipts (daily market only)

Deliveries into Algonquin Gas Transmission from Texas Eastern Transmission at the Lambertville and Hanover, NJ, interconnects; from Transcontinental Gas Pipe Line at the Centerville, NJ, interconnect; from Columbia Gas Transmission at the Hanover, NJ, and Ramapo, NY, interconnects; from Millennium Pipeline at Ramapo, NY; from Tennessee Gas Pipeline at the Mahwah, NJ, Cheshire, CT., and Mendon, MA., interconnects; from Iroquois Gas Transmission System at the Brookfield, CT., interconnect; and from Maritimes & Northeast Pipeline at the Beverly, MA., interconnect.

Dracut, Mass. (daily market only)

Deliveries into Tennessee Gas Pipeline at the Dracut interconnect with Maritimes & Northeast Pipeline near Middlesex, MA. Dracut also includes gas entering from Portland Natural Gas Transmission System.

Iroquois, receipts (daily and monthly market)

Deliveries into Iroquois Gas Transmission System at the US-Canadian border at the Waddington interconnect with TC Energy (formally TransCanada) pipelines.

Iroquois, zone 1 (daily market only)

Deliveries from Iroquois Pipeline starting at, but not including, Waddington, New York and extending to and including Iroquois interconnection with the Tennessee Gas Pipeline Company at Wright, New York.

Iroquois, zone 2 (daily and monthly market)

Deliveries from Iroquois Gas Transmission System starting at the Athens, NY, power plant downstream to the terminus of the pipeline at Hunts Point and South Commack.

Niagara (daily and monthly market)

Cross-border deliveries to and from TC Energy pipelines and the Niagara spur and loop lines, a border-crossing point between eastern Canada and the northeastern United States, north of Niagara Falls, NY Niagara Spur Loop line and Niagara Spur line interconnects are with Tennessee Gas Pipeline, National Fuel Gas Supply, Dominion Transmission and Texas Eastern Transmission.

Tennessee, Zone 5 (200 leg) (daily market only)

Deliveries from Tennessee Gas Pipeline Zone 5, downstream of compressor station 245 extending to and including station 254.

Tennessee, zone 6 delivered (daily and monthly market)

Deliveries from Tennessee Gas Pipeline on the 200 leg in Connecticut, Massachusetts, Rhode Island and New Hampshire.

Tennessee, Zone 6, delivered North (daily and monthly market)

Deliveries from Tennessee Gas Pipeline on the 200 leg on all legs east of Station 267 in Massachusetts and New Hampshire excluding the Hopkinton to Gloucester Lateral which begins in Hopkinton, passes through Lexington, Burlington, Wilmington, Somerville, Beverly Salem and ends in Gloucester, Massachusetts.

Tennessee, Zone 6, delivered South (daily and monthly market)

Deliveries from Tennessee Gas Pipeline on the 200 leg on all legs west of Station 267 in Massachusetts and New Hampshire.

Texas Eastern, M-3 (daily and monthly market)

Deliveries from Texas Eastern Transmission beginning at the outlet side of the Delmont compressor station in Westmoreland County, PA, easterly to all points in the M3 market zone, except for deliveries to Transcontinental Gas Pipe Line at Lower Chanceford.

Transco, zone 5 delivered (daily and monthly market)

Deliveries from Transcontinental Gas Pipe Line on the 30-inch, 36-inch and 42-inch lines from the Georgia-South Carolina border to the Virginia-Maryland border. Deliveries into Transco at the Pleasant Valley receipt point near Fairfax, VA, from Dominion's Cove Point LNG terminal are not included.

Transco, zone 5 delivered North (daily market only)

Deliveries from Transcontinental Gas Pipe Line on the 30-inch, 36-inch and 42-inch lines north of Station 165 to the Virginia-Maryland border. Deliveries into Transco at the Pleasant Valley receipt point near Fairfax, VA, from Dominion's Cove Point LNG terminal are not included. Transactions are also included in the Transco, zone 5 delivered index.

Transco, zone 5 delivered South (daily and monthly market)

Deliveries from Transcontinental Gas Pipe Line on the 30-inch, 36-inch and 42-inch lines from the Georgia-South Carolina border up to and including Station 165 in Virginia. Deliveries from Transco north of Station 165 are not included. Transactions are also included in the Transco, zone 5 delivered index.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035505

Transco, zone 6 non-N.Y. (daily and monthly market)

Deliveries from Transcontinental Gas Pipe Line from the start of zone 6 at the Virginia-Maryland border to the Linden, NJ, compressor station and on the 24-inch pipeline to the Wharton, PA, station. The non-New York point does not include deliveries to Public Service Electric and Gas in New Jersey, whose supply is taken downstream of Linden.

Transco, zone 6 non-N.Y. North (daily and monthly market)

Deliveries from Transcontinental Gas Pipe Line from Station 195 in York, Pennsylvania, to the Linden, New Jersey, compressor station and on the Leidy Line south of Clinton County, Pennsylvania. The non-New York North point does not include deliveries to Public Service Electric and Gas in New Jersey, whose supply is taken downstream of Linden. Transactions are also included in the Transco, zone 6 non-NY index.

Transco, zone 6 N.Y. (daily and monthly market)

Deliveries from Transcontinental Gas Pipe Line at the end of zone 6 into city-gates downstream of Linden, NJ, for New York City area distributors.

Appalachia

Columbia Gas, Appalachia (daily and monthly market)

Deliveries in Columbia Gas Transmission's Interruptible Paper Pool (IPP pool) from any source on Columbia Gas. Deliveries in the IPP pool, which is also known as the "TCO Pool" can originate from any source delivered into Columbia Gas' system.

Columbia Gas, Appalachia (Non-IPP) (daily and monthly market)

Deliveries to Columbia Gas Transmission from on-system production locations that are restricted from Columbia's IPP pool (TCO pool). This pricing location does not include transactions for gas delivered to Columbia from interconnects with other interstate pipeline systems.

Eastern Gas, North (daily market only)

Deliveries into Eastern Gas Transmission and Storage starting at the Valley Gate delivery point at the end of Eastern Gas's South Point system, about 40 miles northeast of Pittsburgh in Armstrong County, PA, and continuing north into New York and eastward across the state, crossing the Hudson River and terminating in Rensselaer County, near Albany, Troy and Schenectady, NY

Eastern Gas, South (Eastern Gas, Appalachia in monthly market) (daily and monthly market)

Deliveries into two Eastern Gas Transmission and Storage main lines: One runs northeast from Warren County, Ohio, midway between Cincinnati and Dayton, and merges with the second line just northeast of Pittsburgh, PA. The second line runs from Buchanan County, VA, on the Virginia-West Virginia border north to the end of the zone at Valley Gate in Armstrong County, PA.

Lebanon Hub (daily and monthly market)

Deliveries to or from Texas Gas Transmission, ANR Pipeline, Texas Eastern Transmission, Panhandle Eastern Pipe Line, Columbia Gas Transmission, Dominion Gas Transmission and Rockies Express Pipeline at interconnects in the Lebanon, OH, area.

Leidy Hub (daily and monthly market)

Deliveries into and from Dominion Transmission, National Fuel Gas Supply, Columbia Gas Transmission, Texas Eastern Transmission and Transcontinental Gas Pipe Line in the vicinity of the Leidy storage facility in Clinton County, PA.

Millennium, East receipts (daily and monthly market)

Receipts into Millennium Pipeline downstream of the Corning compressor station in Steuben County, NY, and upstream of the Ramapo interconnect with Algonquin Gas Transmission in Rockland County, NY.

Tennessee, zone 4-200 leg (daily and monthly market)

Deliveries into Tennessee Gas Pipeline at all points of receipt on the 200 line in the states of Pennsylvania and Ohio as well as transactions at Tennessee's station 219 pool. This location does not include deliveries from Tennessee to other systems in zone 4.

Tennessee, zone 4-300 leg (daily and monthly market)

Deliveries into Tennessee Gas Pipeline, zone 4-300 leg from, and including, station 315 in Tioga County, PA, to, and including, station 321 in Susquehanna County, PA.

Tennessee, zone 4-313 Pool (daily and monthly market)

Transactions at Station 313 in Potter County, Pennsylvania, on Tennessee Gas Pipeline's Zone 4 300 Leg.

Texas Eastern M-2, receipts (daily and monthly market)

Receipts into Texas Eastern Transmission on its 24- and 30-inch lines in the pipeline's Market Zone 2, which extends on the 24-inch line from the Illinois-Indiana state line to the suction side of Bern compressor station in Lewisville, Ohio, and on the 30-inch line from the Tennessee-Kentucky state line to the suction side of Delmont station in Westmoreland County, PA, and to the discharge side of Station Site No. 22 in southwestern Pennsylvania. (This location does not include deliveries out of Texas Eastern, M-2.)

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035506

Transco, Leidy Line receipts (daily and monthly market)

Receipts into Transcontinental Gas Pipe Line's Leidy Line downstream of the Leidy and Wharton storage facilities in Clinton and Potter counties, PA, to Transco's station 505 in Hunterdon County, NJ This pricing location does not include transactions at the storage-related interconnects with Dominion Transmission, National Fuel Gas Supply, UGI Storage or Tennessee Gas Pipeline.

Midcontinent

ANR, Okla. (daily and monthly market)

Deliveries into ANR Pipeline at the start of the Southwest mainline at the Custer, OK, compressor station, into the Texas Panhandle north to the Greensburg, KS, station.

Enable Gas, East (daily and monthly market)

Deliveries into Enable Gas Transmission's flex/neutral and north pooling areas in northeastern Arkansas and southeastern Oklahoma. The north pooling area is separated from the south pooling area by a generally northwest-to-southeast line between Le Flore County, OK, and Bolivar County, MS. The flex (or neutral) pooling area in Oklahoma comprises all of Pushmataha, Latimer, Haskell and Pittsburg counties and the northeast section of Atoka County.

NGPL, Amarillo receipt (daily market only)

Deliveries into Natural Gas Pipeline Co. of America starting at the Trailblazer Pipeline interconnection in Gage County, NE, on the Amarillo mainline at compressor station 106 east to NGPL's interconnection with Northern Border Pipeline at station 109 in Keokuk County, IA.

NGPL, Midcontinent (daily and monthly market)

Deliveries into Natural Gas Pipeline Co. of America starting at compressor station 155 in Wise County, TX, west to the Amarillo mainline at station 112 in Moore County in the Texas Panhandle, and then north to the Trailblazer Pipeline interconnection in Gage County, NE. Included are deliveries into NGPL at all Oklahoma points west of station 801, as well as those in North Texas north and east of station 170 and in Kansas south of station 103.

Oneok, Okla. (daily and monthly market)

Deliveries into Oneok Gas Transportation's mainline systems from several gathering systems, all of which are located in Oklahoma. One of the two largest is near the east-central part of the state in Pittsburg and Haskell counties. The second, in the west-central part of the state, extends from Blaine and Canadian counties southeast to Grady County. Oneok operates a single price pool for all gas coming into the system.

Panhandle, Tx.-Okla. (daily and monthly market)

Deliveries into Panhandle Eastern Pipe Line on two laterals running from the Texas and Oklahoma panhandles, southwestern Kansas and northwestern Oklahoma upstream of the Haven, KS, compressor station. Deliveries to Panhandle at the Haven pooling point — the demarcation between Panhandle's field and market zones — are not included.

Southern Star, Tx.-Okla.-Kan. (daily and monthly market)

Deliveries into Southern Star Central Gas Pipeline's system from Hemphill County in the Texas Panhandle eastward, from Carter County in south-central Oklahoma northward and from Grant County in southwestern Kansas eastward.

Texas Eastern, M-1 24-inch (daily market only)

Deliveries to Texas Eastern's 24-inch line downstream of the Little Rock, AR, compressor station to the Illinois-Indiana state line.

Upper Midwest

Alliance, into interstates (daily market only)

Deliveries from Alliance Pipeline into Vector Pipeline, Natural Gas Pipeline Co. of America, ANR Pipeline and Midwestern Gas Transmission at the tailgate of the Aux Sable plant in north-central Illinois at the terminus of Alliance. Deliveries into the Northern Indiana Public Service, Peoples Gas Light & Coke and Nicor Gas city-gates in the Chicago area are not included.

ANR, ML 7 (daily market only)

Deliveries into ANR Pipeline in its northern market zone starting at the Sandwich, IL, compressor station at the terminus of the Southwest mainline north through Wisconsin to the Crystal Falls, MI, interconnection with Great Lakes Gas Transmission. Also, deliveries into ANR east from Sandwich to the Defiance, Ohio, compressor station at the terminus of the Southeast mainline, and north from the Bridgman, MI., station to the Orient, MI, station.

Chicago city-gates (daily and monthly market)

Deliveries into the Nicor Gas, Peoples Gas Light & Coke, North Shore Gas and Northern Indiana Public Service city-gates in the Chicago metropolitan area.

Chicago-Nicor (daily and monthly market)

Deliveries into the Nicor Gas system in the Chicago metropolitan area. Transactions are also included in the Chicago city-gates index.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035507

Chicago-NIPSCO (daily and monthly market)

Deliveries into the Northern Indiana Public Service system in the Chicago metropolitan area. Transactions are also included in the Chicago city-gates index.

Chicago-Peoples (daily and monthly market)

Deliveries into the Peoples Gas Light & Coke system in the Chicago metropolitan area. Transactions are also included in the Chicago city-gates index.

Consumers Energy city-gate (daily and monthly market)

Deliveries into all city-gates of Consumers Energy, which serves most of central Michigan and the areas around Saginaw Bay.

Dawn, Ontario (daily and monthly market)*

Deliveries from Union Gas' Dawn Hub, a gathering point for 15 adjacent storage pools in Ontario near Port Huron, MI, on the US-Canadian border. Included are deliveries into TC Energy pipelines at Kirkwall, Ontario; deliveries into Great Lakes Gas Transmission at St. Clair, MI; deliveries into Consumers Energy at Bluewater, MI; deliveries into Panhandle Eastern Pipe Line at Ojibway, MI; and deliveries into Dawn storage. Deliveries from Union into Canadian Mainline at Parkway, Ontario, are not included.

Emerson, Viking GL (daily and monthly market)*

Deliveries into Great Lakes Gas Transmission from TC Energy pipelines at the Emerson 2 meter station at the US-Canadian border at Emerson, Manitoba, and deliveries into Viking Gas Transmission from Canadian Mainline at the Emerson 1 station.

MichCon city-gate (daily and monthly market)

Deliveries into all city-gates of Michigan Consolidated Gas, which serves the Detroit and Grand Rapids areas and much of north and northeast Michigan. The main MichCon city-gates are located at interconnects with ANR Pipeline at Willow Run and Wolkfork, MI, Panhandle Eastern Pipe Line at River Rouge, Great Lakes Gas Transmission at Belle River, Union Gas at St. Clair Pipeline and Consumers Energy at Northville. MichCon also receives in-state production at Kalkaska.

Northern Border, Ventura Transfer Point (daily and monthly market)

Deliveries on Northern Border Pipeline at its Ventura Transfer point (DRN# 125771). This location is designed to capture gas traded on Northern Border at Ventura that is not traded for delivery to Northern Natural Gas at the Northern Natural/ Northern Border Ventura interconnect (DRN#4680).

Northern, demarcation (daily and monthly market)

Deliveries into Northern Natural Gas at the demarcation point between its production (field) and market zones, at the Clifton station in Clay County, KS.

Northern, Ventura (daily and monthly market)

Deliveries to Northern Natural Gas at Ventura in Hancock County, IA.

REX, Zone 3 delivered (daily and monthly market)

Deliveries from Rockies Express Pipeline to Natural Gas Pipeline Co. of America pipeline at the Moultrie County, IL interconnect; to Midwestern Gas Transmission at the Edgar County, IL interconnect; to ANR Pipeline at the Shelby County, IN interconnect; to the Trunkline system at the Douglas County, IL interconnect; and to the Panhandle Eastern Pipe Line at the Putnam County, IN interconnect.

Rover, delivered (daily and monthly market)

Deliveries from Rover Pipeline into ANR Pipeline and Panhandle Eastern Pipeline in Defiance County, Ohio.

East Texas

Agua Dulce Hub (daily market only)

Deliveries into Kinder Morgan Texas Pipelines, Houston Pipe Line, Gulf South Pipeline, Natural Gas Pipeline Co. of America, Transcontinental Gas Pipe Line, Tennessee Gas Pipeline, TransTexas Gas, Enterprise Texas, NET Mexico, and Valley Crossing at the Agua Dulce Hub in Nueces County, TX, about 20 miles west-southwest of Corpus Christi. Deliveries from the ExxonMobil King Ranch plant are included.

Carthage Hub (daily market only)

Deliveries into Enable East, Gulf South Pipeline, Atmos Pipeline, Southern Natural Gas, Kinder Morgan Texas Pipelines, Tennessee Gas Pipeline, Texas Eastern Transmission and Texas Gas Transmission at the tailgate of the Carthage, Texas, processing plant in Panola County, Texas.

Florida Gas, zone 1 (daily and monthly market)

Deliveries into Florida Gas Transmission beginning at compressor station 2 in Nueces County in South Texas to station 7 in Acadia Parish, LA.

Houston Ship Channel (daily and monthly market)

Deliveries to end-users and pipelines that serve them in the Houston Ship Channel region, an industrial area extending from the east side of Houston to Galveston Bay and northeastward to the Port Arthur-Beaumont area. Gas is delivered in this area by numerous pipelines, including Kinder Morgan Texas Pipeline, Kinder Morgan Tejas Pipeline, Houston Pipe Line and Enterprise Texas pipeline.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035508

Katy (daily and monthly market)

Deliveries into Oasis Pipeline, Atmos Pipeline, Houston Pipe Line and Kinder Morgan Texas Pipelines in the Katy, TX, area, including deliveries and receipts into and out of Katy storage.

NGPL, S. Texas (daily and monthly market)

Deliveries into Natural Gas Pipeline Co. of America at the beginning of the mainline at the Thompsonville receipt point in Jim Hogg County, TX, north to compressor station 302 in Montgomery County, TX.

NGPL, Texok zone (daily and monthly market)

Deliveries to Natural Gas Pipeline Co. of America in all areas of the Texok zone excluding the portion in Texas and Oklahoma on the A/G Line. Applicable to the Texok zone are deliveries to NGPL from the Louisiana-Texas border westward to compressor station 302 in Montgomery County, TX, and northward to the interconnect with the Gulf Coast Mainline receipt zone in Cass County, TX. The "Texok Gulf Coast Pooling Point" is included in this posting, but the "Texok A/G Pooling Point" is not. Trades at ICE locations ICE Bennington, Oklahoma and ICE NGPL, TXOK West Pool are excluded from this location.

Tennessee, zone 0 (daily and monthly market)

Deliveries into Tennessee Gas Pipeline's 100 leg from the Mexico Texas border to Compressor Station 40 in Natchitoches, Louisiana, including all points of receipts on the Carthage Line No. 701-1 up to but not including transactions done at Carthage Hub in Panola County, Texas.

Texas Eastern, E. Texas (daily and monthly market)

Deliveries into Texas Eastern Transmission on the 24-inch line from the Huntsville, TX, compressor station to the Little Rock station in Arkansas, including the segment from Joaquin to Sharon.

Texas Eastern, S. Texas (daily and monthly market)

Deliveries into Texas Eastern Transmission on the 30-inch pipeline from the Mexico-Texas border to just upstream of the Vidor, TX, compressor station; and deliveries into Texas Eastern on the 24-inch pipeline from the Hagist Ranch compressor station to just upstream of the Huntsville, TX compressor station.

Transco, zone 1 (daily and monthly market)

Deliveries into Transcontinental Gas Pipe Line on two 24-inch lines running from South Texas to compressor station 30 in Wharton County, TX, which is Transco's pooling point for gas gathered on the Gulf Central Texas Lateral and for onshore coastal South Texas production.

Transco, zone 2 (daily and monthly market)

Deliveries into Transcontinental Gas Pipe Line on the 30-inch line downstream of station 30 in Wharton County, TX, to compressor station 45 in Beauregard Parish, LA, the only pooling point in the zone.

Louisiana/Southeast

ANR, La. (daily and monthly market)

Deliveries into ANR Pipeline along the southeastern Louisiana lateral that starts offshore and runs to the Patterson, LA, compressor station onshore and on to the Eunice, LA station, where ANR's Southeast mainline begins. Also, deliveries into ANR along a second lateral that runs from the HIOS system downstream of West Cameron 167 offshore to the Grand Chenier, LA station onshore and on to the Eunice station, as well as deals done at the Eunice pool.

Columbia Gulf, La. (daily and monthly market)

Deliveries into Columbia Gulf Transmission on its onshore lateral pipeline system stretching across South Louisiana, upstream of Rayne, LA. Columbia Gulf's East Lateral extends from Rayne to Venice, LA. The West Lateral runs from Rayne to west of Cameron, LA. Excluded are deals done in the offshore rate zone, at Rayne or elsewhere in the mainline rate zone.

Columbia Gulf, mainline (daily and monthly market)

Deliveries into Columbia Gulf Transmission anywhere along its mainline system zone in Louisiana and Mississippi. The mainline system extends northeast from Rayne, LA to Leach, KY.

Florida city-gates (daily market only)

Deliveries from Florida Gas Transmission into all city-gates in the Florida market area, which begins in Santa Rosa County just west of station 12 in the extreme western Florida Panhandle and extends into southern Florida. Also included in the development of Florida city-gates daily index are basis deals done within the defined Florida city-gates methodology at a differential to Florida Gas, Zone 3 final daily index.

Florida Gas, zone 2 (daily and monthly market)

Deliveries into Florida Gas Transmission downstream of station 7 in Acadia Parish, LA, to station 8 in East Baton Rouge Parish. Included is supply into the mainline from the White Lake Lateral and from the Chacahoula Lateral, both of which extend south from the mainline into production areas.

Florida Gas, zone 3 (daily and monthly market)

Deliveries into Florida Gas Transmission downstream of compressor station 8 to just upstream of station 12 in Santa Rosa County, FL., the demarcation point with the market area. Includes deliveries between stations 8 and 12, including Mobile

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035509

Bay deals into Florida Gas.

Henry Hub (daily and monthly market)

Deliveries into interstate and intrastate pipelines from the outlet of Henry Hub on Sabine Pipe Line in Vermilion Parish, LA. Pipelines include Gulf South Pipeline, Southern Natural Gas, Natural Gas Pipeline Co. of America, Texas Gas Transmission, Sabine Pipe Line, Columbia Gulf Transmission, Transcontinental Gas Pipe Line, Trunkline Gas, Jefferson Island Pipeline and Acadian Gas.

Pine Prairie Hub (daily and monthly market)

Deliveries into and out of interstate and intrastate pipelines at the Pine Prairie header system in Louisiana. Pipelines include Tennessee Gas Pipe Line, Transcontinental Gas Pipe Line, Texas Eastern Transmission, Columbia Gulf Transmission, Texas Gas Transmission, Florida Gas Transmission, ANR Pipeline, and Kinder Morgan Louisiana Pipeline. Included are deliveries and receipts into and out of Pine Prairie storage.

Southern Natural, La. (daily and monthly market)

Deliveries into Southern Natural Gas' mainlines anywhere in Louisiana, including an eastern spur starting in Plaquemines Parish and a western spur starting in St. Mary Parish in South Louisiana, and a line that starts at the Texas-Louisiana border in DeSoto Parish and runs to the Louisiana-Mississippi border in East Carroll Parish in northern Louisiana.

Tennessee, La., 500 leg (daily and monthly market)

Deliveries into Tennessee Gas Pipeline's 500 leg in zone L in southeastern Louisiana, including deliveries into the 500 Leg from the offshore Blue Water Header system. The 500 Leg meets the boundary of Zone 1 at station 534 at Purvis, MS.

Tennessee, La., 800 leg (daily and monthly market)

Deliveries into Tennessee Gas Pipeline's 800 leg in zone L in southeastern Louisiana, including deliveries from the offshore Blue Water Header system. The leg meets the boundary of the market area at station 834 at Winnsboro in central Louisiana.

Tennessee, Zone 1 (daily market only)

Deliveries into Tennessee Gas Pipeline 100 Leg between Natchitoches, Louisiana and Portland, Tennessee.

Texas Eastern, E. La. (daily and monthly market)

Deliveries into Texas Eastern Transmission on the 30-inch line from the Opelousas, LA, compressor station to the Kosciusko, MS, compressor station. Included are deliveries into the 30-inch pipeline from Texas Eastern's Venice Line at the New Roads, LA compressor station.

Texas Eastern, W. La. (daily and monthly market)

Deliveries into Texas Eastern Transmission on the 30-inch line from the Vidor, LA compressor station to just upstream of the Opelousas, LA compressor station. Includes deliveries from Texas Eastern's offshore Cameron Line at the Gillis, LA compressor station.

Texas Eastern, M-1 30-inch (Kosi) (daily and monthly market)

Deliveries into Texas Eastern Transmission on the 30-inch line at the Kosciusko, MS compressor station, which is the demarcation point between Texas Eastern's production and market zones. Deliveries into the 24-inch mainline are not included.

Texas Gas, zone SL (daily and monthly market)

Deliveries into Texas Gas Transmission on two southeastern Louisiana laterals, including offshore segments. The southwest spur begins offshore at Grand Chenier and runs through Cameron Parish to the Eunice compressor station. The southeast spur begins offshore and runs through Terrebone Parish to Eunice. Zone SL extends to the vicinity where Texas Gas crosses the Red River in Rapides Parish.

Texas Gas, zone 1 (daily and monthly market)

Deliveries into Texas Gas Transmission starting just south of the Pineville, LA compressor station in Rapides Parish north to Crockett County, TN.

Transco, zone 3 (daily and monthly market)

Deliveries into Transcontinental Gas Pipe Line on the 30-inch, 36-inch and 42-inch lines downstream of compressor station 45 in Beauregard Parish, LA to station 65 on the Louisiana-Mississippi border in St. Helena Parish, LA. Pooling points in the zone are at stations 50, 62 and 65.

Transco, zone 4 (daily and monthly market)

Deliveries into Transcontinental Gas Pipe Line on the 30-inch, 36-inch and 42-inch lines downstream of compressor station 65 at the Louisiana-Mississippi border in St. Helena Parish, LA, to the Georgia-South Carolina border. Gas enters the Transco mainline from the Mobile Bay Lateral at station 85 in Butler, AL, the only zone 4 pooling point.

Trunkline, La. (monthly market only)

Deliveries into Trunkline Gas at points upstream of the Longville compressor station on the lines that do not extend to Texas.

Trunkline, E. La. (daily market only)

Deliveries into Trunkline Gas on an offshore gathering system running from south of Terrebonne Parish west to the Kaplan

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035510

station in Vermilion Parish, the boundary with the WLA zone.

Trunkline, W. La. (daily market only)

Deliveries into Trunkline Gas along two laterals starting at an offshore Louisiana lateral leading to the Kaplan, LA station in Vermilion Parish, northwest to the Longville compressor station. Includes deliveries at the Kaplan compressor station, which demarcates the WLA and ELA zones.

Trunkline, zone 1A (daily and monthly market)

Deliveries to Trunkline Gas Co. in zone 1A from the discharge side of its Longville, LA, compressor station north to the suction side of its Dyersburg, TN, station, as well as transactions at Trunkline's zone 1A pool.

Rockies/Northwest

Cheyenne Hub (daily and monthly market)

Deliveries into Trailblazer Pipeline, Public Service Co. of Colorado and Colorado Interstate Gas in the vicinity of the Cheyenne Hub in northeast Colorado.

CIG, Rocky Mountains (daily and monthly market)

Deliveries into Colorado Interstate Gas' 20-inch, 22-inch and 24-inch mainlines in Wyoming and Colorado. Also included are deliveries into the Parachute to Natural Buttes segment in Uintah County, Utah, and deliveries into CIG's 16-inch lateral running from the Rawlins station in Carbon County, WY to the Elk Basin station in Park County, WY. Not included are deliveries into CIG's system at points south of Cheyenne, WY.

GTN, Kingsgate (daily market only)

Deliveries into Gas Transmission Northwest from Foothills Pipeline at the Kingsgate interconnection at the US-Canadian border in Boundary County, ID. The system was previously known as PG&E Gas Transmission, Northwest.

Kern River/Opal plant (daily market only)

Deliveries into Kern River Gas Transmission at the Opal, WY, processing plant and Muddy Creek compressor station in southwestern Wyoming where Kern River interconnects with Northwest Pipeline, Questar Pipeline and Colorado Interstate Gas. Gas traded at the Opal plant that is not nominated into a specific pipeline is included in the daily Kern River-Opal plant pricing point.

Kern River, Wyoming (monthly market only)

Deliveries into Kern River Gas Transmission anywhere in Wyoming. Transactions done at Opal, WY and the Muddy Creek compressor station, where Kern River interconnects with Northwest Pipeline, Questar Pipeline and Colorado Interstate Gas, are used in both the Kern River, Wyoming, and Northwest Pipeline, Rocky Mountain, monthly postings because gas traded at those points often isn't for nomination into a specific pipeline

Northwest, Canadian border (Sumas) (daily and monthly market)*

Deliveries into Northwest Pipeline from Westcoast Energy at the Sumas, WA.-Huntington, British Columbia, interconnection at the US-Canadian border.

Northwest, Rocky Mountains (monthly market)

Deliveries into Northwest Pipeline's mainline in Wyoming, Utah and Colorado between the Kemmerer and Moab stations. Deliveries at Ignacio, CO and elsewhere in zone MO are excluded. Transactions done at Opal, WY, and the Muddy Creek compressor station, where Northwest interconnects with Kern River Gas Transmission, Questar Pipeline and Colorado Interstate Gas, are used in both the Kern River, Wyoming, and Northwest Pipeline, Rocky Mountain monthly postings because gas traded at those points often is not for nomination into a specific pipeline.

Northwest, Rocky Mountain Pool (daily market only)

Deliveries into Northwest Pipeline from the Green River, WY compressor station to the Moab compressor station in San Juan County, Utah. Not included are transactions done at White River Hub.

Northwest, S. of Green River (daily and monthly market)

Deliveries into Northwest Pipeline from the Green River, WY compressor station south to the La Plata interconnection with El Paso Natural Gas in the San Juan Basin in La Plata County, CO. Included are deliveries from Clay Basin storage, the Piceance Basin and the Ignacio plant.

Northwest, Wyoming pool (daily and monthly market)

Deliveries into Northwest Pipeline from the Green River, WY compressor station to the Kemmerer, WY station. Included are deliveries at the Opal, WY plant as well as at the Painter, Anschutz, Muddy Creek, Granger, Shute Creek and Whitney stations.

PG&E, Malin (daily and monthly market)

Deliveries into Pacific Gas and Electric's Lines 400 and 401 at the Oregon-California border at Malin, OR. This location includes deliveries from Gas Transmission Northwest and Ruby Pipeline.

Questar, Rocky Mountains (daily market only)

Deliveries into Questar Pipeline on its North system, which runs from northwestern Colorado through southern Wyoming

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035511

to Salt Lake City, and on its South system, which runs from western Colorado to Payson, Utah, east of the Fidlar compressor station. A 20-inch line running parallel to the Utah-Colorado border connects the two systems. This point was discontinued in the monthly market effective May 1, 2014. It continues to be published in the daily market.

Stanfield, Ore. (daily market only)

Deliveries into Northwest Pipeline from Gas Transmission Northwest at the Stanfield compressor station in Umatilla County, OR on the Oregon-Washington border. This point was discontinued in the monthly market effective Jan. 1, 2012. It continues to be published in the daily market.

TCPL Alberta, AECO-C (daily and monthly market)

Deliveries into TC Energy's Alberta System at the AECO-C, NIT Hub in southeastern Alberta. AECO-C is the principal storage facility and hub on TCPL Alberta; paying the rate for NIT service, or Nova Inventory Transfer, will cover transmission for delivery of gas to AECO-C and most other points. The monthly bidweek posting is composed of fixed-price deals only. The price is reported in Canadian dollars per gigajoule.

TCPL Alberta, AECO-C Physical Basis (monthly market only)

Deliveries on TC Energy's Alberta System at the AECO-C, NIT Hub in southeastern Alberta. Posting is composed of physical basis deals in which the basis value is negotiated on one of the first three days of bidweek and the price is set by the final closing value of the near-month NYMEX futures contract plus or minus the negotiated basis. AECO-C is the principal storage facility and hub on TCPL Alberta; paying the rate for NIT service, or Nova Inventory Transfer, will cover transmission for delivery of gas to AECO-C and most other points. The price is reported in US dollars per MMBtu.

Westcoast, station 2 (daily and monthly market)

Deliveries into Westcoast Energy at compressor station 2 in north-central British Columbia. The price is reported in Canadian dollars per gigajoule. This point was added to the monthly bidweek market effective for December 2013 delivery.

White River Hub (daily market only)

Deliveries to or from pools or interconnects that make up the White River Hub in Rio Blanco County, Colorado.

Southwest

El Paso, Bondad (daily market only)

Deliveries into El Paso Natural Gas at the Bondad compressor station in the San Juan Basin. Bondad is located in the northern part of the San Juan Basin in La Plata County, CO, south of the Ignacio plant on Northwest Pipeline and north of the Blanco plant on El Paso.

El Paso, Permian Basin (daily and monthly market)

Deliveries into El Paso Natural Gas in the Permian Basin from three pools: the Waha plant south (Waha pool), the Keystone station south to Waha (Keystone pool) and the Plains station south to Keystone (Plains pool).

El Paso, San Juan Basin (daily and monthly market)

Deliveries into El Paso Natural Gas south of the Bondad compressor station in the San Juan Basin, including gas from the Blanco, Chaco, Rio Vista, Milagro and Valverde plants in New Mexico.

El Paso, South Mainline (daily market only)

Deliveries on El Paso's south mainline at points between Cornudas station in West Texas to but not including Ehrenberg, AZ.

El Paso, West Texas (daily and monthly):

Deliveries into El Paso Natural Gas in West Texas from two pools: the Waha plant south (Waha Pool), and the Keystone station south to Waha (Keystone Pool).

Kern River, delivered (daily and monthly market)

Deliveries from Kern River Gas Transmission upstream of the Southern California Gas system in the Las Vegas, NV, area; excluded are deliveries at Wheeler Ridge, Kramer Junction and Daggett.

PG&E, city-gate (daily and monthly market)

Deliveries from Pacific Gas and Electric's intrastate transmission system to city-gates on PG&E's local distribution system in Northern California.

PG&E, South (daily and monthly market)

Deliveries into Pacific Gas and Electric in Southern California from El Paso Natural Gas and Transwestern Pipeline at Topock, CA; from Kern River Gas Transmission at Daggett, CA, and the High Desert Lateral; from Southern California Gas at the Kern River station; and from Questar Southern Trails Pipeline at Essex, CA.

SoCal Gas (daily and monthly market)

Deliveries into Southern California Gas from El Paso Natural Gas at Topock, CA, and Blythe, CA (Ehrenberg, AZ); from Transwestern Pipeline at Topock-Needles, CA; from Kern River Gas Transmission at Wheeler Ridge and Kramer Junction, CA; and from Questar Southern Trails Pipeline at Needles. The point also includes deliveries from Pacific Gas and Electric at several points, including Kern River station and Pisgah-Daggett; and in-state production.

CPSE-MDL_000035512

SoCal Gas, city-gate (daily and monthly market)

Deliveries at Southern California Gas' city-gate pool. The SoCal Gas city-gate pool is a "virtual" trading location on SoCal Gas' system for deliveries to and from holders of the distributor's city-gate pool contracts. This point includes storage transactions delivered to and from the city-gate pool.

Transwestern, Permian Basin (daily and monthly market)

Deliveries into Transwestern Pipeline from the West Texas zone located southeast and southwest of the WT-1 compressor station in Lea County, NM and the Central zone bordered by station 8 in Lincoln County, NM, to the northwest, station P-1 in Roosevelt County, NM, to the east and station WT-1 in Eddy County, NM to the south.

Transwestern, San Juan Basin (daily and monthly market)

Deliveries to Transwestern Pipeline at points included in Transwestern's Blanco Hub in San Juan County, NM.

Waha (daily and monthly market)

Deliveries into interstate and intrastate pipelines at the outlet of the Waha header system in the Permian Basin in West Texas. Pipelines and locations include El Paso Natural Gas, Transwestern Pipeline, Natural Gas Pipeline Co. of America, Northern Natural Gas, Delhi Pipeline, Oasis Pipeline, Atmos Zone 1, OneOk West Tex, Enterprise Texas Pipeline, Permian Highway Pipeline, and Gulf Coast Express Pipeline. Does not include Atmos Zone 3 or Tolar Hub.

Canadian Gas Price Reporter (CGPR) Daily & Monthly Indices Methodology

All CGPR daily and monthly indices are volume-weighted or arithmetic average calculations of transactions on the ICE NGX Exchange. Only transactions done on ICE NGX are included in their formation.

Daily Prices and Calculations:

For more information on the calculation of AB-NIT Same Day 1A-5A, please see the ICE NGX Methodology guide at https://www.theice.com/publicdocs/NGX_Index_Methodology.pdf

Monthly Prices and Calculations:

First of the Month Canadian and US Refinitiv WM/Reuters 12 Noon EST FX Benchmark exchange rates are published on the first business day of the month.

The NYMEX Henry Hub prompt month expiration price is converted to CAD by multiplying the final NYMEX expiration price by the prevailing CAD exchange rate on the day of expiration, then dividing by the constant 1.055056.

Alberta Natural Gas Reference Price is publicly available by the Alberta Department of Energy with a two-month lag. Most recent values are calculated by subtracting the Intra-Alberta Transport from the NIT Purchase Price, then multiplying by the Pipeline Fuel/Loss Factor.

ICE NGX Alberta Market Price is publicly available on ICE NGX and is a volume-weighted average price for all physically delivered natural gas in the month at the Alberta AB-NIT market center for all traded products.

ICE NGX Alberta Spot Price – Empress (7) is calculated by adding the ICE NGX AB-NIT Month Ahead 7A end of month value to ICE NGX AB-NIT-TCPL Empress Month Ahead Spread (7AA) value. ICE NGX AB-NIT Month Ahead (7A) is a volume-weighted calculation of all ICE NGX AB-NIT Month Ahead transactions done on ICE NGX for delivery the following month. ICE NGX AB-NIT Month Ahead Bidweek (7A1) is volume-weighted calculation of all ICE NGX AB-NIT Month Ahead transactions done on ICE NGX for delivery the following month during ICE NGX bidweek, defined as the last five business days of the month. ICE NGX AB-NIT-TCPL Empress Month Ahead Spread (7AA) is a volume-weighted calculation of all ICE NGX AB-NIT-TCPL/Empress fixed price spread deals done on ICE NGX for delivery the following month.

ICE NGX Spectra – Stn 2 Month Ahead (7B) is a volume-weighted calculation of all ICE NGX Spectra – Stn 2 transactions done on ICE NGX for delivery the following month. ICE NGX AB-NIT Month Ahead Bidweek (7C) is volume-weighted calculation of all ICE NGX Spectra – Stn 2 transactions done on ICE NGX for delivery the following month during ICE NGX bidweek, defined as the last five business days of the month.

Saskatchewan Provincial Gas Price is a publicly available royalty calculation published by the Government of Saskatchewan with a two-month lag. The value is converted to cubic meters by multiplying the most recent royalty price and the constant 37.78.

All other Month Ahead values are volume-weighted calculations based on their respective ICE NGX contracts traded on ICE NGX for delivery next month.

Gas Indices Americas (GIA) Daily Indices Methodology

The GIA prices are calculated using twenty trading locations across four regions in the US and Canada. Platts publishes a daily index for North America as well as the Northeast, South, Midwest, and West regions. Prices are reported in US dollars per million Btu.

Platts collects interstate pipeline natural gas data from the Intraday 3 pipeline nomination cycle to determine locations, location weightings, and region weightings. Volumes are compiled by location according to location definitions.

A. Determine GIA Locations

- Rank Platts locations in each of the four regions by average daily nomination volume in the prior winter or summer season, where winter represents November – March and summer represents April – October.
- The top 5 locations in each region with the highest volumes are selected.
- To ensure adequate trading liquidity, each location must have an average daily deal count of at least 20 trades over the prior winter or summer season. If a location does not meet this threshold, it is excluded and the location with the next highest volume is selected.

For example, the locations for Nov 2020 – Mar 2021 represent the 5 locations in each region with the highest average daily nomination volumes that also meet the liquidity threshold during Nov 2019 – Mar 2020. The locations remain constant for the entirety of the season. Locations are reviewed twice per year at the end of the winter and summer seasons. Platts publishes the twenty locations in April for the following winter and in November for the following summer. Given the seasonal lag between traded volumes for location selection and index calculation, Platts reserves the right to exclude locations that meet these criteria should diminished trading liquidity occur or include locations that meet these criteria after the prior season.

B. Calculate GIA Region Prices

Region price = (Location1 price x location1 weighting) + (Location2 price x location2 weighting) + (Location3 price x location3 weighting) + (Location4 price x location4 weighting) + (Location5 price x location5 weighting)

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035537

1. Location price = Platts final daily index price, published around 5 pm Central Time according to the Platts daily gas calendar.

Should Platts not assess a price for a location, the location weighting is evenly distributed over the other locations in the region in computing the region price.

2. Location weighting = the weight of each location's volume based on the 5 locations in each region over the prior winter or summer season, where for each location:

Location1 weighting = Location1 volume / (Location1 volume + location2 volume + location3 volume + location4 volume + location5 volume)

No location may have a location weighting greater than twice the size of the average of the five points, i.e., 40%. Should a location need to be capped, any allocation above 40% is divided equally over the other locations in that region.

For example, the location weightings for Nov 2020 – Mar 2021 are determined by dividing the location volume for Nov 2019 – March 2020 by the total volume for all 5 locations in the region over the same period. The location weightings remain constant for the entirety of the season. Location weightings are reviewed twice per year at the end of the winter and summer seasons. Platts publishes the location weightings in April for the following winter and in November for the following summer.

C. Calculate GIA North America Price

GIA North America price = (Region1 price x Region1 weighting) + (Region2 price x Region2 weighting) + (Region3 price x Region3 weighting) + (Region4 price x Region4 weighting)

Region price = Prices calculated per B. above

Region weighting = the weight of each region's volume based on the 5 locations in each region over the prior winter or summer season, where for each region:

Region1 weighting = Region1 volume / (Region1 volume + Region2 volume + Region3 volume + Region4 volume). No region may have a weighting greater than twice the size of the average of the four regions, i.e., 50%. Should a region need to be capped, any allocation above 50% is divided equally over the other regions.

GIA Symbols

Name of Indices	GIA Final Daily Indices By Trade Date	GIA Final Daily Indices By Flow Date
Description of Symbol	Index	Index
Market Data Category	GH	GH
Bates Published	c	c
GIA Northeast	IGKAA00	IGKAA21
GIA South	IGLAA00	IGLAA21
GIA Midwest	IGMAA00	IGMAA21
GIA West	IGNAA00	IGNAA21
GIA North America	IGOAA00	IGOAA21

Bates are defined as: Index = c

For example, the region weightings for Nov 2020 – Mar 2021 are determined by dividing the region volume for Nov 2019 – March 2020 by the total volume for all 4 regions over the same period. The region weightings remain constant for the entirety of the season. Region weightings are reviewed twice per year at the end of the winter and summer seasons. Platts publishes the region weightings in April for the following winter and in November for the following summer.

CPSE-MDL_000035538

Revision history

December 2022: Launched NYMEX Henry Hub expiration price and updated the name for Lone Star Pipeline to Atmos Pipeline.

November 2022: Platts discontinues ICE CGX, Waha Hub and ICE Midcoast Carthage Hub locations.

August 2022: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout.

July 2022: Platts adds new daily and monthly ICE location titled ICE NGPL TXOK East Storage (Gulf Coast) PIN 25658.

February 2022: Platts removed the word "monthly" from the titles for the monthly locations Northwest, Wyoming Pool and Northwest, S. of Green River under the "Platts Locations Monthly Symbols" section. Platts also added the sentence "Platts will accept bidweek trades transacted before 3:00 pm CT on day 3 of bidweek as this coincides with the deadline for trades done on the ICE exchange" in the "What to report" section.

January 2022: Platts launched ICE CGX Waha Hub daily and monthly index. Separately, Platts also discontinued daily and monthly ICE CGX West Pool.

December 2021: Platts adds two new monthly locations Northwest, S. of Green River and Northwest, Wyoming Pool. The titles have been changed from "daily market only" to "daily and monthly market". Platts corrects alphabetization in locations.

November 2021: Platts changes the title of the Northwest, Rocky Mountains location from"daily and monthly market" to "monthly market only" and bolds the title of Northwest, Rocky Mountain Pool (daily market only). Platts adds daily and monthly ICE Rex, zone 3 Delivered Pool locations.

October 2021: Platts shortened its bidweek trading period to three (3) days from five (5) days starting Sept. 24 for the October bidweek.

September 2021: Platts changes the title of the Northwest, Rocky Mountains location from"monthly market only" to "daily and monthly market".

August 2021: Platts launched the ICE NGX TransGas Energy Pool 5A Same Day Index.

July 2021: Platts completed an annual update to the US and Canada Natural Gas Methodology Guide. Platts launched daily and monthly liquidity tables that show average monthly volumes and deal counts by location over the past four months. Platts updated the Algonquin city-gate methodology to address divergence of trades upstream of Cromwell compressor station. Platts also changed the methodology and name of the location because of Dominion Energy changing its name to Eastern Gas Transmission and Storage.

June 2021: In June Platts added the Valley Crossing Pipeline to the Agua Dulce natural gas index and the Permian Highway and Gulf Coast Express pipelines to the Waha natural gas index. In May Platts launched ICE Midcoast Carthage Hub daily and monthly indices. In April Platts launched ICE Bay Gas Storage and ICE REX W-NGPL daily and monthly indices.

January 2021: Platts discontinued monthly Transco, Zone 6 non-NY South and ANR-ML 7 indices. Platts also launched ICE Transco, Zone 6 non-NY South indices.

December 2020: Platts discontinued daily Tennessee, zone 6 (300 leg) delivered and Transco, Zone 6 non-NY South indices. Platts also launched ICE Transco, Zone 6 non-NY South and ICE Tennessee, zone 6 300 leg indices. In addition, Platts updated submission methods to include API submission through Trade Vision launched in December.

November 2020: Platts added month to date indices for the ICE NGX AB-NIT Yesterday Index, ICE NGX APC-ATP Same Day Index, ICE NGX Spectra Station #2 Same Day Index, ICE NGX TransGas Energy Pool Same Day Index, and ICE NGX Union Dawn Same Day Index locations

September 2020: Platts launched ICE Midship, receipts daily and monthly indices.

July 2020: Platts completed an annual review of the North American Natural Gas methodology and specifications guide. Platts reviewed all content and made minor edits to language. Add daily cash basis symbols for Platts daily table, as well as symbols for ICE REX, Cheyenne Comp Pool daily & monthly indices.

July 2020: Added month to date prices for CGPR day ahead locations.

May 2020: Platts removed references to Shale Value Chain following discontinuation on May 25. Platts also added more information around CGPR Daily & Monthly indices, including data used and calculations.

May 2020: Platts updated the methodology guide to merge the Gas Indices Americas (GIA) methodology into the US and Canada methodology guide. Platts also included methodology pertaining to Canadian Enerdata Ltd. acquisition and publishing of daily & monthly Canadian ICE NGX contracts.

April 2020: Platts launched ICE Transco, River Road and ICE MEP, Lamar daily and monthly indices.

March 2020: Amended prior Revision History for November 2019 to show complete name of Platts Trade Vision

February 2020: Platts has changed the preliminary monthly indices to only include ICE transactional data. Bilateral transactions will still be included in final monthly Indices.

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035539

December 2019: Platts has changed the mention of TransCanada to TC Energy to reflect recent name change. Platts has also changed TransCanada Mainline name to Canadian Mainline to reflect recent name change.

November 2019: Added Platts Trade Vision as a method to receive trade submissions used in the formation of its North American natural gas indices. Platts launched ICE Tennessee, zone 0 South Texas Border Pool.

October 2019: Added language about the use of market information when assessing prices and key submitter dependency.

September 2019: Platts launched Pine Prairie Hub, Rover delivered, and Northwest Rocky Mountain Pool in the daily market and discontinued the ICE Pine Prairie Hub location. In the monthly market, Platts launched Pine Prairie Hub, Rover delivered, and Kern River delivered. Platts discontinued ICE Kern River on system delivery and ICE Pine Prairie Hub in the monthly market. Platts launched the following ICE locations for the daily and monthly market : ICE Gillis Hub, ICE GCX West Pool, ICE HSC-Kinder Morgan, ICE Tennessee Zone 1, 800 Leg Pool.

August 2019: Platts completed an annual review of the North American Natural Gas methodology and specifications guide. Platts reviewed all content and made minor edits to language.

July 2019: Platts launched ICE Columbia Gas, A08 Pool daily and monthly index in June 2019. Platts also launched natural gas OTC indices for Canadian Locations. Platts adds language to Part V of Methodology & Specification guide further explaining the correction process in the daily and monthly market, additional detail on the timeframe for correcting, and interaction with price submitters.

May 2019: Platts launched ICE El Paso, Anadarko monthly index. Platts revised several symbols in the daily and monthly markets to correct errors. Tennessee Zone 1 daily absolute range flow date symbol was revised to IGBHI22, while the Preliminary Cumulative Basis Deal Count symbols for all locations in the Rockies/Northwest and Southwest regions were corrected.

April 2019: Platts added language to Part I, spelling out Canadian locations outside of FERC jurisdiction, as well as the inclusion of basis deals in the Florida city-gates daily index. In addition, Part VII was revised to include an asterisk identifying Canadian locations, and corresponding footnote, in addition to further details on basis deals in Florida city-gates. Platts launched ICE El Paso, Anadarko daily index.

January 2019: Platts added daily and monthly indices for the following Platts Location, El Paso, West Texas. Platts added daily and monthly indices for the following ICE location, ICE Banquete Hub. Due to a listing issue Platts added daily indices and symbols for the following ICE locations, ICE NGPL, Amarillo Pooling PIN and ICE NGPL, Amarillo Storage PIN and removed ICE NGPL, Iowa-Illinois Pooling PIN and ICE NGPL, Iowa-Illinois Storage PIN.

November 2018: Platts added daily and monthly indices for the following Platts Locations, Tennessee, zone 6, delivered North, and Tennessee, zone 6, delivered South. Platts added daily and monthly indices for the following ICE locations, ICE Iroquois, zone 1 (delivered excl. Waddington) and ICE Tennessee, zone 5, 200 Line, dlvd downstream of station 245, as well as monthly basis symbols for Platts locations in Rockies and Southwest. Platts discontinued daily and monthly indices for the following ICE locations, ICE TGP-Z6 200L, North and ICE TGP-Z6, 200L South.

October 2018: Platts added daily indices for the following Platts locations, Tennessee, zone 5 (200 leg) and Iroquois, zone 1. Platts discontinued daily and monthly indices for the following ICE locations, ICE Iroquois, zone 1 (delivered excl. Waddington and ICE Tennessee, zone 5, 200 Line, delivered downstream of station 245. Platts added daily and monthly indices for the following ICE locations, ICE Tennessee, Zone 6, 200L, North and ICE Tennessee, Zone 6 200L, South.

September 2018: Platts discontinued daily and monthly indices for the following Platts locations Rex Clarington, Ohio and Tennessee Zone-4 Ohio . Platts also removed daily and monthly indices for the following ICE locations, ICE NGPL Iowa-Illinois Pooling PIN and ICE NGPL Iowa-Illinois Storage PIN, and added daily and monthly indices for the following ICE locations, ICE NGPL, Iowa-Illinios GC Pool, ICE NGPL, Iowa-Illinois AM Pool, ICE NGPL, Iowa-Illinios GC Storage, ICE NGPL, Iowa-Illinois AM Storage, ICE Rover, receipts, ICE REX, zone 3 receipts, ICE ENT, STX Map, ICE Agua Blanca Pool

August 2018: Platts added Shale Value Chain methodology to the North American Natural Gas methodology guide and retired the separate Shale Value Chain methodology guide.

June 2018: Platts completed an annual update to the North American Natural Gas methodology guide. In this update, Platts reviewed all content and made minor edits throughout.

June 2018: Platts added daily and monthly indices for ICE Dominion Energy, Cove Point, on system delivery; ICE Rover, delivered into ANR; ICE Rover, delivered into Panhandle; and ICE Bennington, Oklahoma, (buyer's choice) locations, and discontinued daily and monthly indices for the following ICE locations, ICE Transco Cove Point Pleasant Valley Interconnect, and ICE Bennington Oklahoma

June 2018: Added Tennessee, Zone 1 as a daily market index in Louisiana/Southeast.

May 2018: Clarified methodology for NGPL, Texok zone.

March 2018: Clarified methodology for Agua Dulce, Tennessee, zone 0, and Waha locations.

December 2017: On December 1, Platts changed final monthly indices for Platts locations methodology to add non-Platts price

© 2022 by S&P Global Inc. All rights reserved.

reporter ICE trades. Corrected symbol for Platts location Rex, zone 3 delivered final daily indices by flow date absolute range symbol.

November 2017: Platts discontinued regional average preliminary fixed price monthly symbols on November 17. Only regional average final monthly index prices will be published.

October 2017: On trade date October 31, 2017, changed final daily indices for Platts locations methodology to add non-Platts price reporter ICE trades and editorial judgment to assess daily prices. Added daily and monthly indices for ICE Algonquin, Millennium-Ramapo receipts, ICE Algonquin, TGP-Mahwah receipts, and ICE ETC, Cleburne locations.

September 2017: Launched preliminary monthly indices for Platts and ICE locations on September 25, 2017 and final monthly indices for ICE locations on October 1, 2017.

August 2017: Platts amended text throughout to reflect implementation of Platts ICE natural gas agreement. Launched preliminary daily indices for Platts locations and final daily indices for ICE locations on August 31, 2017.

June 2017: Platts completed an annual update to the North American Natural Gas methodology guide. In this update, Platts reviewed all content and made minor edits throughout.

January 2017: Added ICE physical bids and offers to market information used to assess monthly indices

August 2016: Platts completed an annual update to the North American Natural Gas methodology guide in August 2016. In this update, Platts reviewed all content. In this edition, Platts made minor edits throughout.

June 2016: Added Transco, zone 5 delivered North (daily market only) and Transco, zone 5 delivered South (daily and monthly markets) sublistings. Discontinued use of backup Yahoo mailboxes and replaced them with gasprice_daily2@spglobal.com and gasprice_monthly2@spglobal.com.

April 2016: Extended reportable transaction time cutoff to 1 pm Central from 11:30 am, effective April 1, 2016. Added detail on calculations of regional and national average prices.

January 2016: Added regional average symbols for the 8 regions.

December 2015: Reorganized locations by 8 separate regions.

October 2015: Added Chicago-Nicor, Chicago-NIPSCO, Chicago-Peoples, and REX, Zone 3 delivered to daily and monthly markets.

August 2015: Added Tennesee, Zone 4-313 Pool and Transco, Zone 6 non-NY South locations to daily and monthly markets. Also edited Part I, Part II, and Part III at beginning of document.

June 2015: Section on common and absolute ranges changed to show ranges are carried out to a third decimal place and rounded to the nearest half-cent.

April 2015: Clarification of descriptions at Algonquin, city-gates; Dominion, North Point; Dominion, South Point; Texas Eastern, M-3; and Chicago city-gates.

February 2015: Clarification of Corrections and Security and Confidentiality sections.

January 2015: Added "monthly market" to Transco Zone 5 delivered point description.

December 2014: Added Transco Zone 5 delivered to monthly market. Added Transco Zone 6 non-NY North and Columbia Gas, Appalachia (Non-IPP) to the daily and monthly markets. The monthly market additions are effective December 2014 trading for January 2015 delivery. The daily market additions are effective trade date January 2, 2015 for delivery on January 3 – 5.

November 2014: Clarified description for Columbia Gas, Appalachia (daily and monthly market), confirming it reflects deliveries in Columbia Gas Transmission's Interruptible Paper Pool (IPP pool) from any source on Columbia Gas. Deliveries in the IPP pool, which is also known as the "TCO Pool" can originate from any source delivered into Columbia Gas' system.

October 2014: Updates description for Columbia Gas, Appalachia (daily market only) confirming it reflects deliveries into Columbia Gas Transmission's Interruptible Paper Pool (IPP pool) from any source on Columbia Gas. Deliveries into the IPP pool are transported using Columbia Gas Transmission's IPP Rate schedule and can originate from any source delivered into Columbia Gas' system, including unrestricted aggregation points under the pipeline's AS rate schedule.

May 2014: Discontinued Questar Gas Co. pricing location for monthly bidweek market only.

April 2014: Correction of description for Tennessee, La., 500 leg.

April 2014: Modification of description for Tennessee, zone 6 delivered, confining it to the deliveries off the 200 leg. Addition of Tennessee, zone 6 (300 leg) pricing location to the daily market.

January 2014: Platts revamped this Methodology and Specifications Guide effective January 2014. This revamp was completed to enhance the clarity and usefulness of the guide and to introduce greater consistency of layout and structure across Platts published methodology guides. Methodologies for market coverage were not changed in this version. Platts symbols for all pricing locations were added in Part VII and the order of pricing location listings was revised to group them by six geographical regions.

November 2013: Added WestCoast Energy, station 2, to monthly bidweek market effective bidweek trading November 2013 for December 2013 delivery. Changed name of CenterPoint Energy

© 2022 by S&P Global Inc. All rights reserved.

CPSE-MDL_000035541

Gas Transmission to Enable Gas Transmission. (In the daily price tables, the CenterPoint, East" listing was changed to "Enable Gas, East," effective trade date November 25, 2013, and in the monthly bidweek tables "CenterPoint Energy Gas Transmission Co., East" was changed to "Enable Gas Transmission, LLC., East" effective bidweek trading November 2013 for delivery December 2013.)

July 2013: Clarification of methodology for Western Canadian daily price indices Westcoast, station 2, and NW, Can. Bdr. (Sumas) for Canadian holidays that fall on Mondays.

April 2013: Additions of Transcontinental Gas Pipe Line, Leidy Line receipts and Tennessee Gas Pipeline, Zone 4-200 leg pricing locations to the daily and monthly bidweek markets.

January 2013: Modification of description for Niagara pricing location to reflect US exports to Canada as well as US imports from Canada.

October 2012: Additions of Texas Eastern M-2, receipts and Millennium Pipeline, East receipts to the daily and monthly bidweek markets.

January 2012: (second update in January 2012): Addition of Tennessee, zone 4-300 leg to the daily market and the monthly bidweek market.

January 2012: Discontinuation of three pricing locations: Natural Gas Pipeline Co. of America, Louisana, in the daily and monthly bidweek markets; Stingray Pool in the daily market; and Stanfield, Ore., in the monthly bidweek market only. (The Stanfield, Ore., location continues in the daily market.) The changes became effective January 1, 2012. Additionally, language was added to the PG&E, Malin location description to make explicit that the location includes deliveries from Gas Transmission Northwest and Ruby Pipeline.

US working natural gas volumes in underground storage declines 192 Bcf: EIA

- **Platts survey estimated 195 Bcf draw**
- **End-of-season could slip below 1.5 Tcf**

A string of massive weekly US natural gas storage withdrawals, starting with the 192 Bcf pull reported Feb. 4, have the potential to unravel recent forecasts, and prompt stocks to enter next year's heating season more than 600 Bcf below the five-year average, marking a dramatic year over year reversal.

Natural gas storage inventories fell 192 Bcf to 2.689 Tcf for the week ended Jan. 29, according to the US Energy Information Administration.

The withdrawal was below the 195 Bcf pull an S&P Global Platts' survey of analysts expected, but it proved to be the largest weekly draw of the heating season. Storage volumes now stand 41 Bcf, or

PLATTS LOCATIONS NATURAL GAS DAILY FINAL ASSESSMENT RATIONALE

Platts Gas Daily indices are based upon trade data reported to Platts by market participants and the Intercontinental Exchange.

The indices are calculated using detailed transaction level data from these providers. Platts editors screen the data for outliers that may be further examined and potentially removed. A volume weighted average is then calculated from the remaining set of data.

These locations were assessed by Platts and deviated from the standard volume weighted average methodology in the following ways:

1. Niagara: Price of $2.805/MMBtu was assessed at a 9.5-cent premium to Dominion South Point, based on recent daily gas trading and verified by ICE bid/offer activity.
2. NGPL, STX: Price of $2.86/MMBtu was assessed at a 5-cent premium to NGPL, Texok Zone based on recent daily gas trading and verified by ICE bid/offer activity.
3. Transco, zone 2: Price of $2.915/MMBtu was assessed flat to Transco, zone 3 based on recent daily gas trading and verified by ICE bid/offer activity.
4. Texas Gas, Zone SL: Price of $2.905/MMBtu was assessed at a 4.5-cent premium to Texas Gas, Zone 1 based on recent daily gas trading and verified by ICE bid/offer activity.

This rationale applies to symbols found in the Market Data category GD listed at http://plts.co/3z3y30qw7qH

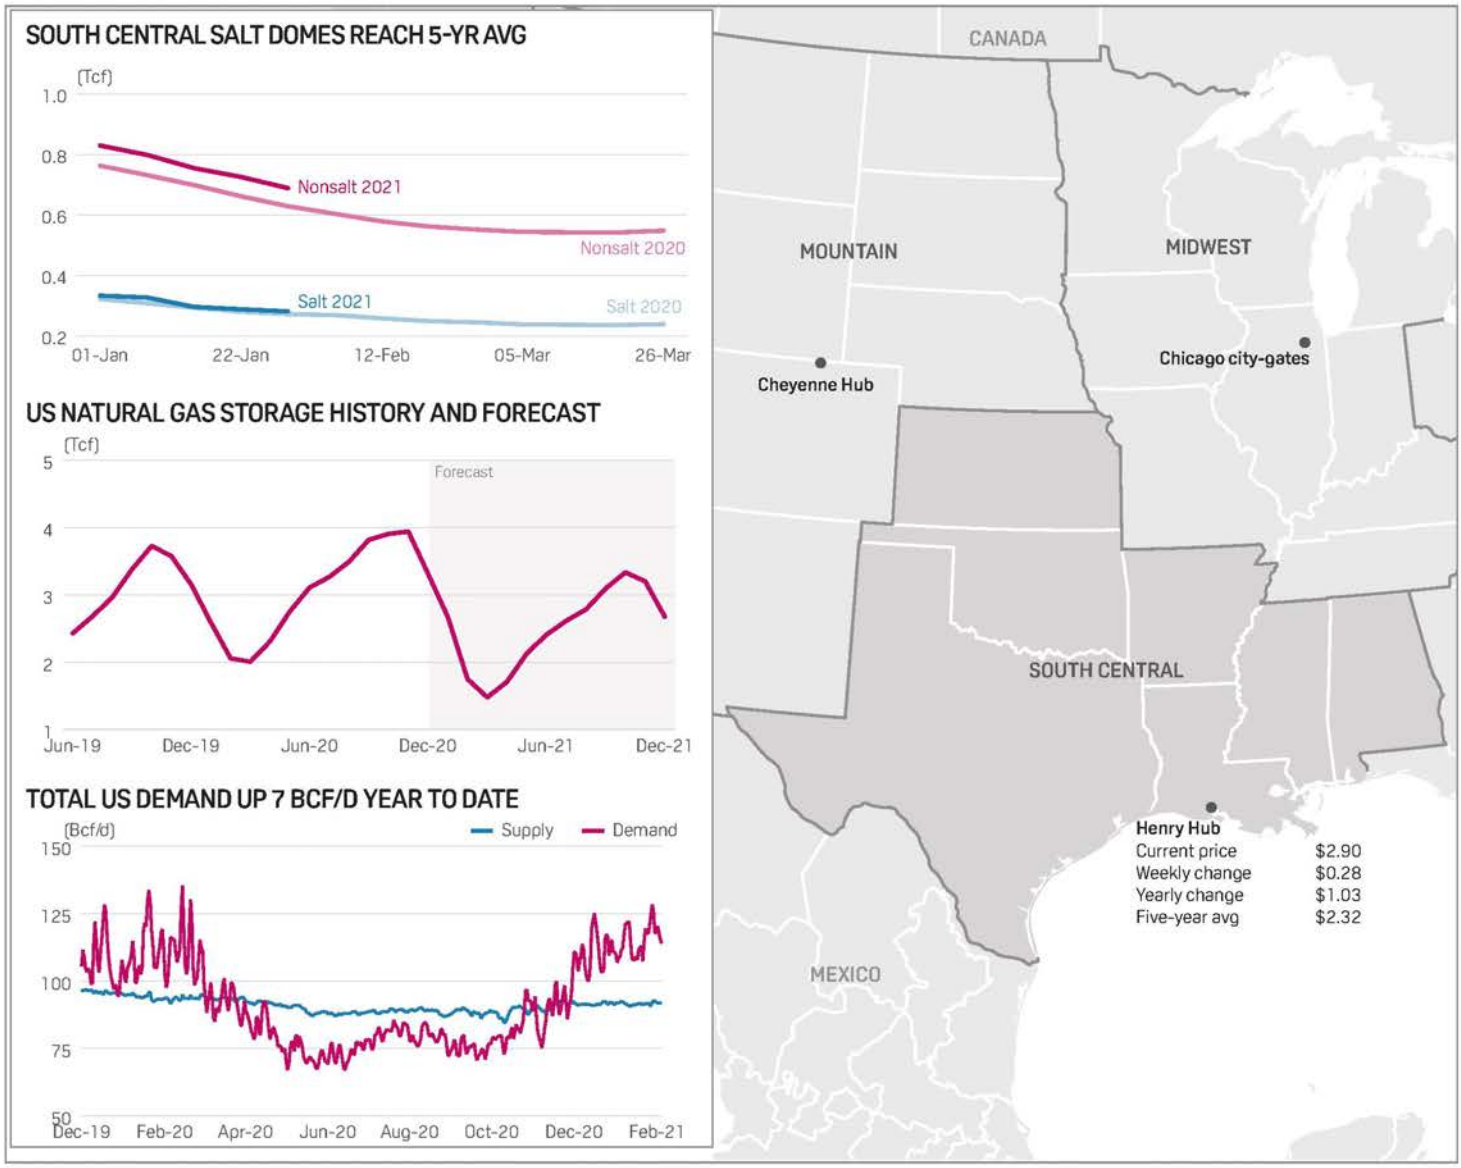
1.5%, more than the year-ago level of 2.648 Tcf and 198 Bcf, or 7.9%, more than the five-year average of 2.491 Tcf.

The NYMEX Henry Hub March contract added 11 cents to $2.90/MMBtu in afternoon trading on Feb. 4. The upcoming summer strip, April through October, added 7 cents to average $2.93/MMBtu.



S&P Global Platts Analytics' supply and demand model currently forecasts a 181 Bcf withdrawal for the week ending Feb. 5, which would shrink the storage surplus to the five-year average by 56 Bcf. Milder temperatures reduced demand by nearly 2.5 Bcf/d. Unsurprisingly, residential and commercial demand paced the losses, averaging about 2.2 Bcf/d below the prior week. Moreover, gas-fired power generation fell about 600 MMcf/d as wind generation ramped up.

A draw of at least 230 Bcf looks probable for the week ending Feb. 12 as artic temperatures are forecast to blanket much of the country. It would measure nearly 100 Bcf stronger than the five-year average.

A recent cold snap in both the Midwest and Northeast regions has pulled hard on storage inventories. Heavy withdrawals are expected to continue with the 14-day weather forecast calling for US temperatures

US NATURAL GAS STORAGE: DEMAND FOR WEEK IN PROGRESS DECLINES IN EVERY REGION EXCEPT SOUTH CENTRAL

Demand for the week ending Feb. 5 has declined in every EIA storage region beside the South Central. South Central supply and demand balances tightened week over week by a wide margin as sample withdrawals jumped 14 Bcf. Most of the movement coming from the salt-dome storage facilities. Regional temperatures averaged 51 degrees Fahrenheit for the week ended Feb. 5, but higher gas-fired power demand, combined with a 1 Bcf/d increase in net flows exiting the US Gulf Coast, resulted in a greater call on storage. LNG exports for the week in progress have increased 400 MMcf/d.

to average 2 degrees below normal.

While the main impact of the colder temperatures is being felt in the Northeast, prices across the Southeast and Texas have also strengthened considerably this week due to stronger Henry Hub prices, which rallied 19 cents on Feb. 1. The trickle-down impacts of the prolonged heavy withdrawals pushed the March Henry Hub contract higher as well, gaining 25 cents on Feb. 1.

Prior to the cold snap, Platts Analytics was forecasting total inventories to end the winter at 1.79 Tcf. However, with the recent pull, inventories could trend closer to 1.5 Tcf. This poses issues for the Summer 2021 build, which Platts Analytics is forecasting to total 1.6 Tcf over the season.

ESTIMATED WORKING GAS IN STORAGE (in Bcf)

(week ending January 29)

	This Week	Last Week	Change
East	582	641	-59
Midwest	719	780	-61
Mountain	158	170	-12
Pacific	261	275	-14
South Central	970	1,014	-44
Total Lower 48 US	2,689	2,881	-192
	This Week Last Yr.	**Prior 5-Year Average**	
East	609	562	
Midwest	735	670	
Mountain	138	140	
Pacific	210	218	
South Central	956	901	
Total Lower 48 US	2,648	2,491	

Source: Energy Information Administration

The projected lighter-than-normal injection season has the potential to send total US inventories into winter 2021-22 at 3.1 Tcf. This would be 600 Bcf less than the five-year average and 800 Bcf below volumes entering the 2020-21 heating season, likely leading to higher year-over-year prices at hubs located in the East, South Central and Midwest storage regions.

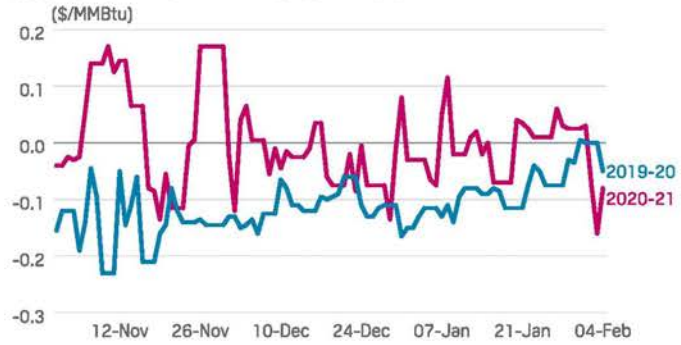
Permian end-users bid up basis prices as shifting market dynamic stokes rivalry

- **El Paso San Juan basis up 25 cents since Jan 2020**
- **Houston Ship Channel basis rises 7 cents on year**
- **Southwest prices rise as Permian Highway starts**



Mounting competition for Permian gas has put upward pressure on cash basis at hubs in the Southwest and East Texas recently as limited West Texas supply gets pulled in opposing directions.

Year to date, cash prices at El Paso San Juan have averaged just 1.5 cents/MMBtu below the benchmark Henry Hub – almost 25 cents higher compared with year-ago levels, data from S&P Global Platts shows.

At Houston Ship Channel, the spot market has traded only a penny below Henry Hub in 2021 and is up about 7 cents compared with year-to-date levels in 2020.

Higher basis prices at both locations this year come following the recent startup of Kinder Morgan's Permian Highway Pipeline. In early January, the initiation of commercial service on the new 2.1 Bcf/d eastbound transmission corridor began upping the ante for West Texas gas.

HOUSTON SHIP CHANNEL CASH BASIS

Source: S&P Global Platts

Transmissions

Over the past eight weeks, total receipts and deliveries from Permian Highway to interconnecting interstate pipelines have doubled to about 500 MMcf/d – up from levels closer to 250 MMcf/d in early December, data compiled by S&P Global Platts Analytics shows.

Flows on Permian Highway itself are not directly observable since the intrastate pipeline is not required to publicly report.

The impact that Permian Highway has had on regional flow dynamics, though, is clear enough. With new, incremental access to premium end-user markets in East Texas, Permian producers have increasingly opted to divert supply away from more discounted legacy markets.

In January, interstate pipeline flows westbound from the Permian Basin averaged about 3.72 Bcf/d, or about 210 MMcf/d below year-ago transmission levels. Northbound flows from the Permian have also suffered, averaging about 375 MMcf/d last month, compared with levels at over 1 Bcf/d in January 2020, Platts Analytics data shows.

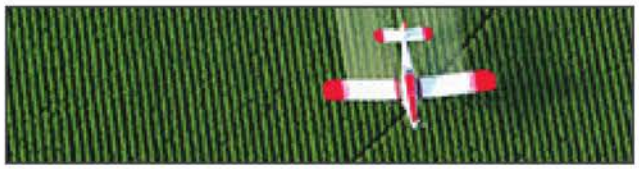
Production

Over the past 12 months, a sharp drop in Permian gas production has also raised the stakes for the basin's supply, driving up prices at once discounted West Texas locations like Waha.

In January, gas production from the Permian averaged about 11.9 Bcf/d, remaining almost 1 Bcf/d below its record-high monthly average recorded in March 2020. Assuming rig counts remain mired around current levels, production growth in the Permian isn't likely to resume until late this year, or early 2022, according to a recent forecast from Platts Analytics.

On Feb. 4, total rig count in the Permian Basin was estimated at 205, or its highest since May. In early March, drilling activity in West Texas began its steep decline as the nearly 430 rigs deployed there were rapidly pulled from the basin as oil prices traded into negative territory.



Forward-market outlook

Over the balance of 2021, forwards markets are actually anticipating some weakening of basis prices in key end-user markets near the Permian.

In East Texas, the balance-2021 forward basis curve at Houston Ship Channel is priced at minus 5 cents/MMBtu. At El Paso San Juan, the bal-year curve is priced at 20 cents below the benchmark, S&P Global Platts' most recently published M2MS data shows.

With Permian Basin production continuing to flounder below year-ago levels, and more midstream capacity expansions from West Texas already in development, it's possible that basis markets in East Texas and the Southwest could be underpriced currently.

Utilization at Elba Liquefaction facility on US Atlantic Coast jumps to 30-day high

- **Maintenance ongoing on two units, third down since 2020 fire**
- **Late-March, April premiums point cargoes to Europe**

Kinder Morgan's Elba Liquefaction facility appeared to be operating at its highest utilization in a month Feb. 4, with feedgas deliveries jumping about 41% from the average over the previous 30 days, S&P Global Platts Analytics data showed.

The smallest of the six major LNG export facilities in the US ramped up as winter demand and Asian prices, while having moderated sharply, continued to provide incentive for deliveries. The ramp-up also came even as the terminal was conducting planned maintenance activities on two units.

The 10-train Georgia terminal has yet to reach full capacity of 2.5 million mt/year since shipping its first cargo in December 2019. One of the trains has been offline since a fire in May 2020. The operator continues to coordinate a repair schedule to allow it to resume service on Unit 2, according to spokeswoman Katherine Hill. She did not say how long the routine maintenance on other units would last.

Gas deliveries to Elba totaled 230 MMcf/d on Feb. 4, up from 150 MMcf/d the day before and an average 163 MMcf/d over the previous 30 days, Platts Analytics data showed. The last time Elba feedgas demand was higher was on Jan. 5, at 240 MMcf/d.

Total gas deliveries to US LNG export terminals were just shy of 11 Bcf/d on Feb. 4, after ending a run Feb. 1 of five consecutive days above that threshold. Feedgas demand remains below the record deliveries of 11.58 Bcf/d set on Dec. 13, Platts Analytics data showed.

After hitting a record $32.50/MMBtu on Jan. 13, less than nine months after plunging to a record low of $1.825/MMBtu, the Platts JKM, the benchmark price for spot-delivered LNG to Northeast Asia, has moderated substantially as the market rolled to March. Platts assessed the JKM at $7.83/MMBtu on Feb. 4.

GAS DELIVERIES TO ELBA LIQUEFACTION FACILITY

Source: S&P Global Platts Analytics

A new monthly record was set in January for LNG tanker transits of the Panama Canal, as US shipments to Asia surged, according to the operator of the Canal. Wait times for LNG tankers passing through without a reservation, meanwhile, have eased so far in February. The Canal is the shortest passageway from the US Gulf Coast to East Asia, the world's biggest import market for LNG.

The forward European netback is now strongly pointed to a premium in late-March and April, suggesting that many US cargoes may remain in the Atlantic Basin this spring. That would be a reversal from January, when imports of LNG into Europe's liquid trading hubs

© 2021 S&P Global Platts, a division of S&P Global Inc. All rights reserved.

Confidential CPSE-MDL_000020021

slumped to their lowest level in nearly three years, according to Platts Analytics data.

The fire at Elba occurred in a mixed refrigerant compressor of Unit 2. Two adjacent units that were shut as a precaution were later brought back online, while Unit 2 has remained down since the fire nine months ago.

The terminal -- originally built to import LNG and later converted to handle exports after the US shale revolution -- utilizes Shell's Movable Modular Liquefaction System design. Shell is the sole offtaker under a 20-year agreement.

Shell upbeat on second half recovery, as reserve replacement takes hit

- **Reserves replacement expected to be minus 53% in 2020**
- **US curbs on federal drilling risk driving up imports, emissions**
- **LNG, chemicals, marketing provide resilience in downturn**

Shell expects a much more "fulsome" recovery in the second half of 2021, and its upstream oil and gas business to remain "foundational" despite losses and a plunge in reserves last year, chief executive Ben van Beurden said Feb. 4.

Fourth-quarter results showed Shell suffered its fifth successive quarter of financial losses in its upstream segment. And it estimated its 2020 reserves replacement ratio would be minus 53%, reflecting lower prices, postponed investment decisions and asset sales.

Its upstream production dropped by 14% from a year earlier to 2.37 million b/d of oil equivalent, under the influence of OPEC+ cuts and hurricanes in the Gulf of Mexico.

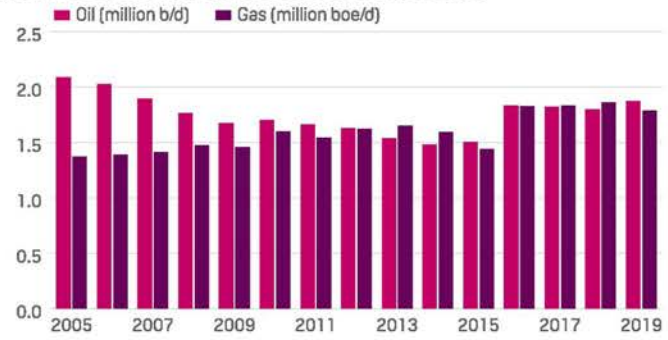
Unlike European rival BP, Shell has made no pledge to reduce upstream production as part of energy transition efforts.

Van Beurden told journalists he was now much more optimistic for the business as a whole, and a likely recovery meant "more room for us therefore to spend," following a $6 billion reduction in capital expenditures last year.

The failure to replace reserves, he suggested, could be seen as a "one-off."

"We look into 2021 with a lot more confidence," he said, adding that upstream oil and gas, including exploration, would remain "a very important, foundational business."

"We have every intention to look after our upstream business so that it will remain a very strong cash generative business, not just for this decade, but well into the next decade," he said.



Van Beurden raised doubts about the Biden administration's decision in the US to block the issuing of leases on federal lands and in federal waters, for the time being. He said Shell itself had plenty of leases in federal waters -- more than 300 lease positions -- but the effect would be to drive up US oil imports, with consequences for emissions.

Shell has "the same goal" as the US administration in terms of supporting the Paris Agreement and achieving net zero emissions by 2050, he said. However, on the question of US drilling, "curtailing the supply of oil and gas is not necessarily the solution for climate change," he said.

"What will happen if we just don't produce these barrels in the Gulf of Mexico -- they will be imported from elsewhere, and guess what, the barrels in the Gulf of Mexico are the most carbon-advantaged barrels that the US currently consumes, so it will not necessarily be an improvement," he said.

In the upstream Shell's adjusted loss in the fourth quarter was smaller than in the third quarter, at $748 million. Adjustments included a $1.3 billion impairment relating to the Appomattox field in the US Gulf of Mexico following a downgrading of productivity expectations there.

SHELL'S EVOLVING OIL/GAS PRODUCTION MIX

Source: Company filings

Demand recovery

On the prospects for a demand recovery as pandemic lockdowns and travel bans start to lift, van Beurden said aviation remained key.

On demand, "we are at the moment still a ways off from where we were, particularly on oil, we're about 5%-7% off from where we were in 2019. That will start to come back more in the course of this year and it will probably be back to where we were in 2022," he said. "Aviation will be a very significant contributor to that remaining recovery that we need to see."

"I am optimistic that in the second half of the year we see a much more fulsome recovery in many parts of our business, we see already in chemicals and already in marketing a significant recovery and I would imagine also in upstream."

In terms of refining, van Beurden said the market collapse last year reinforced long-term trends, noting Shell had cut its refining footprint from 64 refineries at the start of the century to 15 at present and aimed to "high-grade" that to six "energy and chemical parks."

Shell will focus on facilities able to provide a foundation for more innovative fuel types such as biofuels and hydrogen, he said.

"We are repurposing the refineries in places like Singapore and also looking at our refinery configurations in places like Pernis" in the Netherlands, he said. "It will be a high-quality footprint, and importantly we will use that footprint increasingly as a platform to also integrate these facilities of the future."

"We still believe that there is a strong future for these assets in our company, but that will be smaller, that will not be refining for fuels' sake per se."

Confidential

Q1 outlook

For the current quarter, Shell said its upstream output would be in a range of 2.40 million-2.60 million b/d of oil equivalent, up from fourth quarter levels of 2.37 million boe/d, but well below the Q4 2019 level of 2.76 million boe/d.

Similarly, Shell expects an improvement in refinery utilization in the current quarter, to a range of 73%-81%, compared with 72% in the fourth quarter 2020.

Shell's fourth quarter refinery intake was down 20% on the year, and oil product sales were down 26%, at 1.94 million b/d and 4.78 million b/d respectively, although it reported an adjusted profit of $540 million in the segment, with marketing activities contributing $828 million.

Shell's LNG-focused 'integrated gas' division performed relatively well, making an adjusted profit of $1.1 billion, down from $1.99 billion a year earlier, even though liquefaction volumes were down 11% at 8.21 million mt.

It also benefited from higher prices in its chemicals division, reporting a $381 million adjusted profit in the fourth quarter, compared with a $65 million adjusted loss a year earlier, likely reflecting pandemic-related demand.

Shell reported adjusted profit of $393 million in Q4, down 87% on the year, and a return on average capital employed of 2.9%, down from 6.9% a year earlier.

It reduced its net debt by $3.7 billion to $75.39 billion, but its gearing ratio increased to 32.2%, compared with 29.3% a year earlier.

LNG buyers mull tactical changes to procurement plans after winter disruptions

- **Asian importers lack sufficient legal protection to deal with supply shocks**
- **Buyers may rethink procurement strategies, mix of short and long-term supply**
- **Renewed interest in term contracting discussions, renegotiations**

This winter's LNG supply constraints and the associated surge in Asian spot LNG prices in mid-January have prompted buyers to rethink their procurement strategies, given sellers' opportunity to market long-term deals with renewed vigor, and may trigger some lasting changes in contracting behavior.

The supply disruptions seen in recent weeks exposed vulnerabilities in the procurement system for many importers, with countries like Japan focusing on energy security implications, while end-users in China attempt to put together a more robust forecasting, coordination and emergency demand-response mechanism.

Other countries with more demand elasticity like India, Pakistan and Bangladesh responded by simply deferring imports, but this flexibility is enabled by lesser dependency on gas-fired power generation, and could hinder the growth of the sector in the longer term.

In Southeast Asia, the possibility of $30/MMBtu JKM has reignited interest from new buyers in the Philippines and Vietnam for long-term deals, and as buyers go back to the drawing board, term suppliers like Qatar have renewed cause to promote their contracted volumes, despite low summer prices looming on the horizon.

Spot price movements can be a relevant factor in contract negotiations and influence an ongoing contractual relationship, Agnieszka Ason, visiting research fellow at Oxford Institute for Energy Studies, said.

"The record-high spot prices naturally increase the attractiveness of oil-linked LNG SPAs [sale and purchase agreements] and, following a period of the all-time low spot prices and related multiple price review requests from the buyers last year, should generally have a positive impact on long-term contractual relationships," Ason said.

She said buyers with term contracts can discuss options for additional volume under SPAs that may allow additional LNG subject to specified circumstances or 'at any time' during the life of the contract, and such requests can be expedited or discussed in a broader context of a long-term business relationship.

"A situation, where a buyer heavily, or exclusively, relies on spot transactions to satisfy domestic demand (especially in Asia), is more difficult and could force some buyers to enter into unfavorable deals in the short-term," Ason said.

"In the long run, recent price movements could incentivize buyers to restructure the pool of their contractual commitments in favor of new-generation term contracts with robust contract adjustment mechanisms," she added.

Defaults and cancellations

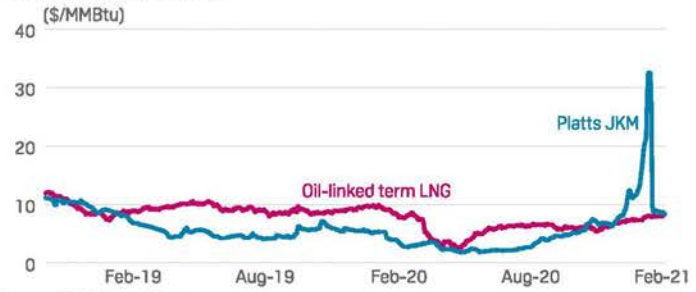
Pakistan was an interesting example, as low summer prices had prompted state importer Pakistan LNG to boost spot procurement, but it was caught off guard by unforeseen supply conditions.

The lowest bidder for one of its spot tenders for end-February delivery, Emirates National Oil Company Group, was unable to follow-up on its bid, while the remaining bidders backed out due to cargo shortages.

While Pakistan LNG maintained in an official statement that this was a "default" by ENOC, market sources with knowledge of the matter said ENOC has maintained that it withdrew its bid within a stipulated period before the final contract was signed, allowing it to pay a $300,000 fine for breaking the bid bond as opposed to a wider penalty in the event of a full legal default.

The case underscores how market anomalies can cause disputes and how Asian buyers, especially state-owned entities, may lack sufficient legal protection, or simply not be as sophisticated as larger players to deal with such issues.

An LNG buyer is unlikely to receive adequate compensation for a delivery failure from a bid bond or capped liability provision; LNG sellers generally seek to cap their liability for a failure to deliver based on a percentage of the agreed cargo price, James E. Atkin, partner at law firm Reed Smith said.



"As a result, LNG buyers should consider including a "wilful default" exception to LNG sellers' liability cap for a failure to deliver; that is, a LNG seller's liability will be uncapped if the LNG buyer can demonstrate that a scheduled cargo has been diverted or sold to a third party for profit," Atkin added.

He said LNG buyers need to tailor their procurement strategy to reflect market demand and flexibility to use alternative fuels, while securing a degree of price certainty. "As a result, we may see certain LNG

WINTER LNG PRICE RALLY MADE SPOT PROCUREMENT EXPENSIVE FOR A SHORT PERIOD

Source: S&P Global Platts

buyers varying their LNG procurement strategy and adopting a mixed portfolio of mid- to long-term supply, complemented by spot purchases."

Anecdotally, term contractual discussions have already picked up in the market.

Woodside Energy chief executive Peter Coleman said in January that Chinese customers were coming back to the company and wanting to start negotiations for supply again.

Texas LNG chief executive Vivek Chandra said in an interview last month that the ability to cancel US LNG cargoes in summer was a feature and not a bug, as it promoted seasonal flexibility.

Prices at the top of the commodity price cycle tend to incentivize new investment. While $30/MMbtu JKM may not necessarily trigger new liquefaction final investment decisions, investors in LNG vessel newbuilds and gas storage infrastructure, and physical and financial traders, have undoubtedly taken notice.

European LNG imports at near 3-year low in month before JKM spike

- **Less than 10% of Qatari, US shipments dispatched to Europe in Jan**
- **Leader Russia still using Arctic Sea route despite winter ice**
- **Spain's restock after cold snap makes it most popular destination**

Imports of LNG into Europe's liquid trading hubs slumped to their lowest level in nearly three years during January, even before record-high prices in Asian spot JKM prices took hold in February, analysis of S&P Global Platts Analytics data showed.

With assessed values for the Platts JKM benchmark already on an upward trajectory in the January trading window, a clear separation between Asian prices and Europe put Nigerian shipments, European reloads, and even US exports via the Cape of Good Hope into the money for Asia export.

Across Europe's key trading locations, namely France, Spain, Italy, Belgium, the UK and the Netherlands, a total of 2.643 million mt of global LNG supply was imported, translating into 3.648 billion cu m of natural gas equivalent.

This was the lowest quantity received by these markets since February 2018, when just 2.069 million mt was imported. It also represented a 35.7% drop in imports on the month and the largest year-on-year fall on record at 59.1%.

Moreover, reloads from European LNG terminals to Asia were extended into January delivery, with the net import diminished by seven exports carrying 0.666 Bcm away from Europe. Back in February 2018, 1.036 Bcm of similar reloads were performed.

During the January trading window, JKM averaged $8.173/MMBtu, but experienced a sharp uptick in H1 December, with assessments ranging between $7.857/MMBtu on Dec. 1 and $12.404/MMBtu Dec. 15. No assessment in H2 November entered this price range.

Likewise, month-ahead prices for January delivery on the British NBP hub did not enter this range either, and averaged $6.369/MMBtu during its tenure as the front month.

With Europe providing little in the way of challenge to the Asian market, most LNG exports from the biggest global players headed toward the more lucrative Asia-Pacific region.

Indeed, less than 10% of global exports from Qatar and the US found their way to Europe's trading markets in January. Just 6.7% of Qatar's 9.217 Bcm production was dispatched to the continent, while only 7.3% of the 6.367 Bcm of US exports were shipped there.

Even Russia's Yamal wanted to get in on the action, and was either undeterred or unimpeded by ice formation on the shorter Arctic Sea route to Asia; two shipments originating from the facility found their way to China and South Korea in just over 20 days.

Russia also held on to European market leadership in January, with its 1.315 Bcm export constituting over a third of all monthly supply to the continent.

Dissecting Europe's imports by destination, Spain was comfortably Europe's most popular market for exports, capturing over a third of all shipments to the area.

Extreme and unseasonably cold temperatures in early January meant that Spanish terminals needed to restock, and this was reflected in an increase of Algerian shipments to the country, seemingly at the expense of France.

As it sought to replenish inventory, Spain was the only country to source supply from countries outside the top five exporters, receiving 365 million cu m from Egypt, Equatorial Guinea, and Trinidad and Tobago.

With Nigerian exports now firmly in favor of Asian delivery, production shipped to Spain and Europe more generally from this source dropped on the month.

On the shores of the UK, US shipments all but disappeared in January, receiving only one cargo compared to the 12 welcomed in December. Russia filled the supply vacuum, sending six of its 13 European shipments to the UK.

This was also seemingly at the expense of France, which, like Italy, imported their lowest volume of LNG since February 2018.

February activity

Despite the record JKM prices falling within February delivery, market sources are reporting that LNG imports could increase this month.

"They are higher month on month: you can see it on the water as well as in French nominations, South Hook, it is pretty busy at Isle of Grain," a UK gas trader said.

"Part of the logic is falling JKM March and February loadings in the Atlantic still make Europe in February, and do so because of the weak

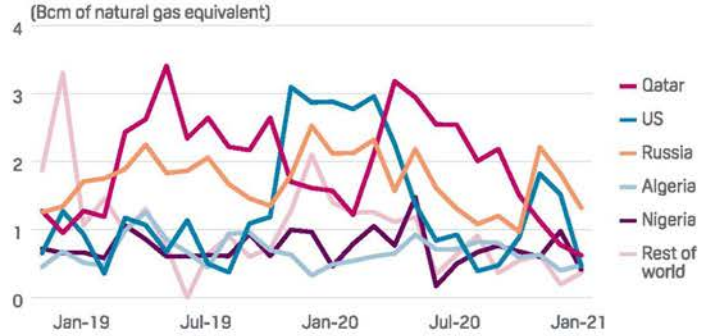
JKM March," he added.

The spike in demand which drove JKM deliveries due to cold weather and tightness in supply was largely confined to the H2 January, H1 February delivery period with a strong intramonth drop off for H2 February, resulting in sellers looking optimize cargoes back into the Atlantic basin for cargoes in the latter part of the month.



This was reflected in the steep backwardation seen in the half month assessments for JKM. On January 13 when the JKM was at it's highest of $32.500/MMBtu, H1 February was assessed at $39.335. MMBtu, but H2 February was assessed at $25.775/MMBtu.

Other market sources have also reported that continued European arrivals may be due to spot vessel unavailability in Q4, whereby leadtimes for chartering extended up to 45 days.

On Feb. 4, the Platts JKM for March delivery was assessed at $7.83/MMBtu.

US oil, rig count jumps 14 to 456, as oil fundamental outlooks buoy expectations

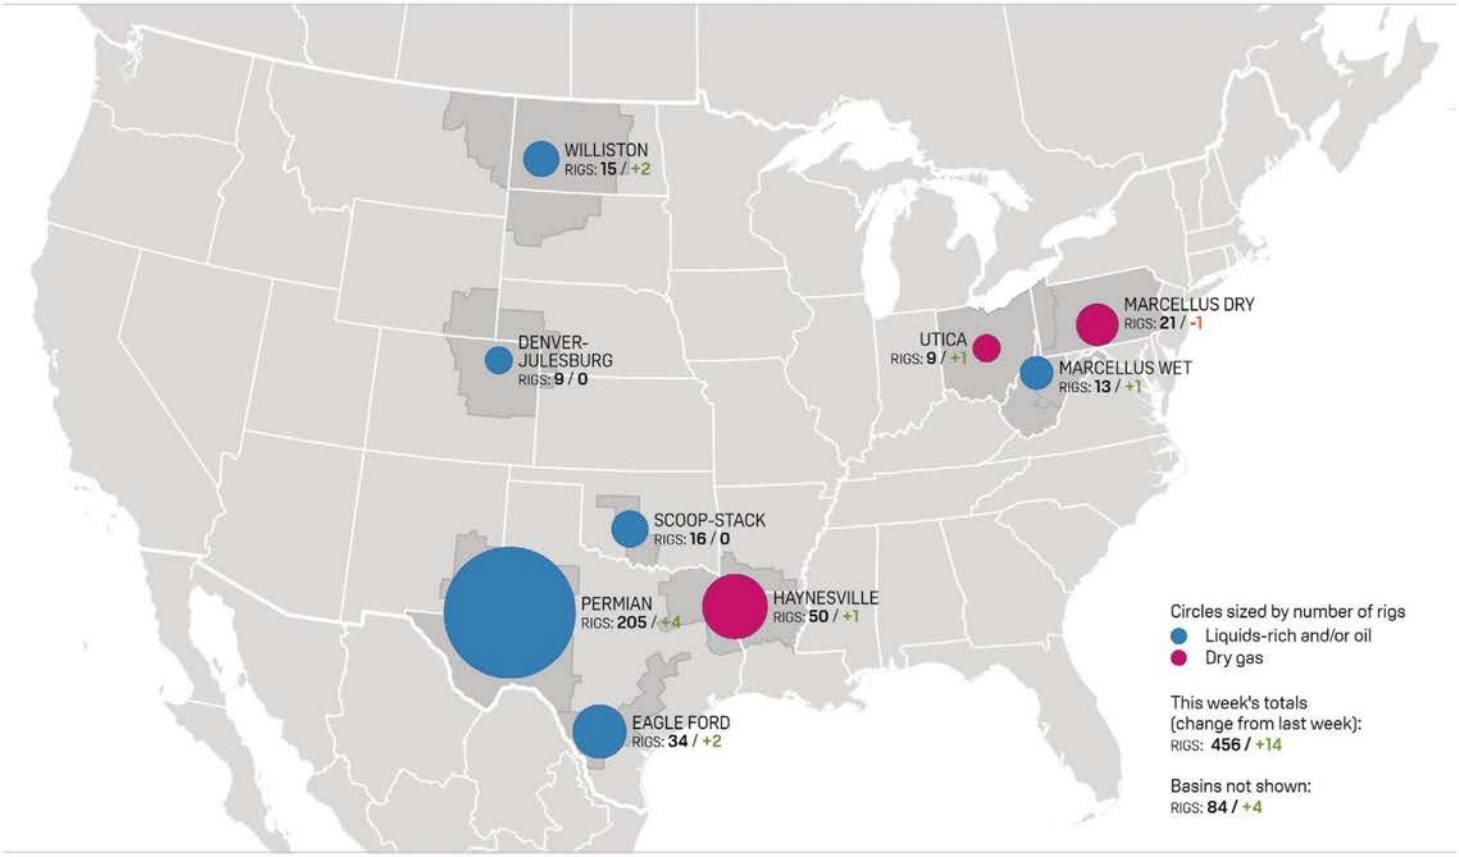
- **Permian rigs up 29, or 16.5%, in the last 4 weeks**
- **Oil price level may stoke interest in Bakken, Eagle Ford**
- **E&Ps may be near H1 20 maintenance activity level**

The US oil and gas rig count jumped 14 in the week ending Feb. 3 to 456, rig data provider Enverus said, as oil market fundamentals continued to improve beyond Wall Street expectations.

© 2021 S&P Global Platts, a division of S&P Global Inc. All rights reserved.

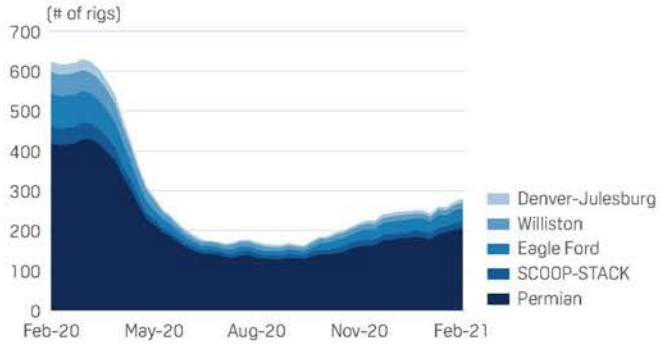
Confidential CPSE-MDL_000020025

The biggest weekly change came in the Permian Basin of West Texas/New Mexico, which was up four rigs to 205. The rig count in the US' largest oil-producing basin, with output just shy of 4.3 million b/d, has leaped 16.5%, or 29, over the past four weeks.



For the total US fleet, oil rigs were up nine on week to 335, while gas rigs rose five to 121.

"Strong WTI prices and the recent Henry Hub rally are both setting operators up to profit on new wells being actively drilled through week-on-week growing rig inventory," said Andrew Cooper, a quantitative analyst with the global supply team at S&P Global Platts Analytics. "The Permian continued leading the charge in the rig recovery, with $55/b WTI giving operators some solid cash flow from new wells coming online."



In addition, the Bakken Shale, of North Dakota and Montana, and

RIG COUNTS OF THE TOP PRODUCING BASINS, AS OF FEBRUARY 3, 2021

Confidential

PERMIAN RIG COUNT CONTINUES TO GROW

Source:Enverus

the Eagle Ford Shale, in South Texas, each added two rigs for totals of 15 and 34, respectively.

"This hinted that some secondary crude plays are entering into a price environment that could generate some drilling interest," Cooper said.

'Back from the dead'

Two operators "came back from the dead," Cooper noted. Apache Corp. and Whiting Petroleum each added one rig during the week, Apache in the Permian and Whiting in the Bakken, Cooper said. Both companies have had zero rigs for most of the past 10 months since the pandemic struck and caused oil prices and the rig count to plunge.

But now in 2021, tighter market fundamentals, including higher demand and lower non-OPEC-plus supplies, "reinforce our convictions in a fast rebalancing oil market," Goldman Sachs said in a Jan. 31 investor note.

"This incoming oil tightness will ... help oil weather financial market uncertainty, and we expect Brent prices to reach $65/bbl by July," the investment bank said. "Growing evidence of supply under-investment in turn leave risks to this price forecast skewed to the upside in 2022."

WTI oil prices, which began last March just shy of $50/b, fell to the low $20s/b by the end of that month and even dipped into the teens in April before heading up again. Prices in afternoon trading Feb. 4 pushed past $56/b.

For the week ended Feb. 3, WTI averaged $53.71/b, up $1 on week; while WTI Midland averaged $54.58/b, up 95 cents; and Bakken Composite averaged $51/b, up $1.32.

Natural gas prices also rose on the week, with Henry Hub averaging $2.84/MMBtu, up 30 cents, and Dominion South $2.59/MMBtu, up 34 cents.

In gas plays, the Marcellus Shale, mostly in Pennsylvania, stayed at 34 rigs for a fourth week, while the Haynesville was up by one rig to 50, a level not seen since December 2019.

Operators drilling for gas were likely hurt in the past few months by a selloff Henry Hub forwards, Cooper said. But, he noted, "Recent cold weather has bumped the prompt month back above $2.80/MMBtu, which should encourage some dry gas drilling in the near term, however, with the price showing significant volatility to weather patterns, some operators are likely staying with their drilling programs for 2021."

The total US rig count, which fell nearly 70% in 2020 from early March to early July, has now recovered nearly a third of the 559 rigs it lost over that period, according to Enverus figures.

Rig count rebound

For January, the domestic rig count averaged 426, up from 407 in December, 379 in November and 339 in October.

Analysts have said the rig count grew rapidly in the months leading up to the end-of-year holiday season in late 2020 to replace or maintain production that was shut-in because of low prices earlier in the year.

But the weekly double-digit increase in rigs seen recently could diminish in the weeks ahead, at least for larger operators, as they stick to pledges of capital discipline despite higher oil prices, Tudor Pickering Holt said this week.

"While we suspect that the collective universe of public E&P operators may now be getting fairly close to their planned first-half 2021 maintenance activity levels, continued momentum on the private side does provide some further near-term horizontal activity upside potential," the boutique energy investment bank said in a Feb. 1 investor note.

Mexico top court permanently blocks parts of federal rule on power market

- **Court finds SENER regulation unconstitutional**
- **Rules hurt competition in favor of state utility, court says**
- **Court decision pivotal after presidential initiative**

Mexico's Supreme Court of Justice on Feb. 3 permanently suspended parts of a regulation issued by the federal government that gave benefits to the state utility CFE over private energy producers, as it found it to be unconstitutional and hurting competition.

The move could create hurdles for a recent initiative of the president.

The regulation, issued by the energy secretariat, or SENER, in May in order to guarantee stability and reliability in the national electric grid during the pandemic, had been temporarily suspended by the Supreme Court in June 2020, after the country's anti-trust watchdog presented a legal complaint. The complaint was backed by companies, associations and non-profit groups like Greenpeace.

The Supreme Court's Feb. 3 ruling, which passed with four votes in favor and one against, is definite and states that some aspects of the SENER regulation are contrary to the constitution as modified by a 2013 reform that opened the sector to competition.

The court determined that SENER does indeed have authority to make regulations in the electricity sector.

However, SENER's regulation "eliminates elements that must exist for free economic competition in the markets of power generation and power supply, mainly related to clean energies," the ruling said.

It also gave CFE advantage over other market participants to have a role in the design and operation of the national grid, the Supreme Court said.

The ruling also said that the national electric grid operator Cenace had no authority to reject interconnection permits or to block a generation permit for any private player.

© 2021 S&P Global Platts, a division of S&P Global Inc. All rights reserved.

Confidential CPSE-MDL_000020027

President's initiative

The ruling comes days after the Mexican president presented an initiative to modify the regulation for the electric sector which in many ways has similar intentions -- to give priority to CFE over private producers in the supply of electricity.

"Certainly, some aspects of the regulation, which have been declared unconstitutional by the Supreme Court, will not be able to pass under a new format, even if it is presented by the president," said Julia Gonzalez, a senior associate specialized in Mexico's energy industry at Mexico-based law firm Gonzalez Calvillo.

Institutions, chambers or other organizations, can present a constitutional controversy against the president's initiative, Gonzalez said, adding that law firms will have to analyze which parts of the ruling apply to the president's initiative.

The government seems to be aware of this and is prepared to tone down. Senator Ricardo Monreal, from the president's Morena party, told local media on Feb. 3 that the initiative presented by the president could be modified to avoid legal confrontations and that he would personally seek dialog with the companies involved.

According to data from SENER, investments worth at least $9 billion would be compromised if the president's initiative was passed.

Roberto Velazco Alvarez, who oversees North American relations at the foreign affairs Secretariat, said Feb. 3 during a webinar organized by the Wilson Center that he is aware of the concerns among market participants and that his office will follow the legislative process closely.

"If we get to a point where there is a legal issue that has not been observed by the Mexican government, we always try to find a friendly solution before we get to arbitration," Velazco Alvarez said.

India's Reliance sells Pennsylvania shale asset to Northern Oil and Gas

Indian conglomerate Reliance Industries Ltd has sold its stake in a US shale gas asset to Northern Oil and Gas Inc, the company said Feb. 4.

RIL subsidiary Reliance Marcellus is to sell its interest in certain upstream assets in the Marcellus shale play of southwestern Pennsylvania. The assets are operated by various affiliates of EQT Corporation.

The assets have been agreed to be sold to Northern Oil and Gas for $250 million cash and warrants to buy 3.25 million NOG shares at $14 apiece in the next seven years.

Reliance had been bullish on shale gas until 2014 when a sharp drop in crude prices hit valuations.

Shale gas blocks suffered more than conventional oil and gas blocks as shale gas blocks are economically viable only when prices are above a certain threshold.

Between 2010 and 2013, RIL invested in the US shale gas assets and bought stakes in three upstream oil exploration joint ventures with Chevron, Pioneer Natural Resource, and Carrizo Oil and Gas; and a midstream joint venture with Pioneer.

Processing, storing, transporting, and marketing of hydrocarbons come under the purview of midstream.

In 2017, Reliance sold the first of its shale gas ventures - Marcellus shale gas assets in north-eastern and central Pennsylvania.

BP, Rosneft strike deal to work on energy transition projects

- **Both companies aim to become net zero by 2050**
- **Deal adds to new low-carbon strategies revealed in past year**

BP and Russian energy giant Rosneft signed a cooperation agreement Feb. 4 to work on joint energy transition projects, including low-carbon technologies and hydrogen, the companies said in a joint press release.

Both companies have been undergoing changes in their long-term strategies with a focus on cutting emissions and developing renewable energy.

Within 10 years, BP aims to cut hydrocarbon output by up to 40% and achieve net carbon neutrality by 2050.

Meanwhile, Rosneft unveiled in December new objectives under its low-carbon agenda until 2035, which will prevent greenhouse gas emissions of 20 million mt in CO2 equivalent and help achieve net carbon neutrality in the same timeframe as BP.

The new deal intends to help BP and Rosneft "deliver more energy with less carbon" through new low-carbon technologies, methane reduction and energy efficiency.

"Rosneft and BP will also jointly evaluate new projects envisaging the use of renewables, opportunities for carbon capture, utilization and storage (CCUS), as well as developments for hydrogen," the joint press release said.

The strategic cooperation will touch not only upstream, but also downstream businesses, including the development of advanced fuels.

Rosneft itself is already considering production of greener and cleaner fuels, such as hydrogen, bio-diesel and sustainable aviation fuel.

BP and Rosneft will also study the issue of natural forest sinks, biodiversity and trading of carbon credits amid the looming EU carbon border tax.

"Joint efforts of our two companies, as the world energy industry leaders...will also provide a significant contribution to overcoming the challenges the industry and the society face in the climate action and the satisfaction of growing global economy demand for energy resources," Rosneft CEO Igor Sechin said in the release.

SUBSCRIBER NOTES

North American gas marketers survey

S&P Global Platts is compiling data for the Q4 2020 ranking of North American natural gas marketers by daily physical wholesale volumes sold.

Platts intends to compile the rankings from information appearing in reports filed with the US Securities and Exchange Commission. For companies not publicly traded or that do not provide such data to the SEC, Platts requests quarterly gas sales data be reported and verified by executive personnel no later than Friday, Feb. 26, 2021.

Sales must average 1 Bcf/d or more during the quarter in order for them to be included.

Please submit data by email, listing volumes of gas the company marketed, in Bcf/d, for Q4 2020 as well as Q4 2019, with the subject line "Q4 Marketer Volumes," to Brandon Evans at bevans@spglobal.com. For more information, contact by email, or phone at 940-577-9482.

Platts proposes shortening bidweek to three trading days from five

Due to historically illiquid trading levels during the fourth and fifth trading days of bidweek, S&P Global Platts proposes to shorten bidweek from five trading days to three trading days for both the preliminary and final Platts and ICE monthly indices beginning June 2021 bidweek, which commences trading on May 24.

The proposed final trading day of bidweek will mirror the expiration of the NYMEX natural gas futures contract on the third to last business day of the month, outside of holiday exceptions.

Price submitters would send, or upload completed trade reports into Trade Vision at the conclusion of trading on the third business day. Platts natural gas editors would assess values and attempt to contact price submitters for trade verification the following business day.

The fixed price and basis transactions currently reported would not change, only the date range would change.

Final Platts and ICE monthly indices would be published by 5:00 pm CST the following business day.

The proposal would impact symbols under the GM and GJ market data categories.

Please send any comments to americasgaspricing@spglobal.com and pricegroup@spglobal.com by April 30. For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts proposes several changes to its hydrogen methodology

S&P Global Platts is proposing several changes to its hydrogen assessments that would refine its treatment of capital expenses, as well as adjust some operational parameters of the various production pathways.

These proposed changes stem from Platts quarterly methodology review of its hydrogen assessments, as well as industry feedback and a review of the assessment methodology by an independent energy consultant.

Chief among these proposed changes is the adoption of a fixed charge rate for the calculation of capital expenses, which is the product of a capital recovery factor and a project finance factor. This change will more accurately incorporate inflation, depreciation, return on equity, debt service, insurance as well as income and property taxes.

In addition, the capital costs ($/KW) for the electrolysis production pathways -- proton exchange membrane (PEM) electrolysis and alkaline electrolysis -- would be increased, from $900/KW for PEM electrolysis to $1,382/KW; and from $702/KW for alkaline electrolysis to $891/KW. These changes would more closely align with the technology-specific capital costs listed in the International Energy Agency's 2019 Future of Hydrogen report (IEA FoH).

This proposed change would directly affect the Netherlands and US Gulf Coast electrolysis assessments, and indirectly affect the Japan and the remainder of the North American electrolysis assessments, whose capital costs would change as follows:

Alberta Hydrogen PEM Electrolysis Capital Cost, from $1,367 to $1,589;
Appalachia Hydrogen PEM Electrolysis Capital Cost, from $951 to $1,460;
Midcontinent Hydrogen PEM Electrolysis Capital Cost, from $923 to $1,417;
Northeast Hydrogen PEM Electrolysis Capital Cost, from $978 to $1,502;
Northern California Hydrogen PEM Electrolysis Capital Cost, from $1,066 to $1,637;
Northwest Hydrogen PEM Electrolysis Capital Cost, from $969 to $1,488;
Rockies Hydrogen PEM Electrolysis Capital Cost. from $937 to $1,439;
Southeast Hydrogen PEM Electrolysis Capital Cost, from $924 to $1,419;
Southern California Hydrogen PEM Electrolysis Capital Cost, from $1,044 to $1,603;
Upper Midwest Hydrogen PEM Electrolysis Capital Cost, from $980 to $1,505;
Japan Hydrogen PEM Electrolysis Capital Cost, from $1,800 to $2,073;
Alberta Hydrogen Alkaline Electrolysis Capital Cost, from $1,066 to $1,025;
Appalachia Hydrogen Alkaline Electrolysis Capital Cost, from $742 to $941;
Midcontinent Hydrogen Alkaline Electrolysis Capital Cost, from $720 to $914;
Northeast Hydrogen Alkaline Electrolysis Capital Cost, from $763 to $968;
Northern California Hydrogen Alkaline Electrolysis Capital Cost, from $832 to $1,056;
Northwest Hydrogen Alkaline Electrolysis Capital Cost, from $756 to $959;
Rockies Hydrogen Alkaline Electrolysis Capital Cost, from $731 to $928;
Southeast Hydrogen Alkaline Electrolysis Capital Cost, from $721 to $915;
Southern California Hydrogen Alkaline Electrolysis Capital Cost, from $815 to $1,034;
Upper Midwest Hydrogen Alkaline Electrolysis Capital Cost, from $764 to $970;
Japan Hydrogen Alkaline Electrolysis Capital Cost, from $1,404 to $1,336.

Other proposed changes include an adjustment for plant efficiencies, based on technology specific assumptions listed in the IEA FoH report, as follows: steam methane reforming (SMR), from 70% to 76%; SMR with carbon capture (CCS), from 63% to 69%; and alkaline electrolysis, from 65% to 66.5%.

The cost of stack refurbishment as a percent of capital cost is also proposed to be increased from 15% to 35% for PEM electrolysis, and from 15% to 45% for alkaline electrolysis, based on technology-specific production costs cited in the IEA FoH report.

Platts is also proposing to adjust the percentage of Dutch peak and base electricity prices used in the Netherlands hydrogen assessments from the current 80% base and 20% peak, to 50% peak and 50% base.

In addition, Platts is proposing to change its method for calculating carbon dioxide emissions, with relevance to the Netherlands (SMR, and SMR w CCS) and California (SMR) assessments, by using the emission factor of 8.9 kg CO2/kg H2, as listed in the IEA FoH report.

Finally, Platts is also proposing to adjust the cadence of its methodology review from quarterly to annual, to accommodate the annual release of the US National Renewable Energy Laboratory's Annual Technology Baseline report, which contains a number of the financial assumptions used in the revised hydrogen methodology as proposed.

The proposed changes would take effect April 1, 2021.

Please send any comments to hydrogenassessments@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to launch UK hydrogen assessments

S&P Global Platts is proposing to assess the cost of hydrogen production in the UK.

Platts would consider the daily cost of hydrogen production via three pathways: Autothermal reforming with carbon capture (ATR w CCS), proton exchange membrane (PEM) electrolysis and alkaline electrolysis.

The proposed UK hydrogen assessments would consider the feedstock costs alone, as well as a second set of assessments that would include assumptions for capital expenses (capex).

Assessments would be made in GBP/kg and GBP/KWh.

The assumptions for ATR w CCS costs would be based on industry research, including an H-Vision reported titled "Blue hydrogen as accelerator and pioneer

© 2021 S&P Global Platts, a division of S&P Global Inc. All rights reserved.

Confidential CPSE-MDL_000020029

SUBSCRIBER NOTES (continued)

for energy transition in the industry", published in 2019.
Electrolysis assumptions would be based on the existing Platts methodology, and would incorporate the same changes as currently proposed in a separate methodology update.
Daily inputs would include the month-ahead National Balancing Point assessment; the month-ahead UK GTMA base and peak power assessments, a UK water price, and the quarterly EC carbon auction spot average as a proxy for UK carbon costs.
The assessments and unit of measurements would be as follows:
Hydrogen UK ATR w CCS (GBP/Kg)
Hydrogen UK ATR w CCS (Incl. capex) (GBP/Kg)
Hydrogen UK ATR w CCS (GBP/KWh)
Hydrogen UK ATR w CCS (Incl. capex) (GBP/KWh)
Hydrogen UK PEM Electrolysis (GBP/Kg)
Hydrogen UK PEM Electrolysis (incl capex) (GBP/Kg)
Hydrogen UK PEM Electrolysis (GBP/KWh)
Hydrogen UK PEM Electrolysis (incl capex) (GBP/KWh)
Hydrogen UK Alkaline Electrolysis (GBP/Kg)
Hydrogen UK Alkaline Electrolysis (incl capex) (GBP/Kg)
Hydrogen UK Alkaline Electrolysis (GBP/KWh)
Hydrogen UK Alkaline Electrolysis (incl capex) (GBP/KWh)
The proposed changes would take effect April 1, 2021.
Please send any comments by March 12 to hydrogenassessments@spglobal.com and pricegroup@spglobal.com.
For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.
Platts will consider all comments received and will make comments not marked as confidential available upon request.

PLATTS DAILY CANADIAN OTC INDICES

Trade Date: Feb 04

Westcoast, station 2 OTC*	PVBCZ93	3.050	-0.035	3.050	3.050	0.7	1

*Price in C$ per Gj

Canadian OTC indices assessment rationale: The Canadian OTC indices are a volume weighted average of bilateral trade data reported to Platts by market participants. ICE NGX trades are not included in the indices. Platts editors screen the data for outliers and do not assess prices if there are no transactions. Questions may be directed to Ryan Ouwerkerk at 713-655-2202 or ryan.ouwerkerk@spglobal.com.

This rationale applies to symbols found in market category GD listed at http://plts.co/uwHX30kvPG0

NORTH AMERICAN FEEDGAS ($/MMBtu), FEB 3

Daily average US LNG feedgas cost	ALNFG00	2.871
30-day moving average US LNG feedgas cost	ALNUS00	2.616
Daily average USGC LNG feedgas cost	ALNFH00	2.853
30-day moving average USGC LNG feedgas cost	ALNUG00	2.608

Export facility		Estimated feedgas cost
Sabine Pass	ALNFA00	2.852
Corpus Christi	ALNFB00	2.866
Cove Point	ALNFC00	2.990
Cameron	ALNFD00	2.872
Freeport	ALNFE00	2.818
Elba Island	ALNFF00	3.019

Facility feedgas costs represent a calculation derived from S&P Global Platts' North American gas spot price indices at the hub(s) from which feedgas would be procured most economically for the export facility. The average summary costs are an average of the relevant export facilities' feedgas costs weighted by Platts Analytics' daily estimated volume delivered to each facility.

NORTHEAST GAS MARKETS

Northeast cash gas prices slide with lower demand

- US Northeast spot gas prices fell during Feb. 4 trading as temperatures begin to rise with a recent winter storm rolling off.
- Algonquin city-gates slid $3.42 to settle to $7.42/MMBtu, while Iroquois Zone 2 fell $1.75 to settle to 6.98/MMBtu for next-day flows.

Demand falls before rising

- Total Northeast demand was forecast by S&P Global Platts Analytics to fall by 1 Bcf to 30.2 Bcf/d on Feb. 5, with the bulk of the demand decline stemming from residential-commercial demand.
- Temperatures are expected to drop to below 30 F again on Feb. 6 and stay there until Feb. 15, which is expected to support demand once again.

Production falls below 33 Bcf/d

- Northeast has fallen below the 33 Bcf/d threshold since the start of February and finished January at 33.6 Bcf/d, down 200 MMcf/d from December, according to Platts Analytics.
- With res-comm demand recently higher, cash basis at Algonquin and Transco Zone 6 has seen a modest lift.

SOUTHEAST GAS MARKETS

Southeast cash gas prices rangebound as demand retreats

- US Southeast and Texas spot gas prices were rangebound in trading Feb. 4, likely as demand came off from recent highs.
- Henry Hub inched up 1 cent on the day to trade at $2.92/MMBtu while Houston Ship Channel added 4 cents to change hands at $2.86/MMBtu for next-day flows. Prices at most locations continued to pace about 15-20 cents higher than the past 30-day average despite the absence of sharp spikes observed at the start of the month.
- Total Southeast residential-commercial demand started the month on a high note at 8.7 Bcf, driven by a sustained period of below-average temperatures, but dwindled to 6.8 Bcf Feb. 4 as temperatures started moving up toward seasonal norms.

Demand dips but may rebound

- Res-comm demand in the first four days of February averaged about 7.8 Bcf/d, 2 Bcf stronger than the year-ago levels.
- The National Weather Service temperature forecasts calls for the likelihood of below-average temperatures across much of the region over the next eight to 14 days, which may push up demand again.
- The balance-of-the month contract was trading at $3.06/MMBtu, up 6 cents from the prior day's settle.

CENTRAL GAS MARKETS

Upper Midwest, Midcontinent gas inches higher on lifted demand

- Natural gas spot prices in the US Midcontinent lifted Feb. 4 as demand increased and storage withdrawals in the Midwest lowered inventories.
- Natural Gas Pipeline-Nicor was trading 9 cents higher on the day at $2.93/MMBtu. Similarly, the cash price for Carthage increased 8 cents on the day to $2.85/MMBtu for next-day flows.

Demand climbs on the day as withdrawals lower inventories

- Demand in the Midcontinent rose about 2% on the day to 24.13 Bcf/d, with both heating demand and power demand lifting 250 MMcf and 166 MMcf , respectively, according to S&P Global Platts Analytics.
- Midwest storage withdrawals for the week ending Jan. 29 were reported at 61 Bcf, bringing total storage levels to 719 Bcf, 2.2% below levels last year and 670 Bcf above the five-year average, according to the US Energy Information Administration.

Chicago city-gates forwards rise over the week

- The Chicago city-gates March contract lifted 25 cents from levels a week ago to $2.77/MMBtu Feb. 3, as colder temperature outlooks and falling storage bought upside risk to prices, according to Platts Analytics data.
- The Chicago city-gates summer strip average (April 2021-October 2021) also saw upward pressure, rising 13 cents over the week to $2.67/MMBtu, about 33% higher than levels at this time last year, according to Platts Analytics data.

WEST GAS MARKETS

US Rockies spot gas prices rise on lower temperatures, higher demand

- Cash prices for next-day flows of gas in the US Rockies largely settled higher on Feb. 4, as regional temperatures are forecast to remain near seasonally normal levels after a weeklong stretch of above-average temperatures.
- CIG, Rockies gained 7.50 cents to settle at $2.835/MMBtu, which was the the location's highest price since late-October.

Rockies temperatures

- The average temperature in the Rockies was forecast at 31 degrees F for Feb. 5, just 1 degree higher than Feb. 4, according to S&P Global Platts Analytics and CustomWeather.
- The temperatures for Feb. 4-5 mark a departure from recent above-average temperatures, which reached into the mid-30s to mid-40s F for Jan. 29-Feb. 3.
- Platts Analytics data shows that gas demand in the Rockies surged 1.33 Bcf on Feb. 4 from prior-day levels to 9.47 Bcf. With similar temperatures forecast for Feb. 5, the elevated demand will likely continue.

Pacific Northwest dynamics

- Spot gas prices in the Pacific Northwest also traded slightly higher on Feb. 3., amid a winter storm in central Washington and lower hydropower generation.
- The National Weather Service issued a Winter Weather Advisory for the Cascade mountains and valleys of Whatcom, Skagit, Snohomish, and King counties in Washington state for Feb. 4-5.
- Hydropower in the Bonneville Power Administration's footprint has recently fallen to average 216 MWh/d for Feb. 1-2 from averaging around 250 MWh/d for the last week of January (Jan. 25-31), according to the most recently available data from the federal agency.

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

☒ **ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the fiscal year ended December 31, 2020

or

☐ **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

Commission file number 1-32740

ENERGY TRANSFER LP

(Exact name of registrant as specified in its charter)

Delaware	**30-0108820**
(state or other jurisdiction of incorporation or organization)	(I.R.S. Employer Identification No.)

8111 Westchester Drive, Suite 600, Dallas, Texas 75225
(Address of principal executive offices) (zip code)
(214) 981-0700
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Common Units	**ET**	**New York Stock Exchange**

Securities registered pursuant to section 12(g) of the Act: **None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes ☒ No ☐

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act.

Yes ☐ No ☒

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days.

Yes ☒ No ☐

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit such files).

Yes ☒ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer ☒ Accelerated filer ☐ Non-accelerated filer ☐ Smaller reporting company ☐ Emerging growth company ☐

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report. ☒

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes ☐ No ☒

The aggregate market value as of June 30, 2020, of the registrant's Common Units held by non-affiliates of the registrant, based on the reported closing price of such Common Units on the New York Stock Exchange on such date, was $16.46 billion. Common Units held by each executive officer and director and by each person who owns 5% or more of the outstanding Common Units have been excluded in that such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

At February 12, 2021, the registrant had 2,702,436,307 Common Units outstanding.

Definitions

The following is a list of certain acronyms and terms used throughout this document:

/d	per day
AOCI	accumulated other comprehensive income (loss)
AROs	asset retirement obligations
Bbls	barrels
BBtu	billion British thermal units
Bcf	billion cubic feet
Btu	British thermal unit, an energy measurement used by gas companies to convert the volume of gas used to its heat equivalent, and thus calculate the actual energy content
Capacity	capacity of a pipeline, processing plant or storage facility refers to the maximum capacity under normal operating conditions and, with respect to pipeline transportation capacity, is subject to multiple factors (including natural gas injections and withdrawals at various delivery points along the pipeline and the utilization of compression) which may reduce the throughput capacity from specified capacity levels
CDM	CDM Resource Management LLC and CDM Environmental & Technical Services LLC, collectively
Citrus	Citrus, LLC, a 50/50 joint venture which owns FGT
Dakota Access	Dakota Access, LLC, a less than wholly-owned subsidiary of ETO
DOE	United States Department of Energy
DOJ	United States Department of Justice
DOT	United States Department of Transportation
Enable	Enable Midstream Partners, LP, a Delaware limited partnership
Energy Transfer Canada	Energy Transfer Canada ULC (formerly SemCAMS Midstream ULC), a less than wholly-owned subsidiary of ETO
EPA	United States Environmental Protection Agency
ETC Sunoco	ETC Sunoco Holdings LLC (formerly Sunoco Inc.), a wholly-owned subsidiary of ETO
ETC Tiger	ETC Tiger Pipeline, LLC, a wholly-owned subsidiary of ETO, which owns the Tiger Pipeline
ETO	Energy Transfer Operating, L.P.
ETO Preferred Units	ETO Series A Preferred Units, ETO Series B Preferred Units, ETO Series D Preferred Units, ETO Series E Preferred Units, ETO Series F Preferred Units and ETO Series G Preferred Units, collectively
ETO Series A Preferred Units	6.250% Series A Fixed-to-Floating Rate Cumulative Redeemable Perpetual Preferred Units
ETO Series B Preferred Units	6.625% Series B Fixed-to-Floating Rate Cumulative Redeemable Perpetual Preferred Units
ETO Series C Preferred Units	7.375% Series C Fixed-to-Floating Rate Cumulative Redeemable Perpetual Preferred Units
ETO Series D Preferred Units	7.625% Series D Fixed-to-Floating Rate Cumulative Redeemable Perpetual Preferred Units
ETO Series E Preferred Units	7.600% Series E Fixed-to-Floating Rate Cumulative Redeemable Perpetual Preferred Units
ETO Series F Preferred Units	6.750% Series F Fixed-Rate Reset Cumulative Redeemable Perpetual Preferred Units
ETO Series G Preferred Units	7.125% Series G Fixed-Rate Reset Cumulative Redeemable Perpetual Preferred Units

ETP GP	Energy Transfer Partners GP, L.P., the general partner of ETO
ETP Holdco	ETP Holdco Corporation, a wholly-owned subsidiary of ETO
ETP LLC	Energy Transfer Partners, L.L.C., the general partner of ETP GP
Exchange Act	Securities Exchange Act of 1934
ExxonMobil	Exxon Mobil Corporation
FEP	Fayetteville Express Pipeline LLC
FERC	Federal Energy Regulatory Commission
FGT	Florida Gas Transmission Pipeline and/or Florida Gas Transmission Company, LLC, a wholly-owned subsidiary of Citrus
GAAP	accounting principles generally accepted in the United States of America
General Partner	LE GP, LLC, the general partner of ET
HFOTCO	Houston Fuel Oil Terminal Company, a wholly-owned subsidiary of ETO, which owns the Houston Terminal
IDRs	incentive distribution rights
KMI	Kinder Morgan Inc.
Lake Charles LNG	Lake Charles LNG Company, LLC, a wholly-owned subsidiary of ETO
LCL	Lake Charles LNG Export Company, LLC, a wholly-owned subsidiary of ETO
LIBOR	London Interbank Offered Rate
LNG	liquefied natural gas
Lone Star	Lone Star NGL LLC, a wholly-owned subsidiary of ETO
MBbls	thousand barrels
MEP	Midcontinent Express Pipeline LLC
Mid-Valley	Mid-Valley Pipeline Company, a wholly-owned subsidiary of ETO
MMBbls	million barrels
MMcf	million cubic feet
MTBE	methyl tertiary butyl ether
NGL	natural gas liquid, such as propane, butane and natural gasoline
NYMEX	New York Mercantile Exchange
NYSE	New York Stock Exchange
ORS	Ohio River System LLC, a less than wholly-owned subsidiary of ETO
OSHA	Federal Occupational Safety and Health Act
OTC	over-the-counter
Panhandle	Panhandle Eastern Pipe Line Company, LP, a wholly-owned subsidiary of ETO
PCBs	polychlorinated biphenyls
PEP	Permian Express Partners LLC, a less than wholly-owned subsidiary of ETO
PES	Philadelphia Energy Solutions Refining and Marketing LLC
Phillips 66	Phillips 66 Partners LP
PHMSA	Pipeline Hazardous Materials Safety Administration
Regency	Regency Energy Partners LP, a wholly-owned subsidiary of ETO
RIGS	Regency Intrastate Gas System, a wholly-owned subsidiary of ETO

Rover	Rover Pipeline LLC, a less than wholly-owned subsidiary of ETO
Sea Robin	Sea Robin Pipeline Company, LLC, a wholly-owned subsidiary of Panhandle
SEC	Securities and Exchange Commission
SemGroup	SemGroup, LLC (formerly SemGroup Corporation)
Shell	Royal Dutch Shell plc
Southwest Gas	Pan Gas Storage, LLC (d.b.a. Southwest Gas Storage Company)
SPLP	Sunoco Pipeline L.P., a wholly-owned subsidiary of ETO
Sunoco Logistics Operations	Sunoco Logistics Partners Operations L.P, a wholly-owned subsidiary of ETO
Sunoco (R&M)	Sunoco (R&M), LLC
Transwestern	Transwestern Pipeline Company, LLC, a wholly-owned subsidiary of ETO
TRRC	Texas Railroad Commission
Trunkline	Trunkline Gas Company, LLC, a wholly-owned subsidiary of Panhandle
Unitholders	holders of Energy Transfer LP common units
USAC	USA Compression Partners, LP, a subsidiary of ETO
WMB	The Williams Companies, Inc.
White Cliffs	White Cliffs Pipeline, L.L.C.

Adjusted EBITDA is a term used throughout this document, which we define as total Partnership earnings before interest, taxes, depreciation, depletion, amortization and other non-cash items, such as non-cash compensation expense, gains and losses on disposals of assets, the allowance for equity funds used during construction, unrealized gains and losses on commodity risk management activities, inventory valuation adjustments, non-cash impairment charges, losses on extinguishments of debt and other non-operating income or expense items. Adjusted EBITDA reflect amounts for unconsolidated affiliates based on the same recognition and measurement methods used to record equity in earnings of unconsolidated affiliates. Adjusted EBITDA related to unconsolidated affiliates excludes the same items with respect to the unconsolidated affiliate as those excluded from the calculation of Segment Adjusted EBITDA and consolidated Adjusted EBITDA, such as interest, taxes, depreciation, depletion, amortization and other non-cash items. Although these amounts are excluded from Adjusted EBITDA related to unconsolidated affiliates, such exclusion should not be understood to imply that we have control over the operations and resulting revenues and expenses of such affiliates. We do not control our unconsolidated affiliates; therefore, we do not control the earnings or cash flows of such affiliates. The use of Segment Adjusted EBITDA or Adjusted EBITDA related to unconsolidated affiliates as an analytical tool should be limited accordingly.

Forward-Looking Statements

Certain matters discussed in this report, excluding historical information, as well as some statements by Energy Transfer LP (the “Partnership” or “ET”) in periodic press releases and some oral statements of the Partnership’s officials during presentations about the Partnership, include forward-looking statements. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. Statements using words such as “anticipate,” “project,” “expect,” “plan,” “goal,” “forecast,” “estimate,” “intend,” “continue,” “could,” “believe,” “may,” “will” or similar expressions help identify forward-looking statements. Although the Partnership and its General Partner believe such forward-looking statements are based on reasonable assumptions and current expectations and projections about future events, no assurance can be given that such assumptions, expectations or projections will prove to be correct. Forward-looking statements are subject to a variety of risks, uncertainties and assumptions. If one or more of these risks or uncertainties materialize, or if underlying assumptions prove incorrect, the Partnership’s actual results may vary materially from those anticipated, estimated, projected, forecasted, expressed or expected in forward-looking statements since many of the factors that determine these results are subject to uncertainties and risks that are difficult to predict and beyond management’s control. For additional discussion of risks, uncertainties and assumptions, see the risk factor summary below and “Item 1A. Risk Factors” included in this annual report.

Risk Factor Summary

Summary of Risks Related to the Partnership's Business

Results of Operations and Financial Condition. Our results of operations and financial condition could be impacted by many risks that are beyond our control, including the following:

- fluctuations in the demand for and price of natural gas, NGLs, crude oil and refined products;
- the outbreak of COVID-19 and recent geopolitical developments in the crude oil market;
- failure to successfully combine the businesses of Energy Transfer and Enable;
- an impairment of goodwill and intangible assets;
- an interruption of supply of crude oil to our facilities;
- the loss of any key producers or customers;
- failure to retain or replace existing customers or volumes due to declining demand or increased competition;
- unfavorable changes in natural gas price spreads between two or more physical locations;
- production declines over time, which we may not be able to replace with production from newly drilled wells;
- our customers' ability to use our pipelines and third-party pipelines over which we have no control;
- the inability to access or continue to access lands owned by third parties;
- the overall forward market for crude oil and other products we store;
- a natural disaster, catastrophe, terrorist attack or other similar event;
- union disputes and strikes or work stoppages by unionized employees;
- cybersecurity breaches and other disruptions or failures of our information systems;
- failure to establish or maintain adequate corporate governance;
- product liability claims and litigation;
- actions taken by certain of our joint ventures that we do not control;
- increasing levels of congestion in the Houston Ship Channel;
- the costs of providing pension and other postretirement health care benefits and related funding requirements;
- mergers among customers and competitors;
- fraudulent activity or misuse of proprietary data involving our outsourcing partners; and
- failure of the liquefaction project to secure long-term contractual arrangements or necessary approvals.

Indebtedness. Our business, results of operations, cash flows and financial condition, as well as our ability to make distributions, could be impacted by the following:

- our debt level and debt agreements, or increases in interest rates;
- changes in LIBOR reporting practices or the method in which LIBOR is determined;
- the credit and risk profile of our general partner and its owners;
- a downgrade of our credit ratings; and
- losses resulting from the use of derivative financial instruments.

Capital Projects and Future Growth. Our business, results of operations, cash flows, financial condition, and future growth could be impacted by the following:

- failure to make acquisitions on economically acceptable terms, or to successfully integrate acquired assets;
- failure to secure debt and equity financing for capital projects on acceptable terms;
- failure to construct new pipelines or to do so efficiently;
- failure to execute our growth strategy due to increased competition within any of our core businesses; and
- failure to attract and retain qualified employees.

Regulatory Matters. Our business, results of operations, cash flows, financial condition, and future growth could be impacted by the following:

- increased regulation of hydraulic fracturing or produced water disposal;
- legal or regulatory actions related to the Dakota Access Pipeline;
- competition for water resources or limitations on water usage for hydraulic fracturing;
- laws, regulations and policies governing the rates, terms and conditions of our services;
- failure to recover the full amount of increases in the costs of our pipeline operations;
- imposition of regulation on assets not previously subject to regulation;
- costs and liabilities resulting from performance of pipeline integrity programs and related repairs;
- new or more stringent pipeline safety controls or enforcement of legal requirements;
- costs and liabilities associated with environmental and worker health and safety laws and regulations;
- climate change legislation or regulations restricting emissions of greenhouse gases;
- regulatory provisions of the Dodd-Frank Act and the rules adopted thereunder;

- deepwater drilling laws and regulations, delays in the processing and approval of drilling permits and exploration, development, oil spill-response and decommissioning plans, and related developments; and
- laws and regulations governing the specifications of products that we store and transport.

Risks Relating to Our Partnership Structure

Cash Distributions to Unitholders. Our cash distributions could be impacted by the following:

- cash distributions are not guaranteed and may fluctuate with our performance and other external factors;
- limitations on available cash that are imposed by our distribution policy;
- our general partner's absolute discretion in determining the level of cash reserves; and
- unitholders' potential liability to repay distributions.

Our General Partner. Our stakeholders could be impacted by risks related to our general partner, including:

- transfer of control of our general partner to a third party without unitholder consent; and
- substantial cost reimbursements due to our general partner.

Our Subsidiaries. Risks that are unique to our subsidiaries and/or our relationship to our subsidiaries could reduce our subsidiaries' cash available for distributions to us, including:

- the potential issuance of additional common units by Sunoco LP or USAC;
- a significant decrease in demand for or the price of motor fuel in the areas Sunoco LP serves;
- seasonal industry trends, which may cause Sunoco LP's operating costs to fluctuate;
- disruptions in Sunoco LP's operations due to dangers inherent in motor fuel transportation;
- adverse publicity for Sunoco LP resulting from negative events or developments;
- increased costs to retain necessary land use, which could disrupt Sunoco LP's operations; and
- federal, state and local laws and regulations that govern the industries in which our subsidiaries operate.

Risks Related to Conflicts of Interest. Our stakeholders could be impacted by conflicts of interest, including:

- our general partner may favor its own interests to the detriment of our Unitholders;
- fiduciary duties owed to Sunoco LP, USAC and their respective unitholders by their general partners; and
- potential conflicts of interest faced by directors and officers in managing our business.

Tax Risks. Our stakeholders could be impacted by tax risks, including:

- our tax treatment depends on our status as a partnership for federal income tax purposes, and not being subject to a material amount of entity-level taxation;
- our cash available for distribution to Unitholders may be substantially reduced if we become subject to entity-level taxation as a result of the Internal Revenue Service ("IRS") treating us as a corporation or legislative, judicial or administrative changes, and may also be reduced by any audit adjustments if imposed directly on the partnership;
- even if Unitholders do not receive any cash distributions from us, Unitholders will be required to pay taxes on their share of our taxable income;
- a Unitholder's share of our taxable income may be increased as a result of the IRS successfully contesting any of the federal income tax positions we take; and
- tax-exempt entities and non-U.S. Unitholders face unique tax issues from owning our common units that may result in adverse tax consequences to them.

PART I

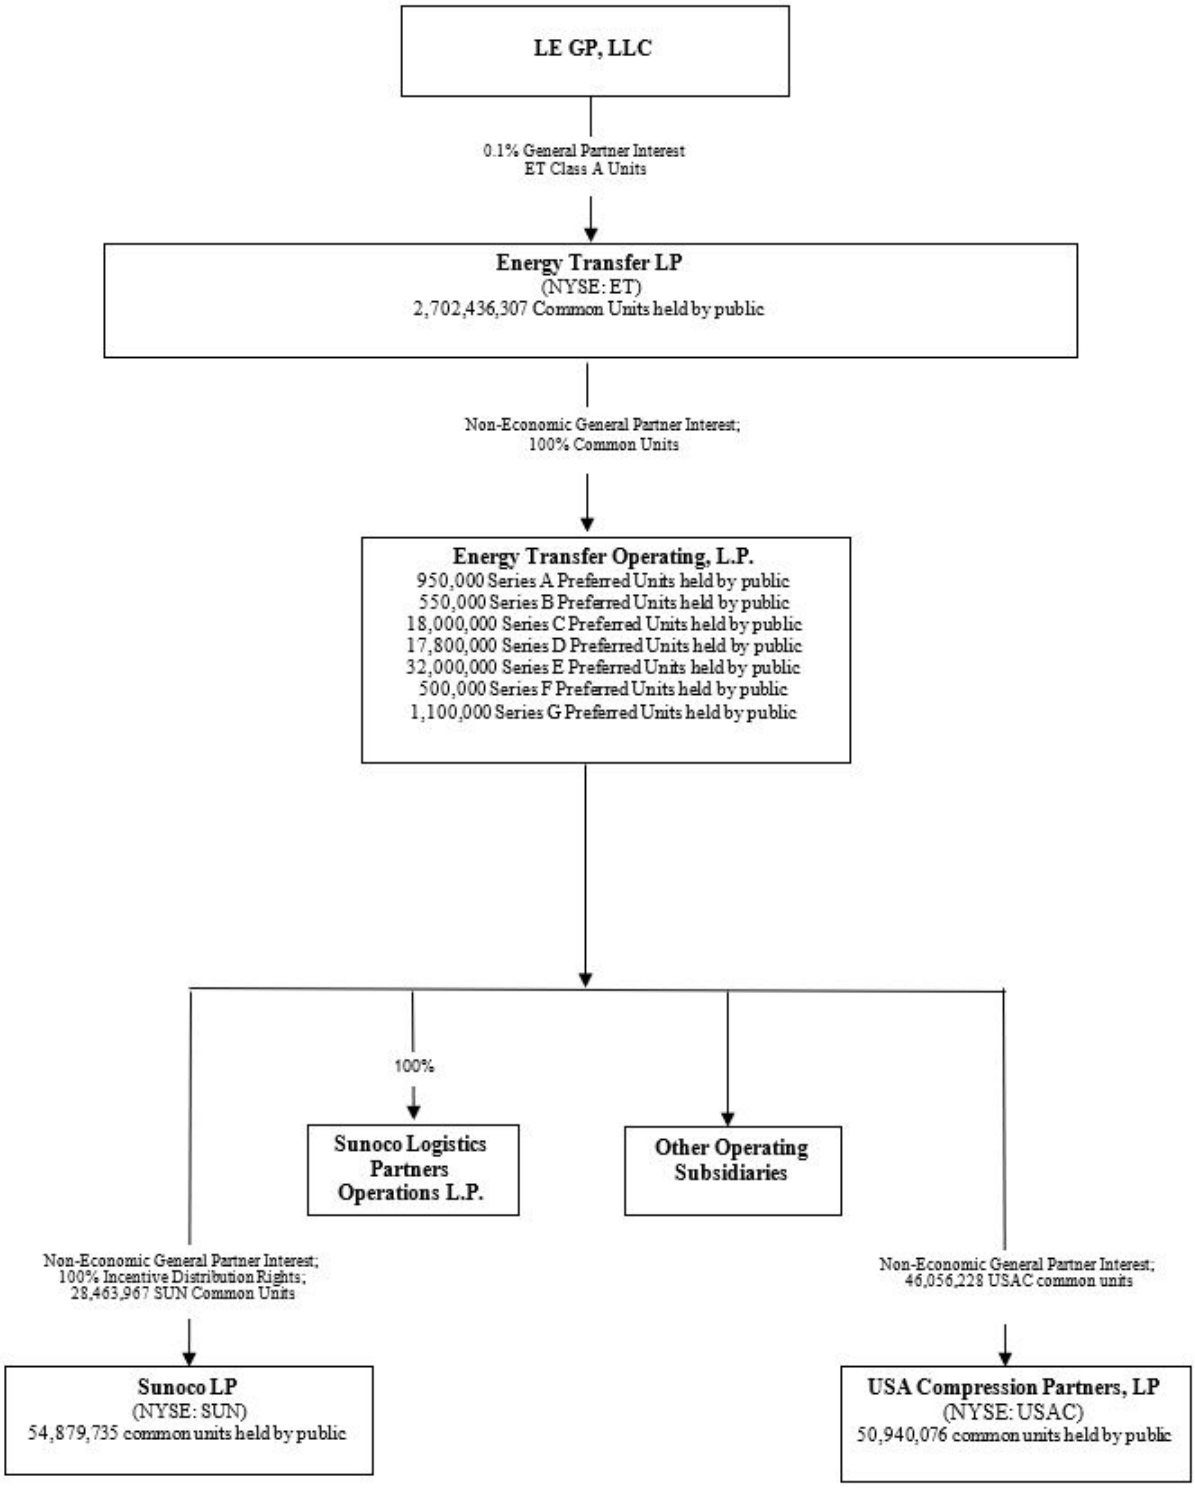
ITEM 1. BUSINESS

Overview

We are a Delaware limited partnership with common units publicly traded on the NYSE under the ticker symbol “ET.”

Unless the context requires otherwise, references to “we,” “us,” “our,” the “Partnership,” “ET” and “Energy Transfer” mean Energy Transfer LP and its consolidated subsidiaries, which include ETO, ETP GP, ETP LLC, Panhandle, Sunoco LP, USAC and Lake Charles LNG. References to the “Parent Company” mean Energy Transfer LP on a stand-alone basis.

The primary activities in which we are engaged, which are in the United States and Canada, and the operating subsidiaries through which we conduct those activities are as follows:



- natural gas operations, including the following:
  - natural gas midstream and intrastate transportation and storage;
  - interstate natural gas transportation and storage; and
- crude oil, NGL and refined products transportation, terminalling services and acquisition and marketing activities, as well as NGL storage and fractionation services.

In addition, we own investments in other businesses, including Sunoco LP and USAC, both of which are publicly traded master limited partnerships.

Substantially all of the Partnership’s cash flows are derived from distributions related to its investment in ETO, whose cash flows are derived from its subsidiaries, including ETO’s investments in Sunoco LP and USAC. The Parent Company’s primary cash requirements are for distributions to its partners, general and administrative expenses and debt service requirements. The Parent Company-only assets and liabilities are not available to satisfy the debts and other obligations of its subsidiaries. The Parent Company distributes its available cash remaining after satisfaction of the aforementioned cash requirements to its Unitholders on a quarterly basis.

We expect our subsidiaries to utilize their resources, along with cash from their operations, to fund their announced growth capital expenditures and working capital needs; however, the Parent Company may issue debt or equity securities from time to time as we deem prudent to provide liquidity for new capital projects of our subsidiaries or for other partnership purposes.

The following chart summarizes our organizational structure as of February 12, 2021. For simplicity, certain immaterial entities and ownership interests have not been depicted.

Unless the context requires otherwise, the Partnership and its subsidiaries are collectively referred to in this report as “we,” “us,” “ET,” “Energy Transfer” or “the Partnership.”

Significant Achievements in 2020 and Beyond

- During the third quarter of 2020, the Partnership completed its Lone Star Express expansion under budget and ahead of schedule.
- During this first quarter of 2020, we completed the integration of the recently acquired SemGroup business and we began to realize financial savings from those actions.
- During the fourth quarter of 2020, the Partnership completed construction of the Orbit Gulf Coast export terminal at Nederland and in January of 2021 loaded the first Very Large Ethane Carrier (“VLEC”) with 911,000 barrels of ethane destined for the northeastern Jiangsu Province, China.
- In February 2021, the Partnership announced its entry into a definitive merger agreement to acquire Enable.

Segment Overview

See Note 17 to our consolidated financial statements in “Item 8. Financial Statements and Supplementary Data” for additional financial information about our segments.

Intrastate Transportation and Storage Segment

Natural gas transportation pipelines receive natural gas from other mainline transportation pipelines, storage facilities and gathering systems and deliver the natural gas to industrial end-users, storage facilities, utilities, power generators and other third-party pipelines. Through our intrastate transportation and storage segment, we own and operate (through wholly-owned subsidiaries or through joint venture interests) approximately 9,400 miles of natural gas transportation pipelines with approximately 22 Bcf/d of transportation capacity and three natural gas storage facilities located in the state of Texas.

Energy Transfer operates one of the largest intrastate pipeline systems in the United States providing energy logistics to major trading hubs and industrial consumption areas throughout the United States. Our intrastate transportation and storage segment focuses on the transportation of natural gas to major markets from various prolific natural gas producing areas (Permian, Barnett, Haynesville and Eagle Ford Shale) through our Oasis pipeline, our ETC Katy pipeline, our natural gas pipeline and storage systems that are referred to as the ET Fuel System, and our HPL System, as further described below.

Our intrastate transportation and storage segment’s results are determined primarily by the amount of capacity our customers reserve as well as the actual volume of natural gas that flows through the transportation pipelines. Under transportation contracts, our customers are charged (i) a demand fee, which is a fixed fee for the reservation of an agreed amount of capacity on the transportation pipeline for a specified period of time and which obligates the customer to pay a fee even if the customer does not transport natural gas on the respective pipeline, (ii) a transportation fee, which is based on the actual throughput of natural gas by the customer, (iii) fuel retention based on a percentage of gas transported on the pipeline, or (iv) a combination of the three, generally payable monthly.

We also generate revenues and margin from the sale of natural gas to electric utilities, independent power plants, local distribution companies, industrial end-users and marketing companies on our HPL System. Generally, we purchase natural gas from either the market (including purchases from our marketing operations) or from producers at the wellhead. To the extent the natural gas comes from producers, it is primarily purchased at a discount to a specified market price and typically resold to customers based on an index price. In addition, our intrastate transportation and storage segment generates revenues from fees charged for storing customers’ working natural gas in our storage facilities and from managing natural gas for our own account.

Interstate Transportation and Storage Segment

Natural gas transportation pipelines receive natural gas from supply sources including other transportation pipelines, storage facilities and gathering systems and deliver the natural gas to industrial end-users and other pipelines. Through our interstate transportation and storage segment, we directly own and operate approximately 12,340 miles of interstate natural gas pipelines with approximately 10.7 Bcf/d of transportation capacity and another approximately 6,780 miles and 10.7 Bcf/d of transportation capacity through joint venture interests.

ETO’s vast interstate natural gas network spans the United States from Florida to California and Texas to Michigan, offering a comprehensive array of pipeline and storage services. Our pipelines have the capability to transport natural gas from nearly all Lower 48 onshore and offshore supply basins to customers in the Southeast, Gulf Coast, Southwest, Midwest, Northeast and Canada. Through numerous interconnections with other pipelines, our interstate systems can access virtually any supply or

market in the country. As discussed further herein, our interstate segment operations are regulated by the FERC, which has broad regulatory authority over the business and operations of interstate natural gas pipelines.

Lake Charles LNG, our wholly-owned subsidiary, owns an LNG import terminal and regasification facility located on Louisiana's Gulf Coast near Lake Charles, Louisiana. The import terminal has approximately 9.0 Bcf of above ground storage capacity and the regasification facility has a send out capacity of 1.8 Bcf/d. Lake Charles LNG derives all of its revenue from a series of long-term contracts with a wholly-owned subsidiary of Shell.

LCL, a wholly-owned subsidiary of ETO, is currently developing a natural gas liquefaction facility for the export of LNG. The project would utilize existing dock and storage facilities owned by Lake Charles LNG located on the Lake Charles site. LCL entered into a prior development agreement with Shell in March 2019; however, Shell withdrew from the project in March 2020 due to adverse market factors affecting Shell's business following the onset of the COVID-19 pandemic. We intend to continue to develop the project, possibly in conjunction with one or more equity partners, and we plan to evaluate a variety of alternatives to advance the project, including the possibility of reducing the size of the project from three trains (16.45 million tonnes per annum of LNG capacity) to two trains (11.0 million tonnes per annum). The project as currently designed is fully permitted by federal, state and local authorities, has all necessary export licenses and benefits from the infrastructure related to the existing regasification facility at the same site, including four LNG storage tanks, two deep water docks and other assets. In light of the existing brownfield infrastructure and the advanced state of the development of the project, we plan to continue to pursue the project on a disciplined, cost effective basis, and ultimately we will determine whether to make a final investment decision to proceed with the project based on market conditions, capital expenditure considerations and our success in securing equity participation by third parties as well as long-term LNG offtake commitments on satisfactory terms.

The results from our interstate transportation and storage segment are primarily derived from the fees we earn from natural gas transportation and storage services.

Midstream Segment

The midstream industry consists of natural gas gathering, compression, treating, processing, storage, and transportation, and is generally characterized by regional competition based on the proximity of gathering systems and processing plants to natural gas producing wells and the proximity of storage facilities to production areas and end-use markets. Gathering systems generally consist of a network of small diameter pipelines and, if necessary, compression systems, that collect natural gas from points near producing wells and transports it to larger pipelines for further transportation.

Treating plants remove carbon dioxide and hydrogen sulfide from natural gas that is higher in carbon dioxide, hydrogen sulfide or certain other contaminants, to ensure that it meets pipeline quality specifications. Natural gas processing involves the separation of natural gas into pipeline quality natural gas, or residue gas, and a mixed NGL stream. Some natural gas produced by a well does not meet the pipeline quality specifications established by downstream pipelines or is not suitable for commercial use and must be processed to remove the mixed NGL stream. In addition, some natural gas can be processed to take advantage of favorable margins for NGLs extracted from the gas stream.

Through our midstream segment, we own and operate natural gas gathering and NGL pipelines, natural gas processing plants, natural gas treating facilities and natural gas conditioning facilities with an aggregate processing capacity of approximately 8.7 Bcf/d. Our midstream segment focuses on the gathering, compression, treating, blending, and processing, and our operations are currently concentrated in major producing basins and shales in South Texas, West Texas, New Mexico, North Texas, East Texas, West Virginia, Pennsylvania, Ohio, Oklahoma, Kansas and Louisiana. Many of our midstream assets are integrated with our intrastate transportation and storage assets.

Our midstream segment also includes a 60% interest in Edwards Lime Gathering, LLC, which operates natural gas gathering, oil pipeline and oil stabilization facilities in South Texas and a 75% membership interest in ORS, which operates a natural gas gathering system in the Utica shale in Ohio.

Our midstream segment results are derived primarily from margins we earn for natural gas volumes that are gathered, transported, purchased and sold through our pipeline systems and the natural gas and NGL volumes processed at our processing and treating facilities.

NGL and Refined Products Transportation and Services Segment

Our NGL operations transport, store and execute acquisition and marketing activities utilizing a complementary network of pipelines, storage and blending facilities, and strategic off-take locations that provide access to multiple NGL markets.

Our NGL and refined products transportation and services segment includes:

- approximately 4,823 miles of NGL pipelines;
- Nederland Terminal and connecting pipelines which provide transportation of ethane, propane, butane and natural gasoline from our Mont Belvieu Facility to our Nederland Terminal where these products can be exported;
- Marcus Hook Terminal which includes fractionation, storage and exporting assets. This facility is connected to our Mariner East pipeline system, which provides for the transportation of ethane and LPG products from western Pennsylvania, West Virginia and eastern Ohio to our Marcus Hook Terminal where these component products can be exported, processed or locally distributed;
- NGL and propane fractionation facilities with an aggregate capacity of 975 MBbls/d;
- NGL storage facility in Mont Belvieu with a working storage capacity of approximately 50 MMBbls; and
- other NGL storage assets, located at our Cedar Bayou and Hattiesburg storage facilities, and our Nederland, Marcus Hook and Inkster NGL terminals with an aggregate storage capacity of approximately 17 MMBbls.

In the first quarter of 2020, we completed and placed into operation a seventh fractionator at our Mont Belvieu facility. In addition, we placed into service the Lone Star Express pipeline in the third quarter of 2020. The NGL pipelines primarily transport NGLs from the Permian and Delaware basins and the Barnett and Eagle Ford Shales to Mont Belvieu.

NGL terminalling services are facilitated by approximately 10 MMBbls of NGL storage capacity. These operations also support our liquids blending activities, including the use of our patented butane blending technology. Refined products operations provide transportation and terminalling services through the use of approximately 2,918 miles of refined products pipelines and 37 active refined products marketing terminals. Our marketing terminals are located primarily in the northeast, midwest and southwest United States, with approximately 8 MMBbls of refined products storage capacity. Our refined products operations utilize our integrated pipeline and terminalling assets, as well as acquisition and marketing activities, to service refined products markets in several regions throughout the United States. The mix of products delivered through our refined products pipelines varies seasonally, with gasoline demand peaking during the summer months, and demand for heating oil and other distillate fuels peaking in the winter. The products transported in these pipelines include multiple grades of gasoline and middle distillates, such as heating oil, diesel and jet fuel. Rates for shipments on these product pipelines are regulated by the FERC and other state regulatory agencies, as applicable.

Revenues in this segment are principally generated from fees charged to customers under dedicated contracts or take-or-pay contracts. Under a dedicated contract, the customer agrees to deliver the total output from particular processing plants that are connected to the NGL pipeline. Take-or-pay contracts have minimum throughput commitments requiring the customer to pay regardless of whether a fixed volume is transported. Fees are market-based, negotiated with customers and competitive with regional regulated pipelines and fractionators. Storage revenues are derived from base storage and throughput fees. This segment also derives revenues from the marketing of NGLs and processing and fractionating refinery off-gas.

Crude Oil Transportation and Services Segment

Our crude oil operations provide transportation (via pipeline and trucking), terminalling and acquisition and marketing services to crude oil markets throughout the southwest, midwest, northwestern and northeastern United States. Through our crude oil transportation and services segment, we own and operate (through wholly-owned subsidiaries or joint venture interests) approximately 10,850 miles of crude oil trunk and gathering pipelines in the southwest and midwest United States. This segment includes equity ownership interests in four crude oil pipelines, the Bakken Pipeline system, Bayou Bridge Pipeline, White Cliffs Pipeline and Maurepas Pipeline. Our crude oil terminalling services operate with an aggregate storage capacity of approximately 71 MMBbls, including approximately 29 MMBbls at our Gulf Coast terminal in Nederland, Texas, approximately 18.2 MMBbls at our Gulf coast terminal on the Houston Ship Channel and approximately 7.7 MMBbls at our Cushing facility in Cushing, Oklahoma. Our crude oil acquisition and marketing activities utilize our pipeline and terminal assets, our proprietary fleet crude oil tractor trailers and truck unloading facilities, as well as third-party assets, to service crude oil markets principally in the midcontinent United States.

Revenues throughout our crude oil pipeline systems are generated from tariffs paid by shippers utilizing our transportation services. These tariffs are filed with the FERC and other state regulatory agencies, as applicable.

Our crude oil acquisition and marketing activities include the gathering, purchasing, marketing and selling of crude oil. Specifically, the crude oil acquisition and marketing activities include:

- purchasing crude oil at both the wellhead from producers, and in bulk from aggregators at major pipeline interconnections and trading locations;

- storing inventory during contango market conditions (when the price of crude oil for future delivery is higher than current prices);
- buying and selling crude oil of different grades at different locations in order to maximize value;
- transporting crude oil using the pipelines, terminals and trucks or, when necessary or cost effective, pipelines, terminals or trucks owned and operated by third parties; and
- marketing crude oil to major integrated oil companies, independent refiners and resellers through various types of sale and exchange transactions.

Investment in Sunoco LP

Sunoco LP is engaged in the distribution of motor fuels to independent dealers, distributors, and other commercial customers and the distribution of motor fuels to end-user customers at retail sites operated by commission agents. Additionally, it receives rental income through the leasing or subleasing of real estate used in the retail distribution of motor fuel. Sunoco LP also operates 78 retail stores located in Hawaii and New Jersey.

Sunoco LP is a distributor of motor fuels and other petroleum products which Sunoco LP supplies to third-party dealers and distributors, to independent operators of commission agent locations and other commercial consumers of motor fuel. Also included in the wholesale operations are transmix processing plants and refined products terminals. Transmix is the mixture of various refined products (primarily gasoline and diesel) created in the supply chain (primarily in pipelines and terminals) when various products interface with each other. Transmix processing plants separate this mixture and return it to salable products of gasoline and diesel.

Sunoco LP is the exclusive wholesale supplier of the Sunoco-branded motor fuel, supplying an extensive distribution network of approximately 5,556 Sunoco-branded company and third-party operated locations throughout the East Coast, Midwest, South Central and Southeast regions of the United States. Sunoco LP believes it is one of the largest independent motor fuel distributors of Chevron, ExxonMobil and Valero branded motor fuel in the United States. In addition to distributing motor fuels, Sunoco LP also distributes other petroleum products such as propane and lubricating oil, and Sunoco LP receives rental income from real estate that it leases or subleases.

Sunoco LP operations primarily consist of fuel distribution and marketing.

Investment in USAC

USAC provides natural gas compression services throughout the United States, including the Utica, Marcellus, Permian Basin, Delaware Basin, Eagle Ford, Mississippi Lime, Granite Wash, Woodford, Barnett, Haynesville, Niobrara and Fayetteville shales. USAC provides compression services to its customers primarily in connection with infrastructure applications, including both allowing for the processing and transportation of natural gas through the domestic pipeline system and enhancing crude oil production through artificial lift processes. As such, USAC's compression services play a critical role in the production, processing and transportation of both natural gas and crude oil. As of December 31, 2020, USAC had 3,726,181 horsepower in its fleet.

USAC operates a modern fleet of compression units, with an average age of approximately seven years. USAC's standard new-build compression units are generally configured for multiple compression stages allowing USAC to operate its units across a broad range of operating conditions. As part of USAC's services, it engineers, designs, operates, services and repairs its compression units and maintains related support inventory and equipment.

USAC provides compression services to its customers under fixed-fee contracts with initial contract terms typically between six months and five years, depending on the application and location of the compression unit. USAC typically continues to provide compression services at a specific location beyond the initial contract term, either through contract renewal or on a month-to-month or longer basis. USAC primarily enters into fixed-fee contracts whereby its customers are required to pay a monthly fee even during periods of limited or disrupted throughput, which enhances the stability and predictability of its cash flows. USAC is not directly exposed to commodity price risk because it does not take title to the natural gas or crude oil involved in its services and because the natural gas used as fuel by its compression units is supplied by its customers without cost to USAC.

USAC's assets and operations are all located and conducted in the United States.

All Other Segment

Our "All Other" segment includes the following:

- Our marketing operations in which we market the natural gas that flows through our gathering and intrastate transportation assets, referred to as on-system gas. We also attract other customers by marketing volumes of natural gas that do not move through our assets, referred to as off-system gas. For both on-system and off-system gas, we purchase natural gas from natural gas producers and other suppliers and sell that natural gas to utilities, industrial consumers, other marketers and pipeline companies, thereby generating gross margins based upon the difference between the purchase and resale prices of natural gas, less the costs of transportation. For the off-system gas, we purchase gas or act as an agent for small independent producers that may not have marketing operations.
- Our natural gas compression equipment business which has operations in Arkansas, California, Colorado, Louisiana, New Mexico, Oklahoma, Pennsylvania and Texas.
- Our wholly-owned subsidiary, Dual Drive Technologies, Ltd. ("DDT"), which provides compression services to customers engaged in the transportation of natural gas, including our other segments.
- Our subsidiaries are involved in the management of coal and natural resources properties and the related collection of royalties. We also earn revenues from other land management activities, such as selling standing timber, leasing coal-related infrastructure facilities, and collecting oil and gas royalties. These operations also include end-user coal handling facilities.
- PEI Power LLC and PEI Power II LLC, which own and operate a facility in Pennsylvania that generates a total of 75 megawatts of electrical power.
- Our 51% ownership interest in Energy Transfer Canada, which owns and operates natural gas processing and gathering facilities in Alberta, Canada.

Asset Overview

The descriptions below include summaries of significant assets within the Partnership's reportable segments. Amounts, such as capacities, volumes and miles included in the descriptions below are approximate and are based on information currently available; such amounts are subject to change based on future events or additional information.

Intrastate Transportation and Storage

The following details our pipelines and storage facilities in the intrastate transportation and storage segment:

Description of Assets	Ownership Interest	Miles of Natural Gas Pipeline	Pipeline Throughput Capacity (Bcf/d)	Working Storage Capacity (Bcf/d)
ET Fuel System	100 %	3,150	5.2	11.2
Oasis Pipeline [1]	100 %	750	2.0	—
HPL System	100 %	3,920	5.3	52.5
ETC Katy Pipeline	100 %	460	2.9	—
Regency Intrastate Gas	100 %	450	2.1	—
Comanche Trail Pipeline	16 %	195	1.1	—
Trans-Pecos Pipeline	16 %	143	1.4	—
Old Ocean Pipeline, LLC	50 %	240	0.2	—
Red Bluff Express Pipeline	70 %	108	1.4	—

[1] Includes bi-directional capabilities

The following information describes our principal intrastate transportation and storage assets:

- The ET Fuel System serves some of the most prolific production areas in the United States and is comprised of intrastate natural gas pipeline and related natural gas storage facilities. The ET Fuel System has many interconnections with pipelines providing direct access to power plants, other intrastate and interstate pipelines, and has bi-directional capabilities. It is strategically located near high-growth production areas and provides access to the three major natural gas trading centers in Texas, the Waha Hub near Pecos, Texas, the Maypearl Hub in Central Texas and the Carthage Hub in East Texas.

The ET Fuel System also includes our Bethel natural gas storage facility, with a working capacity of 6.0 Bcf, an average withdrawal capacity of 300 MMcf/d and an injection capacity of 75 MMcf/d, and our Bryson natural gas storage facility, with a working capacity of 5.2 Bcf, an average withdrawal capacity of 120 MMcf/d and an average injection capacity of 96 MMcf/d. Storage capacity on the ET Fuel System is contracted to third parties under fee-based arrangements that extend through 2023.

In addition, the ET Fuel System is integrated with our Godley processing plant which gives us the ability to bypass the plant when processing margins are unfavorable by blending the untreated natural gas from the North Texas System with natural gas on the ET Fuel System while continuing to meet pipeline quality specifications.

- The Oasis Pipeline is primarily a 36-inch natural gas pipeline. It has bi-directional capabilities with approximately 1.3 Bcf/d of throughput capacity moving west-to-east and greater than 750 MMcf/d of throughput capacity moving east-to-west. The Oasis pipeline connects to the Waha and Katy market hubs and has many interconnections with other pipelines, power plants, processing facilities, municipalities and producers.

  The Oasis pipeline is integrated with our gathering system known as the Southeast Texas System and is an important component to maximizing our Southeast Texas System's profitability. The Oasis pipeline enhances the Southeast Texas System by (i) providing access for natural gas gathered on the Southeast Texas System to other third-party supply and market points and interconnecting pipelines and (ii) allowing us to bypass our processing plants and treating facilities on the Southeast Texas System when processing margins are unfavorable by blending untreated natural gas from the Southeast Texas System with gas on the Oasis pipeline while continuing to meet pipeline quality specifications.

- The HPL System is an extensive network of intrastate natural gas pipelines, an underground Bammel storage reservoir and related transportation assets. The system has access to multiple sources of historically significant natural gas supply reserves from South Texas, the Gulf Coast of Texas, East Texas and the western Gulf of Mexico, and is directly connected to major gas distribution, electric and industrial load centers in Houston, Corpus Christi, Texas City, Beaumont and other cities located along the Gulf Coast of Texas. The HPL System is well situated to gather and transport gas in many of the major gas producing areas in Texas including a strong presence in the key Houston Ship Channel and Katy Hub markets, allowing us to play an important role in the Texas natural gas markets. The HPL System also offers its shippers off-system opportunities due to its numerous interconnections with other pipeline systems, its direct access to multiple market hubs at Katy, the Houston Ship Channel, Carthage and Agua Dulce, as well as our Bammel storage facility.

  The Bammel storage facility has a total working gas capacity of approximately 52.5 Bcf, a peak withdrawal rate of 1.3 Bcf/d and a peak injection rate of 0.6 Bcf/d. The Bammel storage facility is located near the Houston Ship Channel market area and the Katy Hub, and is ideally suited to provide a physical backup for on-system and off-system customers. As of December 31, 2020, we had approximately 19.0 Bcf committed under fee-based arrangements with third parties and approximately 28.7 Bcf stored in the facility for our own account.

- The ETC Katy Pipeline connects three treating facilities, one of which we own, with our gathering system known as Southeast Texas System. The ETC Katy pipeline serves producers in East and North Central Texas and provided access to the Katy Hub. The ETC Katy pipeline expansions include the 36-inch East Texas extension to connect our Reed compressor station in Freestone County to our Grimes County compressor station, the 36-inch Katy expansion connecting Grimes to the Katy Hub, and the 42-inch Southeast Bossier pipeline connecting our Cleburne to Carthage pipeline to the HPL System.

- RIGS is a 450-mile intrastate pipeline that delivers natural gas from northwest Louisiana to downstream pipelines and markets.

- Comanche Trail Pipeline is a 195-mile intrastate pipeline that delivers natural gas from the Waha Hub near Pecos, Texas to the United States/Mexico border near San Elizario, Texas. The Partnership owns a 16% membership interest in and operates Comanche Trail.

- Trans-Pecos Pipeline is a 143-mile intrastate pipeline that delivers natural gas from the Waha Hub near Pecos, Texas to the United States/Mexico border near Presidio, Texas. The Partnership owns a 16% membership interest in and operates Trans-Pecos.

- Old Ocean is a 240-mile intrastate pipeline system that delivers natural gas from Ellis County, Texas to Brazoria County, Texas. The Partnership owns a 50% membership interest in and operates Old Ocean.

- The Red Bluff Express Pipeline is an approximately 108-mile intrastate pipeline that runs through the heart of the Delaware basin and connects our Orla Plant, as well as third-party plants to the Waha Oasis Header. The Partnership owns a 70% membership interest in and operates Red Bluff Express.

Interstate Transportation and Storage

The following details our pipelines in the interstate transportation and storage segment:

Description of Assets	Ownership Interest	Miles of Natural Gas Pipeline	Pipeline Throughput Capacity (Bcf/d)	Working Gas Capacity (Bcf/d)
Florida Gas Transmission	50 %	5,362	3.5	—
Transwestern Pipeline	100 %	2,614	2.1	—
Panhandle Eastern Pipe Line [(1)]	100 %	6,298	2.8	73.4
Trunkline Gas Company	100 %	2,190	0.9	13.0
Tiger Pipeline	100 %	197	2.4	—
Fayetteville Express Pipeline	50 %	185	2.0	—
Sea Robin Pipeline	100 %	740	2.0	—
Stingray Pipeline	100 %	287	0.4	—
Rover Pipeline	32.6 %	719	3.4	—
Midcontinent Express Pipeline	50 %	512	1.8	—
Gulf States Transmission	100 %	10	0.1	—

(1) Natural gas storage assets are owned by Southwest Gas.

The following information describes our principal interstate transportation and storage assets:

- Florida Gas Transmission Pipeline (“FGT”) has mainline capacity of 3.5 Bcf/d and approximately 5,362 miles of pipelines extending from south Texas through the Gulf Coast region of the United States to south Florida. The FGT system receives natural gas from various onshore and offshore natural gas producing basins. FGT is the principal transporter of natural gas to the Florida energy market, delivering approximately 60% of the natural gas consumed in the state. In addition, FGT’s system operates and maintains multiple interconnects with major interstate and intrastate natural gas pipelines, which provide FGT’s customers access to diverse natural gas producing regions. FGT’s customers include electric utilities, independent power producers, industrial end-users and local distribution companies. FGT is owned by Citrus, a 50/50 joint venture with KMI.
- Transwestern Pipeline transports natural gas supply from the Permian Basin in West Texas and eastern New Mexico, the San Juan Basin in northwestern New Mexico and southern Colorado, and the Anadarko Basin in the Texas and Oklahoma panhandles. The system has bi-directional capabilities and can access Texas and Midcontinent natural gas market hubs, as well as major western markets in Arizona, Nevada and California. Transwestern’s customers include local distribution companies, producers, marketers, electric power generators and industrial end-users.
- Panhandle Eastern Pipe Line’s transmission system consists of four large diameter pipelines with bi-directional capabilities, extending approximately 1,300 miles from producing areas in the Anadarko Basin of Texas, Oklahoma and Kansas through Missouri, Illinois, Indiana, Ohio and into Michigan. Panhandle contracts for over 73 Bcf of natural gas storage.
- Trunkline Gas Company’s transmission system consists of one large diameter pipeline with bi-directional capabilities, extending approximately 1,400 miles from the Gulf Coast areas of Texas and Louisiana through Arkansas, Mississippi, Tennessee, Kentucky, Illinois, Indiana and Michigan. Trunkline has one natural gas storage field located in Louisiana.
- Tiger Pipeline is a bi-directional system that extends through the heart of the Haynesville Shale and ends near Delhi, Louisiana, interconnecting with multiple interstate pipelines.
- Fayetteville Express Pipeline originates near Conway County, Arkansas and continues eastward to Panola County, Mississippi with multiple pipeline interconnections along the route. Fayetteville Express Pipeline is owned by a 50/50 joint venture with KMI.
- Sea Robin Pipeline’s system consists of two offshore Louisiana natural gas supply pipelines extending 120 miles into the Gulf of Mexico.
- Stingray Pipeline is an interstate natural gas pipeline system with related assets located in the western Gulf of Mexico and Johnson Bayou, Louisiana. Stingray has recently filed with the FERC to abandon a portion of its system to be used in non-

gas service and the remaining portion to be operated as a non-FERC-regulated gathering system. The proceeding is pending a decision from FERC.

- Rover Pipeline is a large diameter pipeline with total capacity to transport 3.4 Bcf/d natural gas from processing plants in West Virginia, Eastern Ohio and Western Pennsylvania for delivery to other pipeline interconnects in Ohio and Michigan, where the gas is delivered for distribution to markets across the United States, as well as to Ontario, Canada.
- Midcontinent Express Pipeline originates near Bennington, Oklahoma and traverses northern Louisiana and central Mississippi to an interconnect with the Transcontinental Gas Pipeline system in Butler, Alabama. The Midcontinent Express Pipeline is owned by a 50/50 joint venture with KMI, the operator of the system.
- Gulf States Transmission is a 10-mile interstate pipeline that extends from Harrison County, Texas to Caddo Parish, Louisiana.

Regasification Facility

Lake Charles LNG, our wholly-owned subsidiary, owns an LNG import terminal and regasification facility located on Louisiana's Gulf Coast near Lake Charles, Louisiana. The import terminal has approximately 9.0 Bcf of above ground LNG storage capacity and the regasification facility has a send out capacity of 1.8 Bcf/d.

Liquefaction Project

LCL, a wholly-owned subsidiary of ETO, is in the process of developing an LNG liquefaction project at the site of our Lake Charles LNG import terminal and regasification facility. The project would utilize existing dock and storage facilities owned by Lake Charles LNG located on the Lake Charles site. LCL entered into a prior development agreement with Shell in March 2019; however, Shell withdrew from the project in March 2020 due to adverse market factors affecting Shell's business following the onset of the COVID-19 pandemic. We intend to continue to develop the project, possibly in conjunction with one or more equity partners, and we plan to evaluate a variety of alternatives to advance the project, including the possibility of reducing the size of the project from three trains (16.45 million tonnes per annum of LNG capacity) to two trains (11.0 million tonnes per annum). The project as currently designed is fully permitted by federal, state and local authorities, has all necessary export licenses and benefits from the infrastructure related to the existing regasification facility at the same site, including four LNG storage tanks, two deep water docks and other assets. In light of the existing brownfield infrastructure and the advanced state of the development of the project, we plan to continue to pursue the project on a disciplined, cost effective basis, and ultimately we will determine whether to make a final investment decision to proceed with the project based on market conditions, capital expenditure considerations and our success in securing equity participation by third parties as well as long-term LNG offtake commitments on satisfactory terms. LCL is actively involved in a variety of activities related to the development of the project and has also been marketing LNG offtake to numerous potential customers in Asia and Europe.

The export of LNG produced by the liquefaction project from the United States would be undertaken under long-term export authorizations issued by the DOE to LCL. In March 2013, LCL obtained a DOE authorization to export LNG to countries with which the United States has or will have Free Trade Agreements ("FTA") for trade in natural gas (the "FTA Authorization"). In July 2016, LCL also obtained a conditional DOE authorization to export LNG to countries that do not have an FTA for trade in natural gas (the "Non-FTA Authorization"). In October 2020, the DOE extended the FTA Authorization and Non-FTA Authorization to 30- and 25-year terms, respectively, following first deliveries on or before December 2025, consistent with the FERC authorization for the project. The FTA Authorization and Non-FTA Authorization have 25- and 20-year terms, respectively, commencing with the completion of construction of the liquefaction facility. In addition, LCL received its wetlands permits from the USACE to perform wetlands mitigation work and to perform modification and dredging work for the temporary and permanent dock facilities at the Lake Charles LNG facilities.

Midstream

The following details our assets in the midstream segment:

Description of Assets	Net Gas Processing Capacity (MMcf/d)
South Texas Region:	
Southeast Texas System	410
Eagle Ford System	1,920
Ark-La-Tex Region	1,442
North Central Texas Region	700
Permian Region	2,740
Midcontinent Region	1,238
Eastern Region	200

The following information describes our principal midstream assets:

South Texas Region:

- The Southeast Texas System is an integrated system that gathers, compresses, treats, processes, dehydrates and transports natural gas from the Austin Chalk trend and Eagle Ford shale formation. The Southeast Texas System is a large natural gas gathering system covering thirteen counties between Austin and Houston. This system is connected to the Katy Hub through the ETC Katy Pipeline and is also connected to the Oasis Pipeline. The Southeast Texas System includes two natural gas processing plants (La Grange and Alamo) with aggregate capacity of 410 MMcf/d. The La Grange and Alamo processing plants are natural gas processing plants that process the rich gas that flows through our gathering system to produce residue gas and NGLs. Residue gas is delivered into our intrastate pipelines and NGLs are delivered into our NGL pipelines to Lone Star.

  Our treating facilities remove carbon dioxide and hydrogen sulfide from natural gas gathered into our system before the natural gas is introduced to transportation pipelines to ensure that the gas meets pipeline quality specifications.

- The Eagle Ford Gathering System consists of 30-inch and 42-inch natural gas gathering pipelines with over 1.4 Bcf/d of capacity originating in Dimmitt County, Texas, and extending to both our King Ranch gas plant in Kleberg County, Texas and Jackson plant in Jackson County, Texas. The Eagle Ford Gathering System includes four processing plants (Chisholm, Kenedy, Jackson and King Ranch) with aggregate capacity of 1.92 Bcf/d. Our Chisholm, Kenedy, Jackson and King Ranch processing plants are connected to our intrastate transportation pipeline systems for deliveries of residue gas and are also connected with our NGL pipelines for delivery of NGLs to Lone Star.

Ark-La-Tex Region:

- Our Northern Louisiana assets are comprised of several gathering systems in the Haynesville Shale with access to multiple markets through interconnects with several pipelines, including our Tiger Pipeline. Our Northern Louisiana assets include the Bistineau, Creedence, and Tristate Systems, which collectively include three natural gas treating facilities, with aggregate capacity of 1.4 Bcf/d.
- The Ark-La-Tex assets gather, compress, treat and dehydrate natural gas in several parishes in north and west Louisiana and several counties in East Texas. These assets also include cryogenic natural gas processing facilities, a refrigeration plant, a conditioning plant, amine treating plants, a residue gas pipeline that provides market access for natural gas from our processing plants, including connections with pipelines that provide access to the Perryville Hub and other markets in the Gulf Coast region, and an NGL pipeline that provides connections to the Mont Belvieu market for NGLs produced from our processing plants. Collectively, the ten natural gas processing facilities (Dubach, Dubberly, Lisbon, Salem, Elm Grove, Minden, Ada, Brookeland, Lincoln Parish and Mt. Olive) have an aggregate capacity of 1.3 Bcf/d.
- Through the gathering and processing systems described above and their interconnections with RIGS in north Louisiana, as well as other pipelines, we offer producers wellhead-to-market services, including natural gas gathering, compression, processing, treating and transportation.

North Central Texas Region:

- The North Central Texas System is an integrated system located in four counties in North Central Texas that gathers, compresses, treats, processes and transports natural gas from the Barnett and Woodford Shales. Our North Central Texas assets include our Godley and Crescent plants, which process rich gas produced from the Barnett Shale and STACK play, with aggregate capacity of 700 MMcf/d. The Godley plant is integrated with the ET Fuel System.

Permian Region:

- The Permian Basin Gathering System offers wellhead-to-market services to producers in eleven counties in West Texas, as well as two counties in New Mexico which surround the Waha Hub, one of Texas's developing NGL-rich natural gas market areas. As a result of the proximity of our system to the Waha Hub, the Waha Gathering System has a variety of market outlets for the natural gas that we gather and process, including several major interstate and intrastate pipelines serving California, the midcontinent region of the United States and Texas natural gas markets. The NGL market outlets includes Lone Star's liquids pipelines. The Permian Basin Gathering System includes eleven processing facilities (Waha, Coyanosa, Red Bluff, Halley, Jal, Keyston, Tippet, Orla, Panther, Rebel and Arrowhead) with an aggregate processing capacity of 2.4 Bcf/d and one natural gas conditioning facility with aggregate capacity of 200 MMcf/d.
- We own a 50% membership interest in Mi Vida JV LLC, a joint venture which owns a 200 MMcf/d cryogenic processing plant in West Texas. We operate the plant and related facilities on behalf of the joint venture.
- We own a 50% membership interest in Ranch Westex JV, LLC, which processes natural gas delivered from the NGL-rich Bone Spring and Avalon Shale formations in West Texas. The joint venture owns a 25 MMcf/d refrigeration plant and a 125 MMcf/d cryogenic processing plant.

Midcontinent Region:

- The Midcontinent Systems are located in two large natural gas producing regions in the United States, the Hugoton Basin in southwest Kansas, and the Anadarko Basin in western Oklahoma and the Texas Panhandle and the STACK in central Oklahoma. These mature basins have continued to provide generally long-lived, predictable production volume. Our Midcontinent assets are extensive systems that gather, compress and dehydrate low-pressure gas. The Midcontinent Systems include sixteen natural gas processing facilities (Mocane, Beaver, Antelope Hills, Woodall, Wheeler, Sunray, Hemphill, Phoenix, Hamlin, Spearman, Red Deer, Lefors, Cargray, Gray, Rose Valley, and Hopeton) with an aggregate capacity of approximately 1.2 Bcf/d.
- We operate our Midcontinent Systems at low pressures to maximize the total throughput volumes from the connected wells. Wellhead pressures are therefore adequate to allow for flow of natural gas into the gathering lines without the cost of wellhead compression.
- We also own the Hugoton Gathering System that has 1,900 miles of pipeline extending over nine counties in Kansas and Oklahoma. This system is operated by a third party.

Eastern Region:

- The Eastern Region assets are located in eleven counties in Pennsylvania, four counties in Ohio, three counties in West Virginia, and gather natural gas from the Marcellus and Utica basins. Our Eastern Region assets include approximately 600 miles of natural gas gathering pipeline, natural gas trunklines, fresh-water pipelines, and nine gathering and processing systems, as well as the 200 MMcf/d Revolution processing plant, which feeds into our Mariner East and Rover pipeline systems.
- We also own a 51% membership interest in Aqua – ETC Water Solutions LLC, a joint venture that transports and supplies fresh water to natural gas producers drilling in the Marcellus Shale in Pennsylvania.
- We own a 75% membership interest in ORS. On behalf of ORS, we operate its Ohio Utica River System, which consists of 47 miles of 36-inch, 13 miles of 30-inch and 3 miles of 24-inch gathering trunklines, that delivers up to 3.6 Bcf/d to Rockies Express Pipeline, Texas Eastern Transmission, Leach Xpress, Rover and DEO TPL-18.

NGL and Refined Products Transportation and Services

The following details the assets in our NGL and refined products transportation and services segment:

Description of Assets	Miles of Liquids Pipeline [1]	NGL Fractionation / Processing Capacity (MBbls/d)	Working Storage Capacity (MBbls)
Liquids Pipelines:			
Lone Star Express	892	—	—
West Texas Gateway Pipeline	510	—	—
Lone Star	1,400	—	—
Mariner East	667	—	—
Mariner South	67	—	—
Mariner West	398	—	—
White Cliffs Pipeline[2]	540	—	—
Other NGL Pipelines	279	—	—
Liquids Fractionation and Services Facilities:			
Mont Belvieu Facilities	182	940	50,000
Sea Robin Processing Plant[3]	—	26	—
Refinery Services[3]	100	35	—
Hattiesburg Storage Facilities	—	—	5,200
Cedar Bayou	—	—	1,600
NGL Terminals:			
Nederland	—	—	1,900
Orbit Gulf Coast	70	—	1,200
Marcus Hook Terminal	—	132	6,000
Inkster	—	—	860
Refined Products Pipelines:			
Eastern region pipelines	1,016	—	—
Midcontinent region pipelines	332	—	—
Southwest region pipelines	376	—	—
Inland Pipeline	690	—	—
JC Nolan Pipeline	504	—	—
Refined Products Terminals:			
Eagle Point	—	—	6,700
Marcus Hook Terminal	—	—	930
Marcus Hook Tank Farm	—	—	1,900
Marketing Terminals	—	—	7,700
JC Nolan Terminal	—	—	134

[1] Miles of pipeline as reported to PHMSA.

[2] The White Cliffs Pipeline consists of two parallel, 12-inch common carrier pipelines: one crude oil pipeline and one NGL pipeline.

[3] Additionally, the Sea Robin Processing Plant and Refinery Services have inlet volume capacities of 850 MMcf/d and 54 MMcf/d, respectively.

The following information describes our principal NGL and refined products transportation and services assets:

- The Lone Star Express System is an interstate NGL pipeline consisting of 24-inch and 30-inch long-haul transportation pipeline, with throughput capacity of approximately 500 MBbls/d, that delivers mixed NGLs from processing plants in the Permian Basin, the Barnett Shale, and from East Texas to the Mont Belvieu NGL storage facility. In the third quarter of

2020, we completed an expansion of the pipeline, which added approximately 400 MBbls/d of NGL pipeline capacity from Lone Star's pipeline system near Wink, Texas to the Lone Star Express 30-inch pipeline south of Fort Worth, Texas. It is expected to be in service by the fourth quarter of 2020.

- The West Texas Gateway Pipeline transports NGLs produced in the Permian and Delaware Basins and the Eagle Ford Shale to Mont Belvieu, Texas and has a throughput capacity of approximately 240 MBbls/d.
- The Mariner East pipeline transports NGLs from the Marcellus and Utica Shales areas in Western Pennsylvania, West Virginia and Eastern Ohio to destinations in Pennsylvania, including our Marcus Hook Terminal on the Delaware River, where they are processed, stored and distributed to local, domestic and waterborne markets. The first phase of the project, referred to as Mariner East 1, consisted of interstate and intrastate propane and ethane service and commenced operations in the fourth quarter of 2014 and the first quarter of 2016, respectively. The second phase of the project, referred to as Mariner East 2, began service in December 2018. The Mariner East pipeline has a throughput capacity of approximately 345 MBbls/d.
- The Mariner South liquids pipeline system consists of three pipelines and delivers export-grade propane, butane and natural gasoline from Lone Star's Mont Belvieu, Texas storage and fractionation complex to our marine terminal in Nederland, Texas and has a total throughput capacity of approximately 600 MBbls/d.
- The Mariner West pipeline provides transportation of ethane from the Marcellus shale processing and fractionating areas in Houston, Pennsylvania to Marysville, Michigan and the Canadian border and has a throughput capacity of approximately 50 MBbls/d.
- The White Cliffs NGL pipeline, in which we have 51% ownership interest and was acquired by ET in the SemGroup acquisition and contributed to ETO in January 2020, transports NGLs produced in the DJ Basin to Cushing, where it interconnects with the Southern Hills Pipeline to move NGLs to Mont Belvieu, Texas and has a throughput capacity of approximately 90 MBbls/d.
- Other NGL pipelines include the 127-mile Justice pipeline with capacity of 375 MBbls/d, the 45-mile Freedom pipeline with a capacity of 56 MBbls/d, the 20-mile Spirit pipeline with a capacity of 20 MBbls/d and a 50% interest in the 87-mile Liberty pipeline with a capacity of 140 MBbls/d.
- Our Mont Belvieu storage facility is an integrated liquids storage facility with approximately 50 MMBbls of salt dome capacity providing 100% fee-based cash flows. The Mont Belvieu storage facility has access to multiple NGL and refined products pipelines, the Houston Ship Channel trading hub, and numerous chemical plants, refineries and fractionators.
- Our Mont Belvieu fractionators handle NGLs delivered from several sources, including the Lone Star Express pipeline and the Justice pipeline. Fractionator VI was placed in service in February 2019 and Fractionator VII was placed in service in the first quarter of 2020.
- Sea Robin is a rich gas processing plant located on the Sea Robin Pipeline in southern Louisiana. The plant is connected to nine interstate and four intrastate residue pipelines, as well as various deep-water production fields.
- Refinery Services consists of a refinery off-gas processing unit and an O-grade NGL fractionation / Refinery-Grade Propylene ("RGP") splitting complex located along the Mississippi River refinery corridor in southern Louisiana. The off-gas processing unit cryogenically processes refinery off-gas, and the fractionation / RGP splitting complex fractionates the streams into higher value components. The O-grade fractionator and RGP splitting complex, located in Geismar, Louisiana, is connected by approximately 100 miles of pipeline to the Chalmette processing plant, which has a processing capacity of 54 MMcf/d.
- The Hattiesburg storage facility is an integrated liquids storage facility with approximately 5 MMBbls of salt dome capacity, providing 100% fee-based cash flows.
- The Cedar Bayou storage facility is an integrated liquids storage facility with approximately 1.6 MMBbls of tank storage, generating revenues from fixed fee storage contracts, throughput fees, and revenue from blending butane into refined gasoline.
- The Nederland Terminal, in addition to crude oil activities, also provides approximately 1.9 MMBbls of storage and distribution services for NGLs in connection with the Mariner South and Mariner South 2 pipelines, which provide transportation of propane and butane products from the Mont Belvieu region to the Nederland Terminal, where such products can be exported via ship.
- The Orbit Gulf Coast joint venture consists of a 70-mile, 20-inch ethane pipeline with a throughput capacity of approximately 180 MBbls/d, delivering from Lone Star's Mont Belvieu, Texas storage and fractionation complex to our marine terminal in Nederland, Texas, as well as a 180 MBbls/d ethane refrigeration facility and 1.2 MMBbls of storage capacity.

- The Marcus Hook Terminal includes fractionation, terminalling and storage assets, with a capacity of approximately 2 MMBbls of NGL storage capacity in underground caverns, 4 MMBbls of above-ground refrigerated storage, and related commercial agreements. The terminal has a total active refined products storage capacity of approximately 1 MMBbls. The facility can receive NGLs and refined products via marine vessel, pipeline, truck and rail, and can deliver via marine vessel, pipeline and truck. In addition to providing NGL storage and terminalling services to both affiliates and third-party customers, the Marcus Hook Terminal currently serves as an off-take outlet for our Mariner East 1 and Mariner East 2 pipeline systems.
- The Inkster terminal, located near Detroit, Michigan, consists of multiple salt caverns with a total storage capacity of approximately 860 MBbls of NGLs. We use the Inkster terminal's storage in connection with the Toledo North pipeline system and for the storage of NGLs from local producers and a refinery in Western Ohio. The terminal can receive and ship by pipeline in both directions and has a truck loading and unloading rack.
- The Eastern region refined products pipelines consist of 6-inch to 16-inch diameters refined product pipelines in Eastern, Central and North Central Pennsylvania, 8-inch refined products pipeline in western New York and various diameters refined products pipeline in New Jersey (including 80 miles of the 16-inch diameter Harbor Pipeline).
- The midcontinent region refined products pipelines primarily consist of 3-inch to 12-inch refined products pipelines in Ohio and 6-inch and 8-inch refined products pipeline in Michigan.
- The Southwest region refined products pipelines are located in Eastern Texas and consist primarily of 8-inch diameter refined products pipeline.
- The Inland refined products pipeline consists of 12, 10, 8 and 6-inch diameter pipelines in the western, northwestern, and northeastern regions of Ohio.
- The JC Nolan Pipeline is a joint venture between a wholly-owned subsidiary of the Partnership and a wholly-owned subsidiary of Sunoco LP, which transports diesel fuel from a tank farm in Hebert, Texas to Midland, Texas, and was placed into service in July 2019 and has a throughput capacity of approximately 36 MBbls/d.
- We have 37 refined products terminals with an aggregate storage capacity of approximately 8 MMBbls that facilitate the movement of refined products to or from storage or transportation systems, such as a pipeline, to other transportation systems, such as trucks or other pipelines. Each facility typically consists of multiple storage tanks and is equipped with automated truck loading equipment that is operational 24 hours a day.
- In addition to crude oil service, the Eagle Point terminal can accommodate three marine vessels (ships or barges) to receive and deliver refined products to outbound ships and barges. The tank farm has a total active refined products storage capacity of approximately 7 MMBbls and provides customers with access to the facility via ship, barge and pipeline. The terminal can deliver via ship, barge, truck or pipeline, providing customers with access to various markets. The terminal generates revenue primarily by charging fees based on throughput, blending services and storage.
- The Marcus Hook Terminal also has a tank farm with total refined products storage capacity of approximately 2 MMBbls of refined products storage. The terminal receives and delivers refined products via pipeline and primarily provides terminalling services to support movements on our refined products pipelines.
- The JC Nolan Terminal, located in Midland, Texas, is a joint venture between a wholly-owned subsidiary of the Partnership and a wholly-owned subsidiary of Sunoco LP, which provides diesel fuel storage that was placed into service in August 2019.
- This segment also includes the following joint ventures: 15% membership interest in the Explorer Pipeline Company, a 1,850-mile pipeline which originates from refining centers in Beaumont, Port Arthur, and Houston, Texas and extends to Chicago, Illinois; 31% membership interest in the Wolverine Pipe Line Company, a 1,055-mile pipeline that originates from Chicago, Illinois and extends to Detroit, Grand Haven, and Bay City, Michigan; 17% membership interest in the West Shore Pipe Line Company, a 650-mile pipeline which originates in Chicago, Illinois and extends to Madison and Green Bay, Wisconsin; a 14% membership interest in the Yellowstone Pipe Line Company, a 710-mile pipeline which originates from Billings, Montana and extends to Moses Lake, Washington.

Crude Oil Transportation and Services

The following details our pipelines and terminals in its crude oil transportation and services operations:

Description of Assets	Ownership Interest	Miles of Crude Pipeline [1]	Working Storage Capacity (MBbls)
Dakota Access Pipeline	36.40 %	1,172	—
Energy Transfer Crude Oil Pipeline	36.40 %	744	—
Bayou Bridge Pipeline	60 %	212	—
Permian Express Pipelines	87.7 %	1,760	—
Wattenberg Oil Trunkline	100 %	75	360
White Cliffs Pipeline[2]	51 %	527	100
Maurepas Pipeline	51 %	106	—
Other Crude Oil Pipelines	100 %	6,256	—
Nederland Terminal	100 %	—	29,000
Fort Mifflin Terminal	100 %	—	3,300
Eagle Point Terminal	100 %	—	1,800
Midland Terminal	100 %	—	1,000
Marcus Hook Terminal	100 %	—	1,000
Houston Terminal	100 %	—	18,200
Cushing Facility	100 %	—	7,700
Patoka, Illinois Terminal	87.7 %	—	1,900

[1] Miles of pipeline as reported to PHMSA.

[2] The White Cliffs Pipeline consists of two parallel, 12-inch common carrier crude oil pipelines: one crude oil pipeline and one NGL pipeline.

Our crude oil operations consist of an integrated set of pipeline, terminalling, trucking and acquisition and marketing assets that service the movement of crude oil from producers to end-user markets. The following details our assets in the crude oil transportation and services segment:

Crude Oil Pipelines

Our crude oil pipelines consist of approximately 10,850 miles of crude oil trunk and gathering pipelines in the southwest, northwest and midwest United States, including our wholly-owned interests in West Texas Gulf, Permian Express Terminal LLC, Mid-Valley and Wattenberg Oil Trunkline. Additionally, we have equity ownership interests in two crude oil pipelines. Our crude oil pipelines provide access to several trading hubs, including the largest trading hub for crude oil in the United States located in Cushing, Oklahoma, and other trading hubs located in Midland, Colorado City and Longview, Texas. Our crude oil pipelines also deliver to and connect with other pipelines that deliver crude oil to a number of refineries.

- *Bakken Pipeline*. The Dakota Access and Energy Transfer Crude Oil pipelines are collectively referred to as the “Bakken Pipeline.” The Bakken Pipeline is a 1,916-mile pipeline with capacity of 570 MBbls/d, that transports domestically produced crude oil from the Bakken/Three Forks production areas in North Dakota to a storage and terminal hub outside of Patoka, Illinois, or to gulf coast connections including our crude terminal in Nederland, Texas.

  The pipeline transports light, sweet crude oil from North Dakota to major refining markets in the Midwest and Gulf Coast regions.

  The Dakota Access Pipeline went into service on June 1, 2017 and consists of approximately 1,172 miles of 12, 20, 24 and 30-inch diameter pipeline traversing North Dakota, South Dakota, Iowa and Illinois. Crude oil transported on the Dakota Access Pipeline originates at six terminal locations in the North Dakota counties of Mountrail, Williams and McKenzie. The pipeline delivers the crude oil to a hub outside of Patoka, Illinois where it can be delivered to the Energy Transfer Crude Oil Pipeline for delivery to the Gulf Coast or can be transported via other pipelines to refining markets throughout the Midwest.

The Energy Transfer Crude Oil Pipeline went into service on June 1, 2017 and consists of approximately 675 miles of mostly 30-inch converted natural gas pipeline and 69 miles of new 30-inch pipeline from Patoka, Illinois to Nederland, Texas, where the crude oil can be refined or further transported to additional refining markets.

- *Bayou Bridge Pipeline.* The Bayou Bridge Pipeline is a joint venture between ETO and Phillips 66, in which ETO has a 60% ownership interest and serves as the operator of the pipeline. Phase I of the pipeline, which consists of a 30-inch pipeline from Nederland, Texas to Lake Charles, Louisiana, went into service in April 2016. Phase II of the pipeline, which consists of 24-inch pipe from Lake Charles, Louisiana to St. James, Louisiana, which went into service in March 2019.

  With the completion of Phase II, Bayou Bridge Pipeline has a capacity of approximately 480 MBbls/d of light and heavy crude oil from different sources to the St. James crude oil hub, which is home to important refineries located in the Gulf Coast region.

- *Permian Express Pipelines.* The Permian Express pipelines are part of the PEP joint venture and include the Permian Express 1, Permian Express 2, Permian Express 3, Permian Express 4, Permian Longview, Louisiana Access, Longview to Louisiana and Nederland Access pipelines. These pipelines are comprised of crude oil trunk pipelines and crude oil gathering pipelines in Texas and Oklahoma and provide takeaway capacity from the Permian Basin, with origins in multiple locations in Western Texas.

- *White Cliffs Pipeline.* White Cliffs Pipeline, which was acquired by ET in the SemGroup acquisition and contributed to ETO in January 2020, owns a 12-inch common carrier, crude oil pipeline, with a throughput capacity of 100 MBbls/d, that transports crude oil from Platteville, Colorado to Cushing, Oklahoma.

- *Maurepas Pipeline.* The Maurepas Pipeline, which was acquired by ET in the SemGroup acquisition and contributed to ETO in January 2020, consists of three pipelines, with an aggregate throughput capacity of 460 MBbls/d, which service refineries in the Gulf Coast region.

- Other Crude Oil pipelines include the Mid-Valley pipeline system which originates in Longview, Texas and passes through Louisiana, Arkansas, Mississippi, Tennessee, Kentucky and Ohio and terminates in Samaria, Michigan. This pipeline provides crude oil to a number of refineries, primarily in the Midwest United States.

  In addition, we own a crude oil pipeline that runs from Marysville, Michigan to Toledo, Ohio, and a truck injection point for local production at Marysville. This pipeline receives crude oil from the Enbridge pipeline system for delivery to refineries located in Toledo, Ohio and to MPLX's Samaria, Michigan tank farm, which supplies Marathon Petroleum Corporation's refinery in Detroit, Michigan.

  We also own and operate crude oil pipeline and gathering systems in Oklahoma and Kansas. We have the ability to deliver substantially all of the crude oil gathered on our Oklahoma and Kansas systems to Cushing. We are one of the largest purchasers of crude oil from producers in the area, and our crude oil acquisition and marketing activities business is the primary shipper on our Oklahoma crude oil system.

Crude Oil Terminals

- *Nederland.* The Nederland Terminal, located on the Sabine-Neches waterway between Beaumont and Port Arthur, Texas, is a large marine terminal providing storage and distribution services for refiners and other large transporters of crude oil and NGLs. The terminal receives, stores, and distributes crude oil, NGLs, feedstocks, petrochemicals and bunker oils (used for fueling ships and other marine vessels). The terminal currently has a total storage capacity of approximately 29 MMBbls in approximately 160 above ground storage tanks with individual capacities of up to 660 MBbls.

  The Nederland Terminal can receive crude oil at four of its five ship docks and four barge berths. The four ship docks are capable of receiving over 2 MMBbls/d of crude oil. In addition to our crude oil pipelines, the terminal can also receive crude oil through a number of other pipelines, including the DOE. The DOE pipelines connect the terminal to the United States Strategic Petroleum Reserve's West Hackberry caverns at Hackberry, Louisiana and Big Hill caverns near Winnie, Texas, which have an aggregate storage capacity of approximately 395 MMBbls.

  The Nederland Terminal can deliver crude oil and other petroleum products via pipeline, barge and ship. The terminal has three ship docks and three barge berths that are capable of delivering crude oils for international transport. In total, the terminal is capable of delivering over 2 MMBbls/d of crude oil to our crude oil pipelines or a number of third-party pipelines including the DOE. The Nederland Terminal generates crude oil revenues primarily by providing term or spot storage services and throughput capabilities to a number of customers.

- *Fort Mifflin.* The Fort Mifflin terminal complex is located on the Delaware River in Philadelphia, Pennsylvania and includes the Fort Mifflin terminal, the Hog Island wharf, the Darby Creek tank farm and connecting pipelines. The Fort Mifflin terminal contains two ship docks with freshwater drafts and a total storage capacity of approximately 570 MBbls. Crude oil and some refined products enter the Fort Mifflin terminal primarily from marine vessels on the Delaware River.

The Hog Island wharf is located next to the Fort Mifflin terminal on the Delaware River and receives crude oil via two ship docks. The Darby Creek tank farm is a primary crude oil storage terminal that receives crude oil from the Fort Mifflin terminal and Hog Island wharf via our pipelines and has a total storage capacity of approximately 2.7 MMBbls

- *Eagle Point.* The Eagle Point terminal is located in Westville, New Jersey and consists of docks, truck loading facilities and a tank farm. The docks are located on the Delaware River and can accommodate three marine vessels (ships or barges) to receive and deliver crude oil, intermediate products and refined products to outbound ships and barges. The tank farm has a total active storage capacity of approximately 1.8 MMBbls and can receive crude oil via barge and rail and deliver via ship and barge, providing customers with access to various markets. The terminal generates revenue primarily by charging fees based on throughput, blending services and storage.
- *Midland.* The Midland terminal is located in Midland, Texas and was acquired in November 2016 from Vitol. The facility includes approximately 1 MMBbls of crude oil storage, a combined 20 lanes of truck loading and unloading, and provides access to the Permian Express 2 transportation system.
- *Marcus Hook Terminal.* The Marcus Hook Terminal can receive crude oil via marine vessel and can deliver via marine vessel and pipeline. The terminal has a total active crude oil storage capacity of approximately 1 MMBbls.
- *Patoka, Illinois Terminal.* The Patoka, Illinois terminal is a tank farm owned by the PEP joint venture and is located in Marion County, Illinois. The facility includes 234 acres of owned land and provides for approximately 1.9 MMBbls of crude oil storage.
- *Houston Terminal.* The Houston Terminal, which was acquired by ET in the SemGroup acquisition and contributed to ETO in February 2020, consists of storage tanks located on the Houston Ship Channel with an aggregate storage capacity of 18.2 MMBbls used to store, blend and transport refinery products and refinery feedstocks via pipeline, barge, rail, truck and ship. This facility has five deep-water ship docks on the Houston Ship Channel capable of loading and unloading Suezmax cargo vessels and seven barge docks which can accommodate 23 barges simultaneously, three crude oil pipelines connecting to four refineries and numerous rail and truck loading spots.
- *Cushing Facilities.* The Cushing Facility, which was acquired by ET in the SemGroup acquisition and contributed to ETO in January 2020, has approximately 7.7 MMBbls of crude oil storage, of which 5.7 MMBbls are leased to customers and 2.0 MMBbls are available for crude oil operations, blending and marketing activities. The storage terminal has inbound connections with the White Cliffs Pipeline from Platteville, Colorado, the Great Salt Plains Pipeline from Cherokee, Oklahoma, the Cimarron Pipeline from Boyer, Kansas, and two-way connections with all of the other major storage terminals in Cushing. The Cushing terminal also includes truck unloading facilities.

Crude Oil Acquisition and Marketing

Our crude oil acquisition and marketing operations are conducted using our assets, which include approximately 363 crude oil transport trucks, 350 trailers and approximately 166 crude oil truck unloading facilities, as well as third-party truck, rail, pipeline and marine assets.

Investment in Sunoco LP

Sunoco LP is a distributor of motor fuels and other petroleum products which Sunoco LP supplies to third-party dealers and distributors, to independent operators of commission agent locations and other commercial consumers of motor fuel. Also included in the wholesale operations are transmix processing plants and refined products terminals. Transmix is the mixture of various refined products (primarily gasoline and diesel) created in the supply chain (primarily in pipelines and terminals) when various products interface with each other. Transmix processing plants separate this mixture and return it to salable products of gasoline and diesel.

Sunoco LP is the exclusive wholesale supplier of the Sunoco-branded motor fuel, supplying an extensive distribution network of approximately 5,556 Sunoco-branded company and third-party operated locations throughout the East Coast, Midwest, South Central and Southeast regions of the United States. Sunoco LP believes it is one of the largest independent motor fuel distributors of Chevron, ExxonMobil and Valero branded motor fuel in the United States. In addition to distributing motor fuels, Sunoco LP also distributes other petroleum products such as propane and lubricating oil, and Sunoco LP receives rental income from real estate that it leases or subleases.

Sunoco LP operations primarily consist of fuel distribution and marketing.

Sunoco LP's Fuel Distribution and Marketing Operations

Sunoco LP's fuel distribution and marketing operations are conducted by the following consolidated subsidiaries:

- Sunoco, LLC ("Sunoco LLC"), a Delaware limited liability company, primarily distributes motor fuel in 30 states throughout the East Coast, Midwest, South Central and Southeast regions of the United States. Sunoco LLC also processes transmix and distributes refined product through its terminals in Alabama, Texas, Arkansas and New York;
- Sunoco Retail LLC ("Sunoco Retail"), a Pennsylvania limited liability company, owns and operates retail stores that sell motor fuel and merchandise primarily in New Jersey;
- Aloha Petroleum LLC, a Delaware limited liability company, distributes motor fuel and operates terminal facilities on the Hawaiian Islands; and
- Aloha Petroleum, Ltd. ("Aloha"), a Hawaii corporation, owns and operates retail stores on the Hawaiian Islands.

Sunoco LP purchases motor fuel primarily from independent refiners and major oil companies and distributes it across more than 30 states throughout the East Coast, Midwest, South Central and Southeast regions of the United States, as well as Hawaii to approximately:

- 78 company owned and operated retail stores;
- 539 independently operated consignment locations where Sunoco LP sells motor fuel to customers under commission agent arrangements with such operators;
- 6,803 convenience stores and retail fuel outlets operated by independent operators, which are referred to as "dealers" or "distributors," pursuant to long-term distribution agreements; and
- 2,476 other commercial customers, including unbranded convenience stores, other fuel distributors, school districts and municipalities and other industrial customers.

Sunoco LP's Other Operations

Sunoco LP's other operations include retail operations in Hawaii and New Jersey, credit card services and franchise royalties.

Investment in USAC

The following details the assets of USAC:

USAC's modern, standardized compression unit fleet is powered primarily by the Caterpillar, Inc.'s 3400, 3500 and 3600 engine classes, which range from 401 to 5,000 horsepower per unit. These larger horsepower units, which USAC defines as 400 horsepower per unit or greater, represented 86.3% of its total fleet horsepower as of December 31, 2020. The remainder of its fleet consists of smaller horsepower units ranging from 40 horsepower to 399 horsepower that are primarily used in gas lift applications.

The following table provides a summary of USAC's compression units by horsepower as of December 31, 2020:

Unit Horsepower	Fleet Horsepower	Number of Units	Percent of Fleet Horsepower	Percent of Units
Small horsepower				
<400	510,123	3,001	13.7 %	55.0 %
Large horsepower				
>400 and <1,000	437,543	751	11.7 %	13.8 %
>1,000	2,778,515	1,702	74.6 %	31.2 %
Total large horsepower	3,216,058	2,453	86.3 %	45.0 %
Total horsepower	3,726,181	5,454	100.0 %	100.0 %

All Other

The following details the significant assets in the "All Other" segment.

Contract Services Operations

We own and operate a fleet of equipment used to provide treating services, such as carbon dioxide and hydrogen sulfide removal, natural gas cooling, dehydration and Btu management. Our contract treating services are primarily located in Texas, Louisiana and Arkansas.

Compression

We own DDT, which provides compression services to customers engaged in the transportation of natural gas, including our other segments.

Natural Resources Operations

Our Natural Resources operations primarily involve the management and leasing of coal properties and the subsequent collection of royalties. We also earn revenues from other land management activities, such as selling standing timber, leasing fee-based coal-related infrastructure facilities to certain lessees and end-user industrial plants, collecting oil and gas royalties and from coal transportation, or wheelage fees. As of December 31, 2020, we owned or controlled approximately 757 million tons of proven and probable coal reserves in central and northern Appalachia, properties in eastern Kentucky, southwestern Virginia and southern West Virginia, and in the Illinois Basin, properties in southern Illinois, Indiana, and western Kentucky and as the operator of end-user coal handling facilities.

Canadian Operations

Our Canadian operations, which were acquired in the SemGroup acquisition, include a 51% ownership interest in Energy Transfer Canada which owns and operates natural gas processing and gathering facilities in Alberta, Canada. The Canadian operations assets include four sour natural gas processing plants and two sweet natural gas processing plants that have a combined operating capacity of 1,290 MMcf/d and a network of approximately 848 miles of natural gas gathering and transportation pipelines. The principal process performed at the processing plants is to remove contaminants and render the gas salable to downstream pipelines and markets.

Business Strategy

We believe we have engaged, and will continue to engage, in a well-balanced plan for growth through strategic acquisitions, internally generated expansion, measures aimed at increasing the profitability of our existing assets and executing cost control measures where appropriate to manage our operations.

We intend to continue to operate as a diversified, growth-oriented limited partnership. We believe that by pursuing independent operating and growth strategies we will be best positioned to achieve our objectives. We balance our desire for growth with our goal of preserving a strong balance sheet, ample liquidity and investment grade credit metrics.

Following is a summary of the business strategies of our core businesses:

Growth through acquisitions. We intend to continue to make strategic acquisitions that offer the opportunity for operational efficiencies and the potential for increased utilization and expansion of our existing assets while supporting our investment grade credit ratings.

Engage in construction and expansion opportunities. We intend to leverage our existing infrastructure and customer relationships by constructing and expanding systems to meet new or increased demand for midstream and transportation services.

Increase cash flow from fee-based businesses. We intend to increase the percentage of our business conducted with third parties under fee-based arrangements in order to provide for stable, consistent cash flows over long contract periods while reducing exposure to changes in commodity prices.

Enhance profitability of existing assets. We intend to increase the profitability of our existing asset base by adding new volumes under long-term producer commitments, undertaking additional initiatives to enhance utilization and reducing costs by improving operations.

Competition

Natural Gas

The business of providing natural gas gathering, compression, treating, transportation, storage and marketing services is highly competitive. Since pipelines are generally the only practical mode of transportation for natural gas over land, the most significant competitors of our transportation and storage segment are other pipelines. Pipelines typically compete with each other based on location, capacity, price and reliability.

We face competition with respect to retaining and obtaining significant natural gas supplies under terms favorable to us for the gathering, treating and marketing portions of our business. Our competitors include major integrated oil and gas companies, interstate and intrastate pipelines and other companies that gather, compress, treat, process, transport and market natural gas. Many of our competitors, such as major oil and gas and pipeline companies, have capital resources and control supplies of natural gas substantially greater than ours.

In marketing natural gas, we have numerous competitors, including marketing affiliates of interstate pipelines, major integrated oil and gas companies, and local and national natural gas gatherers, brokers and marketers of widely varying sizes, financial resources and experience. Local utilities and distributors of natural gas are, in some cases, engaged directly, and through affiliates, in marketing activities that compete with our marketing operations.

NGL

In markets served by our NGL pipelines, we face competition with other pipeline companies, including those affiliated with major oil, petrochemical and natural gas companies, and barge, rail and truck fleet operations. In general, our NGL pipelines compete with these entities in terms of transportation fees, reliability and quality of customer service. We face competition with other storage facilities based on fees charged and the ability to receive and distribute the customer’s products. We compete with a number of NGL fractionators in Texas and Louisiana. Competition for such services is primarily based on the fractionation fee charged.

Crude Oil and Refined Products

In markets served by our crude oil and refined products pipelines, we face competition from other pipelines as well as rail and truck transportation. Generally, pipelines are the safest, lowest cost method for long-haul, overland movement of products and crude oil. Therefore, the most significant competitors for large volume shipments in the areas served by our pipelines are other pipelines. In addition, pipeline operations face competition from rail and trucks that deliver products in a number of areas that our pipeline operations serve. While their costs may not be competitive for longer hauls or large volume shipments, rail and trucks compete effectively for incremental and marginal volume in many areas served by our pipelines.

With respect to competition from other pipelines, the primary competitive factors consist of transportation charges, access to crude oil supply and market demand. Competitive factors in crude oil purchasing and marketing include price and contract flexibility, quantity and quality of services, and accessibility to end markets.

Our refined product terminals compete with other independent terminals with respect to price, versatility and services provided. The competition primarily comes from integrated petroleum companies, refining and marketing companies, independent terminal companies and distribution companies with marketing and trading operations.

Wholesale Fuel Distribution and Retail Marketing

In our wholesale fuel distribution business, we compete primarily with other independent motor fuel distributors. The markets for distribution of wholesale motor fuel and the large and growing convenience store industry are highly competitive and fragmented, which results in narrow margins. We have numerous competitors, some of which may have significantly greater resources and name recognition than we do. Significant competitive factors include the availability of major brands, customer service, price, range of services offered and quality of service, among others. We rely on our ability to provide value-added and reliable service and to control our operating costs in order to maintain our margins and competitive position.

In our retail business, we face strong competition in the market for the sale of retail gasoline and merchandise. Our competitors include service stations of large integrated oil companies, independent gasoline service stations, convenience stores, fast food stores, supermarkets, drugstores, dollar stores, club stores and other similar retail outlets, some of which are well-recognized national or regional retail systems. The number of competitors varies depending on the geographical area. It also varies with gasoline and convenience store offerings. The principal competitive factors affecting our retail marketing operations include gasoline and diesel acquisition costs, site location, product price, selection and quality, site appearance and cleanliness, hours of operation, store safety, customer loyalty and brand recognition. We compete by pricing gasoline competitively, combining our

retail gasoline business with convenience stores that provide a wide variety of products, and using advertising and promotional campaigns.

Credit Risk and Customers

Credit risk refers to the risk that a counterparty may default on its contractual obligations resulting in a loss to the Partnership. Credit policies have been approved and implemented to govern the Partnership's portfolio of counterparties with the objective of mitigating credit losses. These policies establish guidelines, controls and limits to manage credit risk within approved tolerances by mandating an appropriate evaluation of the financial condition of existing and potential counterparties, monitoring agency credit ratings, and by implementing credit practices that limit exposure according to the risk profiles of the counterparties. Furthermore, the Partnership may, at times, require collateral under certain circumstances to mitigate credit risk as necessary. The Partnership also uses industry standard commercial agreements which allow for the netting of exposures associated with transactions executed under a single commercial agreement. Additionally, we utilize master netting agreements to offset credit exposure across multiple commercial agreements with a single counterparty or affiliated group of counterparties.

The Partnership's counterparties consist of a diverse portfolio of customers across the energy industry, including petrochemical companies, commercial and industrial end-users, oil and gas producers, municipalities, gas and electric utilities, midstream companies and independent power generators. Our overall exposure may be affected positively or negatively by macroeconomic or regulatory changes that impact our counterparties to one extent or another. Currently, management does not anticipate a material adverse effect in our financial position or results of operations as a consequence of counterparty non-performance.

Our natural gas transportation and midstream revenues are derived significantly from companies that engage in exploration and production activities. The discovery and development of new shale formations across the United States has created an abundance of natural gas and crude oil resulting in a negative impact on prices in recent years for natural gas and crude oil. As a result, some of our exploration and production customers have been adversely impacted; however, we are monitoring these customers and mitigating credit risk as necessary.

During the year ended December 31, 2020, none of our customers individually accounted for more than 10% of our consolidated revenues.

Regulation

Regulation of Interstate Natural Gas Pipelines. The FERC has broad regulatory authority over the business and operations of interstate natural gas pipelines. Under the Natural Gas Act of 1938 ("NGA"), the FERC generally regulates the transportation of natural gas in interstate commerce. For FERC regulatory purposes, "transportation" includes natural gas pipeline transmission (forwardhauls and backhauls), storage and other services. The Florida Gas Transmission, Transwestern, Panhandle, Trunkline, Tiger, Fayetteville Express, Rover, Sea Robin, Gulf States and Midcontinent Express pipelines transport natural gas in interstate commerce and thus each qualifies as a "natural-gas company" under the NGA subject to the FERC's regulatory jurisdiction. We also hold certain natural gas storage facilities that are subject to the FERC's regulatory oversight under the NGA.

The FERC's NGA authority includes the power to:

- approve the siting, construction and operation of new facilities;
- review and approve transportation rates;
- determine the types of services our regulated assets are permitted to perform;
- regulate the terms and conditions associated with these services;
- permit the extension or abandonment of services and facilities;
- require the maintenance of accounts and records; and
- authorize the acquisition and disposition of facilities.

Under the NGA, interstate natural gas companies must charge rates that are just and reasonable. In addition, the NGA prohibits natural gas companies from unduly preferring or unreasonably discriminating against any person with respect to pipeline rates or terms and conditions of service.

The maximum rates to be charged by NGA-jurisdictional natural gas companies and their terms and conditions for service are required to be on file with the FERC. Most natural gas companies are authorized to offer discounts from their FERC-approved maximum just and reasonable rates when competition warrants such discounts. Natural gas companies are also generally permitted to offer negotiated rates different from rates established in their tariff if, among other requirements, such companies'

tariffs offer a cost-based recourse rate to a prospective shipper as an alternative to the negotiated rate. Natural gas companies must make offers of rate discounts and negotiated rates on a basis that is not unduly discriminatory. Existing tariff rates may be challenged by complaint or on the FERC's own motion, and if found unjust and unreasonable, may be altered on a prospective basis from no earlier than the date of the complaint or initiation of a proceeding by the FERC. The FERC must also approve all rate changes. We cannot guarantee that the FERC will allow us to charge rates that fully recover our costs or continue to pursue its approach of pro-competitive policies.

For two of our NGA-jurisdictional natural gas companies, ETC Tiger and FEP, the large majority of capacity in those pipelines is subscribed for lengthy terms under FERC-approved negotiated rates. However, as indicated above, cost-based recourse rates are also offered under their respective tariffs.

Pursuant to the FERC's rules promulgated under the Energy Policy Act of 2005, it is unlawful for any entity, directly or indirectly, in connection with the purchase or sale of electric energy or natural gas or the purchase or sale of transmission or transportation services subject to FERC jurisdiction: (i) to defraud using any device, scheme or artifice; (ii) to make any untrue statement of material fact or omit a material fact; or (iii) to engage in any act, practice or course of business that operates or would operate as a fraud or deceit. The Commodity Futures Trading Commission ("CFTC") also holds authority to monitor certain segments of the physical and futures energy commodities market pursuant to the Commodity Exchange Act ("CEA"). With regard to our physical purchases and sales of natural gas, NGLs or other energy commodities; our transportation of these energy commodities; and any related hedging activities that we undertake, we are required to observe these anti-market manipulation laws and related regulations enforced by the FERC and/or the CFTC. These agencies hold substantial enforcement authority, including the ability to assess or seek civil penalties of up to $1.3 million per day per violation, to order disgorgement of profits and to recommend criminal penalties. Should we violate the anti-market manipulation laws and regulations, we could also be subject to related third-party damage claims by, among others, sellers, royalty owners and taxing authorities.

Failure to comply with the NGA, the Energy Policy Act of 2005, the CEA and the other federal laws and regulations governing our operations and business activities can result in the imposition of administrative, civil and criminal remedies.

Regulation of Intrastate Natural Gas and NGL Pipelines. Intrastate transportation of natural gas and NGLs is largely regulated by the state in which such transportation takes place. To the extent that our intrastate natural gas transportation systems transport natural gas in interstate commerce, the rates and terms and conditions of such services are subject to FERC jurisdiction under Section 311 of the Natural Gas Policy Act of 1978 ("NGPA"). The NGPA regulates, among other things, the provision of transportation services by an intrastate natural gas pipeline on behalf of a local distribution company or an interstate natural gas pipeline. The rates and terms and conditions of some transportation and storage services provided on the Oasis pipeline, HPL System, East Texas pipeline, ET Fuel System, Trans-Pecos pipeline and Comanche Trail pipeline are subject to FERC regulation pursuant to Section 311 of the NGPA. Under Section 311, rates charged for intrastate transportation must be fair and equitable, and amounts collected in excess of fair and equitable rates are subject to refund with interest. The terms and conditions of service set forth in the intrastate facility's statement of operating conditions are also subject to FERC review and approval. Should the FERC determine not to authorize rates equal to or greater than our currently approved Section 311 rates, our business may be adversely affected. Failure to observe the service limitations applicable to transportation and storage services under Section 311, failure to comply with the rates approved by the FERC for Section 311 service, and failure to comply with the terms and conditions of service established in the pipeline's FERC-approved statement of operating conditions could result in an alteration of jurisdictional status, and/or the imposition of administrative, civil and criminal remedies.

Our intrastate natural gas operations are also subject to regulation by various agencies in Texas, principally the TRRC. Our intrastate pipeline and storage operations in Texas are also subject to the Texas Utilities Code, as implemented by the TRRC. Generally, the TRRC is vested with authority to ensure that rates, operations and services of gas utilities, including intrastate pipelines, are just and reasonable and not discriminatory. The rates we charge for transportation services are deemed just and reasonable under Texas law unless challenged in a customer or TRRC complaint. We cannot predict whether such a complaint will be filed against us or whether the TRRC will change its regulation of these rates. Failure to comply with the Texas Utilities Code can result in the imposition of administrative, civil and criminal remedies.

Our NGL pipelines and operations are subject to state statutes and regulations which could impose additional environmental, safety and operational requirements relating to the design, siting, installation, testing, construction, operation, replacement and management of NGL transportation systems. In some jurisdictions, state public utility commission oversight may include the possibility of fines, penalties and delays in construction related to these regulations. In addition, the rates, terms and conditions of service for shipments of NGLs on our pipelines are subject to regulation by the FERC under the Interstate Commerce Act ("ICA") and the Energy Policy Act of 1992 (the "EPAct of 1992") if the NGLs are transported in interstate or foreign commerce whether by our pipelines or other means of transportation. Since we do not control the entire transportation path of all NGLs shipped on our pipelines, FERC regulation could be triggered by our customers' transportation decisions.

Regulation of Sales of Natural Gas and NGLs. The price at which we buy and sell natural gas currently is not subject to federal regulation and, for the most part, is not subject to state regulation. The price at which we sell NGLs is not subject to federal or state regulation.

To the extent that we enter into transportation contracts with natural gas pipelines that are subject to FERC regulation, we are subject to FERC requirements related to the use of such capacity. Any failure on our part to comply with the FERC's regulations and policies, or with an interstate pipeline's tariff, could result in the imposition of civil and criminal penalties.

Our sales of natural gas are affected by the availability, terms and cost of pipeline transportation. As noted above, the price and terms of access to pipeline transportation are subject to extensive federal and state regulation. The FERC frequently proposes and implements new rules and regulations affecting those segments of the natural gas industry. These initiatives also may affect the intrastate transportation of natural gas under certain circumstances. The stated purpose of many of these regulatory changes is to promote competition among the various sectors of the natural gas industry and these initiatives generally reflect more light-handed regulation. We cannot predict the ultimate impact of these regulatory changes to our natural gas marketing operations, and we note that some of the FERC's regulatory changes may adversely affect the availability and reliability of interruptible transportation service on interstate pipelines. We do not believe that we will be affected by any such FERC action in a manner that is materially different from other natural gas marketers with whom we compete.

Regulation of Gathering Pipelines. Section 1(b) of the NGA exempts natural gas gathering facilities from the jurisdiction of the FERC under the NGA. We own a number of natural gas pipelines in Texas, Louisiana and West Virginia that we believe meet the traditional tests the FERC uses to establish a pipeline's status as a gathering pipeline not subject to FERC jurisdiction. However, the distinction between FERC-regulated transmission services and federally unregulated gathering services has been the subject of substantial litigation and varying interpretations, so the classification and regulation of our gathering facilities could be subject to change based on future determinations by the FERC, the courts and Congress. State regulation of gathering facilities generally includes various safety, environmental and, in some circumstances, nondiscriminatory take requirements and complaint-based rate regulation.

In Texas, our gathering facilities are subject to regulation by the TRRC under the Texas Utilities Code in the same manner as described above for our intrastate pipeline facilities. Louisiana's Pipeline Operations Section of the Department of Natural Resources' Office of Conservation is generally responsible for regulating intrastate pipelines and gathering facilities in Louisiana and has authority to review and authorize natural gas transportation transactions and the construction, acquisition, abandonment and interconnection of physical facilities.

Historically, apart from pipeline safety, Louisiana has not acted to exercise this jurisdiction respecting gathering facilities. In Louisiana, our Chalkley System is regulated as an intrastate transporter, and the Louisiana Office of Conservation has determined that our Whiskey Bay System is a gathering system.

We are subject to state ratable take and common purchaser statutes in all of the states in which we operate. The ratable take statutes generally require gatherers to take, without undue discrimination, natural gas production that may be tendered to the gatherer for handling. Similarly, common purchaser statutes generally require gatherers to purchase without undue discrimination as to source of supply or producer. These statutes are designed to prohibit discrimination in favor of one producer over another producer or one source of supply over another source of supply. These statutes have the effect of restricting the right of an owner of gathering facilities to decide with whom it contracts to purchase or transport natural gas.

Natural gas gathering may receive greater regulatory scrutiny at both the state and federal levels. For example, the TRRC has approved changes to its regulations governing transportation and gathering services performed by intrastate pipelines and gatherers, which prohibit such entities from unduly discriminating in favor of their affiliates. Many of the producing states have adopted some form of complaint-based regulation that generally allows natural gas producers and shippers to file complaints with state regulators in an effort to resolve grievances relating to natural gas gathering access and rate discrimination allegations. Our gathering operations could be adversely affected should they be subject in the future to the application of additional or different state or federal regulation of rates and services. Our gathering operations also may be or become subject to safety and operational regulations relating to the design, installation, testing, construction, operation, replacement and management of gathering facilities. Additional rules and legislation pertaining to these matters are considered or adopted from time to time. We cannot predict what effect, if any, such changes might have on our operations, but the industry could be required to incur additional capital expenditures and increased costs depending on future legislative and regulatory changes.

Regulation of Interstate Crude Oil, NGL and Products Pipelines. Interstate common carrier pipeline operations are subject to rate regulation by the FERC under the ICA, the EPAct of 1992, and related rules and orders. The ICA requires that tariff rates for petroleum pipelines be "just and reasonable" and not unduly discriminatory and that such rates and terms and conditions of service be filed with the FERC. This statute also permits interested persons to challenge proposed new or changed rates. The FERC is authorized to suspend the effectiveness of such rates for up to seven months, though rates are typically not suspended

for the maximum allowable period. If the FERC finds that the new or changed rate is unlawful, it may require the carrier to pay refunds for the period that the rate was in effect. The FERC also may investigate, upon complaint or on its own motion, rates that are already in effect and may order a carrier to change its rates prospectively. Upon an appropriate showing, a shipper may obtain reparations for damages sustained for a period of up to two years prior to the filing of a complaint.

The FERC generally has not investigated interstate rates on its own initiative when those rates, like those we charge, have not been the subject of a protest or a complaint by a shipper. However, the FERC could investigate our rates at the urging of a third party if the third party is either a current shipper or has a substantial economic interest in the tariff rate level. Although no assurance can be given that the tariff rates charged by us ultimately will be upheld if challenged, management believes that the tariff rates now in effect for our pipelines are within the maximum rates allowed under current FERC policies and precedents.

For many locations served by our product and crude pipelines, we are able to establish negotiated rates. Otherwise, we are permitted to charge cost-based rates, or in many cases, grandfathered rates based on historical charges or settlements with our customers. To the extent we rely on cost-of-service ratemaking to establish or support our rates, the issue of the proper allowance for federal and state income taxes could arise. In July 2016, the United States Court of Appeals for the District of Columbia Circuit issued an opinion in United Airlines, Inc., et al. v. FERC, finding that the FERC had acted arbitrarily and capriciously when it failed to demonstrate that permitting an interstate petroleum products pipeline organized as a master limited partnership, or MLP, to include an income tax allowance in the cost of service underlying its rates, in addition to the discounted cash flow return on equity, would not result in the pipeline partnership owners double recovering their income taxes. The court vacated the FERC's order and remanded to the FERC to consider mechanisms for demonstrating that there is no double recovery as a result of the income tax allowance. In December 2016, the FERC issued a Notice of Inquiry Regarding the Commission's Policy for Recovery of Income Tax Costs. The FERC requested comments regarding how to address any double recovery resulting from the Commission's current income tax allowance and rate of return policies. The comment period with respect to the notice of inquiry ended in April 2017.

In March 2018, the FERC issued a Revised Policy Statement on Treatment of Income Taxes in which the FERC found that an impermissible double recovery results from granting an MLP pipeline both an income tax allowance and a return on equity pursuant to the FERC's discounted cash flow methodology. The FERC revised its previous policy, stating that it would no longer permit an MLP pipeline to recover an income tax allowance in its cost of service. The FERC stated it will address the application of the United Airlines decision to non-MLP partnership forms as those issues arise in subsequent proceedings. The FERC will also apply the revised Policy Statement and the Tax Cuts and Jobs Act of 2017 to initial crude oil pipeline cost-of-service rates and cost-of-service rate changes on a going-forward basis under the FERC's existing ratemaking policies, including cost-of-service rate proceedings resulting from shipper-initiated complaints. In July 2018, the FERC dismissed requests for rehearing and clarification of the March 2018 Revised Policy Statement, but provided further guidance, clarifying that a pass-through entity will not be precluded in a future proceeding from arguing and providing evidentiary support that it is entitled to an income tax allowance and demonstrating that its recovery of an income tax allowance does not result in a double recovery of investors' income tax costs. On July 31, 2020, the United States Court of Appeals for the District of Columbia Circuit issued an opinion upholding FERC's decision denying a separate master limited partnership recovery of an income tax allowance and its decision not to require the master limited partnership to refund accumulated deferred income tax balances. In light of the rehearing order's clarification regarding individual entities' ability to argue in support of recovery of an income tax allowance and the court's subsequent opinion upholding denial of an income tax allowance to a master limited partnership, the impacts the FERC's policy on the treatment of income taxes may have on the rates an interstate pipeline held in a tax-pass-through entity can charge for the FERC regulated transportation services are unknown at this time. Please see "Item 1A. Risk Factors - Regulatory Matters."

Effective January 2018, the 2017 Tax Cuts and Jobs Act changed several provisions of the federal tax code, including a reduction in the maximum corporate tax rate. With the lower tax rate, and as discussed immediately above, the maximum tariff rates allowed by the FERC under its rate base methodology may be impacted by a lower income tax allowance component. Many of our interstate pipelines, such as Tiger, Midcontinent Express and Fayetteville Express, have negotiated market rates that were agreed to by customers in connection with long-term contracts entered into to support the construction of the pipelines. Other systems, such as FGT, Transwestern and Panhandle, have a mix of tariff rate, discount rate, and negotiated rate agreements. In addition, several of these pipelines are covered by approved settlements, pursuant to which rate filings will be made in the future. As such, the timing and impact to these systems of any tax-related policy change is unknown at this time.

The EPAct of 1992 required the FERC to establish a simplified and generally applicable methodology to adjust tariff rates for inflation for interstate petroleum pipelines. As a result, the FERC adopted an indexing rate methodology which, as currently in effect, allows common carriers to change their rates within prescribed ceiling levels that are tied to changes in the Producer Price Index for Finished Goods, or PPI-FG. The FERC's indexing methodology is subject to review every five years.

In December 2020, FERC issued an order setting the indexed rate at PPI-FG plus 0.78% during the five-year period commencing July 1, 2021 and ending June 30, 2026. That order is subject to rehearing and appeal, and several rehearing requests have been filed and are pending before FERC. The indexing methodology is applicable to existing rates, including grandfathered rates, with the exclusion of market-based rates. A pipeline is not required to raise its rates up to the index ceiling, but it is permitted to do so and rate increases made under the index are presumed to be just and reasonable unless a protesting party can demonstrate that the portion of the rate increase resulting from application of the index is substantially in excess of the pipeline's increase in costs. Under the indexing rate methodology, in any year in which the index is negative, pipelines must file to lower their rates if those rates would otherwise be above the rate ceiling.

Finally, in November 2017, the FERC responded to a petition for declaratory order and issued an order that may have significant impacts on the way a marketer of crude oil or petroleum products that is affiliated with an interstate pipeline can price its services if those services include transportation on an affiliate's interstate pipeline. In particular, the FERC's November 2017 order prohibits buy/sell arrangements by a marketing affiliate if: (i) the transportation differential applicable to its affiliate's interstate pipeline transportation service is at a discount to the affiliated pipeline's filed rate for that service; and (ii) the pipeline affiliate subsidizes the loss. Several parties have requested that the FERC clarify its November 2017 order or, in the alternative, grant rehearing of the November 2017 order. The FERC extended the time frame to respond to such requests in January 2018 but has not yet taken final action. We are unable to predict how the FERC will respond to such requests. Depending on how the FERC responds, it could have an impact on the rates we are permitted to charge.

Regulation of Intrastate Crude Oil, NGL and Products Pipelines. Some of our crude oil, NGL and products pipelines are subject to regulation by the TRRC, the Pennsylvania Public Utility Commission and the Oklahoma Corporation Commission. The operations of our joint venture interests are also subject to regulation in the states in which they operate. The applicable state statutes require that pipeline rates be nondiscriminatory and provide no more than a fair return on the aggregate value of the pipeline property used to render services. State commissions generally have not initiated an investigation of rates or practices of petroleum pipelines in the absence of shipper complaints. Complaints to state agencies have been infrequent and are usually resolved informally. Although management cannot be certain that our intrastate rates ultimately would be upheld if challenged, we believe that, given this history, the tariffs now in effect are not likely to be challenged or, if challenged, are not likely to be ordered to be reduced.

In addition, as noted above, the rates, terms and conditions for shipments of crude oil, NGLs or products on our pipelines could be subject to regulation by the FERC under the ICA and the EPAct of 1992 if the crude oil, NGLs or products are transported in interstate or foreign commerce whether by our pipelines or other means of transportation. Since we do not control the entire transportation path of all crude oil, NGLs or products shipped on our pipelines, FERC regulation could be triggered by our customers' transportation decisions.

Regulation of Pipeline Safety. Our pipeline operations are subject to regulation by the DOT, through PHMSA, pursuant to the Natural Gas Pipeline Safety Act of 1968, as amended ("NGPSA"), with respect to natural gas and the Hazardous Liquids Pipeline Safety Act of 1979, as amended ("HLPSA"), with respect to crude oil, NGLs and condensates. The NGPSA and HLPSA, as amended, govern the design, installation, testing, construction, operation, replacement and management of natural gas as well as crude oil, NGL and condensate pipeline facilities. Pursuant to these acts, PHMSA has promulgated regulations governing pipeline wall thickness, design pressures, maximum operating pressures, pipeline patrols and leak surveys, minimum depth requirements, and emergency procedures, as well as other matters intended to ensure adequate protection for the public and to prevent accidents and failures. Additionally, PHMSA has established a series of rules requiring pipeline operators to develop and implement integrity management programs for certain gas and hazardous liquid pipelines that, in the event of a pipeline leak or rupture, could affect high consequence areas ("HCAs"), which are areas where a release could have the most significant adverse consequences, including high population areas, certain drinking water sources and unusually sensitive ecological areas. Failure to comply with the pipeline safety laws and regulations may result in the assessment of sanctions, including administrative, civil or criminal penalties, the imposition of investigatory, remedial or corrective action obligations, the occurrence of delays in permitting or the performance of projects, or the issuance of injunctions limiting or prohibiting some or all of our operations in the affected area.

The HLPSA and NGPSA have been amended by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 ("2011 Pipeline Safety Act") and the Protecting Our Infrastructure of Pipelines and Enhancing Safety Act of 2016 ("2016 Pipeline Safety Act"). The 2011 Pipeline Safety Act increased the penalties for safety violations, established additional safety requirements for newly constructed pipelines and required studies of safety issues that could result in the adoption of new regulatory requirements by PHMSA for existing pipelines. The 2011 Pipeline Safety Act doubled the maximum administrative fines for safety violations from $100,000 to $200,000 for a single violation and from $1 million to $2 million for a related series of violations, but provided that these maximum penalty caps do not apply to certain civil enforcement actions. In January 2021, PHMSA issued a final rule increasing those maximum civil penalties to $222,504 per day, with a maximum of $2,225,034 for a series of violations. Upon reauthorization of PHMSA, Congress often directs the agency to complete certain rulemakings. For

example, in the Consolidated Appropriations Bill for Fiscal Year 2021, Congress reauthorized PHMSA through fiscal year 2023 and directed the agency to move forward with several regulatory actions, including the "Pipeline Safety: Class Location Change Requirements" and the "Pipeline Safety: Safety of Gas Transmission and Gathering Pipelines" proposed rulemakings; Congress has also instructed PHMSA to issue final regulations to require operations of non-rural gas gathering lines and new and existing transmission and distribution pipelines to conduct certain leak detection and repair programs to require facility inspection and maintenance plans to align with those regulations. The timing and scope of such future rulemakings is uncertain.

In addition, states have adopted regulations, similar to existing PHMSA regulations, for intrastate gathering and transmission lines. The states in which we conduct operations typically have developed regulatory programs that parallel the federal regulatory scheme and are applicable to intrastate pipelines. Under such state regulatory programs, states have the authority to conduct pipeline inspections, to investigate accidents and to oversee compliance and enforcement, safety programs and record maintenance and reporting. Congress, PHMSA and individual states may pass or implement additional safety requirements that could result in increased compliance costs for us and other companies in our industry. For example, federal construction, maintenance and inspection standards under the NGPSA that apply to pipelines in relatively populated areas may not apply to gathering lines running through rural regions. However, in October 2019, PHMSA published three final rules that create or expand reporting, inspection, maintenance, and other pipeline safety obligations, including, among other things, extending pipeline integrity assessments to pipelines in certain locations, including newly-defined "Moderate Consequence Areas" ("MCAs").

In another example of how future legal requirements could result in increased compliance costs, notwithstanding the applicability of the federal OSHA's Process Safety Management ("PSM") regulations and the EPA's Risk Management Planning ("RMP") requirements at regulated facilities, PHMSA and one or more state regulators, including the TRRC, have in recent years, expanded the scope of their regulatory inspections to include certain in-plant equipment and pipelines found within NGL fractionation facilities and associated storage facilities, in order to assess compliance of such equipment and pipelines with hazardous liquid pipeline safety requirements. To the extent that these actions are pursued by PHMSA, midstream operators of NGL fractionation facilities and associated storage facilities subject to such inspection may be required to make operational changes or modifications at their facilities to meet standards beyond current PSM and RMP requirements, which changes or modifications may result in additional capital costs, possible operational delays and increased costs of operation that, in some instances, may be significant.

Environmental Matters

General. Our operation of processing plants, pipelines and associated facilities, including compression, in connection with the gathering, processing, storage and transmission of natural gas and the storage and transportation of NGLs, crude oil and refined products is subject to stringent U.S. federal, tribal, state and local laws and regulations, including those governing, among other things, air emissions, wastewater discharges, the use, management and disposal of hazardous and nonhazardous materials and wastes, and the cleanup of contamination. Similar or more stringent laws also exist in Canada. Noncompliance with such laws and regulations, or incidents resulting in environmental releases, could cause us to incur substantial costs, penalties, fines and criminal sanctions, third-party claims for personal injury or property damage, capital expenditures to retrofit or upgrade our facilities and programs, or curtailment or cancellation of permits on operations. As with the industry generally, compliance with existing and anticipated environmental laws and regulations increases our overall cost of doing business, including our cost of planning, permitting, constructing and operating our plants, pipelines and other facilities. As a result of these laws and regulations, our construction and operation costs include capital, operating and maintenance cost items necessary to maintain or upgrade our equipment and facilities.

We have implemented procedures designed to ensure that governmental environmental approvals for both existing operations and those under construction are updated as circumstances require. Historically, our environmental compliance costs have not had a material adverse effect on our business, results of operations or financial condition; however, there can be no assurance that such costs will not be material in the future. For example, we cannot be certain that identification of presently unidentified conditions, more rigorous enforcement by regulatory agencies, enactment of more stringent environmental laws and regulations or unanticipated events will not arise in the future and give rise to environmental liabilities that could have a material adverse effect on our business, financial condition or results of operations.

Uncertainty about the future course of regulation exists because of the recent change in U.S. presidential administrations. In January 2021, the current administration issued an executive order directing all federal agencies to review and take action to address any federal regulations promulgated during the prior administration that may be inconsistent with the current administration's policies. As a result, it is unclear the degree to which certain recent regulatory developments may be modified or rescinded. The executive order also established an Interagency Working Group on the Social Cost of Greenhouse Gases ("Working Group"), which is called on to, among other things, develop methodologies for calculating the "social cost of carbon," "social cost of nitrous oxide" and "social cost of methane." Recommendations from the Working Group are due

beginning June 1, 2021, and final recommendations no later than January 2022. Further regulation of air emissions, as well as uncertainty regarding the future course of regulation, could eventually reduce the demand for oil and natural gas and, in turn, have a material adverse effect on our business, financial condition or results of operations.

Hazardous Substances and Waste Materials. To a large extent, the environmental laws and regulations affecting our operations relate to the release of hazardous substances and waste materials into soils, groundwater and surface water and include measures to prevent, minimize or remediate contamination of the environment. These laws and regulations generally regulate the generation, storage, treatment, transportation and disposal of hazardous substances and waste materials and may require investigatory and remedial actions at sites where such material has been released or disposed. For example, the Comprehensive Environmental Response, Compensation and Liability Act, as amended, ("CERCLA"), also known as the "Superfund" law, and comparable state laws, impose liability without regard to fault or the legality of the original conduct on certain classes of persons that contributed to a release of a "hazardous substance" into the environment. These persons include the owner and operator of the site where a release occurred and companies that disposed or arranged for the disposal of the hazardous substance that has been released into the environment. Under CERCLA, these persons may be subject to strict, joint and several liability, without regard to fault, for, among other things, the costs of investigating and remediating the hazardous substances that have been released into the environment, for damages to natural resources and for the costs of certain health studies. CERCLA and comparable state law also authorize the federal EPA, its state counterparts, and, in some instances, third parties to take actions in response to threats to the public health or the environment and to seek to recover from the responsible classes of persons the costs they incur. It is not uncommon for neighboring landowners and other third parties to file claims for personal injury and property damage allegedly caused by hazardous substances or other pollutants released into the environment. Although "petroleum" as well as natural gas and NGLs are excluded from CERCLA's definition of a "hazardous substance," in the course of our ordinary operations we generate wastes that may fall within that definition or that may be subject to other waste disposal laws and regulations. We may be responsible under CERCLA or state laws for all or part of the costs required to clean up sites at which such substances or wastes have been disposed.

We also generate both hazardous and nonhazardous wastes that are subject to requirements of the federal Resource Conservation and Recovery Act, as amended, ("RCRA") and comparable state statutes. We are not currently required to comply with a substantial portion of the RCRA hazardous waste requirements at many of our facilities because the minimal quantities of hazardous wastes generated there make us subject to less stringent non-hazardous management standards. From time to time, the EPA has considered or third parties have petitioned the agency on the adoption of stricter handling, storage and disposal standards for nonhazardous wastes, including certain wastes associated with the exploration, development and production of crude oil and natural gas. For example, in 2016, the EPA entered into an agreement with several environmental groups to analyze certain Subtitle D criteria regulations pertaining to oil and gas wastes and, if necessary, revise them. In response to the decree, in April 2019, the EPA signed a determination that revision of the regulations is not necessary at this time. It is possible that some wastes generated by us that are currently classified as nonhazardous may in the future be designated as "hazardous wastes," resulting in the wastes being subject to more rigorous and costly disposal requirements, or that the full complement of RCRA standards could be applied to facilities that generate lesser amounts of hazardous waste. Changes such as these examples in applicable regulations may result in a material increase in our capital expenditures or plant operating and maintenance expense and, in the case of our oil and natural gas exploration and production customers, could result in increased operating costs for those customers and a corresponding decrease in demand for our processing, transportation and storage services.

We currently own or lease sites that have been used over the years by prior owners and lessees and by us for various activities related to gathering, processing, storage and transmission of natural gas, NGLs, crude oil and refined products. Waste disposal practices within the oil and gas industry have improved over the years with the passage and implementation of various environmental laws and regulations. Nevertheless, some hydrocarbons and wastes have been disposed of or otherwise released on or under various sites during the operating history of those facilities that are now owned or leased by us. Notwithstanding the possibility that these releases may have occurred during the ownership or operation of these assets by others, these sites may be subject to CERCLA, RCRA and comparable state laws. Under these laws, we could be required to remove or remediate previously disposed wastes (including wastes disposed of or released by prior owners or operators) or contamination (including soil and groundwater contamination) or to prevent the migration of contamination.

As of December 31, 2020 and 2019, accruals of $306 million and $320 million, respectively, were recorded in our consolidated balance sheets as accrued and other current liabilities and other non-current liabilities to cover estimated material environmental liabilities.

The Partnership is subject to extensive and frequently changing federal, tribal, state and local laws and regulations, including those relating to the discharge of materials into the environment or that otherwise relate to the protection of the environment, waste management and the characteristics and composition of fuels. These laws and regulations require environmental assessment and remediation efforts at many of ETC Sunoco's facilities and at formerly owned or third-party sites. Accruals for these environmental remediation activities amounted to $247 million and $252 million at December 31, 2020 and 2019,

respectively, which is included in the total accruals above. These legacy sites that are subject to environmental assessments include formerly owned terminals and other logistics assets, retail sites that are no longer operated by ETC Sunoco, closed and/or sold refineries and other formerly owned sites. We have established a wholly-owned captive insurance company for these legacy sites that are no longer operating. The premiums paid to the captive insurance company include estimates for environmental claims that have been incurred but not reported, based on an actuarially determined fully developed claims expense estimate. In such cases, we accrue losses attributable to unasserted claims based on the discounted estimates that are used to develop the premiums paid to the captive insurance company. As of December 31, 2020, the captive insurance company held $189 million of cash and investments.

The Partnership's accrual for environmental remediation activities reflects anticipated work at identified sites where an assessment has indicated that cleanup costs are probable and reasonably estimable. The accrual for known claims is undiscounted and is based on currently available information, estimated timing of remedial actions and related inflation assumptions, existing technology and presently enacted laws and regulations. It is often extremely difficult to develop reasonable estimates of future site remediation costs due to changing regulations, changing technologies and their associated costs, and changes in the economic environment. Engineering studies, historical experience and other factors are used to identify and evaluate remediation alternatives and their related costs in determining the estimated accruals for environmental remediation activities.

Under various environmental laws, including the RCRA, the Partnership has initiated corrective remedial action at certain of its facilities, formerly owned facilities and at certain third-party sites. At the Partnership's major manufacturing facilities, we have typically assumed continued industrial use and a containment/remediation strategy focused on eliminating unacceptable risks to human health or the environment. The remediation accruals for these sites reflect that strategy. Accruals include amounts designed to prevent or mitigate off-site migration and to contain the impact on the facility property, as well as to address known, discrete areas requiring remediation within the plants. Remedial activities include, for example, closure of RCRA waste management units, recovery of hydrocarbons, handling of impacted soil, mitigation of surface water impacts and prevention or mitigation of off-site migration. A change in this approach as a result of changing the intended use of a property or a sale to a third party could result in a comparatively higher cost remediation strategy in the future.

In general, a remediation site or issue is typically evaluated on an individual basis based upon information available for the site or issue and no pooling or statistical analysis is used to evaluate an aggregate risk for a group of similar items (for example, service station sites) in determining the amount of probable loss accrual to be recorded. The estimates of environmental remediation costs also frequently involve evaluation of a range of estimates. In many cases, it is difficult to determine that one point in the range of loss estimates is more likely than any other. In these situations, existing accounting guidance allows us the minimum amount of the range to accrue. Accordingly, the low end of the range often represents the amount of loss which has been recorded. The Partnership's consolidated balance sheet reflected $306 million in environmental accruals as of December 31, 2020.

In summary, total future costs for environmental remediation activities will depend upon, among other things, the identification of any additional sites, the determination of the extent of the contamination at each site, the timing and nature of required remedial actions, the nature of operations at each site, the technology available and needed to meet the various existing legal requirements, the nature and terms of cost-sharing arrangements with other potentially responsible parties, the availability of insurance coverage, the nature and extent of future environmental laws and regulations, inflation rates, terms of consent agreements or remediation permits with regulatory agencies and the determination of the Partnership's liability at the sites, if any, in light of the number, participation level and financial viability of the other parties. The recognition of additional losses, if and when they were to occur, would likely extend over many years, but management can provide no assurance that it would be over many years. If changes in environmental laws or regulations occur or the assumptions used to estimate losses at multiple sites are adjusted, such changes could materially and adversely impact multiple facilities, formerly owned facilities and third-party sites at the same time. As a result, from time to time, significant charges against income for environmental remediation may occur. And while management does not believe that any such charges would have a material adverse impact on the Partnership's consolidated financial position, it can provide no assurance.

Transwestern conducts soil and groundwater remediation at a number of its facilities. Some of the cleanup activities include remediation of several compressor sites on the Transwestern system for contamination by PCBs, and the costs of this work are not eligible for recovery in rates. The total accrued future estimated cost of remediation activities expected to continue through 2025 is $4 million, which is included in the total environmental accruals mentioned above. Transwestern received FERC approval for rate recovery of projected soil and groundwater remediation costs not related to PCBs effective April 1, 2007. Transwestern, as part of ongoing arrangements with customers, continues to incur costs associated with containing and removing potential PCB contamination. Future costs cannot be reasonably estimated because remediation activities are undertaken as potential claims are made by customers and former customers. Such future costs are not expected to have a material impact on our financial position, results of operations or cash flows, but management can provide no assurance.

Air Emissions. Our operations are subject to the federal Clean Air Act, as amended, and comparable state laws and regulations. These laws and regulations regulate emissions of air pollutants from various industrial sources, including our processing plants, and also impose various monitoring and reporting requirements. Such laws and regulations may require that we obtain pre-approval for the construction or modification of certain projects or facilities, such as our processing plants and compression facilities, expected to produce air emissions or to result in the increase of existing air emissions, that we obtain and strictly comply with air permits containing various emissions and operational limitations, or that we utilize specific emission control technologies to limit emissions. We will incur capital expenditures in the future for air pollution control equipment in connection with obtaining and maintaining operating permits and approvals for air emissions. In addition, our processing plants, pipelines and compression facilities are subject to increasingly stringent regulations, including regulations that require the installation of control technology or the implementation of work practices to control hazardous air pollutants. Moreover, the Clean Air Act requires an operating permit for major sources of emissions and this requirement applies to some of our facilities. Historically, our costs for compliance with existing Clean Air Act and comparable state law requirements have not had a material adverse effect on our results of operations; however, there can be no assurance that such costs will not be material in the future. The EPA and state agencies are often considering, proposing or finalizing new regulations that could impact our existing operations and the costs and timing of new infrastructure development. For example, in October 2015, the EPA published a final rule under the Clean Air Act, lowering the National Ambient Air Quality Standard ("NAAQS") for ground-level ozone to 70 parts per billion for the 8-hour primary and secondary ozone standards. The EPA completed attainment/non-attainment designations in 2018, and states with moderate or high non-attainment areas must submit state implementation plans to the EPA by October 2021. By law, the EPA must review each NAAQS every five years. In December 2020, the EPA announced that it was retaining without revision the 2015 NAAQS for ozone. However, as mentioned above, in January 2021, the Biden administration issued an executive order directing federal agencies to review and take action to address any federal regulations or similar agency actions during the prior administration that may be inconsistent with the current administration's stated priorities. The EPA was specifically ordered to, among other things, propose a Federal Implementation Plan for ozone standards for California, Connecticut, New York, Pennsylvania and Texas by January 2022. Reclassification of areas or imposition of more stringent standards may make it more difficult to construct new or modified sources of air pollution in newly designated non-attainment areas. Also, states are expected to implement more stringent requirements as a result of this new final rule, which could apply to our customers' operations. Compliance with this or other new regulations could, among other things, require installation of new emission controls on some of our equipment, result in longer permitting timelines, and significantly increase our capital expenditures and operating costs, which could adversely impact our business.

Clean Water Act. The Federal Water Pollution Control Act of 1972, as amended, ("Clean Water Act") and comparable state laws impose restrictions and strict controls regarding the discharge of pollutants, including hydrocarbon-bearing wastes, into state waters and waters of the United States. Pursuant to the Clean Water Act and similar state laws, a National Pollutant Discharge Elimination System, or state permit, or both, must be obtained to discharge pollutants into federal and state waters. In addition, the Clean Water Act and comparable state laws require that individual permits or coverage under general permits be obtained by subject facilities for discharges of storm water runoff. The Clean Water Act also prohibits the discharge of dredge and fill material in regulated waters, including wetlands, unless authorized by permit. In June 2015, the EPA and the USACE published a final rule attempting to clarify the federal jurisdictional reach over "waters of the United States" ("WOTUS"), but legal challenges to this rule followed. In January 2020, a new "waters of the United States" rule was finalized to replace the June 2015 rule, defining the following four categories of waters as WOTUS: traditional navigable waters and territorial seas; perennial and intermittent tributaries to those waters; lakes, ponds and impoundments of jurisdictional waters; and wetlands adjacent to jurisdictional waters. However, legal challenges to this rulemaking are ongoing, and it is possible that the Biden Administration could propose a broader interpretation of WOTUS. As a result of these developments, the scope of jurisdiction under the Clean Water Act is uncertain at this time, but to the extent any rule expands the scope of the Clean Water Act's jurisdiction, our operations as well as our exploration and production customers' drilling programs could incur increased costs and delays with respect to obtaining permits for dredge and fill activities in wetland areas.

Additionally, for over 35 years, the USACE has authorized construction, maintenance, and repair of pipelines under a streamlined Nationwide Permit ("NWP") program. From time to time, environmental groups have challenged the NWP program, and, in April 2020, the U.S. District Court for the District of Montana determined that NWP 12 failed to comply with consultation requirements under the federal Endangered Species Act. The district court vacated NWP 12 and enjoined the issuance of new authorizations for oil and gas pipeline projects under the permit. While the district court's order has subsequently been limited pending appeal, and NWP 12 authorizations remain available for certain oil and gas pipeline projects, we cannot predict the ultimate outcome of this case and its impacts on the NWP program. Additionally, in response to the vacatur, the Corps has announced a reissuance of NWP 13 for oil and natural gas pipeline activities, including certain revisions to the conditions for the use of NWP 12; however, the rulemaking may be subject to litigation or to further revision under the Biden Administration. While the full extent and impact of the vacatur is unclear at this time, we could face significant delays and financial costs if we must obtain individual permit coverage from USACE for our projects.

Spills. Our operations can result in the discharge of regulated substances, including NGLs, crude oil or other products. The Clean Water Act, as amended by the federal Oil Pollution Act of 1990, as amended, ("OPA"), and comparable state laws impose restrictions and strict controls regarding the discharge of regulated substances into state waters or waters of the United States. The Clean Water Act and comparable state laws can impose substantial administrative, civil and criminal penalties for non-compliance including spills and other non-authorized discharges. The OPA subjects owners of covered facilities to strict joint and potentially unlimited liability for removal costs and other consequences of a release of oil, where the release is into navigable waters, along shorelines or in the exclusive economic zone of the United States. Spill prevention control and countermeasure requirements of the Clean Water Act and some state laws require that containment dikes and similar structures be installed to help prevent the impact on navigable waters in the event of a release of oil. PHMSA, the EPA, or various state regulatory agencies, has approved our oil spill emergency response plans that are to be used in the event of a spill incident.

In addition, some states maintain groundwater protection programs that require permits for discharges or operations that may impact groundwater conditions. Our management believes that compliance with existing permits and compliance with foreseeable new permit requirements will not have a material adverse effect on our results of operations, financial position or expected cash flows.

Endangered Species. The Endangered Species Act, as amended, restricts activities that may affect endangered or threatened species or their habitat. Similar protections are offered to migratory birds under the Migratory Bird Treaty Act. We may operate in areas that are currently designated as a habitat for endangered or threatened species or where the discovery of previously unidentified endangered species, or the designation of additional species as endangered or threatened may occur in which event such one or more developments could cause us to incur additional costs, to develop habitat conservation plans, to become subject to expansion or operating restrictions, or bans in the affected areas. Moreover, such designation of previously unprotected species as threatened or endangered in areas where our oil and natural gas exploration and production customers operate could cause our customers to incur increased costs arising from species protection measures and could result in delays or limitations in our customers' performance of operations, which could reduce demand for our services.

Climate Change. Climate change continues to attract considerable public, governmental and scientific attention. As a result, numerous proposals have been made and are likely to continue to be made at the international, national, regional and state levels of government to monitor and limit emissions of greenhouse gases ("GHGs"). These efforts have included consideration of cap-and-trade programs, carbon taxes and GHG reporting and tracking programs, and regulations that directly limit GHG emissions from certain sources. In the United States, no comprehensive climate change legislation has been implemented at the federal level to date. However, Canada has implemented a federal carbon pricing regime, and, in the United States, President Biden has announced that he intends to pursue substantial reductions in greenhouse gas emissions, particularly from the oil and gas sector. For example, on January 27, 2021, President Biden signed an executive order that commits to substantial action on climate change, calling for, among other things, the increased use of zero-emissions vehicles by the federal government, the elimination of subsidies provided to the fossil fuel industry, an increase in the production of offshore wind energy, and an increased emphasis on climate-related risks across government agencies and economic sectors. Additionally, the EPA has adopted rules under authority of the Clean Air Act that, among other things, establish Potential for Significant Deterioration ("PSD") construction and Title V operating permit reviews for GHG emissions from certain large stationary sources that are also potential major sources of certain principal, or criteria, pollutant emissions, which reviews could require securing PSD permits at covered facilities emitting GHGs and meeting "best available control technology" standards for those GHG emissions. In addition, the EPA has adopted rules requiring the monitoring and annual reporting of GHG emissions from certain petroleum and natural gas system sources in the United States, including, among others, onshore processing, transmission, storage and distribution facilities. In October 2015, the EPA amended and expanded the GHG reporting requirements to all segments of the oil and natural gas industry, including gathering and boosting facilities and blowdowns of natural gas transmission pipelines.

Federal agencies also have begun directly regulating GHG emissions, such as methane, from oil and natural gas operations. In June 2016, the EPA published New Source Performance Standards ("NSPS"), known as Subpart OOOOa, that require certain new, modified or reconstructed facilities in the oil and natural gas sector to reduce these methane gas and volatile organic compound ("VOC") emissions. These Subpart OOOOa standards expand previously issued NSPS published by the EPA in 2012 and known as Subpart OOOO, by using certain equipment-specific emissions control practices, requiring additional controls for pneumatic controllers and pumps as well as compressors, and imposing leak detection and repair requirements for natural gas compressor and booster stations. In September 2020, the EPA removed natural gas transmission and storage operations from this sector and rescinded the methane-specific requirements of the rule for production and processing facilities. However, President Biden has signed an executive order calling for the suspension, revision, or rescission of the September 2020 rule and the reinstatement or issuance of methane emissions standards for new, modified, and existing oil and has facilities, including the transmission and storage segments. Methane emission standards imposed on the oil and gas sector could result in increased costs to our operations as well as result in delays or curtailment in such operations, which costs, delays or curtailment could adversely affect our business. Several states have also adopted, or are considering adopting, regulations

related to GHG emissions, some of which are more stringent than those implemented by the federal government. Additionally, in December 2015, the United States joined the international community at the 21st Conference of the Parties of the United Nations Framework Convention on Climate Change in Paris, France in signing the "Paris Agreement," a treaty that requires member countries to submit individually-determined, non-binding emission reduction goals every five years beginning in 2020. Although the United States has withdrawn from this agreement, President Biden has signed executive orders recommitting the United States to the Paris Agreement and calling for the federal government to formulate the United States' emissions reduction goal. However, the impacts of these orders are unclear at this time.

The January 2021 climate change executive order also directed the Secretary of the Interior to pause new oil and natural gas leasing on public lands or in offshore waters pending completion of a comprehensive review of the federal permitting and leasing practices, consider whether to adjust royalties associated with coal, oil, and gas resources extracted from public lands and offshore waters, or take other appropriate action, to account for corresponding climate costs. The executive order also directed the federal government to identify "fossil fuel subsidies" to take steps to ensure that, to the extent consistent with applicable law, federal funding is not directly subsidizing fossil fuels. As noted above, a separate executive order issued in January 2021 established a Working Group that is called on to, among other things, develop methodologies for calculating the "social cost of carbon," "social cost of nitrous oxide" and "social cost of methane." Recommendations from the Working Group are due beginning June 1, 2021, and final recommendations no later than January 2022.

The adoption and implementation of any international, federal or state legislation or regulations that require reporting of GHGs or otherwise restrict emissions of GHGs could result in increased compliance costs or additional operating restrictions, and could have a material adverse effect on our business, financial condition, demand for our services, results of operations, and cash flows. Litigation risks are also increasing, as several oil and gas companies have been sued for allegedly causing climate-related damages due to their production and sale of fossil fuel products or for allegedly being aware of the impacts of climate change for some time but failing to adequately disclose such risks to their investors or customers. There is also a risk that financial institutions could be required to adopt policies that have the effect of reducing the funding provided to the fossil fuel sector. For example, recently, the Federal Reserve announced that it has joined the Network for Greening the Financial System, a consortium of financial regulators focused on addressing climate-related risks in the financial sector. Ultimately, this could make it more difficult to secure funding for exploration and production or midstream activities. Finally, most scientists have concluded that increasing concentrations of GHG in the atmosphere may produce climate changes that have significant physical effects, such as increased frequency and severity of storms, droughts, and floods and other climate events that could have an adverse effect on our assets.

If such effects were to occur, our operations could be adversely affected in various ways, including damages to our facilities from powerful winds or rising waters, or increased costs for insurance. Another possible consequence of climate change is increased volatility in seasonal temperatures. The market for our NGLs and natural gas is generally improved by periods of colder weather and impaired by periods of warmer weather, so any changes in climate could affect the market for the fuels that we transport, and thus demand for our services. Despite the use of the term "global warming" as a shorthand for climate change, some studies indicate that climate change could cause some areas to experience temperatures substantially colder than their historical averages. As a result, it is difficult to predict how the market for our products could be affected by increased temperature volatility, although if there is an overall trend of warmer temperatures, it would be expected to have an adverse effect on our business.

Employee Health and Safety. We are subject to the requirements of the federal OSHA and comparable state laws that regulate the protection of the health and safety of workers. In addition, the Occupational Safety and Health Administration's hazard communication standard requires that information be maintained about hazardous materials used or produced in operations and that this information be provided to employees, state and local government authorities and citizens. Historically, our costs for OSHA required activities, including general industry standards, recordkeeping requirements, and monitoring of occupational exposure to regulated substances, have not had a material adverse effect on our results of operations but there is no assurance that such costs will not be material in the future.

Natural Resource Reviews. The National Environmental Policy Act ("NEPA") provides for an environmental impact assessment process in connection with certain projects that involve federal lands or require approvals by federal agencies. The NEPA process implicates a number of other environmental laws and regulations, including the Endangered Species Act, Migratory Bird Treaty Act, Rivers and Harbors Act, Clean Water Act, Bald and Golden Eagle Protection Act, Fish and Wildlife Coordination Act, Marine Mammal Protection Act and National Historic Preservation Act, often requiring coordination with numerous governmental authorities. The NEPA review process can be lengthy and subjective, resulting in delays in obtaining federal approvals for projects. Our projects that are subject to the NEPA can include pipeline construction and pipeline integrity projects that involve federal lands or require approvals by federal agencies. More stringent environmental impact analyses under or third-party challenges with respect to the sufficiency of any environmental impact statement or assessment prepared pursuant to NEPA could adversely impact such projects in the form of delays or increased compliance and mitigations costs.

Indigenous Protections. Part of our operations cross land that has historically been apportioned to various Native American/First Nations tribes ("Indigenous Peoples"), who may exercise significant jurisdiction and sovereignty over their lands. Indigenous Peoples may also have certain treaty rights and rights to consultation on projects that may affect such lands. Our operations may be impacted to the extent these tribal governments are found to have and choose to act upon such jurisdiction over lands where we operate. For example, in 2020, the Supreme Court ruled in *McGirt v. Oklahoma* that the Muscogee (Creek) Nation reservation in Eastern Oklahoma has not been disestablished. Although the court's ruling indicates that it is limited to criminal law, as applied within the Muscogee (Creek) Nation reservation, the ruling may have significant potential implications for civil law, both in the Muscogee (Creek) Nation reservation and other reservations that may similarly be found to not have been disestablished. State courts in Oklahoma have applied the analysis in *McGirt* in ruling that the Cherokee, Chickasaw, Seminole, and Choctaw reservations likewise had not been disestablished.

On October 1, 2020, the EPA granted approval to the State of Oklahoma under Section 10211(a) of the Safe, Accountable, Flexible, Efficient Transportation Equity Act of 2005 (the "SAFETE Act") to administer all of the State's existing EPA-approved regulatory programs to Indian Country within the state except: Indian allotments to which Indians titles have not been extinguished; lands that are held in trust by the United States on behalf of any Indian or Tribe; lands that are owned in fee by any Tribe where title was acquired through a treaty with the United States to which such tribe is a party and that have never been allotted to any citizen or member of such Tribe. The approval extends the State's authority for existing EPA-approved regulatory programs to all lands within the State to which the State applied such programs prior to the U.S. Supreme Court's ruling in *McGirt*. However, several Tribes have expressed dissatisfaction with the consultation process performed in relation to this approval, and it is possible that EPA's approval under the SAFETE Act could be challenged. Additionally, the SAFETE Act provides that any Tribe in Oklahoma may seek "Treatment as a State" by the EPA, and it is possible that one or more of the Tribes in Oklahoma may seek such an approval from EPA. At this time, we cannot predict how these jurisdictional issues may ultimately be resolved.

Human Capital Management

As of December 31, 2020, ET and its consolidated subsidiaries employed an aggregate of 11,421 employees, 1,217 of which are represented by labor unions. We believe that our relations with our employees are good.

Our employees are our greatest asset, and we seek to attract and retain top talent by fostering a culture that is guided by our core values in a manner that respects all people and cultures, promotes safety, and focuses on the protection of public health and the environment.

Ethics and Values. We are committed to operating our business in a manner that honors and respects all people and the communities in which we do business. We recognize that people are our most valued resource, and we are committed to hiring and investing in employees who strive for excellence and live by our core values: working safely, corporate stewardship, ethics and integrity, entrepreneurial mindset, our people, excellence and results, and social responsibility. We value our employees for what they bring to our organization by embracing those from all backgrounds, cultures, and experiences. We also believe that the keys to our successes have been the cultivation of an atmosphere of inclusion and respect within our family of partnerships and sustaining organizations that promote diversity and provide support across all communities. These are the principles upon which we build and strengthen relationships among our people, our stakeholders, and those within the communities we support.

Respecting All People and All Cultures. We believe strict adherence to our Code of Business Conduct and Ethics is not only right, but is in the best interest of the Partnership, its Unitholders, its customers, and the industry in general. In all instances, the policies of the Partnership require that the business of the Partnership be conducted in a lawful and ethical manner. Every employee acting on behalf of the Partnership must adhere to these policies. Please refer to "Item 10. Directors, Executive Officers and Corporate Governance" for additional information on our Code of Business Conduct and Ethics.

Commitment to Protecting Public Health, Safety and the Environment. Protecting public health and the environment is the primary initiative for our environmental management teams, both in the construction and operation of our assets. These teams consist of environmental engineers, scientists and geologists focused on ensuring that our environmental management systems responsibly and efficiently reduce emissions, protect and preserve the land, water and air around us, and remain in compliance with all applicable regulations. Our environmental, health and safety department's more than 100 environmental and safety professionals provide environmental and safety training to our field representatives. This group also assists others throughout the organization in identifying continuous training for personnel, including the training that is required by applicable laws, regulations, standards, and permit conditions. Our safety standards and expectations are communicated to all employees and contractors with the expectation that each individual has the obligation to make safety the highest priority. Our safety culture aims to promote an open environment for discovering, resolving, and sharing safety challenges. We strive to eliminate unwanted safety events through a comprehensive process that promotes leadership, employee involvement, communication, personal responsibility to comply with standard operating procedures and regulatory requirements, effective risk reduction

processes, maintaining clean facilities, contractor safety, and personal wellness. Energy Transfer's goal is operational excellence, which means an injury- and incident-free workplace. To achieve this, we strive to hire and maintain the most qualified and dedicated workforce in the industry and make safety and safety accountability part of our daily operations. The OSHA Total Reportable Incident Rate ("TRIR") is a key performance indicator by which we evaluate the success of our safety programs. TRIR provides companies with a look at their safety record performance for the year by calculating the number of recordable incidents per 200,000 hours worked. Out of more than 17 million hours worked, our TRIR was 0.87 for 2020, compared to 0.94 in 2019. We believe the Partnership's low TRIR speaks to the investment in and focus on safety and environmental compliance as well as the reliability of our assets.

Regarding COVID-19, as an essential business providing critical energy infrastructure, the safety of our employees and the continued operation of our assets are our top priorities, and we will continue to operate in accordance with federal, state and local health guidelines and safety protocols. We have implemented several new policies and provided employees with training to help maintain the health and safety of our workforce.

For additional information on our Human Capital initiatives, please see our Community Engagement Report available on our website at http://www.energytransfer.com/corporate-responsibility/. Information contained on our website is not part of this report.

SEC Reporting

We file or furnish annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and any related amendments and supplements thereto with the SEC. From time to time, we may also file registration and related statements pertaining to equity or debt offerings. The SEC maintains an internet website at http://www.sec.gov that contains reports, proxy and information statements and other information regarding issuers that file electronically with the SEC.

We provide electronic access, free of charge, to our periodic and current reports, and amendments to these reports, on our internet website located at http://www.energytransfer.com. These reports are available on our website as soon as reasonably practicable after we electronically file such materials with the SEC. Information contained on our website is not part of this report.

ITEM 1A. RISK FACTORS

In addition to risks and uncertainties in the ordinary course of business that are common to all businesses, important factors that are specific to our structure as a limited partnership, our industry and our company could materially impact our future performance and results of operations. We have provided below a list of these risk factors that should be reviewed when considering an investment in our securities. ETO, Panhandle, Sunoco LP and USAC file Annual Reports on Form 10-K that include risk factors that can be reviewed for further information. The risk factors set forth below, and those included in ETO's, Panhandle's, Sunoco LP's and USAC's Annual Reports, are not all the risks we face, and other factors currently considered immaterial or unknown to us may impact our future operations.

Risk Relating to the Partnership's Business

Results of Operations and Financial Condition

Our cash flow depends primarily on the cash distributions we receive from our partnership interests in ETO, Sunoco LP and USAC, including the incentive distribution rights in Sunoco LP and, therefore, our cash flow is dependent upon the ability of ETO, Sunoco LP and USAC to make distributions in respect of those partnership interests.

We do not have any significant assets other than our partnership interests in ETO. As a result, our cash flow depends on the performance of ETO and its subsidiaries, including Sunoco LP and USAC, and their ability to make cash distributions, which is dependent on the results of operations, cash flows and financial condition of ETO and its subsidiaries, including Sunoco LP and USAC.

The amount of cash that ETO distributes to us each quarter depends upon the amount of cash ETO generates from its operations, which will fluctuate from quarter to quarter and will depend upon, among other things:

- the amount of natural gas, NGLs, crude oil and refined products transported through ETO's pipelines;
- the level of throughput in processing and treating operations;
- the fees charged and the margins realized by ETO, Sunoco LP and USAC for their services;
- the price of natural gas, NGLs, crude oil and refined products;
- the relationship between natural gas, NGL and crude oil prices;
- the weather in their respective operating areas;
- the level of competition from other midstream, transportation and storage and retail marketing companies and other energy providers;
- the level of their respective operating costs and maintenance and integrity capital expenditures;
- the tax profile on any blocker entities treated as corporations for federal income tax purposes that are owned by any of our subsidiaries;
- prevailing economic conditions; and
- the level and results of their respective derivative activities.

In addition, the actual amount of cash that ETO, and its subsidiaries, including Sunoco LP and USAC, will have available for distribution will also depend on other factors, such as:

- the level of capital expenditures they make;
- the level of costs related to litigation and regulatory compliance matters;
- the cost of acquisitions, if any;
- the levels of any margin calls that result from changes in commodity prices;
- debt service requirements;
- fluctuations in working capital needs;
- their ability to borrow under their respective revolving credit facilities;
- their ability to access capital markets;
- restrictions on distributions contained in their respective debt agreements; and

- the amount, if any, of cash reserves established by the board of directors and their respective general partners in their discretion for the proper conduct of their respective businesses.

ET does not have any control over many of these factors, including the level of cash reserves established by the board of directors. Accordingly, we cannot guarantee that ETO, Sunoco LP and USAC will have sufficient available cash to pay a specific level of cash distributions to their respective partners.

Furthermore, Unitholders should be aware that the amount of cash that our subsidiaries have available for distribution depends primarily upon cash flow and is not solely a function of profitability, which is affected by non-cash items. As a result, our subsidiaries may declare and/or pay cash distributions during periods when they record net losses. Please read "Risks Related to the Businesses of our Subsidiaries" included in this Item 1A for a discussion of further risks affecting ETO's ability to generate distributable cash flow.

Income from our midstream, transportation, terminalling and storage operations is exposed to risks due to fluctuations in the demand for and price of natural gas, NGLs, crude oil and refined products that are beyond our control.

The prices for natural gas, NGLs, crude oil and refined products reflect market demand that fluctuates with changes in global and United States economic conditions and other factors, including:

- the level of domestic natural gas, NGL, refined products and oil production;
- the level of natural gas, NGL, refined products and oil imports and exports, including liquefied natural gas;
- actions taken by natural gas and oil producing nations;
- instability or other events affecting natural gas and oil producing nations;
- the impact of weather, public health crises such as pandemics (including COVID-19), and other events of nature on the demand for natural gas, NGLs, refined products and oil;
- the availability of storage, terminal and transportation systems, and refining, processing and treating facilities;
- the price, availability and marketing of competitive fuels;
- the demand for electricity;
- activities by non-governmental organizations to limit certain sources of funding for the energy sector or restrict the exploration, development and production of oil and natural gas and related products;
- the cost of capital needed to maintain or increase production levels and to construct and expand facilities;
- the impact of energy conservation and fuel efficiency efforts; and
- the extent of governmental regulations, taxation, fees and duties.

In the past, the prices of natural gas, NGLs, refined products and oil have been extremely volatile, and we expect this volatility to continue.

Any loss of business from existing customers or our inability to attract new customers due to a decline in demand for natural gas, NGLs, refined products or oil could have a material adverse effect on our revenues and results of operations. In addition, significant price fluctuations for natural gas, NGL, refined products and oil commodities could materially affect our profitability.

The outbreak of COVID-19 and recent geopolitical developments in the crude oil market could adversely impact our business, financial condition and results of operations.

On January 30, 2020, the World Health Organization ("WHO") announced a global health emergency because of a new strain of coronavirus known as COVID-19 due to the risks it imposes on the international community as the virus spreads globally. In March 2020, the WHO classified the COVID-19 outbreak as a pandemic, based on the rapid increase in exposure globally. The global spread of COVID-19 caused a significant decline in economic activity and a reduced demand for goods and services, particularly in the energy industry, due to reduced operations and/or closures of businesses, "shelter in place" and other similar requirements imposed by government authorities, or other actions voluntarily undertaken by individuals and businesses concerned about exposure to COVID-19. The extent to which the COVID-19 pandemic continues to impact our business, operations and financial results depends on numerous evolving factors that we cannot accurately predict, including: the duration and scope of the pandemic; governmental, business and individuals' actions taken in response to the pandemic and the associated impact on economic activity; the effect on the level of demand for natural gas, NGLs, refined products and/or crude oil; our ability to procure materials and services from third parties that are necessary for the operation of our business; our

ability to provide our services, including as a result of travel restrictions on our employees and employees of third parties that we utilize in connection with our services; the potential for key executives or employees to fall ill with COVID-19; and the ability of our customers to pay for our services if their businesses suffer as a result of the pandemic.

In addition, policy disputes between the Organization of Petroleum Exporting Countries and Russia in the first quarter of 2020 resulted in Saudi Arabia significantly discounting the price of its crude oil, as well as Saudi Arabia and Russia significantly increasing the amount of crude oil they produce. These actions led to significant volatility in crude oil prices. More specifically, the spot price for West Texas Intermediate (WTI) crude oil, for physical delivery at Cushing, Oklahoma, decreased from $63.27 per barrel on January 6, 2020 to $(36.98) per barrel on April 20, 2020 and increased to more than $60 per barrel in February 2021.

Reduced demand for natural gas, NGLs, refined products and/or crude oil caused by the COVID-19 pandemic and a decline in WTI crude oil prices caused by the actions of foreign oil-producing nations or other market factors may result in the shut-in of production from U.S. oil and gas wells, which in turn may result in decreased utilization of our midstream services related to crude oil, NGLs, refined products and natural gas. In addition, reduced demand for crude oil has resulted in an increase in worldwide crude oil storage inventories, which limits our options for end-markets for the products we transport.

The factors discussed above could have a material adverse effect on our business, results of operations and financial condition. In addition, significant price fluctuations for natural gas, NGLs, refined products and oil commodities could materially affect the value of our inventory, as well as the linefill and tank bottoms that we account for as non-current assets. We may be forced to delay some of our capital projects and our customers, who may be in financial distress, may slow down decision-making, delay planned projects or seek to renegotiate or terminate agreements with us. To the extent our counterparties are successful, we may not be able to obtain new contract terms that are favorable to us or to replace contracts that are terminated.

Further, the effects of the pandemic and geopolitical developments have market impacts, such that additional capital may be more difficult for us to obtain or available only on terms less favorable to us. Our inability to fund capital expenditures could have a material impact on our results of operations.

At this time, we cannot estimate the magnitude and duration of potential social, economic and labor instability as a direct result of COVID-19, or of potential industry disruption as a direct result of geopolitical developments in the oil market. Should any of these potential impacts continue for an extended period of time, it will have a negative impact on the demand for our services and an adverse effect on our financial position and results of operations. To the extent these factors adversely affect our business and financial results, they may also have the effect of heightening many of the other risks described in this “Risk Factors” section, as well as the risks discussed or referenced in any applicable prospectus supplement, including in the documents we incorporate by reference herein or therein, such as those relating to our indebtedness, our need to generate sufficient cash flows to service our indebtedness and our ability to comply with the covenants contained in the agreements that govern our indebtedness.

The failure to successfully combine the businesses of Energy Transfer and Enable in the expected time frame may adversely affect Energy Transfer’s future results.

The success of the merger will depend, in part, on the ability of Energy Transfer to realize the anticipated benefits from combining the businesses of Energy Transfer and Enable. To realize these anticipated benefits, Energy Transfer’s and Enable’s businesses must be successfully combined. If the combined entity is not able to achieve these objectives, the anticipated benefits of the merger may not be realized fully or at all or may take longer to realize than expected. In addition, the actual integration may result in additional and unforeseen expenses, which could reduce the anticipated benefits of the merger.

Energy Transfer and Enable, including their respective subsidiaries, have operated and, until the completion of the merger, will continue to operate independently. It is possible that the integration process could result in the loss of key employees, as well as the disruption of each partnership’s ongoing businesses or inconsistencies in their standards, controls, procedures and policies.

Any or all of those occurrences could adversely affect the combined entity’s ability to maintain relationships with customers and employees after the merger or to achieve the anticipated benefits of the merger. Integration efforts between the two partnerships will also divert management attention and resources. These integration matters could have an adverse effect on each of Energy Transfer and Enable.

An impairment of goodwill and intangible assets could reduce our earnings.

As of December 31, 2020, our consolidated balance sheet reflected $2.39 billion of goodwill and $5.75 billion of intangible assets. Goodwill is recorded when the purchase price of a business exceeds the fair value of the tangible and separately measurable intangible net assets. Accounting principles generally accepted in the United States require us to test goodwill for impairment on an annual basis or when events or circumstances occur, indicating that goodwill might be impaired. Long-lived

assets such as intangible assets with finite useful lives are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. If we determine that any of our goodwill or intangible assets were impaired, we would be required to take an immediate charge to earnings with a correlative effect on partners' capital and balance sheet leverage as measured by debt to total capitalization.

During the year ended December 31, 2020, the Partnership recognized goodwill impairments of $483 million related to our midstream operations, $1.28 billion related to our crude operations, $198 million related to our all other operations, $10 million related to our intrastate operations and $226 million related to our interstate operations, primarily due to decreases in projected future cash flow as a result of the overall market demand decline. In addition, USAC recognized a goodwill impairment of $619 million during the year ended December 31, 2020, which is included in the Partnership's consolidated results of operations.

We depend on certain key producers for our supply of natural gas and the loss of any of these key producers could adversely affect our financial results.

Certain producers who are connected to our systems represent a material source of our supply of natural gas. We are not the only option available to these producers for disposition of the natural gas they produce. To the extent that these and other producers may reduce the volumes of natural gas that they supply us, we would be adversely affected unless we were able to acquire comparable supplies of natural gas from other producers.

Our intrastate transportation and storage and interstate transportation and storage operations depend on key customers to transport natural gas through our pipelines and the pipelines of our joint ventures.

During 2020, Trafigura US Inc. accounted for approximately 29% of our intrastate transportation and storage revenues. During 2020, Shell, Ascent Resources LLC and Antero Resources Corporation collectively accounted for 32% of our interstate transportation and storage revenues.

Our joint ventures, FEP and Citrus, also depend on key customers for the transport of natural gas through their pipelines. FEP has a small number of major shippers with one shipper accounting for approximately 64% of its revenues in 2020 while Citrus has long-term agreements with its top two customers which accounted for 54% of its 2020 revenue. For the Trans-Pecos and Comanche Trail pipelines, CFE International LLC is the primary shipper.

The failure of the major shippers on our and our joint ventures' intrastate and interstate transportation and storage pipelines to fulfill their contractual obligations could have a material adverse effect on our cash flow and results of operations if we or our joint ventures were unable to replace these customers under arrangements that provide similar economic benefits as these existing contracts.

We may be unable to retain or replace existing midstream, transportation, terminalling and storage customers or volumes due to declining demand or increased competition in crude oil, refined products, natural gas and NGL markets, which would reduce our revenues and limit our future profitability.

The retention or replacement of existing customers and the volume of services that we provide at rates sufficient to maintain or increase current revenues and cash flows depends on a number of factors beyond our control, including the price of and demand for crude oil, refined products, natural gas and NGLs in the markets we serve and competition from other service providers.

A significant portion of our sales of natural gas are to industrial customers and utilities. As a consequence of the volatility of natural gas prices and increased competition in the industry and other factors, industrial customers, utilities and other gas customers are increasingly reluctant to enter into long-term purchase contracts. Many customers purchase natural gas from more than one supplier and have the ability to change suppliers at any time. Some of these customers also have the ability to switch between gas and alternate fuels in response to relative price fluctuations in the market. Because there are many companies of greatly varying size and financial capacity that compete with us in the marketing of natural gas, we often compete in natural gas sales markets primarily on the basis of price.

We also receive a substantial portion of our revenues by providing natural gas gathering, processing, treating, transportation and storage services. While a substantial portion of our services are sold under long-term contracts for reserved service, we also provide service on an unreserved or short-term basis. Demand for our services may be substantially reduced due to changing market prices. Declining prices may result in lower rates of natural gas production resulting in less use of services, while rising prices may diminish consumer demand and also limit the use of services. In addition, our competitors may attract our customers' business. If demand declines or competition increases, we may not be able to sustain existing levels of unreserved service or renew or extend long-term contracts as they expire or we may reduce our rates to meet competitive pressures.

Revenue from our NGL transportation systems and refined products storage is also exposed to risks due to fluctuations in demand for transportation and storage service as a result of unfavorable commodity prices, competition from nearby pipelines,

and other factors. We receive substantially all of our transportation revenues through dedicated contracts under which the customer agrees to deliver the total output from particular processing plants that are connected only to our transportation system. Reduction in demand for natural gas or NGLs due to unfavorable prices or other factors, however, may result lower rates of production under dedicated contracts and lower demand for our services. In addition, our refined products storage revenues are primarily derived from fixed capacity arrangements between us and our customers, a portion of our revenue is derived from fungible storage and throughput arrangements, under which our revenue is more dependent upon demand for storage from our customers.

The volume of crude oil and refined products transported through our crude oil and refined products pipelines and terminal facilities depends on the availability of attractively priced crude oil and refined products in the areas serviced by our assets. A period of sustained price reductions for crude oil or refined products could lead to a decline in drilling activity, production and refining of crude oil or import levels in these areas. A period of sustained increases in the price of crude oil or refined products supplied from or delivered to any of these areas could materially reduce demand for crude oil or refined products in these areas. In either case, the volumes of crude oil or refined products transported in our crude oil and refined products pipelines and terminal facilities could decline.

The loss of existing customers by our midstream, transportation, terminalling and storage facilities or a reduction in the volume of the services our customers purchase from us, or our inability to attract new customers and service volumes would negatively affect our revenues, be detrimental to our growth, and adversely affect our results of operations.

We and our subsidiaries, including Sunoco LP and USA Compression Partners, LP ("USAC"), are exposed to the credit risk of our customers and derivative counterparties, and an increase in the nonpayment and nonperformance by our customers or derivative counterparties could reduce our ability to make distributions to our unitholders.

We, Sunoco LP and USAC are subject to risks of loss resulting from nonpayment or nonperformance by our, Sunoco LP's and USAC's customers. Commodity price volatility and/or the tightening of credit in the financial markets may make it more difficult for customers to obtain financing and, depending on the degree to which this occurs, there may be a material increase in the nonpayment and nonperformance by our customers. In addition, our risk management activities are subject to the risks that a counterparty may not perform its obligation under the applicable derivative instrument, the terms of the derivative instruments are imperfect, and our risk management policies and procedures are not properly followed. Any material nonpayment or nonperformance by our customers or our derivative counterparties could reduce our ability to make distributions to our unitholders. Any substantial increase in the nonpayment and nonperformance by our customers could have a material effect on our, Sunoco LP's and USAC's results of operations and operating cash flows.

Due to recent market disruptions involving the COVID-19 pandemic, some of our counterparties may be forced to file for bankruptcy protection, in which case our existing contracts with those counterparties may be rejected by the bankruptcy court. Following the request of one of our FERC-regulated natural pipelines, the FERC commenced an investigation into whether the public interest requires abrogation or modification of a firm transportation agreement and an interruptible transportation agreement with one of our shippers. By order dated November 9, 2020, FERC held that the record did not support a finding that the public interest presently requires abrogation or modification of the subject firm transportation agreement. However, actual determination regarding the contract will depend upon further action by the counterparty and any further bankruptcy-related proceedings. If a counterparty is successful in rejecting an existing contract in bankruptcy, we expect that we would attempt to negotiate replacement contracts with those counterparties and, depending on the availability of alternatives to our services, these contracts may have terms that are less favorable to us than the contracts rejected in bankruptcy court.

The profitability of certain activities in our natural gas gathering, processing, transportation and storage operations are largely dependent upon natural gas commodity prices, price spreads between two or more physical locations and market demand for natural gas and NGLs.

For a portion of the natural gas gathered on our systems, we purchase natural gas from producers at the wellhead and then gather and deliver the natural gas to pipelines where we typically resell the natural gas under various arrangements, including sales at index prices. Generally, the gross margins we realize under these arrangements decrease in periods of low natural gas prices.

We also enter into percent-of-proceeds arrangements, keep-whole arrangements, and processing fee agreements pursuant to which we agree to gather and process natural gas received from the producers.

Under percent-of-proceeds arrangements, we generally sell the residue gas and NGLs at market prices and remit to the producers an agreed upon percentage of the proceeds based on an index price. In other cases, instead of remitting cash payments to the producer, we deliver an agreed upon percentage of the residue gas and NGL volumes to the producer and sell the volumes we keep to third parties at market prices. Under these arrangements, our revenues and gross margins decline when

natural gas prices and NGL prices decrease. Accordingly, a decrease in the price of natural gas or NGLs could have an adverse effect on our revenues and results of operations.

Under keep-whole arrangements, we generally sell the NGLs produced from our gathering and processing operations at market prices. Because the extraction of the NGLs from the natural gas during processing reduces the Btu content of the natural gas, we must either purchase natural gas at market prices for return to producers or make a cash payment to producers equal to the value of this natural gas. Under these arrangements, our gross margins generally decrease when the price of natural gas increases relative to the price of NGLs.

When we process the gas for a fee under processing fee agreements, we may guarantee recoveries to the producer. If recoveries are less than those guaranteed to the producer, we may suffer a loss by having to supply liquids or its cash equivalent to keep the producer whole.

We also receive fees and retain gas in kind from our natural gas transportation and storage customers. Our fuel retention fees and the value of gas that we retain in kind are directly affected by changes in natural gas prices. Decreases in natural gas prices tend to decrease our fuel retention fees and the value of retained gas.

In addition, we receive revenue from our off-gas processing and fractionating system in south Louisiana primarily through customer agreements that are a combination of keep-whole and percent-of-proceeds arrangements, as well as from transportation and fractionation fees. Consequently, a large portion of our off-gas processing and fractionation revenue is exposed to risks due to fluctuations in commodity prices. In addition, a decline in NGL prices could cause a decrease in demand for our off-gas processing and fractionation services and could have an adverse effect on our results of operations.

For our midstream segment, we generally analyze gross margin based on fee-based margin (which includes revenues from processing fee arrangements) and non-fee-based margin (which includes gross margin earned on percent-of-proceeds and keep-whole arrangements). The amount of segment margin earned by our midstream segment from fee-based and non-fee-based arrangements (individually and as a percentage of total revenues) will be impacted by the volumes associated with both types of arrangements, as well as commodity prices; therefore, the dollar amounts and the relative magnitude of gross margin from fee-based and non-fee-based arrangements in future periods may be significantly different from results reported in previous periods.

Our midstream facilities and transportation pipelines provide services related to natural gas wells that experience production declines over time, which we may not be able to replace with natural gas production from newly drilled wells in the same natural gas basins or in other new natural gas producing areas.

In order to maintain or increase throughput levels on our gathering systems and transportation pipeline systems and asset utilization rates at our treating and processing plants, we must continually contract for new natural gas supplies and natural gas transportation services.

A substantial portion of our assets, including our gathering systems and our processing and treating plants, are connected to natural gas reserves and wells that experience declining production over time. Our gas transportation pipelines are also dependent upon natural gas production in areas served by our gathering systems or in areas served by other gathering systems or transportation pipelines that connect with our transportation pipelines. We may not be able to obtain additional contracts for natural gas supplies for our natural gas gathering systems, and we may be unable to maintain or increase the levels of natural gas throughput on our transportation pipelines. The primary factors affecting our ability to connect new supplies of natural gas to our gathering systems include our success in contracting for existing natural gas supplies that are not committed to other systems and the level of drilling activity and production of natural gas near our gathering systems or in areas that provide access to our transportation pipelines or markets to which our systems connect. We have no control over the level of drilling activity in our areas of operation, the amount of reserves underlying the wells and the rate at which production from a well will decline. In addition, we have no control over producers or their production and contracting decisions.

While a substantial portion of our services are provided under long-term contracts for reserved service, we also provide service on an unreserved basis. The reserves available through the supply basins connected to our gathering, processing, treating, transportation and storage facilities may decline and may not be replaced by other sources of supply. A decrease in development or production activity could cause a decrease in the volume of unreserved services we provide and a decrease in the number and volume of our contracts for reserved transportation service over the long run, which in each case would adversely affect our revenues and results of operations.

If we are unable to replace any significant volume declines with additional volumes from other sources, our results of operations and cash flows could be materially and adversely affected.

Our revenues depend on our customers' ability to use our pipelines and third-party pipelines over which we have no control.

Our natural gas transportation, storage and NGL businesses depend, in part, on our customers' ability to obtain access to pipelines to deliver gas to us and receive gas from us. Many of these pipelines are owned by parties not affiliated with us. Any interruption of service on our pipelines or third-party pipelines due to testing, line repair, reduced operating pressures, or other causes or adverse change in terms and conditions of service could have a material adverse effect on our ability, and the ability of our customers, to transport natural gas to and from our pipelines and facilities and a corresponding material adverse effect on our transportation and storage revenues. In addition, the rates charged by interconnected pipelines for transportation to and from our facilities affect the utilization and value of our storage services. Significant changes in the rates charged by those pipelines or the rates charged by other pipelines with which the interconnected pipelines compete could also have a material adverse effect on our storage revenues.

Shippers using our oil pipelines and terminals are also dependent upon our pipelines and connections to third-party pipelines to receive and deliver crude oil and products. Any interruptions or reduction in the capabilities of these pipelines due to testing, line repair, reduced operating pressures, or other causes could result in reduced volumes transported in our pipelines or through our terminals. Similarly, if additional shippers begin transporting volume over interconnecting oil pipelines, the allocations of pipeline capacity to our existing shippers on these interconnecting pipelines could be reduced, which also could reduce volumes transported in its pipelines or through our terminals. Allocation reductions of this nature are not infrequent and are beyond our control. Any such interruptions or allocation reductions that, individually or in the aggregate, are material or continue for a sustained period of time could have a material adverse effect on our results of operations, financial position, or cash flows.

The inability to continue to access lands owned by third parties could adversely affect our ability to operate and our financial results.

Our ability to operate our pipeline systems on certain lands owned by third parties will depend on our success in maintaining existing rights-of-way and obtaining new rights-of-way on those lands. We are parties to rights-of-way agreements, permits and licenses authorizing land use with numerous parties, including, private land owners, governmental entities, Native American tribes, rail carriers, public utilities and others. For more information, see our regulatory disclosure titled "Indigenous Protections." Our ability to secure extensions of existing agreements, permits and licenses is essential to our continuing business operations, and securing additional rights-of-way will be critical to our ability to pursue expansion projects. We cannot provide any assurance that we will be able to maintain access to existing rights-of-way upon the expiration of the current grants, that all of the rights-of-way will be obtained in a timely fashion or that we will acquire new rights-of-way as needed.

Further, whether we have the power of eminent domain for our pipelines varies from state to state, depending upon the type of pipeline and the laws of the particular state and the ownership of the land to which we seek access. When we exercise eminent down rights or negotiate private agreements cases, we must compensate landowners for the use of their property and, in eminent domain actions, such compensation may be determined by a court. The inability to exercise the power of eminent domain could negatively affect our business if we were to lose the right to use or occupy the property on which our pipelines are located. For example, following a decision issued in May 2017 by the federal Tenth Circuit Court of Appeals, tribal ownership of even a very small fractional interest in an allotted land, that is, tribal land owned or at one time owned by an individual Indian landowner, bars condemnation of any interest in the allotment. Consequently, the inability to condemn such allotted lands under circumstances where existing pipeline rights-of-way may soon lapse or terminate serves as an additional impediment for pipeline operators. Any loss of rights with respect to our real property, through our inability to renew right-of-way contracts or otherwise, could have a material adverse effect on our business, results of operations, financial condition and ability to make cash distributions to unitholders.

Our storage operations are influenced by the overall forward market for crude oil and other products we store, and certain market conditions may adversely affect our financial and operating results.

Our storage operations are influenced by the overall forward market for crude oil and other products we store. A contango market (meaning that the price of crude oil or other products for future delivery is higher than the current price) is associated with greater demand for storage capacity, because a party can simultaneously purchase crude oil or other products at current prices for storage and sell at higher prices for future delivery. A backwardated market (meaning that the price of crude oil or other products for future delivery is lower than the current price) is associated with lower demand for storage capacity because a party can capture a premium for prompt delivery of crude oil or other products rather than storing it for future sale. A prolonged backwardated market, or other adverse market conditions, could have an adverse impact on its ability to negotiate favorable prices under new or renewing storage contracts, which could have an adverse impact on our storage revenues. As a result, the overall forward market for crude oil or other products may have an adverse effect on our financial condition or results of operations.

Competition for water resources or limitations on water usage for hydraulic fracturing could disrupt crude oil and natural gas production from shale formations.

Hydraulic fracturing is the process of creating or expanding cracks by pumping water, sand and chemicals under high pressure into an underground formation in order to increase the productivity of crude oil and natural gas wells. Water used in the process is generally fresh water, recycled produced water or salt water. There is competition for fresh water from municipalities, farmers, ranchers and industrial users. In addition, the available supply of fresh water can also be reduced directly by drought. Prolonged drought conditions increase the intensity of competition for fresh water. Limitations on oil and gas producers' access to fresh water may restrict their ability to use hydraulic fracturing and could reduce new production. Such disruptions could potentially have a material adverse impact on our financial condition or results of operations.

A natural disaster, catastrophe or other event could result in severe personal injury, property damage and environmental damage, which could curtail our operations and otherwise materially adversely affect our cash flow.

Some of our operations involve risks of personal injury, property damage and environmental damage, which could curtail our operations and otherwise materially adversely affect our cash flow. For example, natural gas pipeline and other facilities operate at high pressures. Virtually all of our operations are exposed to potential natural disasters, including hurricanes, tornadoes, storms, floods and/or earthquakes.

If one or more facilities that are owned by us, or that deliver natural gas or other products to us, are damaged by severe weather or any other disaster, accident, catastrophe or event, our operations could be significantly interrupted. Similar interruptions could result from damage to production or other facilities that supply our facilities or other stoppages arising from factors beyond our control. These interruptions might involve significant damage to people, property or the environment, and repairs might take from a week or less for a minor incident to six months or more for a major interruption. Any event that interrupts the revenues generated by our operations, or which causes us to make significant expenditures not covered by insurance, could reduce our cash available for paying distributions to Unitholders.

As a result of market conditions, premiums and deductibles for certain insurance policies can increase substantially, and in some instances, certain insurance may become unavailable or available only for reduced amounts of coverage. As a result, we may not be able to renew existing insurance policies or procure other desirable insurance on commercially reasonable terms, if at all. If we were to incur a significant liability for which we were not fully insured, it could have a material adverse effect on our financial position and results of operations. In addition, the proceeds of any such insurance may not be paid in a timely manner and may be insufficient if such an event were to occur.

Terrorist attacks aimed at our facilities could adversely affect our business, results of operations, cash flows and financial condition.

The United States government has issued warnings that energy assets, including our nation's pipeline infrastructure, may be the future target of terrorist organizations. Some of our facilities are subject to standards and procedures required by the Chemical Facility Anti-Terrorism Standards. We believe we are in compliance with all material requirements; however, such compliance may not prevent a terrorist attack from causing material damage to our facilities or pipelines. Any such terrorist attack on our facilities or pipelines, those of our customers, or in some cases, those of other pipelines could have a material adverse effect on our business, financial condition and results of operations.

Our business could be affected adversely by union disputes and strikes or work stoppages by unionized employees.

As of December 31, 2020, approximately 11% of our workforce is covered by a number of collective bargaining agreements with various terms and dates of expiration. There can be no assurances that we will not experience a work stoppage in the future as a result of labor disagreements. Any work stoppage could, depending on the affected operations and the length of the work stoppage, have a material adverse effect on our business, financial position, results of operations or cash flows.

Cybersecurity breaches and other disruptions could compromise our information and operations, and expose us to liability, which would cause our business and reputation to suffer.

In the ordinary course of our business, we collect and store sensitive data, including intellectual property, our proprietary business information and that of our customers, suppliers and business partners, and personally identifiable information of our employees, in our data centers and on our networks. The secure processing, maintenance and transmission of this information is critical to our operations and business strategy. Despite our security measures, our information technology and infrastructure may be vulnerable to attacks by hackers or breached due to employee error, malfeasance or other disruptions. Any such breach could compromise our networks and the information stored there could be accessed, publicly disclosed, lost or stolen. Any such access, disclosure or other loss of information could result in legal claims or proceedings, liability under laws that protect the privacy of personal information, regulatory penalties for divulging shipper information, disruption of our operations, damage to our reputation, and loss of confidence in our products and services, which could adversely affect our business.

Our information technology infrastructure is critical to the efficient operation of our business and essential to our ability to perform day-today operations. Breaches in our information technology infrastructure or physical facilities, or other disruptions, could result in damage to our assets, safety incidents, damage to the environment, potential liability or the loss of contracts, and have a material adverse effect on our operations, financial position and results of operations.

Our operations could be disrupted if our information systems fail, causing increased expenses and loss of sales.

Our business is highly dependent on financial, accounting and other data processing systems and other communications and information systems, including our enterprise resource planning tools. We process a large number of transactions on a daily basis and rely upon the proper functioning of computer systems. If a key system was to fail or experience unscheduled downtime for any reason, even if only for a short period, our operations and financial results could be affected adversely. Our systems could be damaged or interrupted by a security breach, fire, flood, power loss, telecommunications failure or similar event. We have a formal disaster recovery plan in place, but this plan may not entirely prevent delays or other complications that could arise from an information systems failure. Our business interruption insurance may not compensate us adequately for losses that may occur.

Product liability claims and litigation could adversely affect our business and results of operations.

Product liability is a significant commercial risk. Substantial damage awards have been made in certain jurisdictions against manufacturers and resellers based upon claims for injuries caused by the use of or exposure to various products. There can be no assurance that product liability claims against us would not have a material adverse effect on our business or results of operations.

Along with other refiners, manufacturers and sellers of gasoline, ETC Sunoco Holdings LLC (“ETC Sunoco”) is a defendant in numerous lawsuits that allege methyl tertiary butyl ether (“MTBE”) contamination in groundwater. Plaintiffs, who include water purveyors and municipalities responsible for supplying drinking water and private well owners, are seeking compensatory damages (and in some cases injunctive relief, punitive damages and attorneys’ fees) for claims relating to the alleged manufacture and distribution of a defective product (MTBE-containing gasoline) that contaminates groundwater, and general allegations of product liability, nuisance, trespass, negligence, violation of environmental laws and deceptive business practices. There has been insufficient information developed about the plaintiffs’ legal theories or the facts that would be relevant to an analysis of the ultimate liability to ETC Sunoco. An adverse determination of liability related to these allegations or other product liability claims against ETC Sunoco could have a material adverse effect on our business or results of operations.

We do not control, and therefore may not be able to cause or prevent certain actions by, certain of our joint ventures.

Certain of our operations are conducted through joint ventures, some of which have their own governing boards. With respect to our joint ventures, we share ownership and management responsibilities with partners that may not share our goals and objectives. Consequently, it may be difficult or impossible for us to cause the joint venture entity to take actions that we believe would be in their or the joint venture’s best interests. Likewise, we may be unable to prevent actions of the joint venture. Differences in views among joint venture partners may result in delayed decisions or failures to agree on major matters, such as large expenditures or contractual commitments, the construction or acquisition of assets or borrowing money, among others. Delay or failure to agree may prevent action with respect to such matters, even though such action may serve our best interest or that of the joint venture. Accordingly, delayed decisions and disagreements could adversely affect the business and operations of the joint ventures and, in turn, our business and operations.

The use of derivative financial instruments could result in material financial losses by us.

From time to time, we and/or our subsidiaries have sought to reduce our exposure to fluctuations in commodity prices and interest rates by using derivative financial instruments and other risk management mechanisms and by our trading, marketing and/or system optimization activities. To the extent that we hedge our commodity price and interest rate exposures, we forgo the benefits we would otherwise experience if commodity prices or interest rates were to change in our favor.

The accounting standards regarding hedge accounting are very complex, and even when we engage in hedging transactions that are effective economically (whether to mitigate our exposure to fluctuations in commodity prices, or to balance our exposure to fixed and variable interest rates), these transactions may not be considered effective for accounting purposes. Accordingly, our consolidated financial statements may reflect some volatility due to these hedges, even when there is no underlying economic impact at that point. It is also not always possible for us to engage in a hedging transaction that completely mitigates our exposure to commodity prices. Our consolidated financial statements may reflect a gain or loss arising from an exposure to commodity prices for which we are unable to enter into a completely effective hedge.

In addition, our derivatives activities can result in losses. Such losses could occur under various circumstances, including if a counterparty does not perform its obligations under the derivative arrangement, the hedge is imperfect, commodity prices move unfavorably related to our physical or financial positions or hedging policies and procedures are not followed.

Increasing levels of congestion in the Houston Ship Channel could result in a diversion of business to less busy ports.

Our Gulf Coast facilities are strategically situated on prime real estate located in the Houston Ship Channel, which is in close proximity to both supply sources and demand sources. In recent years, the success of the Port of Houston has led to an increase in vessel traffic driven in part by the growing overseas demand for U.S. crude, gasoline, liquefied natural gas and petrochemicals and in part by the Port of Houston's recent decision to accept large container vessels, which can restrict the flow of other cargo. Increasing congestion in the Port of Houston could cause our customers or potential customers to divert their business to smaller ports in the Gulf of Mexico, which could result in lower utilization of our facilities.

The costs of providing pension and other postretirement health care benefits and related funding requirements are subject to changes in pension fund values, changing demographics and fluctuating actuarial assumptions and may have a material adverse effect on our financial results.

Certain of our subsidiaries provide pension plan and other postretirement healthcare benefits to certain of their employees. The costs of providing pension and other postretirement health care benefits and related funding requirements are subject to changes in pension and other postretirement fund values, changing demographics and fluctuating actuarial assumptions that may have a material adverse effect on the Partnership's future consolidated financial results. While certain of the costs incurred in providing such pension and other postretirement healthcare benefits are recovered through the rates charged by the Partnership's regulated businesses, the

Partnership's subsidiaries may not recover all of the costs and those rates are generally not immediately responsive to current market conditions or funding requirements. Additionally, if the current cost recovery mechanisms are changed or eliminated, the impact of these benefits on operating results could significantly increase.

Mergers among customers and competitors could result in lower volumes being shipped on our pipelines or products stored in or distributed through our terminals, or reduced crude oil marketing margins or volumes.

Mergers between existing customers could provide strong economic incentives for the combined entities to utilize their existing systems instead of our systems in those markets where the systems compete. As a result, we could lose some or all of the volumes and associated revenues from these customers and could experience difficulty in replacing those lost volumes and revenues, which could materially and adversely affect our results of operations, financial position, or cash flows.

Fraudulent activity or misuse of proprietary data involving our outsourcing partners could expose us to additional liability.

We utilize both affiliated entities and third parties in the processing of our information and data. Breaches of security measures or the accidental loss, inadvertent disclosure or unapproved dissemination of proprietary information, or sensitive or confidential data about us or our customers, including the potential loss or disclosure of such information or data as a result of fraud or other forms of deception, could expose us to a risk of loss, or misuse of this information, result in litigation and potential liability, lead to reputational damage, increase our compliance costs, or otherwise harm our business.

We compete with other businesses in our market with respect to attracting and retaining qualified employees.

Our continued success depends on our ability to attract and retain qualified personnel in all areas of our business. We compete with other businesses in our market with respect to attracting and retaining qualified employees. A tight labor market, increased overtime and a higher full-time employee ratio may cause labor costs to increase. A shortage of qualified employees may require us to enhance wage and benefits packages in order to compete effectively in the hiring and retention of such employees or to hire more expensive temporary employees. No assurance can be given that our labor costs will not increase, or that such increases can be recovered through increased prices charged to customers. We are especially vulnerable to labor shortages in oil and gas drilling areas when energy prices drive higher exploration and production activity.

Changes in currency exchange rates could adversely affect our results of operations for our Canadian operations.

A portion of our revenue is generated from operations in Canada, which use the Canadian dollar as the functional currency. Therefore, changes in the exchange rate between the U.S. dollar and the Canadian dollar could adversely affect our results of operations.

We are subject to the risks of doing business outside of the U.S.

The success of our business depends, in part, on continued performance in our non-U.S. operations. We currently have operations in Canada. In addition to the other risks described in this report on Form 10-K, there are numerous risks and uncertainties that specifically affect our non-U.S. operations. These risks and uncertainties include political and economic instability, changes in local governmental laws, regulations and policies, including those related to tariffs, investments, taxation, exchange controls, employment regulations and repatriation of earnings, and enforcement of contract and intellectual property rights. International transactions may also involve increased financial and legal risks due to differing legal systems and customs, including risks of non-compliance with U.S. and local laws affecting our activities abroad, including compliance with the U.S. Foreign Corrupt Practices Act. While these factors and the impact of these factors are difficult to predict, any one or more of them could adversely affect our financial and operational results.

Our trucking fleet operations are subject to the Federal Motor Carrier Safety Regulations which are enacted, reviewed and amended by the FMCSA. Our fleet currently has a "satisfactory" safety rating; however, if our safety rating were downgraded to "unsatisfactory," our business and results of operations could be adversely affected.

All federally regulated carriers' safety ratings are measured through a program implemented by the FMCSA known as the Compliance Safety Accountability ("CSA") program. The CSA program measures a carrier's safety performance based on violations observed during roadside inspections as opposed to compliance audits performed by the FMCSA. The quantity and severity of any violations are compared to a peer group of companies of comparable size and annual mileage. If a company rises above a threshold established by the FMCSA, it is subject to action from the FMCSA. There is a progressive intervention strategy that begins with a company providing the FMCSA with an acceptable plan of corrective action that the company will implement. If the issues are not corrected, the intervention escalates to on-site compliance audits and ultimately an "unsatisfactory" rating and the revocation of its operating authority by the FMCSA could have an adverse effect on our business, results of operations and financial condition.

Indebtedness

Our debt level and debt agreements may limit our ability to make distributions to Unitholders and may limit our future financial and operating flexibility.

As of December 31, 2020, we had approximately $51.44 billion of consolidated debt, excluding the debt of our unconsolidated joint ventures. Our level of indebtedness affects our operations in several ways, including, among other things:

- a significant portion of our and our subsidiaries' cash flow from operations will be dedicated to the payment of principal and interest on outstanding debt and will not be available for other purposes, including payment of distributions;
- covenants contained in our and our subsidiaries' existing debt agreements require us and them, as applicable, to meet financial tests that may adversely affect our flexibility in planning for and reacting to changes in our business;
- our and our subsidiaries' ability to obtain additional financing for working capital, capital expenditures, acquisitions and general partnership, corporate or limited liability company purposes, as applicable, may be limited;
- we may be at a competitive disadvantage relative to similar companies that have less debt;
- we may be more vulnerable to adverse economic and industry conditions as a result of our significant debt level; and
- failure by us or our subsidiaries to comply with the various restrictive covenants of our respective debt agreements could negatively impact our ability to incur additional debt, including our ability to utilize the available capacity under our revolving credit facility, and our ability to pay our distributions.

The consolidated debt level and debt agreements of ETO and its subsidiaries, including Sunoco LP and USAC, may limit the distributions we receive from ETO, as well as our future financial and operating flexibility.

ETO's and its subsidiaries' levels of indebtedness affect their operations in several ways, including, among other things:

- a significant portion of ETO's and its subsidiaries' cash flows from operations will be dedicated to the payment of principal and interest on outstanding debt and will not be available for other purposes, including payment of distributions to us;
- covenants contained in ETO's and its subsidiaries' existing debt agreements require ETO and its subsidiaries, as applicable, to meet financial tests that may adversely affect their flexibility in planning for and reacting to changes in their respective businesses;
- ETO's and its subsidiaries' ability to obtain additional financing for working capital, capital expenditures, acquisitions and general partnership, corporate or limited liability company purposes, as applicable, may be limited;
- ETO and its subsidiaries may be at a competitive disadvantage relative to similar companies that have less debt;

- ETO and its subsidiaries may be more vulnerable to adverse economic and industry conditions as a result of their significant debt levels;
- failure by ETO or its subsidiaries to comply with the various restrictive covenants of the respective debt agreements could negatively impact ETO's and/or its subsidiaries' ability to incur additional debt, including their ability to utilize the available capacity under their revolving credit facilities, and to pay distributions to us and their unitholders.

We do not have the same flexibility as other types of organizations to accumulate cash, which may limit cash available to service our debt or to repay debt at maturity.

Unlike a corporation, our partnership agreement requires us to distribute, on a quarterly basis, 100% of our Available Cash (as defined in our partnership agreement) to our Unitholders of record and our general partner. Available Cash is generally all of our cash on hand as of the end of a quarter, adjusted for cash distributions and net changes to reserves. Our general partner will determine the amount and timing of such distributions and has broad discretion to establish and make additions to our reserves or the reserves of our operating subsidiaries in amounts it determines in its reasonable discretion to be necessary or appropriate:

- to provide for the proper conduct of our business and the businesses of our operating subsidiaries (including reserves for future capital expenditures and for our anticipated future credit needs);
- to provide funds for distributions to our Unitholders and our general partner for any one or more of the next four calendar quarters; or
- to comply with applicable law or any of our loan or other agreements.

Increases in interest rates could materially adversely affect our business, results of operations, cash flows and financial condition.

In addition to our exposure to commodity prices, we have significant exposure to changes in interest rates. Approximately $6.72 billion of our consolidated debt as of December 31, 2020 bears interest at variable interest rates and the remainder bears interest at fixed rates. To the extent that we have debt with floating interest rates, our results of operations, cash flows and financial condition could be materially adversely affected by increases in interest rates. We manage a portion of our interest rate exposures by utilizing interest rate swaps.

An increase in interest rates could impact demand for our storage capacity.

There is a financing cost for a storage capacity user to own crude oil while it is stored. That financing cost is impacted by the cost of capital or interest rate incurred by the storage user, in addition to the commodity cost of the crude oil in inventory. Absent other factors, a higher financing cost adversely impacts the economics of storing crude oil for future sale. As a result, a significant increase in interest rates could adversely affect the demand for our storage capacity independent of other market factors.

An increase in interest rates may also cause a corresponding decline in demand for equity investments, in general, and in particular for yield-based equity investments such as our Common Units. Any such reduction in demand for our Common Units resulting from other more attractive investment opportunities may cause the trading price of our Common Units to decline.

An increase in the LIBOR or a phase-out or replacement of LIBOR with a benchmark rate that is higher or more volatile than the LIBOR rate could increase our cost of borrowing and could adversely affect our financial position.

As of December 31, 2020, we had outstanding approximately $6.40 billion of debt that bears interest at variable interest rates that use the LIBOR as a benchmark rate. Due to the perceived structural risks inherent in unsecured benchmark rates such as LIBOR, in July 2014, the Financial Stability Board (FSB) recommended developing alternative, near risk-free reference rates. In response to the recommendation put forth by the FSB, the Board of Governors of the Federal Reserve System and the Federal Reserve Bank of New York convened the Alternative Reference Rates Committee ("ARRC") to identify alternatives to LIBOR. In June 2017, the ARRC selected the secured overnight financing rate (SOFR) as the preferred alternative reference rate to LIBOR. In July 2017, the U.K.'s Financial Conduct Authority (FCA), which oversees the LIBOR submission process for all currencies and regulates the authorized administrator of LIBOR, ICE Benchmark Administration (IBA), announced that it intends to stop persuading or compelling London banks to make these rate submissions after 2021. The cessation date for compulsory submission and publication of rates for certain tenors of LIBOR has since been extended by the IBA and FCA until June 2023. Additionally, the ARRC has published a series of principles for LIBOR fallback contract language which include a methodology for determining fallback rates, which are primarily comprised of SOFR as the replacement benchmark and a replacement benchmark spread.

It is unclear, if certain LIBOR tenors continue to be reported beyond 2021, whether they will be considered representative or whether SOFR as the identified successor benchmark rate will attain market acceptance as a replacement for LIBOR. It is not possible to predict the further effect of the rules, recommendations or administrative practices of the FCA, IBA or ARRC, any changes in the methods by which LIBOR is determined or any other reforms to LIBOR that may be enacted in the United Kingdom, the European Union or elsewhere. Any such developments may cause LIBOR to perform differently than in the past or cease to exist. In addition, any other legal or regulatory changes made by the FCA, the European Commission or any other successor governance or oversight body, or future changes adopted by such body, in the method by which LIBOR is determined or the change from LIBOR to an alternative benchmark rate may result in, among other things, a sudden or prolonged increase or decrease in LIBOR, a delay in the publication of LIBOR, and changes in the rules or methodologies in LIBOR, which may discourage market participants from continuing to administer or to participate in LIBOR's determination, and, in certain situations, could result in LIBOR no longer being determined and published.

The adoption of SOFR, or any other alternative benchmark rate, may result in interest obligations which are more than or do not otherwise correlate over time with the payments that would have been made on such debt if U.S. dollar LIBOR was available in its current form. Further, the same costs and risks that may lead to the discontinuation or unavailability of U.S. dollar LIBOR may make one or more of the alternative methods impossible or impracticable to determine. Use of SOFR as an alternative benchmark rate and replacement for LIBOR could affect our debt securities, derivative instruments, receivables, debt payments and receipts. At this time, it is not possible to predict the effect of the establishment of any alternative benchmark rate(s). Any new benchmark rate will likely not replicate LIBOR exactly, and any changes to benchmark rates may have an uncertain impact on our cost of funds and our access to the capital markets. Any of these proposals or consequences could have a material adverse effect on our financing costs.

A downgrade of our credit ratings could impact our and our subsidiaries' liquidity, access to capital and costs of doing business, and maintaining credit ratings is under the control of independent third parties.

A downgrade of our credit ratings may increase our and our subsidiaries' cost of borrowing and could require us to post collateral with third parties, negatively impacting our available liquidity. Our and our subsidiaries' ability to access capital markets could also be limited by a downgrade of our credit ratings and other disruptions. Such disruptions could include:

- economic downturns;
- deteriorating capital market conditions;
- declining market prices for crude oil, natural gas, NGLs and other commodities;
- terrorist attacks or threatened attacks on our facilities or those of other energy companies; and
- the overall health of the energy industry, including the bankruptcy or insolvency of other companies.

Credit rating agencies perform independent analysis when assigning credit ratings. The analysis includes a number of criteria including, but not limited to, business composition, market and operational risks, as well as various financial tests. Credit rating agencies continue to review the criteria for industry sectors and various debt ratings and may make changes to those criteria from time to time. Credit ratings are not recommendations to buy, sell or hold investments in the rated entity. Ratings are subject to revision or withdrawal at any time by the rating agencies, and we cannot assure you that we will maintain our current credit ratings.

Capital Projects and Future Growth

If we and our subsidiaries do not make acquisitions on economically acceptable terms, our future growth could be limited.

Our results of operations and our ability to grow and to make distributions to Unitholders will depend in part on our ability to make acquisitions that are accretive to our distributable cash flow per unit.

We may be unable to make accretive acquisitions for any of the following reasons, among others:

- because we are unable to identify attractive acquisition candidates or negotiate acceptable purchase contracts with them;
- because we are unable to raise financing for such acquisitions on economically acceptable terms; or
- because we are outbid by competitors, some of which are substantially larger than us and have greater financial resources and lower costs of capital then we do.

Furthermore, even if we consummate acquisitions that we believe will be accretive, those acquisitions may in fact adversely affect our results of operations or result in a decrease in distributable cash flow per unit. Any acquisition involves potential risks, including the risk that we may:

- fail to realize anticipated benefits, such as new customer relationships, cost-savings or cash flow enhancements;
- decrease our liquidity by using a significant portion of our available cash or borrowing capacity to finance acquisitions;
- significantly increase our interest expense or financial leverage if we incur additional debt to finance acquisitions;
- encounter difficulties operating in new geographic areas or new lines of business;
- incur or assume unanticipated liabilities, losses or costs associated with the business or assets acquired for which we are not indemnified or for which the indemnity is inadequate;
- be unable to hire, train or retrain qualified personnel to manage and operate our growing business and assets;
- less effectively manage our historical assets, due to the diversion of management's attention from other business concerns; or
- incur other significant charges, such as impairment of goodwill or other intangible assets, asset devaluation or restructuring charges.

If we consummate future acquisitions, our capitalization and results of operations may change significantly. As we determine the application of our funds and other resources, Unitholders will not have an opportunity to evaluate the economic, financial and other relevant information that we will consider.

Capital projects will require significant amounts of debt and equity financing, which may not be available to us on acceptable terms, or at all.

We plan to fund our growth capital expenditures, including any new pipeline construction projects and improvements or repairs to existing facilities that we may undertake, with proceeds from sales of our debt and equity securities and borrowings under our revolving credit facility; however, we cannot be certain that we will be able to issue our debt and equity securities on terms satisfactory to us, or at all. If we are unable to finance our expansion projects as expected, we could be required to seek alternative financing, the terms of which may not be attractive to us, or to revise or cancel our expansion plans.

A significant increase in our indebtedness that is proportionately greater than our issuance of equity could negatively impact our and our subsidiaries' credit ratings or our ability to remain in compliance with the financial covenants under our revolving credit agreement, which could have a material adverse effect on our financial condition, results of operations and cash flows.

If we do not continue to construct new pipelines, our future growth could be limited.

Our results of operations and ability to grow and to increase distributable cash flow per unit will depend, in part, on our ability to construct pipelines that are accretive to our distributable cash flow. We may be unable to construct pipelines that are accretive to distributable cash flow for any of the following reasons, among others:

- we are unable to identify pipeline construction opportunities with favorable projected financial returns;
- we are unable to obtain necessary governmental approvals and contracts with qualified contractors and vendors on acceptable terms;
- we are unable to raise financing for our identified pipeline construction opportunities; or
- we are unable to secure sufficient transportation commitments from potential customers due to competition from other pipeline construction projects or for other reasons.

Furthermore, even if we construct a pipeline that we believe will be accretive, the pipeline may in fact adversely affect our results of operations or results from those projected prior to commencement of construction and other factors.

Expanding our business by constructing new pipelines and related facilities subjects us to risks.

One of the ways that we have grown our business is through the construction of additions to our existing gathering, compression, treating, processing and transportation systems. The construction of new pipelines and related facilities (or the improvement and repair of existing facilities) involves numerous regulatory, environmental, political and legal uncertainties beyond our control and requires the expenditure of significant amounts of capital that we will be required to finance through borrowings, the issuance of additional equity or from operating cash flow. If we undertake these projects, they may not be completed on schedule, at all, or at the budgeted cost. A variety of factors outside our control, such as weather, natural disasters

and difficulties in obtaining permits and rights-of-way or other regulatory approvals, as well as the performance by third-party contractors, may result in increased costs or delays in construction. For example, in recent years, pipeline projects by many companies have been subject to several challenges by environmental groups, such as challenges to agency reviews under the NEPA and to the USACE NWP program. For more information on the NWP program, see our regulatory disclosure titled "Clean Water Act". Separately, cost overruns or delays in completing a project could have a material adverse effect on our results of operations and cash flows. Moreover, our revenues may not increase immediately following the completion of a particular project. For instance, if we build a new pipeline, the construction will occur over an extended period of time, but we may not materially increase our revenues until long after the project's completion. In addition, the success of a pipeline construction project will likely depend upon the level of oil and natural gas exploration and development drilling activity and the demand for pipeline transportation in the areas proposed to be serviced by the project as well as our ability to obtain commitments from producers in the area to utilize the newly constructed pipelines. In this regard, we may construct facilities to capture anticipated future growth in oil or natural gas production in a region in which such growth does not materialize. As a result, new facilities may be unable to attract enough throughput or contracted capacity reservation commitments to achieve our expected investment return, which could adversely affect our results of operations and financial condition.

The liquefaction project is dependent upon securing long-term contractual arrangements for the off-take of LNG on terms sufficient to support the financial viability of the project.

LCL, our wholly-owned subsidiary, is in the process of developing a liquefaction project at the site of our existing regasification facility in Lake Charles, Louisiana. The project would utilize existing dock and storage facilities owned by us located on the Lake Charles site. The parties' determination as to the feasibility of the project will be particularly dependent upon the prospects for securing long-term contractual arrangements for the off-take of LNG which in turn will be dependent upon supply and demand factors affecting the price of LNG in foreign markets. The financial viability of the project will also be dependent upon a number of other factors, including the expected cost to construct the liquefaction facility, the terms and conditions of the financing for the construction of the liquefaction facility, the cost of the natural gas supply, the costs to transport natural gas to the liquefaction facility, the costs to operate the liquefaction facility and the costs to transport LNG from the liquefaction facility to customers in foreign markets (particularly Europe and Asia). Some of these costs fluctuate based on a variety of factors, including supply and demand factors affecting the price of natural gas in the United States, supply and demand factors affecting the costs for construction services for large infrastructure projects in the United States, and general economic conditions, there can be no assurance that the parties will determine to proceed to develop this project.

The construction of the liquefaction project remains subject to further approvals and some approvals may be subject to further conditions, review and/or revocation.

While LCL has received authorization from the DOE to export LNG to non-Free Trade Agreements ("non-FTA") countries, the non-FTA authorization is subject to review, and the DOE may impose additional approval and permit requirements in the future or revoke the non-FTA authorization should the DOE conclude that such export authorization is inconsistent with the public interest. The FERC order (issued December 17, 2015) authorizing LCL to site, construct and operate the liquefaction project contains a condition requiring all phases of the liquefaction project to be completed and in-service within five years of the date of the order. The order also requires the modifications to our Trunkline pipeline facilities that connect to our Lake Charles facility and additionally requires execution of a transportation contract for natural gas supply to the liquefaction facility prior to the initiation of construction of the liquefaction facility. On December 5, 2019, the FERC granted an extension of time until and including December 16, 2025, to complete construction of the liquefaction project and pipeline facilities modifications and place the facilities into service.

Integration of assets acquired in past acquisitions or future acquisitions with our existing business will be a complex and time-consuming process. A failure to successfully integrate the acquired assets with our existing business in a timely manner may have a material adverse effect on our business, financial condition, results of operations or cash available for distribution to unitholders.

The difficulties of integrating past and future acquisitions with our business include, among other things:

- operating a larger combined organization in new geographic areas and new lines of business;
- hiring, training or retaining qualified personnel to manage and operate our growing business and assets;
- integrating management teams and employees into existing operations and establishing effective communication and information exchange with such management teams and employees;
- diversion of management's attention from our existing business;
- assimilation of acquired assets and operations, including additional regulatory programs;

- loss of customers or key employees;
- maintaining an effective system of internal controls in compliance with the Sarbanes-Oxley Act of 2002 as well as other regulatory compliance and corporate governance matters; and
- integrating new technology systems for financial reporting.

If any of these risks or other unanticipated liabilities or costs were to materialize, then desired benefits from past acquisitions and future acquisitions resulting in a negative impact to our future results of operations. In addition, acquired assets may perform at levels below the forecasts used to evaluate their acquisition, due to factors beyond our control. If the acquired assets perform at levels below the forecasts, then our future results of operations could be negatively impacted.

Also, our reviews of proposed business or asset acquisitions are inherently imperfect because it is generally not feasible to perform an in-depth review of each such proposal given time constraints imposed by sellers. Even if performed, a detailed review of assets and businesses may not reveal existing or potential problems and may not provide sufficient familiarity with such business or assets to fully assess their deficiencies and potential. Inspections may not be performed on every asset, and environmental problems, may not be observable even when an inspection is undertaken.

We are affected by competition from other midstream, transportation, terminalling and storage companies.

We experience competition in all of our business segments. With respect to our midstream operations, we compete for both natural gas supplies and customers for our services. Our competitors include major integrated oil companies, interstate and intrastate pipelines and companies that gather, compress, treat, process, transport, store and market natural gas.

Our natural gas and NGL transportation pipelines and storage facilities compete with other interstate and intrastate pipeline companies and storage providers in the transportation and storage of natural gas and NGLs. The principal elements of competition among pipelines are rates, terms of service, access to sources of supply and the flexibility and reliability of service. Natural gas and NGLs also compete with other forms of energy, including electricity, coal, fuel oils and renewable or alternative energy. Competition among fuels and energy supplies is primarily based on price; however, non-price factors, including governmental regulation, environmental impacts, efficiency, ease of use and handling, and the availability of subsidies and tax benefits also affects competitive outcomes.

In markets served by our NGL pipelines, we compete with other pipeline companies and barge, rail and truck fleet operations. We also face competition with other storage and fractionation facilities based on fees charged and the ability to receive, distribute and/or fractionate the customer’s products.

Our crude oil and refined petroleum products pipelines face significant competition from other pipelines for large volume shipments. These operations also face competition from trucks for incremental and marginal volumes in the areas we serve. Further, our crude and refined product terminals compete with terminals owned by integrated petroleum companies, refining and marketing companies, independent terminal companies and distribution companies with marketing and trading operations.

We, Sunoco LP and USAC may not be able to fully execute our growth strategy if we encounter increased competition for qualified assets.

Our strategy contemplates growth through the development and acquisition of a wide range of midstream, transportation, storage and other energy infrastructure assets while maintaining a strong balance sheet. This strategy includes constructing and acquiring additional assets and businesses to enhance our ability to compete effectively and diversify our asset portfolio, thereby providing more stable cash flow. We regularly consider and enter into discussions regarding the acquisition of additional assets and businesses, stand-alone development projects or other transactions that we believe will present opportunities to realize synergies and increase our cash flow.

Consistent with our strategy, we may, from time to time, engage in discussions with potential sellers regarding the possible acquisition of additional assets or businesses. Such acquisition efforts may involve our participation in processes that involve a number of potential buyers, commonly referred to as “auction” processes, as well as situations in which we believe we are the only party or one of a very limited number of potential buyers in negotiations with the potential seller. We cannot give assurance that our acquisition efforts will be successful or that any acquisition will be completed on terms considered favorable to us.

In addition, we are experiencing increased competition for the assets we purchase or contemplate purchasing. Increased competition for a limited pool of assets could result in us losing to other bidders more often or acquiring assets at higher prices, both of which would limit our ability to fully execute our growth strategy. Inability to execute our growth strategy may materially adversely impact our results of operations.

Regulatory Matters

Litigation commenced by WMB against ET and its affiliates, if decided adverse to ET, could require ET to make a substantial payment to WMB.

WMB filed a complaint against ET and its affiliates ("ET Defendants) in the Delaware Court of Chancery, alleging that the ET Defendants breached the merger agreement between WMB, ET, and several of ET's affiliates. Following a ruling by the Court on June 24, 2016, which allowed for the subsequent termination of the merger agreement by ET on June 29, 2016, WMB filed a notice of appeal to the Supreme Court of Delaware. WMB filed an amended complaint on September 16, 2016 and sought a $410 million termination fee and additional damages of up to $10 billion based on the purported lost value of the merger consideration. These damages claims are based on the alleged breaches of the Merger Agreement, as well as new allegations that the ET Defendants breached an additional representation and warranty in the Merger Agreement. The ET Defendants filed amended counterclaims and affirmative defenses on September 23, 2016 and sought a $1.48 billion termination fee under the Merger Agreement and additional damages caused by WMB 's misconduct. These damages claims are based on the alleged breaches of the Merger Agreement, as well as new allegations that WMB breached the Merger Agreement by failing to disclose material information that was required to be disclosed in the Form S-4. On September 29, 2016, WMB filed a motion to dismiss the ET Defendants' amended counterclaims and to strike certain of the ET Defendants' affirmative defenses. On December 1, 2017, the Court issued a Memorandum Opinion granting Williams' motion to dismiss in part and denying it in part. On March 23, 2017, the Delaware Supreme Court affirmed the Court's June 24, 2016 ruling, and as a result, Williams conceded that its $10 billion damages claim is foreclosed, although its $410 million termination fee claim remains pending.

In July 2020, the Court denied ET Defendant's Motion for Summary Judgment and Williams' Motion for Partial Summary Judgment. ET Defendants cannot predict the outcome of the Williams Litigation or any lawsuits that might be filed subsequent to the date of this filing; nor can ET Defendants predict the amount of time and expense that will be required to resolve these lawsuits. ET Defendants believe that Williams' claims are without merit and intend to defend vigorously against them.

Increased regulation of hydraulic fracturing or produced water disposal could result in reductions or delays in crude oil and natural gas production in our areas of operation, which could adversely impact our business and results of operations.

The hydraulic fracturing process has come under considerable scrutiny from sections of the public as well as environmental and other groups asserting that chemicals used in the hydraulic fracturing process could adversely affect drinking water supplies and may have other detrimental impacts on public health, safety, welfare and the environment. In addition, the water disposal process has come under scrutiny from sections of the public as well as environmental and other groups asserting that the operation of certain water disposal wells has caused increased seismic activity. Additionally, several candidates for political office in both state and federal government have announced intentions to impose greater restrictions on hydraulic fracturing or produced water disposal. For example, the Biden Administration has issued orders temporarily suspending the issuance of new authorizations, and suspending the issuance of new leases pending completion of a review of current practices, for oil and gas development on federal lands and waters (but not tribal lands that the federal government merely holds in trust). Separately, the Colorado Oil and Gas Conservation Commission adopted new rules to cover a variety of matters related to public health, safety, welfare, wildlife, and environmental resources; most significantly, these rule changes establish more stringent setbacks (2,000-foot, instead of the prior 500-foot) on new oil and gas development and eliminate routine flaring and venting of natural gas at new existing wells across the state, each subject to only limited exceptions. While the final impacts of these developments cannot be predicted, the adoption of new laws or regulations imposing additional permitting, disclosures, restrictions or costs related to hydraulic fracturing or produced water disposal or prohibiting hydraulic fracturing in proximity to areas considered to be environmentally sensitive could make drilling certain wells impossible or less economically attractive. As a result, the volume of crude oil and natural gas we gather, transport and store for our customers could be substantially reduced which could have an adverse effect on our financial condition or results of operations.

Legal or regulatory actions related to the Dakota Access pipeline could cause an interruption to current or future operations, which could have an adverse effect on our business and results of operations.

On July 27, 2016, the Standing Rock Sioux Tribe and other Native American tribes (the "Tribes") filed a lawsuit in the United States District Court for the District of Columbia ("District Court") challenging permits issued by the USACE permitting Dakota Access, LLC ("Dakota Access") to cross the Missouri River at Lake Oahe in North Dakota. The case was subsequently amended to challenge an easement issued by the USACE allowing the pipeline to cross land owned by the USACE adjacent to the Missouri River. As a result of this litigation, the District Court vacated the easement, ordered USACE to prepare an Environmental Impact Statement ("EIS"), and order the pipeline shutdown and drained of oil. Dakota Access and USACE appealed this decision and moved for a stay of the District Court's orders. On August 5, 2020, the Court of Appeals granted a stay of the portion of the District Court order that required Dakota Access to shut the pipeline down and empty it of oil, but the Court of Appeals denied a stay of the easement vacatur. The August 5 order also stated that the Court of Appeals expected the

USACE to clarify its position with respect to whether USACE intends to allow the continued operation of the pipeline notwithstanding the vacatur of the easement and that the District Court may consider additional relief, if necessary. Following this order, the Tribes filed a motion with the District Court seeking an injunction to prevent the continued operation of the pipeline. This motion has been briefed by the Tribes, USACE, and Dakota Access, but the District Court has not yet ruled on this motion. On January 26, 2021, the Court of Appeals affirmed the District Court's order requiring an EIS and its order vacating the easement. In the same January 26 order, the Court of Appeals also overturned the District Court's August 5, 2020 order that the pipeline be shut down and emptied of oil because of the lack of findings sufficient to satisfy the legal requirements for injunctive relief, including a finding of irreparable harm to the Tribes in the absence of an injunction. The District Court scheduled a status conference for February 10, 2021 to discuss the impact of the Court of Appeals' ruling on the pending motion for injunctive relief, as well as USACE's expectations as to how it will proceed in light of the Court of Appeals' recent vacatur ruling. USACE filed a motion for a continuance of the status conference until April 9, 2021, and this motion was approved by the District Court on February 9, 2021. For further information, see Note 11 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data" in this report.

Our interstate natural gas pipelines are subject to laws, regulations and policies governing the rates they are allowed to charge for their services, which may prevent us from fully recovering our costs.

Laws, regulations and policies governing interstate natural gas pipeline rates could affect the ability of our interstate pipelines to establish rates, to charge rates that would cover future increases in its costs, or to continue to collect rates that cover current costs.

We are required to file tariff rates (also known as recourse rates) with the FERC that shippers may pay for interstate natural gas transportation services. We may also agree to discount these rates on a not unduly discriminatory basis or negotiate rates with shippers who elect not to pay the recourse rates. The FERC must approve or accept all rate filings for us to be allowed to charge such rates.

The FERC may review existing tariff rates on its own initiative or upon receipt of a complaint filed by a third party. The FERC may, on a prospective basis, order refunds of amounts collected if it finds the rates to have been shown not to be just and reasonable or to have been unduly discriminatory. The FERC has recently exercised this authority with respect to several other pipeline companies. If the FERC were to initiate a proceeding against us and find that our rates were not just and reasonable or were unduly discriminatory, the maximum rates we are permitted to charge may be reduced and the reduction could have an adverse effect on our revenues and results of operations.

The costs of our interstate pipeline operations may increase, and we may not be able to recover all of those costs due to FERC regulation of our rates. If we propose to change our tariff rates, our proposed rates may be challenged by the FERC or third parties, and the FERC may deny, modify or limit our proposed changes if we are unable to persuade the FERC that changes would result in just and reasonable rates that are not unduly discriminatory. We also may be limited by the terms of rate case settlement agreements or negotiated rate agreements with individual customers from seeking future rate increases, or we may be constrained by competitive factors from charging our tariff rates.

To the extent our costs increase in an amount greater than our revenues increase, or there is a lag between our cost increases and our ability to file for and obtain rate increases, our operating results would be negatively affected. Even if a rate increase is permitted by the FERC to become effective, the rate increase may not be adequate. We cannot guarantee that our interstate pipelines will be able to recover all of our costs through existing or future rates.

The ability of interstate pipelines held in tax-pass-through entities, like us, to include an allowance for income taxes as a cost-of-service element in their regulated rates has been subject to extensive litigation before the FERC and the courts for a number of years. Effective January 2018, the 2017 Tax Cuts and Jobs Act (the "Tax Act") changed several provisions of the federal tax code, including a reduction in the maximum corporate tax rate. On March 15, 2018, in a set of related proposals, the FERC addressed treatment of federal income tax allowances in regulated entity rates. The FERC issued a Revised Policy Statement on Treatment of Income Taxes ("Revised Policy Statement") stating that it will no longer permit master limited partnerships to recover an income tax allowance in their cost-of-service rates. The FERC issued the Revised Policy Statement in response to a remand from the United States Court of Appeals for the District of Columbia Circuit in United Airlines v. FERC, in which the court determined that the FERC had not justified its conclusion that a pipeline organized as a master limited partnership would not "double recover" its taxes under the current policy by both including an income-tax allowance in its cost of service and earning a return on equity ("ROE") calculated using the discounted cash flow methodology. On July 18, 2018, the FERC issued an order denying requests for rehearing and clarification of its Revised Policy Statement because it is a non-binding policy and parties will have the opportunity to address the policy as applied in future cases. In the rehearing order, the FERC clarified that a pipeline organized as a master limited partnership will not be precluded in a future proceeding from arguing and providing evidentiary support that it is entitled to an income tax allowance and demonstrating that its recovery of an income tax allowance

does not result in a double-recovery of investors' income tax costs. On July 31, 2020, the United States Court of Appeals for the District of Columbia Circuit issued an opinion upholding FERC's decision denying a separate master limited partnership recovery of an income tax allowance and its decision not to require the master limited partnership to refund accumulated deferred income tax balances. In light of the rehearing order's clarification regarding individual entities' ability to argue in support of recovery of an income tax allowance and the court's subsequent opinion upholding denial of an income tax allowance to a master limited partnership, the impacts that FERC's policy on the treatment of income taxes may have on the rates an interstate pipeline held in a tax-pass-through entity can charge for the FERC regulated transportation services are unknown at this time.

Even without application of FERC's recent rate making-related policy statements and rulemakings, under the NGA, FERC or our shippers may challenge the cost-of-service rates we charge. The FERC's establishment of a just and reasonable rate is based on many components, including ROE and tax-related components, including the allowance for income taxes and the amount for accumulated deferred income taxes, but also other pipeline costs that will continue to affect the FERC's determination of just and reasonable cost-of-service rates. Moreover, we receive revenues from our pipelines based on a variety of rate structures, including cost-of-service rates, negotiated rates, discounted rates and market-based rates. Many of our interstate pipelines, such as ETC Tiger, Midcontinent Express and Fayetteville Express, have negotiated market rates that were agreed to by customers in connection with long-term contracts entered into to support the construction of the pipelines. Other systems, such as FGT, Transwestern and Panhandle, have a mix of tariff rate, discount rate, and negotiated rate agreements. The revenues we receive from natural gas transportation services we provide pursuant to cost-of-service based rates may decrease in the future as a result of changes to FERC policies, combined with the reduced corporate federal income tax rate established in the Tax Act. The extent of any revenue reduction related to our cost-of-service rates, if any, will depend on a detailed review of all of a pipeline's cost-of-service components and the outcomes of any challenges to our rates by the FERC or our shippers.

By order issued January 16, 2019, the FERC initiated a review of Panhandle's existing rates pursuant to Section 5 of the NGA to determine whether the rates currently charged by Panhandle are just and reasonable and set the matter for hearing. Panhandle filed a cost and revenue study on April 1, 2019 and an NGA Section 4 rate case on August 30, 2019. The Section 4 and section 5 proceedings were consolidated by order of the Chief Judge on October 1, 2019. A hearing in the combined proceedings commenced on August 25, 2020 and adjourned on September 15, 2020. By order dated January 19, 2021, the Chief Judge has extended the deadline for the initial decision to March 2021.

Our interstate natural gas pipelines are subject to laws, regulations and policies governing terms and conditions of service, which could adversely affect our business and results of operations.

In addition to rate oversight, the FERC's regulatory authority extends to many other aspects of the business and operations of our interstate natural gas pipelines, including:

- terms and conditions of service;
- the types of services interstate pipelines may or must offer their customers;
- construction of new facilities;
- acquisition, extension or abandonment of services or facilities;
- reporting and information posting requirements;
- accounts and records; and
- relationships with affiliated companies involved in all aspects of the natural gas and energy businesses.

Compliance with these requirements can be costly and burdensome. In addition, we cannot guarantee that the FERC will authorize tariff changes and other activities we might propose and to undertake in a timely manner and free from potentially burdensome conditions. Future changes to laws, regulations, policies and interpretations thereof may impair our access to capital markets or may impair the ability of our interstate pipelines to compete for business, may impair their ability to recover costs or may increase the cost and burden of operation.

In December 2017, the then-serving FERC Chairman announced that the FERC will review its policies on certification of natural gas pipelines, including an examination of its long-standing Policy Statement on Certification of New Interstate Natural Gas Pipeline Facilities, issued in 1999, that is used to determine whether to grant certificates for new pipeline projects. To that end, FERC issued a Notice of Inquiry on April 9, 2018, requesting comments on its certification policies, but no action has been taken in that docket. We are unable to predict what, if any, changes may be proposed that will affect our natural gas pipeline business or when such proposals, if any, might become effective. We do not expect that any change in this policy would affect us in a materially different manner than any other similarly sized natural gas pipeline company operating in the United States.

Rate regulation or market conditions may not allow us to recover the full amount of increases in the costs of our crude oil, NGL and refined products pipeline operations.

Transportation provided on our common carrier interstate crude oil, NGL and refined products pipelines is subject to rate regulation by the FERC, which requires that tariff rates for transportation on these oil pipelines be just and reasonable and not unduly discriminatory. If we propose new or changed rates, the FERC or interested persons may challenge those rates and the FERC is authorized to suspend the effectiveness of such rates for up to seven months and to investigate such rates. If, upon completion of an investigation, the FERC finds that the proposed rate is unjust or unreasonable, it is authorized to require the carrier to refund revenues in excess of the prior tariff during the term of the investigation. The FERC also may investigate, upon complaint or on its own motion, rates that are already in effect and may order a carrier to change its rates prospectively. Upon an appropriate showing, a shipper may obtain reparations for damages sustained for a period of up to two years prior to the filing of a complaint.

The primary ratemaking methodology used by the FERC to authorize increases in the tariff rates of petroleum pipelines is price indexing. The FERC's ratemaking methodologies may limit our ability to set rates based on our costs or may delay the use of rates that reflect increased costs. On March 25, 2020, the FERC issued a Notice of Inquiry seeking comment on a proposal to change the preliminary screen for complaints against oil pipeline index rate increases to a "Percentage Comparison Test" consistent with the preliminary screen used by the FERC for protests against oil pipeline index rate increases. The FERC also requested comment on whether the appropriate threshold for the screen is a 10% or more differential between a proposed index rate increase and the annual percentage change in cost of service reported by the pipeline. Initial comments were due June 16, 2020, and reply comments were due July 16, 2020. The FERC has not yet taken any further action on the Notice of Inquiry. At this time, we cannot determine the effect of a change in the FERC's preliminary screen for complaints against index rates changes, however, a revised screen would result in a threshold aligned with the existing threshold for protests against index rate increases. Any complaint or protest raised by a shipper could materially and adversely affect our financial condition, results of operations or cash flows.

On June 18, 2020, FERC issued a Notice of Inquiry requesting comments on a proposed oil pipeline index for the five-year period commencing July 1, 2021 and ending June 30, 2026, and requested comments on whether and how the index should reflect the Revised Policy Statement and FERC's treatment of accumulated deferred income taxes as well as FERC's revised ROE methodology. Comments on the indexing rate methodology Notice of Inquiry were due August 17, 2020, with reply comments due September 11, 2020.

On December 17, 2020, FERC issued an order establishing a new index of PPI-FG plus 0.78%. Rehearing of this order has been requested and remains pending before FERC.

Under the Energy Policy Act of 1992 (the "Energy Policy Act"), certain interstate pipeline rates were deemed just and reasonable or "grandfathered." Revenues are derived from such grandfathered rates on most of our FERC-regulated pipelines. A person challenging a grandfathered rate must, as a threshold matter, establish a substantial change since the date of enactment of the Energy Policy Act, in either the economic circumstances or the nature of the service that formed the basis for the rate. If the FERC were to find a substantial change in circumstances, then the existing rates could be subject to detailed review and there is a risk that some rates could be found to be in excess of levels justified by the pipeline's costs. In such event, the FERC could order us to reduce pipeline rates prospectively and to pay refunds to shippers.

If the FERC's petroleum pipeline ratemaking methodologies procedures changes, the new methodology or procedures could adversely affect our business and results of operations.

State regulatory measures could adversely affect the business and operations of our midstream and intrastate pipeline and storage assets.

Our midstream and intrastate transportation and storage operations are generally exempt from FERC regulation under the NGA, but FERC regulation still significantly affects our business and the market for our products. The rates, terms and conditions of service for the interstate services we provide in our intrastate gas pipelines and gas storage are subject to FERC regulation under Section 311 of the NGPA. Our HPL System, East Texas pipeline, Oasis pipeline and ET Fuel System provide such services. Under Section 311, rates charged for transportation and storage must be fair and equitable. Amounts collected in excess of fair and equitable rates are subject to refund with interest, and the terms and conditions of service, set forth in the pipeline's statement of operating conditions, are subject to FERC review and approval. Should the FERC determine not to authorize rates equal to or greater than our costs of service, our cash flow would be negatively affected.

Our midstream and intrastate gas and oil transportation pipelines and our intrastate gas storage operations are subject to state regulation. All of the states in which we operate midstream assets, intrastate pipelines or intrastate storage facilities have adopted some form of complaint-based regulation, which allow producers and shippers to file complaints with state regulators

in an effort to resolve grievances relating to the fairness of rates and terms of access. The states in which we operate have ratable take statutes, which generally require gatherers to take, without undue discrimination, production that may be tendered to the gatherer for handling. Similarly, common purchaser statutes generally require gatherers to purchase without undue discrimination as to source of supply or producer. These statutes have the effect of restricting our right as an owner of gathering facilities to decide with whom we contract to purchase or transport natural gas. Should a complaint be filed in any of these states or should regulation become more active, our business may be adversely affected.

Our intrastate transportation operations located in Texas are also subject to regulation as gas utilities by the Texas Railroad Commission ("TRRC"). Texas gas utilities must publish the rates they charge for transportation and storage services in tariffs filed with the TRRC, although such rates are deemed just and reasonable under Texas law unless challenged in a complaint.

We are subject to other forms of state regulation, including requirements to obtain operating permits, reporting requirements, and safety rules (see description of federal and state pipeline safety regulation below). Violations of state laws, regulations, orders and permit conditions can result in the modification, cancellation or suspension of a permit, civil penalties and other relief.

Certain of our assets may become subject to regulation.

The distinction between federally unregulated gathering facilities and FERC-regulated transmission pipelines under the NGA has been the subject of extensive litigation and may be determined by the FERC on a case-by-case basis, although the FERC has made no determinations as to the status of our facilities. Consequently, the classification and regulation of our gathering facilities could change based on future determinations by the FERC, the courts or Congress. If our gas gathering operations become subject to FERC jurisdiction, the result may adversely affect the rates we are able to charge and the services we currently provide, and may include the potential for a termination of our gathering agreements with our customers.

Intrastate transportation of NGLs is largely regulated by the state in which such transportation takes place. Lone Star's NGL Pipeline transports NGLs within the state of Texas and is subject to regulation by the TRRC. This NGLs transportation system offers services pursuant to an intrastate transportation tariff on file with the TRRC. In 2013, Lone Star's NGL pipeline also commenced the interstate transportation of NGLs, which is subject to the FERC's jurisdiction under the Interstate Commerce Act ("ICA") and the Energy Policy Act. Both intrastate and interstate NGL transportation services must be provided in a manner that is just, reasonable, and non-discriminatory. The tariff rates established for interstate services were based on a negotiated agreement; however, if the FERC's ratemaking methodologies were imposed, they may, among other things, delay the use of rates that reflect increased costs and subject us to potentially burdensome and expensive operational, reporting and other requirements. In addition, the rates, terms and conditions for shipments of crude oil, petroleum products and NGLs on our pipelines are subject to regulation by the FERC if the NGLs are transported in interstate or foreign commerce, whether by our pipelines or other means of transportation. Since we do not control the entire transportation path of all crude oil, petroleum products and NGLs on our pipelines, FERC regulation could be triggered by our customers' transportation decisions.

In addition, if any of our pipelines were found to have provided services or otherwise operated in violation of the NGA, Natural Gas Policy Act of 1978 ("NGPA"), or ICA, this could result in the imposition of administrative and criminal remedies and civil penalties, as well as a requirement to disgorge charges collected for such services in excess of the rate established by the FERC. Any of the foregoing could adversely affect revenues and cash flow related to these assets.

We may incur significant costs and liabilities resulting from performance of pipeline integrity programs and related repairs.

Pursuant to authority under the NGPSA and Hazardous Liquids Pipeline Safety Act of 1979, as amended ("HLPSA"), PHMSA has established a series of rules requiring pipeline operators to develop and implement integrity management programs for natural gas transmission and hazardous liquid pipelines that, in the event of a pipeline leak or rupture, could affect high consequence areas ("HCAs") which are areas where a release could have the most significant adverse consequences, including high population areas, certain drinking water sources, and unusually sensitive ecological areas. These regulations require operators of covered pipelines to:

- perform ongoing assessments of pipeline integrity;
- identify and characterize applicable threats to pipeline segments that could impact a high consequence area;
- improve data collection, integration and analysis;
- repair and remediate the pipeline as necessary; and
- implement preventive and mitigating actions.

In addition, states have adopted regulations similar to existing PHMSA regulations for intrastate gathering and transmission lines. At this time, we cannot predict the ultimate cost of compliance with applicable pipeline integrity management regulations, as the cost will vary significantly depending on the number and extent of any repairs found to be necessary as a result of the pipeline integrity testing. We will continue our pipeline integrity testing programs to assess and maintain the integrity of our pipelines. The results of these tests could cause us to incur significant and unanticipated capital and operating expenditures for repairs or upgrades deemed necessary to ensure the continued safe and reliable operation of our pipelines. Any changes to pipeline safety laws by Congress and regulations by PHMSA that result in more stringent or costly safety standards could have a significant adverse effect on us and similarly situated midstream operators. For example, in October 2019, PHMSA published the first of three expected regulations relating to new or more stringent requirements for certain natural gas lines and gathering lines, that had originally been proposed in 2016 as part of PHMSA's "Gas Megarule." The rulemaking imposed numerous requirements, including, among other things, expanding certain of PHMSA's current regulatory safety programs for natural gas pipelines in newly defined MCAs that contain as few as five dwellings within a potential impact area. PHMSA is still expected to issue the second and third parts of the Gas Megarule, but we cannot predict the timing of any such action. The safety and hazardous liquid pipelines rule would extend leak detection requirements to all non-gathering hazardous liquid pipelines and require operators to inspect affected pipelines following extreme weather events or natural disasters to address any resulting damage. Finally, the enhanced emergency procedures rule focuses on increased emergency safety measures. In particular, this rule increases the authority of PHMSA to issue an emergency order that addresses unsafe conditions or hazards that pose an imminent threat to pipeline safety. The changes adopted or proposed by these rulemakings or made in future legal requirements could have a material adverse effect on our results of operations and costs of transportation services.

Federal and state legislative and regulatory initiatives relating to pipeline safety that require the use of new or more stringent safety controls or result in more stringent enforcement of applicable legal requirements could subject us to increased capital costs, operational delays and costs of operation.

The NGPSA and HLPSA were amended by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 ("2011 Pipeline Safety Act"). Among other things, the 2011 Pipeline Safety Act increased the penalties for safety violations and directed the Secretary of Transportation to promulgate rules or standards relating to expanded integrity management requirements, automatic or remote-controlled valve use, excess flow valve use, leak detection system installation, testing to confirm that the material strength of certain pipelines are above 30% of specified minimum yield strength, and operator verification of records confirming the MAOP of certain interstate natural gas transmission pipelines. In January 2021, PHMSA issued a final rule increasing the maximum administrative fines for safety violations were increased to account for inflation, with maximum civil penalties set at $222,504 per day, with a maximum of $2,225,034 for a series of violations. Upon reauthorization of PHMSA, Congress often directs the agency to complete certain rulemakings. For example, in the Consolidated Appropriations Bill for Fiscal Year 2021, Congress reauthorized PHMSA through fiscal year 2023 and directed the agency to move forward with several regulatory actions, including the "Pipeline Safety: Class Location Change Requirements" and the "Pipeline Safety: Safety of Gas Transmission and Gathering Pipelines" proposed rulemakings; Congress has also instructed PHMSA to issue final regulations to require operations of non-rural gas gathering lines and new existing transmission and distribution pipelines to conduct certain leak detection and repair programs to require facility inspection and maintenance plans to align with those regulations. The timing and scope of such future rulemakings is uncertain. The safety enhancement requirements and other provisions of Congressional mandates to PHMSA, as well as any implementation of PHMSA rules thereunder or any issuance or reinterpretation of guidance by PHMSA or any state agencies with respect thereto, could require us to install new or modified safety controls, pursue additional capital projects, or conduct maintenance programs on an accelerated basis, any or all of which tasks could result in our incurring increased operating costs that could be significant and have a material adverse effect on our results of operations or financial condition.

Our business involves the generation, handling and disposal of hazardous substances, hydrocarbons and wastes which activities are subject to environmental and worker health and safety laws and regulations that may cause us to incur significant costs and liabilities.

Our business is subject to stringent federal, tribal, state, and local laws and regulations governing the discharge of materials into the environment, worker health and safety and protection of the environment. These laws and regulations may require the acquisition of permits for the construction and operation of our pipelines, plants and facilities, result in capital expenditures to manage, limit or prevent emissions, discharges or releases of various materials from our pipelines, plants and facilities, impose specific health and safety standards addressing worker protection, and impose substantial liabilities for pollution resulting from our construction and operations activities. Several governmental authorities, such as the United States Environmental Protection Agency ("EPA") and analogous state agencies have the power to enforce compliance with these laws and regulations and the permits issued under them and frequently mandate difficult and costly remediation measures and other actions. Failure to comply with these laws, regulations and permits may result in the assessment of significant administrative, civil and criminal penalties, the imposition of investigatory remedial and corrective action obligations, the occurrence of delays in permitting and completion of projects, and the issuance of injunctive relief. For example, following an inadvertent return that occurred in

connection with the construction of our Mariner East 2 pipeline (“Mariner 2”), the Pennsylvania Department of Environmental Protection in September 2020 ordered the rerouting of a section of Mariner 2. We have challenged this order and cannot predict the final outcome; however, any rerouting of Mariner 2 or other of our pipeline projects may result in delays in the completion of these projects.

Certain environmental laws impose strict, joint and several liability for costs required to clean up and restore sites where hazardous substances, hydrocarbons or wastes have been disposed or released, even under circumstances where the substances, hydrocarbons or wastes have been released by a predecessor operator. Moreover, it is not uncommon for neighboring landowners and other third parties to file claims for personal injury and property and natural resource damage allegedly caused by noise, odor or the release of hazardous substances, hydrocarbons or wastes into the environment.

We may incur substantial environmental costs and liabilities because of the underlying risk arising out of our operations. Although we have established financial reserves for our estimated environmental remediation liabilities, additional contamination or conditions may be discovered, resulting in increased remediation costs, liabilities or natural resource damages that could substantially increase our costs for site remediation projects. Accordingly, we cannot assure you that our current reserves are adequate to cover all future liabilities, even for currently known contamination.

Uncertainty about the future course of regulation exists because of the recent change in U.S. presidential administrations. In January 2021, the current administration issued an executive order directing all federal agencies to review and take action to address any federal regulations promulgated during the prior administration that may be inconsistent with the current administration’s policies. As a result, it is unclear the degree to which certain recent regulatory developments may be modified or rescinded. The executive order also established a Working Group that is called on to, among other things, develop methodologies for calculating the “social cost of carbon,” “social cost of nitrous oxide” and “social cost of methane.” Recommendations from the Working Group are due beginning June 1, 2021, and final recommendations no later than January 2022. Further regulation of air emissions, as well as uncertainty regarding the future course of regulation, could eventually reduce the demand for oil and natural gas and, in turn, have a material adverse effect on our business, financial condition or results of operations.

Changes in environmental laws and regulations occur frequently, and any such changes that result in more stringent and costly waste handling, emission standards, or storage, transport, disposal or remediation requirements could have a material adverse effect on our operations or financial position. For example, in October 2015, the EPA published a final rule under the Clean Air Act, lowering the National Ambient Air Quality Standard (“NAAQS”) for ground-level ozone to 70 parts per billion for the 8-hour primary and secondary ozone standards, and the EPA finalized its attainment/non-attainment designations in 2018, though these are subject to change. Reclassification of areas or imposition of more stringent standards may make it more difficult to construct new or modified sources of air pollution in newly designated non-attainment areas. Also, states are expected to implement more stringent requirements as a result of this new final rule, which could apply to our customers’ operations. Compliance with this final rule or any other new regulations could, among other things, require installation of new emission controls on some of our equipment, result in longer permitting timelines or new restrictions or prohibitions with respect to permits or projects, and significantly increase our capital expenditures and operating costs, which could adversely impact our business. Historically, we have been able to satisfy the more stringent nitrogen oxide emission reduction requirements that affect our compressor units in ozone non-attainment areas at reasonable cost, but there is no assurance that we will not incur material costs in the future to meet the new, more stringent ozone standard.

Regulations under the Clean Water Act, Oil Pollution Act of 1990, as amended (“OPA”), and state laws impose regulatory burdens on terminal operations. Spill prevention control and countermeasure requirements of federal and state laws require containment to mitigate or prevent contamination of waters in the event of a refined product overflow, rupture, or leak from above-ground pipelines and storage tanks. The Clean Water Act also requires us to maintain spill prevention control and countermeasure plans at our terminal facilities with above-ground storage tanks and pipelines. In addition, OPA requires that most fuel transport and storage companies maintain and update various oil spill prevention and oil spill contingency plans. Facilities that are adjacent to water require the engagement of Federally Certified Oil Spill Response Organizations to be available to respond to a spill on water from above-ground storage tanks or pipelines.

Transportation and storage of refined products over and adjacent to water involves risk and potentially subjects us to strict, joint, and potentially unlimited liability for removal costs and other consequences of an oil spill where the spill is into navigable waters, along shorelines or in the exclusive economic zone of the United States.

In the event of an oil spill into navigable waters, substantial liabilities could be imposed upon us. The Clean Water Act imposes restrictions and strict controls regarding the discharge of pollutants into navigable waters, with the potential of substantial liability for the violation of permits or permitting requirements.

Terminal operations and associated facilities are subject to the Clean Air Act as well as comparable state and local statutes. Under these laws, permits may be required before construction can commence on a new source of potentially significant air emissions, and operating permits may be required for sources that are already constructed. If regulations become more stringent, additional emission control technologies.

Climate change legislation or regulations restricting emissions of greenhouse gases ("GHGs") could result in increased operating costs and reduced demand for the services we provide.

Climate change continues to attract considerable public, governmental and scientific attention. As a result, numerous proposals have been made and are likely to continue to be made at the international, national, regional and state levels of government to monitor and limit emissions of GHGs. These efforts have included consideration of cap-and-trade programs, carbon taxes and GHG reporting and tracking programs, and regulations that directly limit GHG emissions from certain sources. In the United States, no comprehensive climate change legislation has been implemented at the federal level to date. However, Canada has implemented a federal carbon pricing regime, and, in the United States, President Biden has announced that he intends to pursue substantial reductions in greenhouse gas emissions, particularly from the oil and gas sector. For example, on January 27, 2021, President Biden signed an executive order that commits to substantial action on climate change, calling for, among other things, the increased use of zero-emissions vehicles by the federal government, the elimination of subsidies provided to the fossil fuel industry, an increase in the production of offshore wind energy, and an increased emphasis on climate-related risks across government agencies and economic sectors. Additionally, the EPA has adopted rules under authority of the Clean Air Act that, among other things, establish Potential for Significant Deterioration ("PSD") construction and Title V operating permit reviews for GHG emissions from certain large stationary sources that are also potential major sources of certain principal, or criteria, pollutant emissions, which reviews could require securing PSD permits at covered facilities emitting GHGs and meeting "best available control technology" standards for those GHG emissions. In addition, the EPA has adopted rules requiring the monitoring and annual reporting of GHG emissions from certain petroleum and natural gas system sources in the United States, including, among others, onshore processing, transmission, storage and distribution facilities. In October 2015, the EPA amended and expanded the GHG reporting requirements to all segments of the oil and natural gas industry, including gathering and boosting facilities and blowdowns of natural gas transmission pipelines.

Federal agencies also have begun directly regulating GHG emissions, such as methane, from oil and natural gas operations. In June 2016, the EPA published New Source Performance Standards ("NSPS"), known as Subpart OOOOa, that require certain new, modified or reconstructed facilities in the oil and natural gas sector to reduce these methane gas and volatile organic compound ("VOC") emissions. These Subpart OOOOa standards expand previously issued NSPS published by the EPA in 2012 and known as Subpart OOOO, by using certain equipment-specific emissions control practices, requiring additional controls for pneumatic controllers and pumps as well as compressors, and imposing leak detection and repair requirements for natural gas compressor and booster stations. In September 2020, the EPA finalized amendments to Subpart OOOOa that rescind the methane limits for new, reconstructed and modified oil and natural gas production sources while leaving in place the general emission limits for VOCs. In addition, the rulemaking removes from the oil and natural gas category the natural gas transmission and storage segment. However, President Biden has signed an executive order calling for the suspension, revision, or rescission of the September 2020 rule and the reinstatement or issuance of methane emissions standards for new, modified, and existing oil and gas facilities, including the transmission and storage. Methane emission standards imposed on the oil and gas sector could result in increased costs to our operations or those of our customers as well as result in delays or curtailment in such operations, which costs, delays or curtailment could adversely affect our business. Several states have also adopted, or are considering, adopting, regulations related to GHG emissions, some of which are more stringent than those implemented by the federal government.

Additionally, in December 2015, the United States joined the international community at the 21st Conference of the Parties of the United Nations Framework Convention on Climate Change in Paris, France in signing the "Paris Agreement," a treaty that requires member countries to submit individually-determined, non-binding GHG emission reduction goals every five years beginning in 2020. Although the United States had withdrawn from this agreement, President Biden has signed executive orders recommitting the United States to the Paris Agreement and calling for the federal government to formulate the United States' emissions reduction goal. However, the impacts of these orders are unclear at this time.

The adoption, strengthening and implementation of any international, federal or state legislation or regulations that require reporting of GHGs or otherwise restrict emissions of GHGs could result in increased compliance costs or additional operating restrictions, and could have a material adverse effect on our business, financial condition, demand for our services, results of operations, and cash flows. Litigation risks are also increasing, as several oil and gas companies have been sued for allegedly causing climate-related damages due to their production and sale of fossil fuel products or for allegedly being aware of the impacts of climate change for some time but failing to adequately disclose such risks to their investors or customers. There is also a risk that financial institutions could be required to adopt policies that have the effect of reducing the funding provided to the fossil fuel sector. For example, recently, the Federal Reserve announced that it has joined the Network for Greening the

Financial System, a consortium of financial regulators focused on addressing climate-related risks in the financial sector. Ultimately, this could make it more difficult to secure funding for exploration and production or midstream activities. Finally, most scientists have concluded that increasing concentrations of GHG in the atmosphere may produce climate changes that have significant physical effects, such as increased frequency and severity of storms, droughts, and floods and other climate events that could have an adverse effect on our assets.

The swaps regulatory provisions of the Dodd-Frank Act and the rules adopted thereunder could have an adverse effect on our ability to use derivative instruments to mitigate the risks of changes in commodity prices and interest rates and other risks associated with our business.

Provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") and rules adopted by the Commodity Futures Trading Commission (the "CFTC"), the SEC and other prudential regulators establish federal regulation of the physical and financial derivatives, including over-the-counter derivatives market and entities, such as us, participating in that market. While most of these regulations are already in effect, the implementation process is still ongoing and the CFTC continues to review and refine its initial rulemakings through additional interpretations and supplemental rulemakings. As a result, any new regulations or modifications to existing regulations could significantly increase the cost of derivative contracts, materially alter the terms of derivative contracts, reduce the availability and/or liquidity of derivatives to protect against risks we encounter, reduce our ability to monetize or restructure our existing derivative contracts, and increase our exposure to less creditworthy counterparties. Any of these consequences could have a material adverse effect on our financial condition, results of operations and cash available for distribution to our Unitholders.

The CFTC has re-proposed speculative position limits for certain futures and option contracts in the major energy markets and for swaps that are their economic equivalents, although certain bona fide hedging transactions would be exempt from these position limits provided that various conditions are satisfied. The CFTC has also finalized a related aggregation rule that requires market participants to aggregate their positions with certain other persons under common ownership and control, unless an exemption applies, for purposes of determining whether the position limits have been exceeded. If adopted, the revised position limits rule and its finalized companion rule on aggregation may create additional implementation or operational exposure. In addition to the CFTC federal speculative position limit regime, designated contract markets ("DCMs") also maintain speculative position limit and accountability regimes with respect to contracts listed on their platform as well as aggregation requirements similar to the CFTC's final aggregation rule. Any speculative position limit regime, whether imposed at the federal-level or at the DCM-level may impose added operating costs to monitor compliance with such position limit levels, addressing accountability level concerns and maintaining appropriate exemptions, if applicable.

The Dodd-Frank Act requires that certain classes of swaps be cleared on a derivatives clearing organization and traded on a DCM or other regulated exchange, unless exempt from such clearing and trading requirements, which could result in the application of certain margin requirements imposed by derivatives clearing organizations and their members. The CFTC and prudential regulators have also adopted mandatory margin requirements for uncleared swaps entered into between swap dealers and certain other counterparties. We currently qualify for and rely upon an end-user exception from such clearing and margin requirements for the swaps we enter into to hedge our commercial risks. However, the application of the mandatory clearing and trade execution requirements and the uncleared swaps margin requirements to other market participants, such as swap dealers, may adversely affect the cost and availability of the swaps that we use for hedging.

In addition to the Dodd-Frank Act, the European Union and other foreign regulators have adopted and are implementing local reforms generally comparable with the reforms under the Dodd-Frank Act. Implementation and enforcement of these regulatory provisions may reduce our ability to hedge our market risks with non-U.S. counterparties and may make transactions involving cross-border swaps more expensive and burdensome. Additionally, the lack of regulatory equivalency across jurisdictions may increase compliance costs and make it more difficult to satisfy our regulatory obligations.

Additional deepwater drilling laws and regulations, delays in the processing and approval of drilling permits and exploration, development, oil spill-response and decommissioning plans, and other related developments may have a material adverse effect on our business, financial condition, or results of operations.

The Federal Bureau of Ocean Energy Management ("BOEM") and the federal Bureau of Safety and Environmental Enforcement ("BSEE"), each agencies of the United States Department of the Interior, have imposed more stringent permitting procedures and regulatory safety and performance requirements for new wells to be drilled in federal waters. Compliance with these more stringent regulatory requirements and with existing environmental and oil spill regulations, together with any uncertainties or inconsistencies in decisions and rulings by governmental agencies, delays in the processing and approval of drilling permits or exploration, development, oil spill-response and decommissioning plans, and possible additional regulatory initiatives could result in difficult and more costly actions and adversely affect or delay new drilling and ongoing development efforts. For instance, in January 2021, the Biden administration issued an executive order focused on climate change that,

among other things, directed the Secretary of the Interior to pause new oil and natural gas leasing on public lands or in offshore waters pending completion of a comprehensive review of the federal permitting and leasing practices, consider whether to adjust royalties associated with coal, oil, and gas resources extracted from public lands and offshore waters, or take other appropriate action, to account for corresponding climate costs.

In addition, new regulatory initiatives may be adopted or enforced by the BOEM or the BSEE in the future that could result in additional costs, delays, restrictions, or obligations with respect to oil and natural gas exploration and production operations conducted offshore by certain of our customers. Separately, in October 2020, BOEM and BSEE published a proposed rule regarding financial assurance requirements for offshore leases, particularly regarding requirements for bonds above base amounts prescribed by regulation. At this time, we cannot determine with any certainty the amount of any additional financial assurance that may be ordered by BOEM and required of us in the future, or that such additional financial assurance amounts can be obtained. The final publication or implementation of this rule, as well as any new rules, regulations, or legal initiatives, could delay or disrupt our customers' operations, increase the risk of expired leases due to the time required to develop new technology, result in increased supplemental bonding and costs, limit activities in certain areas, or cause our customers' to incur penalties, or shut-in production or lease cancellation. Also, if material spill events were to occur in the future, the United States or other countries could elect to issue directives to temporarily cease drilling activities offshore and, in any event, may from time to time issue further safety and environmental laws and regulations regarding offshore oil and gas exploration and development. The overall costs imposed on our customers to implement and complete any such spill response activities or any decommissioning obligations could exceed estimated accruals, insurance limits, or supplemental bonding amounts, which could result in the incurrence of additional costs to complete. Separately, in January 2021, the Biden Administration has issued orders temporarily suspending the issuance of new authorizations and suspending the issuance of new leases pending completion of a review of current practices, for oil and gas development on federal lands and waters. The Biden Administration also published an order calling for an increase in the production of offshore wind energy, which may impact the use of federal waters. We cannot predict with any certainty the full impact of any new laws or regulations on our customers' drilling operations or on the cost or availability of insurance to cover some or all of the risks associated with such operations. The occurrence of any one or more of these developments could result in decreased demand for our services, which could have a material adverse effect on our business as well as our financial position, results of operation and liquidity.

Our business is subject to federal, state and local laws and regulations that govern the product quality specifications of the petroleum products that we store and transport.

The petroleum products that we store and transport are sold by our customers for consumption into the public market. Various federal, state and local agencies have the authority to prescribe specific product quality specifications to commodities sold into the public market. Changes in product quality specifications could reduce our throughput volume, require us to incur additional handling costs or require the expenditure of significant capital. In addition, different product specifications for different markets impact the fungibility of products transported and stored in our pipeline systems and terminal facilities and could require the construction of additional storage to segregate products with different specifications. We may be unable to recover these costs through increased revenues.

In addition, our patented butane blending services are reliant upon gasoline vapor pressure specifications. Significant changes in such specifications could reduce butane blending opportunities, which would affect our ability to market our butane blending service licenses and which would ultimately affect our ability to recover the costs incurred to acquire and integrate our butane blending assets.

Risks Relating to Our Partnership Structure

Issuance of Limited Partner units or other classes of equity

We may issue an unlimited number of limited partner interests or other classes of equity without the consent of our Unitholders, which will dilute Unitholders' ownership interest in us and may increase the risk that we will not have sufficient available cash to maintain or increase our per unit distribution level.

Our partnership agreement allows us to issue an unlimited number of additional limited partner interests, including securities senior to the Common Units, without the approval of our Unitholders. The issuance of additional Common Units or other equity securities by us will have the following effects:

- our Unitholders' current proportionate ownership interest in us will decrease;
- the amount of cash available for distribution on each Common Unit or partnership security may decrease;
- the ratio of taxable income to distributions may increase;
- the relative voting strength of each previously outstanding Common Unit may be diminished; and

- the market price of our Common Units may decline.

Cash Distributions to Unitholders and Governance

Cash distributions are not guaranteed and may fluctuate with our performance and other external factors.

Our principal source of earnings and cash flow is cash distributions from ETO. In addition, ETO's earnings and cash flows are generated by its subsidiaries, including ETO's investments in Sunoco LP and USAC. Therefore, the amount of distributions we are currently able to make to our Unitholders may fluctuate based on the level of distributions ETO and its subsidiaries, including Sunoco LP and USAC, make to their partners. ETO may not be able to continue to make quarterly distributions at its current level or increase its quarterly distributions in the future. In addition, while we would expect to increase or decrease distributions to our Unitholders if ETO increases or decreases distributions to us, the timing and amount of such increased or decreased distributions, if any, will not necessarily be comparable to the timing and amount of the increase or decrease in distributions made by ETO to us.

Our ability to distribute cash received from ETO to our Unitholders is limited by a number of factors, including:

- interest expense and principal payments on our indebtedness;
- restrictions on distributions contained in any current or future debt agreements;
- our general and administrative expenses;
- expenses of our subsidiaries other than ETO and its subsidiaries, including tax liabilities of our corporate subsidiaries, if any; and
- reserves our general partner believes prudent for us to maintain for the proper conduct of our business or to provide for future distributions.

We cannot guarantee that in the future we will be able to pay distributions or that any distributions we do make will be at or above our current quarterly distribution. The actual amount of cash that is available for distribution to our Unitholders will depend on numerous factors, many of which are beyond our control or the control of our general partner.

Our general partner's absolute discretion in determining the level of cash reserves may adversely affect our ability to make cash distributions to our preferred unitholders.

Our partnership agreement requires our general partner to deduct from operating surplus cash reserves that in its reasonable discretion are necessary to fund our future operating expenditures. In addition, our partnership agreement permits our general partner to reduce available cash by establishing cash reserves for the proper conduct of our business, to comply with applicable law or agreements to which we are a party or to provide funds for future distributions to partners. These cash reserves will affect the amount of cash available for distribution to unitholders.

Unitholders may have liability to repay distributions.

Under certain circumstances, Unitholders may have to repay us amounts wrongfully distributed to them. Under Delaware law, we may not make a distribution to Unitholders if the distribution causes our liabilities to exceed the fair value of our assets. Liabilities to partners on account of their partnership interests and non-recourse liabilities are not counted for purposes of determining whether a distribution is permitted. Delaware law provides that a limited partner who receives such a distribution and knew at the time of the distribution that the distribution violated Delaware law, will be liable to the limited partnership for the distribution amount for three years from the distribution date.

The NYSE does not require a publicly traded partnership like us to comply with certain corporate governance requirements.

We have preferred units that are listed on the NYSE. Because we are a publicly traded partnership, the NYSE does not require us to have a majority of independent directors on our general partner's board of directors or to establish a compensation committee or a nominating and corporate governance committee. Accordingly, our Unitholders do not have the same protections afforded to stockholders of corporations that are subject to all of the corporate governance requirements of the applicable stock exchange.

Our General Partner

The control of our general partner may be transferred to a third party without Unitholder consent.

The general partner may transfer its general partner interest to a third party without the consent of the Unitholders. Furthermore, the general partner of our general partner may transfer its general partner interest in our general partner to a third party without

the consent of the Unitholders. Any new owner of the general partner or the general partner of the general partner would be in a position to replace the officers of the general partner with its own choices and to control the decisions taken by such officers.

Cost reimbursements due to our general partner may be substantial and may reduce our ability to pay the distributions to Unitholders.

Prior to making any distributions to our Unitholders, we will reimburse our general partner for all expenses it has incurred on our behalf. In addition, our general partner and its affiliates may provide us with services for which we will be charged reasonable fees as determined by the general partner. The reimbursement of these expenses and the payment of these fees could adversely affect our ability to make distributions to the Unitholders. Our general partner has sole discretion to determine the amount of these expenses and fees.

Our general partner has a limited call right that may require Unitholders to sell their units at an undesirable time or price.

If at any time our general partner and its affiliates own more than 90% of our outstanding units, our general partner will have the right, but not the obligation, which it may assign to any of its affiliates or to us, to acquire all, but not less than all, of the units held by unaffiliated persons at a price not less than their then-current market price. As a result, Unitholders may be required to sell their units at an undesirable time or price and may not receive any return on their investment. Unitholders may also incur a tax liability upon a sale of their units. As of December 31, 2020, the directors and executive officers of our general partner owned approximately 14% of our Common Units.

Our Subsidiaries

We are dependent on third parties, including key personnel of ETO under a shared services agreement, to provide the financial, accounting, administrative and legal services necessary to operate our business.

We rely on the services of key personnel of ETO, including the ongoing involvement and continued leadership of Kelcy L. Warren, one of the founders of ETO's midstream business. Mr. Warren has been integral to the ETO's success because of his ability to identify and develop strategic business opportunities. Losing the leadership of Mr. Warren could make it difficult for ETO to identify internal growth projects and accretive acquisitions, which could have a material adverse effect on ETO's ability to increase the cash distributions paid on its partnership interests.

ETO's executive officers that provide services to us pursuant to a shared services agreement allocate their time between us and ETO. To the extent that these officers face conflicts regarding the allocation of their time, we may not receive the level of attention from them that the management of our business requires. If ETO is unable to provide us with a sufficient number of personnel with the appropriate level of technical accounting and financial expertise, our internal accounting controls could be adversely impacted.

We have a holding company structure in which our subsidiaries conduct our operations and own our operating assets.

We are a holding company, and our subsidiaries conduct all of our operations and own all of our operating assets. We do not have significant assets other than the partnership interests and the equity in our subsidiaries. As a result, our ability to pay distributions to our Unitholders and to service our debt depends on the performance of our subsidiaries and their ability to distribute funds to us. The ability of our subsidiaries to make distributions to us may be restricted by, among other things, credit facilities and applicable state partnership laws and other laws and regulations. If we are unable to obtain funds from our subsidiaries, we may not be able to pay distributions to our Unitholders or to pay interest or principal on our debt when due.

The interruption of distributions to us from our operating subsidiaries and equity investees may affect our ability to satisfy our obligations and to make distributions to our partners.

We are a holding company with no business operations other than that of our operating subsidiaries. Our only significant assets are the equity interests we own in our operating subsidiaries and equity investees. As a result, we depend upon the earnings and cash flow of our operating subsidiaries and equity investees and any interruption of distributions to us may affect our ability to meet our obligations, including any obligations under our debt agreements, and to make distributions to our partners.

Our subsidiaries are not prohibited from competing with us.

Neither our partnership agreement nor the partnership agreements of our subsidiaries, including ETO, Sunoco LP and USAC, prohibit our subsidiaries from owning assets or engaging in businesses that compete directly or indirectly with us. In addition, our subsidiaries may acquire, construct or dispose of any assets in the future without any obligation to offer us the opportunity to purchase or construct any of those assets.

ETO may issue additional preferred equity, and Sunoco LP and USAC may issue additional common units, which may increase the risk that each Partnership will not have sufficient available cash to maintain or increase its per unit distribution level.

The partnership agreements of ETO, Sunoco LP and USAC allow each partnership to issue an unlimited number of additional limited partner interests. The issuance of additional preferred units, common units or other equity securities by each respective partnership will have the following effects:

- Unitholders' current proportionate ownership interest in each partnership will decrease;
- the amount of cash available for distribution on each common unit or partnership security may decrease;
- the ratio of taxable income to distributions may increase;
- the relative voting strength of each previously outstanding common unit may be diminished; and
- the market price of each partnership's common units may decline.

The payment of distributions on any additional units issued by ETO, Sunoco LP and USAC may increase the risk that either partnership may not have sufficient cash available to maintain or increase its per unit distribution level, which in turn may impact the available cash that we have to meet our obligations

A significant decrease in demand for motor fuel, including increased consumer preference for alternative motor fuels or improvements in fuel efficiency, in the areas Sunoco LP serves would reduce their ability to make distributions to its unitholders.

For the year ended December 31, 2020, sales of refined motor fuels accounted for approximately 96% of Sunoco LP's total revenues and 72% of gross profit. A significant decrease in demand for motor fuel in the areas Sunoco LP serves could significantly reduce revenues and Sunoco LP's ability to make distributions to its unitholders, including ETO. Sunoco LP revenues are dependent on various trends, such as trends in commercial truck traffic, travel and tourism in their areas of operation, and these trends can change. Regulatory action, including government imposed fuel efficiency standards, may also affect demand for motor fuel. Because certain of Sunoco LP's operating costs and expenses are fixed and do not vary with the volumes of motor fuel distributed, their costs and expenses might not decrease ratably or at all should they experience such a reduction. As a result, Sunoco LP may experience declines in their profit margin if fuel distribution volumes decrease.

Any technological advancements, regulatory changes or changes in consumer preferences causing a significant shift toward alternative motor fuels could reduce demand for the conventional petroleum based motor fuels Sunoco LP currently sells. Additionally, a shift toward electric, hydrogen, natural gas or other alternative-power vehicles could fundamentally change customers' shopping habits or lead to new forms of fueling destinations or new competitive pressures.

New technologies have been developed and governmental mandates have been implemented to improve fuel efficiency, which may result in decreased demand for petroleum-based fuel. Any of these outcomes could result in fewer visits to Sunoco LP's convenience stores or independently operated commission agents and dealer locations, a reduction in demand from their wholesale customers, decreases in both fuel and merchandise sales revenue, or reduced profit margins, any of which could have a material adverse effect on Sunoco LP's business, financial condition, results of operations and cash available for distribution to its unitholders.

Sunoco LP's financial condition and results of operations are influenced by changes in the prices of motor fuel, which may adversely impact margins, customers' financial condition and the availability of trade credit.

Sunoco LP's operating results are influenced by prices for motor fuel. General economic and political conditions, acts of war or terrorism and instability in oil producing regions, particularly in the Middle East and South America, could significantly impact crude oil supplies and petroleum costs. Significant increases or high volatility in petroleum costs could impact consumer demand for motor fuel and convenience merchandise. Such volatility makes it difficult to predict the impact that future petroleum costs fluctuations may have on Sunoco LP's operating results and financial condition. Sunoco LP is subject to dealer tank wagon pricing structures at certain locations further contributing to margin volatility. A significant change in any of these factors could materially impact both wholesale and retail fuel margins, the volume of motor fuel distributed or sold at retail, and overall customer traffic, each of which in turn could have a material adverse effect on Sunoco LP's business, financial condition, results of operations and cash available for distribution to its unitholders.

Significant increases in wholesale motor fuel prices could impact Sunoco LP as some of their customers may have insufficient credit to purchase motor fuel from us at their historical volumes. Higher prices for motor fuel may also reduce access to trade credit support or cause it to become more expensive.

The industries in which Sunoco LP operates are subject to seasonal trends, which may cause its operating costs to fluctuate, affecting its cash flow.

Sunoco LP relies in part on customer travel and spending patterns and may experience more demand for gasoline in the late spring and summer months than during the fall and winter. Travel, recreation and construction are typically higher in these months in the geographic areas in which Sunoco LP or its commission agents and dealers operate, increasing the demand for motor fuel that they sell and distribute. Therefore, Sunoco LP's revenues and cash flows are typically higher in the second and third quarters of our fiscal year. As a result, Sunoco LP's results from operations may vary widely from period to period, affecting Sunoco LP's cash flow.

The dangers inherent in the storage and transportation of motor fuel could cause disruptions in Sunoco LP's operations and could expose them to potentially significant losses, costs or liabilities.

Sunoco LP stores motor fuel in underground and aboveground storage tanks. Sunoco LP transports the majority of its motor fuel in its own trucks, instead of by third-party carriers. Sunoco LP's operations are subject to significant hazards and risks inherent in transporting and storing motor fuel. These hazards and risks include, but are not limited to, traffic accidents, fires, explosions, spills, discharges, and other releases, any of which could result in distribution difficulties and disruptions, environmental pollution, governmentally-imposed fines or clean-up obligations, personal injury or wrongful death claims, and other damage to its properties and the properties of others. Any such event not covered by Sunoco LP's insurance could have a material adverse effect on its business, financial condition, results of operations and cash available for distribution to its unitholders.

Sunoco LP's fuel storage terminals are subject to operational and business risks which may adversely affect their financial condition, results of operations, cash flows and ability to make distributions to its unitholders.

Sunoco LP's fuel storage terminals are subject to operational and business risks, the most significant of which include the following:

- the inability to renew a ground lease for certain of their fuel storage terminals on similar terms or at all;
- the dependence on third parties to supply their fuel storage terminals;
- outages at their fuel storage terminals or interrupted operations due to weather-related or other natural causes;
- the threat that the nation's terminal infrastructure may be a future target of terrorist organizations;
- the volatility in the prices of the products stored at their fuel storage terminals and the resulting fluctuations in demand for storage services;
- the effects of a sustained recession or other adverse economic conditions;
- the possibility of federal and/or state regulations that may discourage their customers from storing gasoline, diesel fuel, ethanol and jet fuel at their fuel storage terminals or reduce the demand by consumers for petroleum products;
- competition from other fuel storage terminals that are able to supply their customers with comparable storage capacity at lower prices; and
- climate change legislation or regulations that restrict emissions of GHGs could result in increased operating and capital costs and reduced demand for our storage services.

The occurrence of any of the above situations, amongst others, may affect operations at their fuel storage terminals and may adversely affect Sunoco LP's business, financial condition, results of operations, cash flows and ability to make distributions to its unitholders.

Negative events or developments associated with Sunoco LP's branded suppliers could have an adverse impact on its revenues.

Sunoco LP believes that the success of its operations is dependent, in part, on the continuing favorable reputation, market value, and name recognition associated with the motor fuel brands sold at Sunoco LP's convenience stores and at stores operated by its independent, branded dealers and commission agents. Erosion of the value of those brands could have an adverse impact on the volumes of motor fuel Sunoco LP distributes, which in turn could have a material adverse effect on its business, financial condition, results of operations and ability to make distributions to its unitholders.

Sunoco LP currently depends on a limited number of principal suppliers in each of its operating areas for a substantial portion of its merchandise inventory and its products and ingredients for its food service facilities. A disruption in supply or a change in either relationship could have a material adverse effect on its business.

Sunoco LP currently depends on a limited number of principal suppliers in each of its operating areas for a substantial portion of its merchandise inventory and its products and ingredients for its food service facilities. If any of Sunoco LP's principal suppliers elect not to renew their contracts, Sunoco LP may be unable to replace the volume of merchandise inventory and products and ingredients currently purchased from them on similar terms or at all in those operating areas. Further, a disruption in supply or a significant change in Sunoco LP's relationship with any of these suppliers could have a material adverse effect on Sunoco LP's business, financial condition and results of operations and cash available for distribution to its unitholders.

The wholesale motor fuel distribution industry and convenience store industry are characterized by intense competition and fragmentation and impacted by new entrants. Failure to effectively compete could result in lower margins.

The market for distribution of wholesale motor fuel is highly competitive and fragmented, which results in narrow margins. Sunoco LP has numerous competitors, some of which may have significantly greater resources and name recognition than it does. Sunoco LP relies on its ability to provide value-added, reliable services and to control its operating costs in order to maintain our margins and competitive position. If Sunoco LP fails to maintain the quality of its services, certain of its customers could choose alternative distribution sources and margins could decrease. While major integrated oil companies have generally continued to divest retail sites and the corresponding wholesale distribution to such sites, such major oil companies could shift from this strategy and decide to distribute their own products in direct competition with Sunoco LP, or large customers could attempt to buy directly from the major oil companies. The occurrence of any of these events could have a material adverse effect on Sunoco LP's business, financial condition, results of operations and cash available for distribution to its unitholders.

The geographic areas in which Sunoco LP operates and supplies independently operated commission agent and dealer locations are highly competitive and marked by ease of entry and constant change in the number and type of retailers offering products and services of the type we and our independently operated commission agents and dealers sell in stores. Sunoco LP competes with other convenience store chains, independently owned convenience stores, motor fuel stations, supermarkets, drugstores, discount stores, dollar stores, club stores, mass merchants and local restaurants. Over the past two decades, several non-traditional retailers, such as supermarkets, hypermarkets, club stores and mass merchants, have impacted the convenience store industry, particularly in the geographic areas in which Sunoco LP operates, by entering the motor fuel retail business. These non-traditional motor fuel retailers have captured a significant share of the motor fuels market, and Sunoco LP expects their market share will continue to grow.

In some of Sunoco LP's markets, its competitors have been in existence longer and have greater financial, marketing, and other resources than they or their independently operated commission agents and dealers do. As a result, Sunoco LP's competitors may be able to better respond to changes in the economy and new opportunities within the industry. To remain competitive, Sunoco LP must constantly analyze consumer preferences and competitors' offerings and prices to ensure that they offer a selection of convenience products and services at competitive prices to meet consumer demand. Sunoco LP must also maintain and upgrade our customer service levels, facilities and locations to remain competitive and attract customer traffic to our stores. Sunoco LP may not be able to compete successfully against current and future competitors, and competitive pressures faced by Sunoco LP could have a material adverse effect on its business, results of operations and cash available for distribution to its unitholders.

Sunoco LP may be subject to adverse publicity resulting from concerns over food quality, product safety, health or other negative events or developments that could cause consumers to avoid its retail locations or independently operated commission agent or dealer locations.

Sunoco LP may be the subject of complaints or litigation arising from food-related illness or product safety which could have a negative impact on its business. Negative publicity, regardless of whether the allegations are valid, concerning food quality, food safety or other health concerns, food service facilities, employee relations or other matters related to its operations may materially adversely affect demand for its food and other products and could result in a decrease in customer traffic to its retail stores or independently operated commission agent or dealer locations.

It is critical to Sunoco LP's reputation that they maintain a consistent level of high quality at their food service facilities and other franchise or fast food offerings. Health concerns, poor food quality or operating issues stemming from one store or a limited number of stores could materially and adversely affect the operating results of some or all of their stores and harm the company-owned brands, continuing favorable reputation, market value and name recognition.

Sunoco LP does not own all of the land on which its retail service stations are located, and Sunoco LP leases certain facilities and equipment, and Sunoco LP is subject to the possibility of increased costs to retain necessary land use which could disrupt its operations.

Sunoco LP does not own all of the land on which its retail service stations are located. Sunoco LP has rental agreements for approximately 38% of the company, commission agent or dealer operated retail service stations where Sunoco LP currently

controls the real estate. Sunoco LP also has rental agreements for certain logistics facilities. As such, Sunoco LP is subject to the possibility of increased costs under rental agreements with landowners, primarily through rental increases and renewals of expired agreements. Sunoco LP is also subject to the risk that such agreements may not be renewed. Additionally, certain facilities and equipment (or parts thereof) used by Sunoco LP are leased from third parties for specific periods. Sunoco LP's inability to renew leases or otherwise maintain the right to utilize such facilities and equipment on acceptable terms, or the increased costs to maintain such rights, could have a material adverse effect on its financial condition, results of operations and cash flows.

Sunoco LP is subject to federal laws related to the Renewable Fuel Standard.

New laws, new interpretations of existing laws, increased governmental enforcement of existing laws or other developments could require us to make additional capital expenditures or incur additional liabilities. For example, certain independent refiners have initiated discussions with the EPA to change the way the Renewable Fuel Standard ("RFS") is administered in an attempt to shift the burden of compliance from refiners and importers to blenders and distributors. Under the RFS, which requires an annually increasing amount of biofuels to be blended into the fuels used by U.S. drivers, refiners/importers are obligated to obtain renewable identification numbers ("RINS") either by blending biofuel into gasoline or through purchase in the open market. If the obligation was shifted from the importer/refiner to the blender/distributor, the Partnership would potentially have to utilize the RINS it obtains through its blending activities to satisfy a new obligation and would be unable to sell RINS to other obligated parties, which may cause an impact on the fuel margins associated with Sunoco LP's sale of gasoline. In addition, the RFS regulations are highly complex and evolving, and the RINS market is subject to significant price volatility as a result. The price of RINS to meet compliance obligations under the RFS could be substantial and adversely impact our financial condition.

The occurrence of any of the events described above could have a material adverse effect on Sunoco LP's business, financial condition, results of operations and cash available for distribution to its unitholders.

Sunoco LP is subject to federal, state and local laws and regulations that govern the product quality specifications of refined petroleum products it purchases, stores, transports, and sells to its distribution customers.

Various federal, state, and local government agencies have the authority to prescribe specific product quality specifications for certain commodities, including commodities that Sunoco LP distributes. Changes in product quality specifications, such as reduced sulfur content in refined petroleum products, or other more stringent requirements for fuels, could reduce Sunoco LP's ability to procure product, require it to incur additional handling costs and/or require the expenditure of capital. If Sunoco LP is unable to procure product or recover these costs through increased selling price, it may not be able to meet its financial obligations. Failure to comply with these regulations could result in substantial penalties for Sunoco LP.

USAC's customers may choose to vertically integrate their operations by purchasing and operating their own compression fleet, increasing the number of compression units they currently own or using alternative technologies for enhancing crude oil production.

USAC's customers that are significant producers, processors, gatherers and transporters of natural gas and crude oil may choose to vertically integrate their operations by purchasing and operating their own compression fleets in lieu of using USAC's compression services. The historical availability of attractive financing terms from financial institutions and equipment manufacturers facilitates this possibility by making the purchase of individual compression units increasingly affordable to USAC's customers. In addition, there are many technologies available for the artificial enhancement of crude oil production, and USAC's customers may elect to use these alternative technologies instead of the gas lift compression services USAC provides. Such vertical integration, increases in vertical integration or use of alternative technologies could result in decreased demand for USAC's compression services, which may have a material adverse effect on its business, results of operations, financial condition and reduce its cash available for distribution.

A significant portion of USAC's services are provided to customers on a month-to-month basis, and USAC cannot be sure that such customers will continue to utilize its services.

USAC's contracts typically have an initial term of between six months and five years, depending on the application and location of the compression unit. After the expiration of the initial term, the contract continues on a month-to-month or longer basis until terminated by USAC or USAC's customers upon notice as provided for in the applicable contract. For the year ended December 31, 2020, approximately 30% of USAC's compression services on a revenue basis were provided on a month-to-month basis to customers who continue to utilize its services following expiration of the primary term of their contracts. These customers can generally terminate their month-to-month compression services contracts on 30-days' written notice. If a significant number of these customers were to terminate their month-to-month services, or attempt to renegotiate their month-

to-month contracts at substantially lower rates, it could have a material adverse effect on USAC's business, results of operations, financial condition and cash available for distribution.

USAC's preferred units have rights, preferences and privileges that are not held by, and are preferential to the rights of, holders of its common units.

USAC's preferred units rank senior to all of its other classes or series of equity securities with respect to distribution rights and rights upon liquidation. These preferences could adversely affect the market price for its common units or could make it more difficult for USAC to sell its common units in the future.

In addition, distributions on USAC's preferred units accrue and are cumulative, at the rate of 9.75% per annum on the original issue price, which amounts to a quarterly distribution of $24.375 per preferred unit. If USAC does not pay the required distributions on its preferred units, USAC will be unable to pay distributions on its common units. Additionally, because distributions on USAC's preferred units are cumulative, USAC will have to pay all unpaid accumulated distributions on the preferred units before USAC can pay any distributions on its common units. Also, because distributions on USAC's common units are not cumulative, if USAC does not pay distributions on its common units with respect to any quarter, USAC's common unitholders will not be entitled to receive distributions covering any prior periods if USAC later recommences paying distributions on its common units.

USAC's preferred units are convertible into common units by the holders of USAC's preferred units or by USAC in certain circumstances. USAC's obligation to pay distributions on USAC's preferred units, or on the common units issued following the conversion of USAC's preferred units, could impact USAC's liquidity and reduce the amount of cash flow available for working capital, capital expenditures, growth opportunities, acquisitions and other general Partnership purposes. USAC's obligations to the holders of USAC's preferred units could also limit its ability to obtain additional financing or increase its borrowing costs, which could have an adverse effect on its financial condition.

Risks Related to Conflicts of Interest

The fiduciary duties of our general partner's officers and directors may conflict with those of ETO's, Sunoco LP's or USAC's respective general partners.

Conflicts of interest may arise because of the relationships among ETO, Sunoco LP, USAC, their general partners and us. Our General Partner's directors and officers have fiduciary duties to manage our business in a manner beneficial to us and our Unitholders. Some of our general partner's directors or officers are also directors and/or officers of ETO's general partner, Sunoco LP's general partner or USAC's general partner, and have fiduciary duties to manage the respective businesses of ETO, Sunoco LP and USAC in a manner beneficial to ETO, Sunoco LP, USAC and their respective unitholders. The resolution of these conflicts may not always be in our best interest or that of our Unitholders.

Potential conflicts of interest may arise among our general partner, its affiliates and us. Our general partner and its affiliates have limited fiduciary duties to us, which may permit them to favor their own interests to the detriment of us.

Conflicts of interest may arise among our general partner and its affiliates, on the one hand, and us, on the other hand. As a result of these conflicts, our general partner may favor its own interests and the interests of its affiliates over our interests. These conflicts include, among others, the following:

- our general partner is allowed to take into account the interests of parties other than us, including ETO, and its subsidiaries, including Sunoco LP and USAC, and their respective affiliates and any general partners and limited partnerships acquired in the future, in resolving conflicts of interest, which has the effect of limiting its fiduciary duties to us.
- our general partner has limited its liability and reduced its fiduciary duties under the terms of our partnership agreement, while also restricting the remedies available for actions that, without these limitations, might constitute breaches of fiduciary duty. As a result of purchasing our units, Unitholders consent to various actions and conflicts of interest that might otherwise constitute a breach of fiduciary or other duties under applicable state law.
- our general partner determines the amount and timing of our investment transactions, borrowings, issuances of additional partnership securities and reserves, each of which can affect the amount of cash that is available for distribution.
- our general partner determines which costs it and its affiliates have incurred are reimbursable by us.
- our partnership agreement does not restrict our general partner from causing us to pay it or its affiliates for any services rendered, or from entering into additional contractual arrangements with any of these entities on our behalf, so long as the terms of any such payments or additional contractual arrangements are fair and reasonable to us.
- our general partner controls the enforcement of obligations owed to us by it and its affiliates.

- our general partner decides whether to retain separate counsel, accountants or others to perform services for us.

Our partnership agreement limits our general partner's fiduciary duties to us and restricts the remedies available for actions taken by our general partner that might otherwise constitute breaches of fiduciary duty.

Our partnership agreement contains provisions that reduce the standards to which our general partner would otherwise be held by state fiduciary duty law. For example, our partnership agreement:

- permits our general partner to make a number of decisions in its individual capacity, as opposed to in its capacity as our general partner. This entitles our general partner to consider only the interests and factors that it desires, and it has no duty or obligation to give any consideration to any interest of, or factors affecting, us, our affiliates or any limited partner;
- provides that our general partner is entitled to make other decisions in "good faith" if it reasonably believes that the decisions are in our best interests;
- generally provides that affiliated transactions and resolutions of conflicts of interest not approved by a conflicts committee of the board of directors of our general partner and not involving a vote of Unitholders must be on terms no less favorable to us than those generally being provided to or available from unrelated third parties or be "fair and reasonable" to us and that, in determining whether a transaction or resolution is "fair and reasonable," our general partner may consider the totality of the relationships among the parties involved, including other transactions that may be particularly favorable or advantageous to us;
- provides that unless our general partner has acted in bad faith, the action taken by our general partner shall not constitute a breach of its fiduciary duty;
- provides that our general partner may resolve any conflicts of interest involving us and our general partner and its affiliates, and any resolution of a conflict of interest by our general partner that is "fair and reasonable" to us will be deemed approved by all partners, including the Unitholders, and will not constitute a breach of the partnership agreement;
- provides that our general partner may, but is not required, in connection with its resolution of a conflict of interest, to seek "special approval" of such resolution by appointing a conflicts committee of the general partner's board of directors composed of two or more independent directors to consider such conflicts of interest and to recommend action to the board of directors, and any resolution of the conflict of interest by the conflicts committee shall be conclusively deemed "fair and reasonable" to us; and
- provides that our general partner and its officers and directors will not be liable for monetary damages to us, our limited partners or assignees for any acts or omissions unless there has been a final and non-appealable judgment entered by a court of competent jurisdiction determining that the general partner or those other persons acted in bad faith or engaged in fraud, willful misconduct or gross negligence.

Our general partner's absolute discretion in determining the level of cash reserves may adversely affect our ability to make cash distributions to our Unitholders.

Our partnership agreement requires our general partner to deduct from operating surplus cash reserves that in its reasonable discretion are necessary to fund our future operating expenditures. In addition, our partnership agreement permits our general partner to reduce available cash by establishing cash reserves for the proper conduct of our business, to comply with applicable law or agreements to which we are a party or to provide funds for future distributions to partners. These cash reserves will affect the amount of cash available for distribution to Unitholders.

Although we control Sunoco LP and USAC through our ownership of Sunoco LP's and USAC's general partners, Sunoco LP's and USAC's general partners owe duties to Sunoco LP and Sunoco LP's unitholders and USAC and USAC's unitholders, respectively, which may conflict with our interests.

Conflicts of interest exist and may arise in the future as a result of the relationships between us and our affiliates, on the one hand, and Sunoco LP and USAC and their respective limited partners, on the other hand. The directors and officers of Sunoco LP's and USAC's general partners have duties to manage Sunoco LP and USAC, respectively, in a manner beneficial to us. At the same time, the general partners have fiduciary duties to manage Sunoco LP and USAC in a manner beneficial to Sunoco LP and USAC and their respective limited partners. The boards of directors of Sunoco LP's and USAC's general partner will resolve any such conflict and have broad latitude to consider the interests of all parties to the conflict. The resolution of these conflicts may not always be in our best interest.

For example, conflicts of interest with Sunoco LP and USAC may arise in the following situations:

- the allocation of shared overhead expenses to Sunoco LP, USAC and us;

- the interpretation and enforcement of contractual obligations between us and our affiliates, on the one hand, and Sunoco LP and USAC, on the other hand;
- the determination of the amount of cash to be distributed to Sunoco LP's and USAC's partners and the amount of cash to be reserved for the future conduct of Sunoco LP's and USAC's businesses;
- the determination whether to make borrowings under Sunoco LP's and USAC's revolving credit facilities to pay distributions to their respective partners;
- the determination of whether a business opportunity (such as a commercial development opportunity or an acquisition) that we may become aware of independently of Sunoco LP and USAC is made available for Sunoco LP and USAC to pursue; and
- any decision we make in the future to engage in business activities independent of Sunoco LP and USAC.

Some of our executive officers and directors face potential conflicts of interest in managing our business.

Certain of our executive officers and directors are also officers and/or directors of ETO. These relationships may create conflicts of interest regarding corporate opportunities and other matters. The resolution of any such conflicts may not always be in our or our Unitholders' best interests. In addition, these overlapping executive officers and directors allocate their time among us and ETO. These officers and directors face potential conflicts regarding the allocation of their time, which may adversely affect our business, results of operations and financial condition.

Affiliates of our general partner may compete with us.

Except as provided in our partnership agreement, affiliates and related parties of our general partner are not prohibited from engaging in other businesses or activities, including those that might be in direct competition with us.

Tax Risks to Unitholders

Our tax treatment depends on our continuing status as a partnership for federal income tax purposes, as well as our not being subject to a material amount of entity-level taxation. If the IRS were to treat us, ETO or its subsidiaries, including Sunoco LP and USAC as a corporation for federal income tax purposes or if we, ETO, Sunoco LP or USAC become subject to a material amount of entity-level taxation for state tax purposes, then our cash available for distribution would be substantially reduced.

The anticipated after-tax economic benefit of an investment in our Common Units depends largely on our being treated as a partnership for federal income tax purposes. We have not requested, and do not plan to request, a ruling from the IRS on this matter. The value of our investments in ETO and its subsidiaries, including Sunoco LP and USAC, depend largely on ETO, Sunoco LP and USAC being treated as partnerships for federal income tax purposes. Despite the fact that we, ETO, Sunoco LP and USAC are each a limited partnership under Delaware law, we would each be treated as a corporation for federal income tax purposes unless we satisfy a "qualifying income" requirement. Based upon our current operations and current Treasury Regulations, we believe we, ETO, Sunoco LP and USAC satisfy the qualifying income requirement. Failing to meet the qualifying income requirement or a change in current law could cause us, ETO, Sunoco LP or USAC to be treated as a corporation for federal income tax purposes or otherwise subject us to taxation as an entity.

If we, ETO, Sunoco LP or USAC were treated as a corporation for federal income tax purposes, we would pay federal income tax at the corporate tax rate and we would likely pay additional state income taxes at varying rates. Distributions to Unitholders would generally be taxed again as corporate distributions, and none of our income, gains, losses or deductions would flow through to Unitholders. Because a tax would be imposed upon us as a corporation, our cash available for distribution to Unitholders would be substantially reduced. Therefore, treatment of us as a corporation would result in a material reduction in the anticipated cash flow and after-tax return to the Unitholders, likely causing a substantial reduction in the value of our Common Units.

At the state level, several states have been evaluating ways to subject partnerships to entity-level taxation through the imposition of state income, franchise, or other forms of taxation. We currently own property or conduct business in many states that impose a margin or franchise tax. In the future, we may expand our operations. Imposition of a similar tax on us in the jurisdictions in which we operate or in other jurisdictions to which we may expand could substantially reduce our cash available for distribution to our Unitholders. Our partnership agreement provides that if a law is enacted or existing law is modified or interpreted in a manner that subjects us to taxation as a corporation or otherwise subjects us to entity-level taxation for U.S. federal, state, local or foreign income tax purposes, the target distribution amounts may be adjusted to reflect the impact of that law or interpretation on us.

The tax treatment of publicly traded partnerships or an investment in our units could be subject to potential legislative, judicial or administrative changes or differing interpretations, possibly applied on a retroactive basis.

The present United States federal income tax treatment of publicly traded partnerships, including us, or an investment in our Common Units may be modified by administrative, legislative or judicial changes or differing interpretations at any time. Members of Congress have frequently proposed and considered substantive changes to the existing United States federal income tax laws that affect publicly traded partnerships, including proposals that would eliminate our ability to qualify for partnership tax treatment.

Any modification to the United States federal income tax laws and interpretations thereof may or may not be retroactively applied and could make it more difficult or impossible for us to meet the exception for certain publicly traded partnerships to be treated as partnerships for United States federal income tax purposes. We are unable to predict whether any changes or other proposals will ultimately be enacted. Any future legislative changes could negatively impact the value of an investment in our Common Units. You are urged to consult with your own tax advisor with respect to the status of regulatory or administrative developments and proposals and their potential effect on your investment in our Common Units.

If the IRS contests the federal income tax positions we take, the market for our Common Units may be adversely affected and the costs of any such contest will reduce cash available for distributions to our Unitholders.

We have not requested a ruling from the IRS with respect to our treatment as a partnership for federal income tax purposes. The IRS may adopt positions that differ from the positions we take. It may be necessary to resort to administrative or court proceedings to sustain some or all of the positions we take. A court may not agree with some or all of the positions we take. Any contest with the IRS may materially and adversely impact the market for our Common Units and the prices at which they trade. In addition, the costs of any contest between us and the IRS will result in a reduction in our cash available for distribution to our Unitholders and thus will be borne indirectly by our Unitholders.

If the IRS makes audit adjustments to our income tax returns for tax years beginning after December 31, 2017, it (and some states) may assess and collect any taxes (including any applicable penalties and interest) resulting from such audit adjustments directly from us, in which case our cash available for distribution to our Unitholders might be substantially reduced.

Pursuant to the Bipartisan Budget Act of 2015, for tax years beginning after December 31, 2017, if the IRS makes audit adjustments to our income tax returns, it (and some states) may assess and collect any taxes (including any applicable penalties and interest) resulting from such audit adjustment directly from us. To the extent possible under the new rules, our general partner may elect to either pay the taxes (including any applicable penalties and interest) directly to the IRS or, if we are eligible, issue an information statement to each Unitholder and former Unitholder with respect to an audited and adjusted return. Although our general partner may elect to have our Unitholders and former Unitholders take such audit adjustment into account and pay any resulting taxes (including applicable penalties or interest) in accordance with their interests in us during the tax year under audit, there can be no assurance that such election will be practical, permissible or effective in all circumstances. As a result, our current Unitholders may bear some or all of the tax liability resulting from such audit adjustment, even if such Unitholders did not own units in us during the tax year under audit. If, as a result of any such audit adjustment, we are required to make payments of taxes, penalties and interest, our cash available for distribution to our Unitholders might be substantially reduced.

Unitholders are required to pay taxes on their share of our income even if they do not receive any cash distributions from us.

Our Unitholders are required to pay any federal income taxes and, in some cases, state and local income taxes on their share of our taxable income whether or not they receive cash distributions from us. Our Unitholders may not receive cash distributions from us equal to their share of our taxable income or even equal to the actual tax liability that results from that income.

Tax gain or loss on disposition of our Common Units could be more or less than expected.

If a Unitholder sells their Common Units, the Unitholder will recognize a gain or loss equal to the difference between the amount realized and that Unitholder’s tax basis in those units. Because distributions in excess of a Unitholder’s allocable share of our net taxable income decrease such Unitholder’s tax basis in their Common Units, the amount, if any, of such prior excess distributions with respect to the units a Unitholder sells will, in effect, become taxable income to a Unitholder if such units are sold at a price greater than their tax basis in those units, even if the price such Unitholder receives is less than their original costs. In addition, because the amount realized includes a Unitholder’s share of our nonrecourse liabilities, if a Unitholder sells their Common Units, a Unitholder may incur a tax liability in excess of the amount of cash received from the sale.

A substantial portion of the amount realized from a Unitholder's sale of their Common Units, whether or not representing gain, may be taxed as ordinary income to such Unitholder due to potential recapture items, including depreciation recapture.Thus, a Unitholder may recognize both ordinary income and capital loss from the sale of Common Units if the amount realized on a sale of such units is less than such Unitholder's adjusted basis in the units. Net capital loss may only offset capital gains and, in the case of individuals, up to $3,000 of ordinary income per year. In the taxable period in which a Unitholder sells their Common Units, such Unitholder may recognize ordinary income from our allocations of income and gain to such Unitholder prior to the sale and from recapture items that generally cannot be offset by any capital loss recognized upon the sale of Common Units.

Tax-exempt entities face unique tax issues from owning our units that may result in adverse tax consequences to them.

Investment in our units by tax-exempt entities, such as employee benefit plans and individual retirement accounts (known as IRAs) raises issues unique to them. For example, virtually all of our income allocated to organizations that are exempt from United States federal income tax, including IRAs and other retirement plans, will be unrelated business taxable income and will be taxable to them. Tax-exempt entities should consult a tax advisor before investing in our units.

Non-United States Unitholders will be subject to United States taxes and withholding with respect to their income and gain from owning our units.

Non-United States Unitholders are generally taxed and subject to income tax filing requirements by the United States on income effectively connected with a United States trade or business ("effectively connected income"). Income allocated to our Unitholders and any gain from the sale of our units will generally be considered to be "effectively connected" with a United States trade or business. As a result, distributions to a non-United States Unitholder will be subject to withholding at the highest applicable effective tax rate and a non-United States Unitholder who sells or otherwise disposes of a unit will also be subject to United States federal income tax on the gain realized from the sale or disposition of that unit.

Moreover, the transferee of an interest in a partnership that is engaged in a United States trade or business is generally required to withhold 10% of the "amount realized" by the transferor unless the transferor certifies that it is not a foreign person. While the determination of a partner's "amount realized" generally includes any decrease of a partner's share of the partnership's liabilities, recently issued Treasury regulations provide that the "amount realized" on a transfer of an interest in a publicly traded partnership, such as our Common Units, will generally be the amount of gross proceeds paid to the broker effecting the applicable transfer on behalf of the transferor, and thus will be determined without regard to any decrease in that partner's share of a publicly traded partnership's liabilities. The Treasury regulations further provide that withholding on a transfer of an interest in a publicly traded partnership will not be imposed on a transfer that occurs prior to January 1, 2022, and after that date, if effected through a broker, the obligation to withhold is imposed on the transferor's broker.

We have subsidiaries that will be treated as corporations for federal income tax purposes and subject to corporate-level income taxes.

Even though we (as a partnership for United States federal income tax purposes) are not subject to United States federal income tax, some of our operations are conducted through subsidiaries that are organized as corporations for United States federal income tax purposes. The taxable income, if any, of subsidiaries that are treated as corporations for United States federal income tax purposes, is subject to corporate-level United States federal income taxes, which may reduce the cash available for distribution to us and, in turn, to our Unitholders. If the IRS or other state or local jurisdictions were to successfully assert that these corporations have more tax liability than we anticipate or legislation was enacted that increased the corporate tax rate, the cash available for distribution could be further reduced. The income tax return filings positions taken by these corporate subsidiaries require significant judgment, use of estimates, and the interpretation and application of complex tax laws. Significant judgment is also required in assessing the timing and amounts of deductible and taxable items. Despite our belief that the income tax return positions taken by these subsidiaries are fully supportable, certain positions may be successfully challenged by the IRS, state or local jurisdictions.

We treat each purchaser of Common Units as having the same tax benefits without regard to the actual Common Units purchased. The IRS may challenge this treatment, which could result in a Unitholder owing more tax and may adversely affect the value of the Common Units.

Because we cannot match transferors and transferees of Common Units and because of other reasons, we have adopted certain methods for allocating depreciation, depletion and amortization that may not conform to all aspects of existing Treasury Regulations. A successful IRS challenge to the use of these methods could adversely affect the amount of tax benefits available to our Unitholders. It also could affect the timing of these tax benefits or the amount of gain from the sale of Common Units and could have a negative impact on the value of our Common Units or result in audit adjustments to tax returns of our Unitholders. Moreover, because we have subsidiaries that are organized as C corporations for federal income tax purposes owns

units in us, a successful IRS challenge could result in this subsidiary having a greater tax liability than we anticipate and, therefore, reduce the cash available for distribution to our partnership and, in turn, to our Unitholders.

We generally prorate our items of income, gain, loss and deduction between transferors and transferees of our units each month based upon the ownership of our units on the first business day of each month, instead of on the basis of the date a particular unit is transferred. The IRS may challenge aspects of our proration method, and if successful, we would be required to change the allocation of items of income, gain, loss and deduction among our Unitholders.

We generally prorate our items of income, gain, loss and deduction between transferors and transferees of our units each month based upon the ownership of our units on the first business day of each month (the "Allocation Date"), instead of on the basis of the date a particular unit is transferred. Similarly, we generally allocate (i) certain deductions for depreciation of capital additions, (ii) gain or loss realized on a sale or other disposition of our assets and (iii) in the discretion of the general partner, any other extraordinary item of income, gain, loss or deduction based upon ownership on the Allocation Date. Treasury Regulations allow a similar monthly simplifying convention, but such regulations do not specifically authorize all aspects of the proration method we have adopted. If the IRS were to challenge our proration method, we may be required to change the allocation of items of income, gain, loss and deduction among our Unitholders.

A Unitholder whose units are the subject of a securities loan (e.g. a loan to a short seller to cover a short sale of units) may be considered as having disposed of those units. If so, such Unitholder would no longer be treated for tax purposes as a partner with respect to those units during the period of the loan and may recognize gain or loss from the disposition.

Because there are no specific rules governing the federal income tax consequences of loaning a partnership interest, a Unitholder whose units are the subject of a securities loan may be considered as having disposed of the loaned units. In that case, the Unitholder may no longer be treated for tax purposes as a partner with respect to those units during the period of the loan to the short seller, and the Unitholder and may recognize gain or loss from such disposition. Moreover, during the period of the loan, any of our income, gain, loss or deduction with respect to those units may not be reportable by the Unitholder and any cash distributions received by the Unitholder as to those units could be fully taxable as ordinary income. Unitholders desiring to assure their status as partners and avoid the risk of gain recognition from a securities loan are urged to consult a tax advisor to determine whether it is advisable to modify any applicable brokerage account agreements to prohibit their brokers from borrowing their units.

We have adopted certain valuation methodologies in determining Unitholder's allocations of income, gain, loss and deduction. The IRS may challenge these methods or the resulting allocations, and such a challenge could adversely affect the value of our Common Units.

When we issue additional units or engage in certain other transactions, we determine the fair market value of our assets and allocate any unrealized gain or loss attributable to such assets to the capital accounts of our Unitholders and our general partner. Although we may from time to time consult with professional appraisers regarding valuation matters, including the valuation of our assets, we make many of the fair market value estimates of our assets ourselves using a methodology based on the market value of our Common Units as a means to measure the fair market value of our assets. Our methodology may be viewed as understating the value of our assets. In that case, there may be a shift of income, gain, loss and deduction between certain Unitholders and our general partner, which may be unfavorable to such Unitholders. Moreover, under our current valuation methods, subsequent purchasers of our Common Units may have a greater portion of their Internal Revenue Code Section 743(b) adjustment allocated to our tangible assets and a lesser portion allocated to our intangible assets. The IRS may challenge our valuation methods, or our allocation of Section 743(b) adjustment attributable to our tangible and intangible assets, and allocations of income, gain, loss and deduction between our general partner and certain of our Unitholders.

A successful IRS challenge to these methods or allocations could adversely affect the amount of taxable income or loss being allocated to our Unitholders. It also could affect the amount of gain on the sale of Common Units by our Unitholders and could have a negative impact on the value of our Common Units or result in audit adjustments to the tax returns of our Unitholders without the benefit of additional deductions.

Unitholders will likely be subject to state and local taxes and income tax return filing requirements in jurisdictions where they do not live as a result of investing in our units.

In addition to United States federal income taxes, the Unitholders may be subject to other taxes, including state and local taxes, unincorporated business taxes and estate, inheritance or intangible taxes that are imposed by the various jurisdictions in which we or our subsidiaries conduct business or own property now or in the future, even if they do not live in any of those jurisdictions. Unitholders will likely be required to file state and local income tax returns and pay state and local income taxes in some or all of these various jurisdictions. Further, Unitholders may be subject to penalties for failure to comply with those requirements. It is the responsibility of each Unitholder to file all federal, state and local tax returns.

Unitholders may be subject to limitation on their ability to deduct interest expense incurred by us.

In general, our Unitholders are entitled to a deduction for the interest we have paid or accrued on indebtedness properly allocable to our trade or business during our taxable year. However, subject to the exceptions in the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act"), under the Tax Cuts and Jobs Act, for taxable years beginning after December 31, 2017, our deduction for "business interest" is generally limited to the sum of our business interest income and 30% of our "adjusted taxable income." For the 2020 taxable year, the CARES Act generally increases the 30% adjusted taxable income limitation to 50%. For the purposes of this limitation, adjusted taxable income is computed without regard to any business interest expense or business interest income, and in the case of taxable years beginning before January 1, 2022, any deduction allowable for depreciation, amortization, or depletion. The interest limitation does not apply to regulated pipeline businesses and, therefore, we believe that our interest expense is fully deductible. If the IRS contests this position or if further guidance is issued contrary to the positions taken, the unitholder's ability to deduct this interest expense could be limited.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

A description of our properties is included in "Item 1. Business." In addition, we own office buildings for our executive offices in Dallas, Texas and office buildings in Newton Square, Pennsylvania; Houston, Texas and San Antonio, Texas. While we may require additional office space as our business expands, we believe that our existing facilities are adequate to meet our needs for the immediate future, and that additional facilities will be available on commercially reasonable terms as needed.

We believe that we have satisfactory title to or valid rights to use all of our material properties. Although some of our properties are subject to liabilities and leases, liens for taxes not yet due and payable, encumbrances securing payment obligations under non-competition agreements and immaterial encumbrances, easements and restrictions, we do not believe that any such burdens will materially interfere with our continued use of such properties in our business, taken as a whole. In addition, we believe that we have, or are in the process of obtaining, all required material approvals, authorizations, orders, licenses, permits, franchises and consents of, and have obtained or made all required material registrations, qualifications and filings with, the various state and local government and regulatory authorities which relate to ownership of our properties or the operations of our business.

Substantially all of our pipelines, which are described in "Item 1. Business," are constructed on rights-of-way granted by the apparent record owners of the property. Lands over which pipeline rights-of-way have been obtained may be subject to prior liens that have not been subordinated to the right-of-way grants. We have obtained, where necessary, easement agreements from public authorities and railroad companies to cross over or under, or to lay facilities in or along, watercourses, county roads, municipal streets, railroad properties and state highways, as applicable. In some cases, properties on which our pipelines were built were purchased in fee. We also own and operate multiple natural gas and NGL storage facilities and own or lease other processing, treating and conditioning facilities in connection with our midstream operations.

ITEM 3. LEGAL PROCEEDINGS

ETC Sunoco Holdings LLC and Sunoco (R&M), LLC (collectively, "Sunoco Defendants") are defendants in lawsuits alleging MTBE contamination of groundwater. The plaintiffs, state-level governmental entities, assert product liability, nuisance, trespass, negligence, violation of environmental laws, and/or deceptive business practices claims. The plaintiffs seek to recover compensatory damages, and in some cases also seek natural resource damages, injunctive relief, punitive damages, and attorneys' fees.

As of December 31, 2020, Sunoco Defendants are defendants in five cases, including one case each initiated by the States of Maryland and Rhode Island, one by the Commonwealth of Pennsylvania and two by the Commonwealth of Puerto Rico. The more recent Puerto Rico action is a companion case alleging damages for additional sites beyond those at issue in the initial Puerto Rico action. The actions brought by the State of Maryland and Commonwealth of Pennsylvania have also named as defendants ETO, ETP Holdco Corporation, and Sunoco Partners Marketing & Terminals L.P. ("SPMT").

It is reasonably possible that a loss may be realized in the remaining cases; however, we are unable to estimate the possible loss or range of loss in excess of amounts accrued. An adverse determination with respect to one or more of the MTBE cases could have a significant impact on results of operations during the period in which any such adverse determination occurs, but such an adverse determination likely would not have a material adverse effect on the Partnership's consolidated financial position.

In April 2016, PHMSA issued a Notice of Probable Violation, Proposed Compliance Order, and Proposed Civil Penalty related to certain welding practices and procedures followed during construction of ETO's Permian Express 2 pipeline system in

Texas. PHMSA subsequently issued a Final Order, and the related civil penalty has been paid. Additional penalties could be assessed related to ongoing compliance actions; however, the Partnership does not currently anticipate additional penalties.

In late 2016, FERC Enforcement Staff began a non-public investigation of Rover's removal of the Stoneman House, a potential historic structure, in connection with Rover's application for permission to construct a new interstate natural gas pipeline and related facilities. In mid-2017, FERC Enforcement Staff began a non-public investigation regarding allegations that diesel fuel may have been included in the drilling mud at the Tuscarawas River horizontal directional drilling ("HDD") operations. Rover and the Partnership are cooperating with the investigations. Enforcement Staff has provided Rover its non-public preliminary findings regarding those investigations. The company disagrees with those findings and intends to vigorously defend against any potential penalty. Given the stage of the proceedings, and the non-public nature of the investigation, the Partnership is unable at this time to provide an assessment of the potential outcome or range of potential liability, if any.

On November 3, 2017, the State of Ohio and the Ohio Environmental Protection Agency ("Ohio EPA") filed suit against Rover and other defendants (collectively, the "Defendants") seeking to recover approximately $2.6 million in civil penalties allegedly owed and certain injunctive relief related to permit compliance. The Defendants filed several motions to dismiss, which were granted on all counts. The Ohio EPA appealed, and on December 9, 2019, the Fifth District court of appeals entered a unanimous judgment affirming the trial court. The Ohio EPA sought review from the Ohio Supreme Court. On April 22, 2020, the Ohio Supreme Court granted the review. Briefing has concluded and oral arguments were held on January 26, 2021, but no opinion has yet been issued.

Energy Transfer received an Administrative Compliance Order from the New Mexico Environmental Department on August 28, 2020 to settle the outstanding NOVs at its Jal 3 gas plant. The NOVs covered emission events that occurred January 1, 2017 through August 31, 2018. The Compliance Order includes an assessed civil penalty of $4,023,779.80. The proceedings in this case are stayed until May 17, 2021 to allow the parties to discuss possible settlement of this matter. Negotiations with the NMED are ongoing.

In January 2019, we received notice from the DOJ on behalf of the EPA that a civil penalty enforcement action was being pursued under the Clean Water Act for an estimated 450 barrel crude oil release from the Mid-Valley Pipeline operated by SPLP and owned by Mid-Valley Pipeline Corporation. The release purportedly occurred in October 2014 on a nature preserve located in Hamilton County, Ohio, near Cincinnati, Ohio. After discovery and notification of the release, SPLP conducted substantial emergency response, remedial work and primary restoration in three phases and the primary restoration has been acknowledged to be complete. Operation and maintenance (O&M) activities will continue for several years. In December of 2019, SPLP reached an agreement in principal with the EPA regarding payment of a civil penalty which will be subject to public comment. The DOJ, on behalf of United States Department of Interior Fish and Wildlife, and the Ohio Attorney General, on behalf of the Ohio EPA, along with technical representatives from those agencies have been discussing natural resource damage assessment claims related to state endangered species and compensatory restoration. The timing and outcome of these matters cannot be reasonably determined at this time; however, we do not expect there to be a material impact to our results of operations, cash flows or financial position.

On September 10, 2018, a pipeline release and fire (the "Incident") occurred on the Revolution pipeline, a natural gas gathering line located in Center Township, Beaver County, Pennsylvania. There were no injuries. On February 8, 2019, the Pennsylvania Department of Environmental Protection ("PADEP") issued a Permit Hold on any requests for approvals/permits or permit amendments for any project in Pennsylvania pursuant to the state's water laws. The Partnership filed an appeal of the Permit Hold with the Pennsylvania Environmental Hearing Board. On January 3, 2020, the Partnership entered into a Consent Order and Agreement with the Department in which, among other things, the Permit Hold was lifted, the Partnership agreed to pay a $28.6 million civil penalty and fund a $2 million community environmental project, and all related appeals were withdrawn. On November 11, 2020, the PADEP issued an Order, which requires additional approvals and work prior to placing the Revolution Pipeline back in service. The Partnership filed an appeal of this Order with the Environmental Hearing Board on December 8, 2020.

The Pennsylvania Office of Attorney General has commenced an investigation regarding the Incident, and the United States Attorney for the Western District of Pennsylvania has issued a federal grand jury subpoena for documents relevant to the Incident. The scope of these investigations is not further known at this time.

On June 4, 2019, the Oklahoma Corporation Commission's ("OCC") Transportation Division filed a complaint against SPLP seeking a penalty of up to $1 million related to a May 2018 rupture near Edmond, Oklahoma. The rupture occurred on the Noble to Douglas 8" pipeline in an area of external corrosion and caused the release of approximately fifteen barrels of crude oil. SPLP responded immediately to the release and remediated the surrounding environment and pipeline in cooperation with the OCC. The OCC filed the complaint alleging that SPLP failed to provide adequate cathodic protection to the pipeline causing the failure. SPLP is negotiating a settlement agreement with the OCC for a lesser penalty.

Additionally, we have received notices of violations and potential fines under various federal, state and local provisions relating to the discharge of materials into the environment or protection of the environment. While we believe that even if any one or more of the environmental proceedings listed above were decided against us, it would not be material to our financial position, results of operations or cash flows, we are required to report environmental governmental proceedings if we reasonably believe that such proceedings will result in monetary sanctions in excess of $300,000.

For a description of other legal proceedings, see Note 11 to our consolidated financial statements included in “Item 8. Financial Statements and Supplementary Data.”

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON UNITS, RELATED UNITHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Parent Company

Description of Units

As of February 18, 2021, there were approximately 13,375 holders of record of our common units, which number does not separately account for individual participants in securities positions listings. Common units represent limited partner interests in us that entitle the holders to the rights and privileges specified in the Parent Company's Third Amended and Restated Agreement of Limited Partnership, as amended to date (the "Partnership Agreement").

As of December 31, 2020, limited partners own an aggregate 99.9% limited partner interest in us. Our General Partner owns an aggregate 0.1% general partner interest in us. Our common units are registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and are listed for trading on the NYSE under the ticker symbol "ET." Each holder of a common unit is entitled to one vote per unit on all matters presented to the limited partners for a vote. In addition, if at any time any person or group (other than our General Partner and its affiliates) owns beneficially 20% or more of all common units, any Common Units owned by that person or group may not be voted on any matter and are not considered to be outstanding when sending notices of a meeting of unitholders (unless otherwise required by law), calculating required votes, determining the presence of a quorum or for other similar purposes under our Partnership Agreement. The common units are entitled to distributions of Available Cash as described below under "Cash Distribution Policy."

ET Class A Units

In October 2018, in connection with merger of ETO with a wholly-owned subsidiary of the Partnership in a unit-for-unit exchange (the "Energy Transfer Merger"), the Partnership issued 647,745,099 Class A units ("ET Class A Units") representing limited partner interests in the Partnership to the General Partner. The number of ET Class A Units issued allows the General Partner and its affiliates to retain a voting interest in the Partnership that is identical to their voting interest in the Partnership prior to the completion of the Energy Transfer Merger. The ET Class A Units are entitled to vote together with the Partnership's common units, as a single class, except as required by law. Additionally, ET's partnership agreement provides that, under certain circumstances, upon the issuance by the Partnership of additional common units or any securities that have voting rights that are pari passu with the Partnership common units, the Partnership will issue to any holder of ET Class A Units additional ET Class A Units such that the holder maintains a voting interest in the Partnership that is identical to its voting interest in the Partnership prior to such issuance of common units. In connection with the SemGroup Transaction, we issued an additional 14,246,973 ET Class A Units in December 2019. The ET Class A Units are not entitled to distributions and otherwise have no economic attributes.

Cash Distribution Policy

General. The Parent Company will distribute all of its "Available Cash" to its unitholders and its General Partner within 50 days following the end of each fiscal quarter.

Definition of Available Cash. Available Cash is defined in the Partnership Agreement and generally means, with respect to any calendar quarter, all cash on hand at the end of such quarter less the amount of cash reserves that are necessary or appropriate in the reasonable discretion of the General Partner to:

- provide for the proper conduct of its business;
- comply with applicable law and/or debt instrument or other agreement; and
- provide funds for distributions to unitholders and its General Partner in respect of any one or more of the next four quarters.

Recent Sales of Unregistered Securities

None.

Issuer Purchases of Equity Securities

None.

Securities Authorized for Issuance Under Equity Compensation Plans

For information on the securities authorized for issuance under ET's equity compensation plans, see "Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Unitholder Matters."

ITEM 6. SELECTED FINANCIAL DATA

The selected historical financial data should be read in conjunction with "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and the historical consolidated financial statements and accompanying notes thereto included elsewhere in this report. The amounts in the table below, except per unit data, are in millions.

As discussed in Note 2 to the consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" the Partnership's consolidated financial statements for all periods presented have been retrospectively adjusted to reflect the change in the accounting policy related to certain barrels of crude oil.

	Years Ended December 31,				
	2020	2019	2018	2017	2016
Statement of Operations Data:					
Total revenues	$ 38,954	$ 54,213	$ 54,087	$ 40,523	$ 31,792
Operating income	2,980	7,203	5,403	2,670	1,809
Income from continuing operations	140	4,825	3,685	2,492	420
Loss from discontinued operations	—	—	(265)	(177)	(462)
Net income (loss)	140	4,825	3,420	2,315	(42)
Basic income (loss) from continuing operations per limited partner unit	(0.24)	1.34	1.21	0.81	0.91
Diluted income (loss) from continuing operations per limited partner unit	(0.24)	1.33	1.20	0.79	0.89
Basic loss from discontinued operations per limited partner unit	—	—	(0.01)	(0.01)	(0.01)
Diluted loss from discontinued operations per limited partner unit	—	—	(0.01)	(0.01)	(0.01)
Cash distribution per common unit	0.92	1.22	1.22	1.17	1.14
Balance Sheet Data (at period end):					
Assets held for sale	—	—	—	3,313	3,588
Total assets	95,144	98,973	88,413	86,358	79,088
Liabilities associated with assets held for sale	—	—	—	75	48
Long-term debt, less current maturities	51,417	51,028	43,373	43,671	42,608
Total equity	31,388	33,938	31,017	30,092	22,594

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

(Tabular dollar and unit amounts, except per unit data, are in millions)

Energy Transfer LP is a Delaware limited partnership whose common units are publicly traded on the NYSE under the ticker symbol "ET."

The following discussion of our historical consolidated financial condition and results of operations should be read in conjunction with our historical consolidated financial statements and accompanying notes thereto included in "Item 8. Financial Statements and Supplementary Data" of this report. This discussion includes forward-looking statements that are subject to risk and uncertainties. Actual results may differ substantially from the statements we make in this section due to a number of factors that are discussed in "Item 1A. Risk Factors" of this report.

Unless the context requires otherwise, references to "we," "us," "our," the "Partnership" and "ET" mean Energy Transfer LP and its consolidated subsidiaries, which include ETO, ETP GP, ETP LLC, Panhandle, Sunoco LP and Lake Charles LNG. References to the "Parent Company" mean Energy Transfer LP on a stand-alone basis.

OVERVIEW

Energy Transfer LP directly and indirectly owns equity interests in ETO, Sunoco LP and USAC, all of which are limited partnerships engaged in diversified energy-related services. Sunoco LP and USAC have publicly traded common units.

We control ETO through our ownership of its general partner.

The Parent Company's principal sources of cash flow are derived from its direct and indirect investments in the limited partner and general partner interests in ETO. ETO's earnings and cash flows are generated by its subsidiaries, including ETO's investments in Sunoco LP and USAC. The amount of cash that ETO, Sunoco LP and USAC distribute to their respective partners, including the Parent Company, each quarter is based on earnings from their respective business activities and the amount of available cash, as discussed below.

In order to fully understand the financial condition and results of operations of the Parent Company on a stand-alone basis, we have included discussions of Parent Company matters apart from those of our consolidated group.

General

Our primary objective is to increase the level of our distributable cash flow to our Unitholders over time by pursuing a business strategy that is currently focused on growing our subsidiaries' natural gas and liquids businesses through, among other things, pursuing certain construction and expansion opportunities relating to our subsidiaries' existing infrastructure and acquiring certain strategic operations and businesses or assets. The actual amounts of cash that we will have available for distribution will primarily depend on the amount of cash our subsidiaries generate from their operations.

Our reportable segments are as follows:

- intrastate transportation and storage;
- interstate transportation and storage;
- midstream;
- NGL and refined products transportation and services;
- crude oil transportation and services;
- investment in Sunoco LP;
- investment in USAC; and
- all other.

Recent Developments

COVID-19

In 2020, the COVID-19 pandemic prompted several states and municipalities in which we operate to take extraordinary and wide-ranging actions to contain and combat the outbreak and spread of the virus, including mandates for many individuals to substantially restrict daily activities and for many businesses to curtail or cease normal operations. To the extent COVID-19 continues or worsens, governments may impose additional similar restrictions. As a provider of critical energy infrastructure, our business has been designated as a "critical infrastructure sector" and our employees as "essential critical infrastructure workers" pursuant to the Department of Homeland Security Guidance on Essential Critical Infrastructure Workforce(s). To date, our field operations have continued uninterrupted, and remote work and other COVID-19 related conditions have not significantly impacted our ability to maintain operations or caused us to incur significant additional expenses; however, we are unable to predict the magnitude or duration of current and potential future COVID-19 mitigation measures. As an essential business providing critical energy infrastructure, the safety of our employees and the continued operation of our assets are our top priorities and we will continue to operate in accordance with federal and state health guidelines and safety protocols. We have implemented several new policies and provided employee training to help maintain the health and safety of our workforce.

Pending Enable Acquisition

On February 17, 2021, the Partnership announced its entry into a definitive merger agreement to acquire Enable. Under the terms of the merger agreement, Enable's common unitholders will receive 0.8595 of an ET common unit in exchange for each Enable common unit. In addition, each outstanding Enable Series A preferred unit will be exchanged for 0.0265 of an ET Series G preferred unit, and ET will make a $10 million cash payment for Enable's general partner. The transaction is subject to the approval of Enable's unitholders and other customary regulatory approvals.

ET Contribution of SemGroup Assets to ETO

On December 5, 2019, ET completed the acquisition of SemGroup. During the first and second quarters of 2020, ET contributed former SemGroup assets to ETO through sale and contribution transactions.

ETO Series F and Series G Preferred Units Issuance

On January 22, 2020, ETO issued 500,000 of its 6.750% Series F Preferred Units at a price of $1,000 per unit and 1,100,000 of its 7.125% Series G Preferred Units at a price of $1,000 per unit. The net proceeds were used to repay amounts outstanding under ETO's revolving credit facility and for general partnership purposes.

ETO January 2020 Senior Notes Offering and Redemption

Utilizing proceeds from the January 2020 Senior Notes Offering, ETO redeemed its $400 million aggregate principal amount of 5.75% Senior Notes due September 1, 2020, its $1.05 billion aggregate principal amount of 4.15% Senior Notes due October 1, 2020, its $1.14 billion aggregate principal amount of 7.50% Senior Notes due October 15, 2020, its $250 million aggregate principal amount of 5.50% Senior Notes due February 15, 2020, ET's $52 million aggregate principal amount of 7.50% Senior Notes due October 15, 2020 and Transwestern's $175 million aggregate principal amount of 5.36% Senior Notes due December 9, 2020. See "Liquidity and Capital Resources - Recent Financing Transactions" below for more information on the January 2020 Senior Notes Offering.

Lake Charles LNG

On March 30, 2020, Shell announced that it would not proceed with a proposed equity interest in the Lake Charles LNG liquefaction project due to adverse market factors affecting Shell's business following the onset of the COVID-19 pandemic. We intend to continue to develop the project, possibly in conjunction with one or more equity partners, and we plan to evaluate a variety of alternatives to advance the project, including the possibility of reducing the size of the project from three trains (16.45 million tonnes per annum of LNG capacity) to two trains (11.0 million tonnes per annum). The project as currently designed is fully permitted by federal, state and local authorities, has all necessary export licenses and benefits from the infrastructure related to the existing regasification facility at the same site, including four LNG storage tanks, two deep water docks and other assets. In light of the existing brownfield infrastructure and the advanced state of the development of the project, we plan to continue to pursue the project on a disciplined, cost effective basis, and ultimately we will determine whether to make a final investment decision to proceed with the project based on market conditions, capital expenditure considerations and our success in securing equity participation by third parties as well as long-term LNG offtake commitments on satisfactory terms.

Sunoco LP November 2020 Senior Notes Offering and Repurchase

On November 9, 2020, Sunoco LP completed a private offering of $800 million in aggregate principal amount of 4.500% senior notes due 2029. Sunoco LP used the proceeds to fund the tender offer on its 4.875% $1 billion senior notes due 2023. Approximately 56% of the 2023 senior notes were tendered. On January 15, 2021, Sunoco LP repurchased the remaining outstanding portion of its 2023 senior notes.

Regulatory Update

Interstate Natural Gas Transportation Regulation

Rate Regulation

Effective January 2018, the 2017 Tax Cuts and Jobs Act (the "Tax Act") changed several provisions of the federal tax code, including a reduction in the maximum corporate tax rate. On March 15, 2018, in a set of related proposals, the FERC addressed treatment of federal income tax allowances in regulated entity rates. The FERC issued a Revised Policy Statement on Treatment of Income Taxes ("Revised Policy Statement") stating that it will no longer permit master limited partnerships to recover an income tax allowance in their cost-of-service rates. The FERC issued the Revised Policy Statement in response to a remand

from the United States Court of Appeals for the District of Columbia Circuit in United Airlines v. FERC, in which the court determined that the FERC had not justified its conclusion that a pipeline organized as a master limited partnership would not "double recover" its taxes under the current policy by both including an income-tax allowance in its cost of service and earning a return on equity calculated using the discounted cash flow methodology. On July 18, 2018, the FERC issued an order denying requests for rehearing and clarification of its Revised Policy Statement. In the rehearing order, the FERC clarified that a pipeline organized as a master limited partnership will not be precluded in a future proceeding from arguing and providing evidentiary support that it is entitled to an income tax allowance and demonstrating that its recovery of an income tax allowance does not result in a double-recovery of investors' income tax costs. On July 31, 2020, the United States Court of Appeals for the District of Columbia Circuit issued an opinion upholding the FERC's decision denying a separate master limited partnership recovery of an income tax allowance and its decision not to require the master limited partnership to refund accumulated deferred income tax balances. In light of the rehearing order's clarification regarding individual entities' ability to argue in support of recovery of an income tax allowance and the court's subsequent opinion upholding denial of an income tax allowance to a master limited partnership, the impacts that FERC's policy on the treatment of income taxes may have on the rates ETO can charge for FERC-regulated transportation services are unknown at this time.

Even without application of the FERC's recent rate making-related policy statements and rulemakings, the FERC or our shippers may challenge the cost-of-service rates we charge. The FERC's establishment of a just and reasonable rate is based on many components, including ROE and tax-related components, although changes in these components may tend to decrease our cost-of-service rate, other components in the cost-of-service rate calculation may increase and result in a newly calculated cost-of-service rate that is less than, the same as, or greater than the prior cost-of-service rate. Moreover, we receive revenues from our pipelines based on a variety of rate structures, including cost-of-service rates, negotiated rates, discounted rates and market-based rates. Many of our interstate pipelines, such as ETC Tiger Pipeline, LLC, Midcontinent Express and Fayetteville Express, have negotiated market rates that were agreed to by customers in connection with long-term contracts entered into to support the construction of the pipelines. Other systems, such as FGT, Transwestern and Panhandle, have a mix of tariff rate, discount rate, and negotiated rate agreements. The revenues we receive from natural gas transportation services we provide pursuant to cost-of-service based rates may decrease in the future as a result of the Revised Policy Statement, changes to ROE methodology, or other FERC policies, combined with the reduced corporate federal income tax rate established in the Tax Act. The extent of any revenue reduction related to our cost-of-service rates, if any, will depend on a detailed review of all of ETO's cost-of-service components and the outcomes of any challenges to our rates by the FERC or our shippers.

On July 18, 2018, the FERC issued a final rule establishing procedures to evaluate rates charged by the FERC-jurisdictional gas pipelines in light of the Tax Act and the FERC's Revised Policy Statement. By order issued January 16, 2019, the FERC initiated a review of Panhandle's existing rates pursuant to Section 5 of the NGA to determine whether the rates currently charged by Panhandle are just and reasonable and set the matter for hearing. Panhandle filed a cost and revenue study on April 1, 2019 and an NGA Section 4 rate case on August 30, 2019. The Section 4 and Section 5 proceedings were consolidated by order of the Chief Judge on October 1, 2019. A hearing in the combined proceedings commenced on August 25, 2020 and adjourned on September 15, 2020. By order dated January 19, 2021, the Chief Judge has extended the deadline for the initial decision to March 26, 2021.

Pipeline Certification

The FERC issued a Notice of Inquiry on April 19, 2018 ("Pipeline Certification NOI"), thereby initiating a review of its policies on certification of natural gas pipelines, including an examination of its long-standing Policy Statement on Certification of New Interstate Natural Gas Pipeline Facilities, issued in 1999, that is used to determine whether to grant certificates for new pipeline projects. We are unable to predict what, if any, changes may be proposed as a result of the Pipeline Certification NOI that will affect our natural gas pipeline business or when such proposals, if any, might become effective. Comments in response to the Pipeline Certification NOI were due on or before July 25, 2018. We do not expect that any change in this policy would affect us in a materially different manner than any other natural gas pipeline company operating in the United States.

Interstate Common Carrier Regulation

The FERC utilizes an indexing rate methodology which, as currently in effect, allows common carriers to change their rates within prescribed ceiling levels that are tied to changes in the Producer Price Index for Finished Goods, or PPI-FG. Many existing pipelines utilize the FERC liquids index to change transportation rates annually. The indexing methodology is applicable to existing rates, with the exclusion of market-based rates. The FERC's indexing methodology is subject to review every five years. In a December 2020 order, FERC determined that during the five-year period commencing July 1, 2021 and ending June 30, 2026, common carriers charging indexed rates will be permitted to adjust their indexed ceilings annually by PPI-FG plus 0.78 percent. Requests for rehearing of the December 2020 order were filed on January 19, 2021, and remain pending before FERC. Accordingly, the FERC's final determination of the index rate coupled with the anticipated and subsequent appeals of the December 2020 order could adversely impact the final determination of the FERC approved index.

FERC has also implemented changes related to its treatment of federal income taxes. The change in treatment impacts two rate components. Those components are the allowance for income taxes and the amount for accumulated deferred income taxes. These changes will primarily impact any cost-of-service related filing and our revenues associated with any cost-based service could be adversely affected by future FERC or judicial rulings. However, we believe that these impacts, if any, will be minimal.

Trends and Outlook

Recent market disruptions involving the COVID-19 pandemic have negatively impacted our earnings and cash flows from operations and may continue to do so. Reduced demand for natural gas, NGLs, refined products and/or crude oil caused by the COVID-19 pandemic and low WTI crude oil prices may result in the continued shut-in of production from U.S. oil and gas wells, which in turn may result in decreased volumes transported on our pipeline systems and decreased overall utilization of our midstream services.

With respect to commodity prices, natural gas prices have strengthened in recent months as a reduction in crude oil production has led to decreased supplies of associated natural gas from these wells. Meanwhile, crude oil prices saw a sharp decline as a result of actions by foreign oil-producing nations and a decrease in global demand as result of the COVID-19 pandemic but have subsequently risen and stabilized. We cannot predict the future impacts, or the duration of such impacts, from the COVID-19 pandemic.

The outlook for commodity prices is mixed and could have a varying impact on our business. Reduced demand and increased supply of crude oil has resulted in an increase in worldwide crude oil storage inventories, which is expected to keep crude oil prices depressed for the near term. With respect to natural gas markets, a relatively more moderate decrease in demand, coupled with the previously mentioned decreases in gas production associated with wells drilled to produce crude oil, have more than counterbalanced the reduction in demand. The overall outlook for our midstream services will depend, in part, on the timing and extent of recovery in the commodity markets.

While we anticipate that current and projected commodity prices and the related impact to activity levels in both the upstream and midstream sectors will impact our business, we cannot predict the ultimate magnitude of that impact and expect it to be varied across our operations, depending on the region, customer, type of service, contract term and other factors.

While the vast majority of our counterparties are investment grade rated companies, recent market disruptions increased the likelihood that some of our counterparties may be forced to file for bankruptcy protection. However, we believe that the recent increases in commodity prices, along with recent expense-cutting initiatives by many companies, have generally strengthened the credit profile for the majority of our producer counterparties.

Ultimately, the extent to which our business will be impacted by recent market developments depends on the factors described above as well as future developments beyond our control, which are highly uncertain and cannot be predicted. In response to these market events and uncertainties, we reduced 2020 growth capital spending, and we expect to continue to a lower level of growth capital spending going forward. See “Liquidity and Capital Resources” below for additional information on our forecasted capital expenditures. In 2020, we also reduced operating expenses, and we expect that our operating expenses going forward will continue to be lower relative to pre-2020 levels. While current market volatility makes the near-term unpredictable, we believe that overall the long-term demand for our services will continue given the essential nature of the midstream natural gas, NGLs, refined products and crude oil businesses, although we cannot predict any possible changes in such demand with reasonable certainty.

We currently have ample liquidity to fund our business and we do not anticipate any liquidity concerns in the immediate future (see “Liquidity and Capital Resources” below). In addition, while the trading price of ET common units declined significantly during the first nine months of 2020, thereby making equity capital market transactions less attractive in the near term, we continue to have access to the debt capital markets on generally favorable terms. In the event we seek additional equity or debt capital, our blended cost of capital for equity and debt is expected to be modestly higher in the near term; however, we will continue to evaluate growth projects and acquisitions as such opportunities may be identified in the future in light of this higher cost of capital.

In addition to the trends and outlook discussed above with respect to the Partnership’s existing business and finances, we also anticipate that the Partnership will continue to increase its focus on the development of alternative energy projects aimed at continuing to reduce its environmental footprint throughout its operations. In February 2021, the Partnership announced the creation of a new group focused on these efforts. The Partnership also recently announced its first-ever dedicated solar power contract, which will reduce the Partnership’s environmental footprint by integrating alternative energy sources when economically beneficial.

Results of Operations

We report Segment Adjusted EBITDA and consolidated Adjusted EBITDA as measures of segment performance. We define Segment Adjusted EBITDA and consolidated Adjusted EBITDA as total Partnership earnings before interest, taxes, depreciation, depletion, amortization and other non-cash items, such as non-cash compensation expense, gains and losses on disposals of assets, the allowance for equity funds used during construction, unrealized gains and losses on commodity risk management activities, inventory valuation adjustments, non-cash impairment charges, losses on extinguishments of debt and other non-operating income or expense items. Segment Adjusted EBITDA and consolidated Adjusted EBITDA reflect amounts for unconsolidated affiliates based on the same recognition and measurement methods used to record equity in earnings of unconsolidated affiliates. Adjusted EBITDA related to unconsolidated affiliates excludes the same items with respect to the unconsolidated affiliate as those excluded from the calculation of Segment Adjusted EBITDA and consolidated Adjusted EBITDA, such as interest, taxes, depreciation, depletion, amortization and other non-cash items. Although these amounts are excluded from Adjusted EBITDA related to unconsolidated affiliates, such exclusion should not be understood to imply that we have control over the operations and resulting revenues and expenses of such affiliates. We do not control our unconsolidated affiliates; therefore, we do not control the earnings or cash flows of such affiliates. The use of Segment Adjusted EBITDA or Adjusted EBITDA related to unconsolidated affiliates as an analytical tool should be limited accordingly.

Segment Adjusted EBITDA, as reported for each segment in the table below, is analyzed for each segment in the section titled “Segment Operating Results.” Adjusted EBITDA is a non-GAAP measure used by industry analysts, investors, lenders and rating agencies to assess the financial performance and the operating results of the Partnership’s fundamental business activities and should not be considered in isolation or as a substitution for net income, income from operations, cash flows from operating activities or other GAAP measures.

As discussed in Note 2 to the consolidated financial statements in “Item 8. Financial Statements and Supplementary Data” the Partnership’s consolidated financial statements for all periods presented have been retrospectively adjusted to reflect the change in the accounting policy related to certain barrels of crude oil.

Year Ended December 31, 2020 Compared to the Year Ended December 31, 2019

Consolidated Results

	Years Ended December 31,		
	2020	2019	Change
Segment Adjusted EBITDA:			
Intrastate transportation and storage	$ 863	$ 999	$ (136)
Interstate transportation and storage	1,680	1,792	(112)
Midstream	1,670	1,602	68
NGL and refined products transportation and services	2,802	2,666	136
Crude oil transportation and services	2,258	2,898	(640)
Investment in Sunoco LP	739	665	74
Investment in USAC	414	420	(6)
All other	105	98	7
Total Segment Adjusted EBITDA	10,531	11,140	(609)
Depreciation, depletion and amortization	(3,678)	(3,147)	(531)
Interest expense, net of interest capitalized	(2,327)	(2,331)	4
Impairment losses	(2,880)	(74)	(2,806)
Losses on interest rate derivatives	(203)	(241)	38
Non-cash compensation expense	(121)	(113)	(8)
Unrealized losses on commodity risk management activities	(71)	(5)	(66)
Inventory valuation adjustments	(82)	79	(161)
Losses on extinguishments of debt	(75)	(18)	(57)
Adjusted EBITDA related to unconsolidated affiliates	(628)	(626)	(2)
Equity in earnings of unconsolidated affiliates	119	302	(183)
Impairment of investments in unconsolidated affiliates	(129)	—	(129)
Other, net	(79)	54	(133)
Income before income tax expense	377	5,020	(4,643)
Income tax expense	(237)	(195)	(42)
Net income	$ 140	$ 4,825	$ (4,685)

Adjusted EBITDA (*consolidated*). For the year ended December 31, 2020 compared to the prior year, Adjusted EBITDA decreased 5.5%, primarily due to the impacts of lower volumes and market prices among several of our core operating segments resulting primarily from COVID-19 related demand reductions. These decreases were partially offset by an increase of $136 million from our NGL and refined products transportation and services segment primarily due to higher throughput volumes, an increase of $68 million from our midstream segment primarily due to the restructuring and assignment of certain gathering and processing contracts, and an increase of $74 million from our investment in Sunoco LP segment primarily due to increased gross profit per gallon sold and a decrease in operating costs. The decrease in Adjusted EBITDA was also offset by a net increase of approximately $569 million from recent acquisitions and assets placed in service.

Depreciation, Depletion and Amortization. Depreciation, depletion and amortization expense increased primarily due to additional depreciation from assets recently placed in service and recent acquisitions.

Interest Expense, Net of Interest Capitalized. Interest expense, net of interest capitalized, decreased primarily due to the following:

- interest expenses recognized by the Partnership (excluding Sunoco LP and USAC) decreased by $8 million due to lower borrowing costs on both recently refinanced and floating rate debt, and higher capitalized interest offsetting a higher consolidated debt balance;
- an increase of $2 million recognized by USAC was primarily due to a full year of interest expense incurred in the current period on its senior notes 2027 issued in March 2019, partially offset by reduced borrowings and lower weighted average interest rates under its credit agreement; and
- an increase of $2 million recognized by Sunoco LP due to a slight increase in average long-term debt.

Impairment Losses. During the year ended December 31, 2020, the Partnership recognized goodwill impairments totaling $2.2 billion and fixed asset impairments totaling $58 million, primarily due to decreases in projected future cash flows as a result of overall market demand decline. In addition, USAC recognized a goodwill impairment of $619 million as well as an equipment impairment of $8 million based on changes in market conditions.

During the year ended December 31, 2019, the Partnership recognized goodwill impairments totaling $21 million primarily due to changes in assumptions related to projected future revenues and cash flows. Also during the year ended December 31, 2019, Sunoco LP recognized a $47 million write-down on assets held for sale related to its ethanol plant in Fulton, New York, and USAC recognized a $6 million fixed asset impairment related to certain idle compressor assets.

Losses on Interest Rate Derivatives. Our interest rate derivatives are not designated as hedges for accounting purposes; therefore, changes in fair value are recorded in earnings each period. Losses on interest rate derivatives decreased by $38 million during the year ended December 31, 2020, compared to the prior year primarily due to a $400 million reduction in notional amount of outstanding forward-starting interest rate derivatives, which was partially offset by lower average interest rates and expenses related to the early termination and settlement of forward-starting interest rate derivatives.

Unrealized Gains (Losses) on Commodity Risk Management Activities. The unrealized gains and losses on our commodity risk management activities include changes in fair value of commodity derivatives and the hedged inventory included in designated fair value hedging relationships. Information on the unrealized gains and losses within each segment are included in "Segment Operating Results" below, and additional information on the commodity-related derivatives, including notional volumes, maturities and fair values, is available in "Item 7A. Quantitative and Qualitative Disclosures About Market Risk" and in Note 14 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data."

Inventory Valuation Adjustments. Inventory valuation reserve adjustments were recorded for the inventory associated with Sunoco LP primarily driven by changes in fuel prices between periods.

Losses on Extinguishments of Debt. Year ended December 31, 2020 amounts were related to ETO Senior Note redemption in January 2020. In addition, Sunoco LP recognized a $13 million loss on extinguishment of debt related to the repurchase of its outstanding 2023 senior notes in 2020.

Impairment of Investments in Unconsolidated Affiliate. During the year ended December 31, 2020, the Partnership recorded an impairment to its investment in White Cliffs of $129 million due to a decrease in projected future revenues and cash flows as a result of the overall market demand decline that occurred subsequent to the SemGroup acquisition and related purchase price allocation in December 2019.

Adjusted EBITDA Related to Unconsolidated Affiliates and *Equity in Earnings of Unconsolidated Affiliates.* See additional information in "Supplemental Information on Unconsolidated Affiliates" and "Segment Operation Results" below.

Other, net. Other, net primarily includes amortization of regulatory assets and other income and expense amounts.

Income Tax Expense. For the year ended December 31, 2020 compared to the same period in the prior year, income tax expense increased due to higher earnings from the Partnership's consolidated corporate subsidiaries in 2020 and the impact of a current state tax benefit (net of federal benefit) of $17 million in the prior year, which was primarily due to a change in estimate related to state income taxes in 2019.

Supplemental Information on Unconsolidated Affiliates

The following table presents financial information related to unconsolidated affiliates:

	Years Ended December 31,		
	2020	2019	Change
Equity in earnings (losses) of unconsolidated affiliates:			
Citrus	$ 162	$ 148	$ 14
FEP [1]	(139)	59	(198)
MEP	(6)	15	(21)
White Cliffs	20	4	16
Other	82	76	6
Total equity in earnings of unconsolidated affiliates	$ 119	$ 302	$ (183)
Adjusted EBITDA related to unconsolidated affiliates[2]:			
Citrus	$ 347	$ 342	$ 5
FEP	76	75	1
MEP	28	60	(32)
White Cliffs	44	—	44
Other	133	149	(16)
Total Adjusted EBITDA related to unconsolidated affiliates	$ 628	$ 626	$ 2
Distributions received from unconsolidated affiliates:			
Citrus	$ 191	$ 178	$ 13
FEP	75	73	2
MEP	26	36	(10)
White Cliffs	29	—	29
Other	85	101	(16)
Total distributions received from unconsolidated affiliates	$ 406	$ 388	$ 18

[1] For the year ended December 31, 2020, equity in earnings (losses) of unconsolidated affiliates includes the impact of non-cash impairments recorded by FEP, which reduced the Partnership's equity in earnings by $208 million.

[2] These amounts represent our proportionate share of the Adjusted EBITDA of our unconsolidated affiliates and are based on our equity in earnings or losses of our unconsolidated affiliates adjusted for our proportionate share of the unconsolidated affiliates' interest, depreciation, depletion, amortization, non-cash items and taxes.

Segment Operating Results

We evaluate segment performance based on Segment Adjusted EBITDA, which we believe is an important performance measure of the core profitability of our operations. This measure represents the basis of our internal financial reporting and is one of the performance measures used by senior management in deciding how to allocate capital resources among business segments.

The tables below identify the components of Segment Adjusted EBITDA, which is calculated as follows:

- *Segment margin*, *operating expenses*, and *selling, general and administrative expenses*. These amounts represent the amounts included in our consolidated financial statements that are attributable to each segment.
- *Unrealized gains or losses on commodity risk management activities* and *inventory valuation adjustments*. These are the unrealized amounts that are included in cost of products sold to calculate segment margin. These amounts are not included in Segment Adjusted EBITDA; therefore, the unrealized losses are added back and the unrealized gains are subtracted to calculate the segment measure.

- *Non-cash compensation expense*. These amounts represent the total non-cash compensation recorded in operating expenses and selling, general and administrative expenses. This expense is not included in Segment Adjusted EBITDA and therefore is added back to calculate the segment measure.
- *Adjusted EBITDA related to unconsolidated affiliates*. Adjusted EBITDA related to unconsolidated affiliates excludes the same items with respect to the unconsolidated affiliate as those excluded from the calculation of Segment Adjusted EBITDA, such as interest, taxes, depreciation, depletion, amortization and other non-cash items. Although these amounts are excluded from Adjusted EBITDA related to unconsolidated affiliates, such exclusion should not be understood to imply that we have control over the operations and resulting revenues and expenses of such affiliates. We do not control our unconsolidated affiliates; therefore, we do not control the earnings or cash flows of such affiliates.

In the following analysis of segment operating results, a measure of segment margin is reported for segments with sales revenues. Segment margin is a non-GAAP financial measure and is presented herein to assist in the analysis of segment operating results and particularly to facilitate an understanding of the impacts that changes in sales revenues have on the segment performance measure of Segment Adjusted EBITDA. Segment margin is similar to the GAAP measure of gross margin, except that segment margin excludes charges for depreciation, depletion and amortization. Among the GAAP measures reported by the Partnership, the most directly comparable measure to segment margin is Segment Adjusted EBITDA; a reconciliation of segment margin to Segment Adjusted EBITDA is included in the following tables for each segment where segment margin is presented.

In addition, for certain segments, the sections below include information on the components of segment margin by sales type, which components are included in order to provide additional disaggregated information to facilitate the analysis of segment margin and Segment Adjusted EBITDA. For example, these components include transportation margin, storage margin, and other margin. These components of segment margin are calculated consistent with the calculation of segment margin; therefore, these components also exclude charges for depreciation, depletion and amortization.

For additional information regarding our business segments, see “Item 1. Business” and Notes 1 and 16 to our consolidated financial statements in “Item 8. Financial Statements and Supplementary Data.”

Segment Operating Results

Intrastate Transportation and Storage

	Years Ended December 31,		
	2020	2019	Change
Natural gas transported (BBtu/d)	12,649	12,442	207
Revenues	$ 2,544	$ 3,099	$ (555)
Cost of products sold	1,478	1,909	(431)
Segment margin	1,066	1,190	(124)
Unrealized (gains) losses on commodity risk management activities	(25)	2	(27)
Operating expenses, excluding non-cash compensation expense	(177)	(190)	13
Selling, general and administrative expenses, excluding non-cash compensation expense	(28)	(29)	1
Adjusted EBITDA related to unconsolidated affiliates	25	25	—
Other	2	1	1
Segment Adjusted EBITDA	$ 863	$ 999	$ (136)

Volumes. For the year ended December 31, 2020 compared to the prior year, transported volumes increased primarily due to increased utilization of our Texas pipelines, partially offset by a decrease in volumes as a result of the bankruptcy filing of a transportation customer.

Segment Margin. The components of our intrastate transportation and storage segment margin were as follows:

	Years Ended December 31,		
	2020	2019	Change
Transportation fees	$ 617	$ 614	$ 3
Natural gas sales and other (excluding unrealized gains and losses)	317	505	(188)
Retained fuel revenues (excluding unrealized gains and losses)	48	50	(2)
Storage margin, including fees (excluding unrealized gains and losses)	59	23	36
Unrealized gains (losses) on commodity risk management activities	25	(2)	27
Total segment margin	$ 1,066	$ 1,190	$ (124)

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to our intrastate transportation and storage segment decreased due to the net impacts of the following:

- a decrease of $188 million in realized natural gas sales and other due to lower realized gains from pipeline optimization activity; and
- a decrease of $2 million in retained fuel revenues primarily due to lower natural gas prices; offset by
- an increase of $36 million in realized storage margin primarily due to higher realized gains on financial derivatives used to hedge physical storage gas;
- a decrease of $13 million in operating expenses primarily due to a $5 million decrease in outside services, a $4 million decrease in employee costs, a $3 million decrease in maintenance project costs and a $2 million decrease in ad valorem taxes; and
- an increase of $3 million in transportation fees primarily due to volume ramp-ups on Red Bluff Express pipeline and new contracts partially offset by the expansion of certain contracts on Regency Intrastate Gas Systems,

Interstate Transportation and Storage

	Years Ended December 31,		
	2020	2019	Change
Natural gas transported (BBtu/d)	10,325	11,346	(1,021)
Natural gas sold (BBtu/d)	16	17	(1)
Revenues	$ 1,861	$ 1,963	$ (102)
Operating expenses, excluding non-cash compensation, amortization and accretion expenses	(567)	(569)	2
Selling, general and administrative expenses, excluding non-cash compensation, amortization and accretion expenses	(59)	(72)	13
Adjusted EBITDA related to unconsolidated affiliates	451	477	(26)
Other	(6)	(7)	1
Segment Adjusted EBITDA	$ 1,680	$ 1,792	$ (112)

Volumes. For the year ended December 31, 2020 compared to the prior year, transported volumes decreased primarily due to lower crude production resulting in lower associated gas production and contract expirations on our Tiger Pipeline, as well as multiple weather events and maintenance of third-party facilities impacting our assets along the Gulf Coast.

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to our interstate transportation and storage segment decreased due to the net impacts of the following:

- a decrease of $102 million in revenues primarily due to a decrease of $63 million from a contractual rate adjustment on commitments at our Lake Charles LNG facility effective January 2020, a decrease of $30 million due to additional revenue recognized in 2019 associated with a shipper bankruptcy, a decrease of $28 million due to lower utilization and lower rates on our Panhandle and Trunkline systems, a decrease of $12 million in transportation fees as a result of multiple weather events and maintenance on third-party facilities connected to our systems, and a decrease of $8 million resulting from contract expirations on ETC Tiger. These decreases were partially offset by higher reservation revenue on Transwestern and Rover resulting from higher contracted capacity and higher parking revenue resulting from timing of transactions; and

- a decrease of $26 million in Adjusted EBITDA related to unconsolidated affiliates primarily due to lower earnings from our Midcontinent Express Pipeline primarily as a result of lower rates received following the expiration of certain contracts, partially offset by an increase from Citrus primarily due to higher revenues resulting from new contracts, rate increases on existing contracts, the recognition of a contract exit fee and lower operating expenses; partially offset by
- a decrease of $2 million in operating expense primarily due to $22 million in refunds of ad valorem taxes on Transwestern and lower current year assessments, a $13 million decrease in employee costs and a $9 million decrease in maintenance project costs resulting from cost-cutting initiatives, partially offset by $38 million in bad debt expense associated with a shipper bankruptcy and a $5 million increase related to the valuation of inventory on Panhandle; and
- a decrease of $13 million in selling, general and administrative expenses primarily resulting from a $17 million favorable settlement related to excise taxes on Rover and a $5 million decrease in employee costs due to cost-cutting initiatives, partially offset by a $4 million increase in legal and consulting fees related to an ongoing rate case and shipper bankruptcies and a $3 million increase in allocated overhead costs.

Midstream

	Years Ended December 31,		
	2020	2019	Change
Gathered volumes (BBtu/d)	12,961	13,468	(507)
NGLs produced (MBbls/d)	611	571	40
Equity NGLs (MBbls/d)	35	31	4
Revenues	$ 5,026	$ 6,031	$ (1,005)
Cost of products sold	2,598	3,577	(979)
Segment margin	2,428	2,454	(26)
Operating expenses, excluding non-cash compensation expense	(705)	(791)	86
Selling, general and administrative expenses, excluding non-cash compensation expense	(87)	(90)	3
Adjusted EBITDA related to unconsolidated affiliates	31	27	4
Other	3	2	1
Segment Adjusted EBITDA	$ 1,670	$ 1,602	$ 68

Volumes. For the year ended December 31, 2020 compared to the prior year, gathered volumes decreased primarily in the South Texas and Northeast regions, partially offset by the impact of the SemGroup acquisition in the Mid-Continent/Panhandle region and volume growth in the Ark-La-Tex and Permian regions. NGL production increased due to the impact of the SemGroup acquisition in the Mid-Continent/Panhandle region and ethane uplift in the Permian, South Texas and North Texas regions.

Segment Margin. The table below presents the components of our midstream segment margin.

	Years Ended December 31,		
	2020	2019	Change
Gathering and processing fee-based revenues	$ 2,187	$ 2,132	$ 55
Non-fee-based contracts and processing	241	322	(81)
Total segment margin	$ 2,428	$ 2,454	$ (26)

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to our midstream segment increased due to the net impacts of the following:

- an increase of $55 million in fee-based margin due to the impact of the SemGroup acquisition in the Mid-Continent/Panhandle region and recognized $103 million related to the restructuring and assignment of certain gathering and processing contracts in the Ark-La-Tex region, which included the recognition of $75 million of deferred revenue received in prior periods. This increase was partially offset by the impact of volume declines in the South Texas region;
- a decrease of $86 million in operating expenses due to cost-saving initiatives, including a decrease of $39 million in outside services, $25 million in materials, $14 million in employee costs and $8 million in office expenses; and
- a decrease of $3 million in selling, general and administrative expenses due to a decrease in allocated overhead costs resulting from overall corporate cost reductions; partially offset by

- a decrease of $70 million in non-fee-based margin due to unfavorable NGL prices of $75 million and favorable natural gas prices of $5 million; and
- a decrease of $11 million in non-fee-based margin due to decreased throughput volume, primarily in the South Texas region.

NGL and Refined Products Transportation and Services

	Years Ended December 31,		
	2020	2019	Change
NGL transportation volumes (MBbls/d)	1,436	1,289	147
Refined products transportation volumes (MBbls/d)	461	583	(122)
NGL and refined products terminal volumes (MBbls/d)	825	844	(19)
NGL fractionation volumes (MBbls/d)	835	706	129
Revenues	$ 10,513	$ 11,641	$ (1,128)
Cost of products sold	7,139	8,393	(1,254)
Segment margin	3,374	3,248	126
Unrealized losses on commodity risk management activities	78	81	(3)
Operating expenses, excluding non-cash compensation expense	(650)	(656)	6
Selling, general and administrative expenses, excluding non-cash compensation expense	(82)	(93)	11
Adjusted EBITDA related to unconsolidated affiliates	82	86	(4)
Segment Adjusted EBITDA	$ 2,802	$ 2,666	$ 136

Volumes. For the year ended December 31, 2020 compared to the prior year, NGL transportation volumes increased due to higher throughput volumes on our Mariner East pipeline system. In addition, throughput barrels on our Texas NGL pipeline system increased due to higher receipt of liquids production from both wholly-owned and third-party gas plants primarily in the Permian and North Texas regions, as well as higher export volumes feeding into our Nederland Terminal resulting from the initiation of service on our propane export pipeline in the fourth quarter of 2020.

Refined products transportation volumes decreased for the year ended December 31, 2020 compared to prior year due to the closure of a third-party refinery during the third quarter of 2019, which negatively impacted supply to our refined products transportation system, and less domestic demand for jet fuel and other refined products. These decreases in volumes were partially offset by the initiation of service of our JC Nolan diesel fuel pipeline in the third quarter of 2019.

NGL and refined products terminal volumes decreased for the year ended December 31, 2020 compared to the prior year primarily due to the closure of a third-party refinery during the third quarter of 2019 and less domestic demand for jet fuel and other refined products. These decreases were partially offset by higher volumes from our Mariner East system, an increase in loaded vessels at our Nederland Terminal, and the initiation of service on our JC Nolan diesel fuel pipeline and natural gasoline export project, both of which commences service in the third quarter of 2019.

Average fractionated volumes at our Mont Belvieu, Texas fractionation facility increased for the year ended December 31, 2020 compared to the prior year primarily due to the commissioning of our sixth and seventh fractionators in February 2019 and February 2020, respectively.

Segment Margin. The components of our NGL and refined products transportation and services segment margin were as follows:

	Years Ended December 31,		
	2020	2019	Change
Fractionators and refinery services margin	$ 726	$ 664	$ 62
Transportation margin	1,895	1,716	179
Storage margin	250	223	27
Terminal Services margin	541	630	(89)
Marketing margin	40	96	(56)
Unrealized gains on commodity risk management activities	(78)	(81)	3
Total segment margin	$ 3,374	$ 3,248	$ 126

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to our NGL and refined products transportation and services segment increased due to the net impacts of the following:

- an increase of $179 million in transportation margin primarily due to a $128 million increase from higher throughput volumes on our Mariner East pipeline system, a $53 million increase from higher throughput volumes received from the Permian region, a $17 million increase due to the initiation of service on our JC Nolan diesel fuel pipeline in the third quarter of 2019, a $14 million increase from higher throughput volumes from the Barnett region, a $12 million increase from higher volumes from the South Texas region and a $3 million increase due to higher throughput on our Mariner West pipeline. These increases were partially offset by a $17 million decrease from lower throughput volumes received from the Eagle Ford region, a $16 million decrease due to less demand for jet fuel and other refined products, and a $13 million decrease resulting from the closure of a third-party refinery during the third quarter of 2019;
- an increase of $62 million in fractionators and refinery services margin primarily due to a $57 million increase resulting from the commissioning of our sixth and seventh fractionators in February 2019 and February 2020, respectively, and higher NGL volumes from the Permian and Barnett regions feeding our Mont Belvieu fractionation facility, and a $9 million increase in rail and truck volumes feeding our refinery services facility. These increases were partially offset by a $7 million decrease due primarily to an expiration of a third-party blending contract during the second quarter of 2020;
- an increase of $27 million in storage margin primarily due to a $16 million increase from throughput fees generated from exported volumes and an $11 million increase from component product storage fees; and
- a decrease of $11 million in selling, general and administrative expenses primarily due to lower allocated overhead costs and lower employee costs resulting from cost-cutting initiatives; partially offset by
- a decrease of $89 million in terminal services margin primarily due to a $90 million decrease resulting from an expiration of a third-party contract at our Nederland Terminal in the second quarter of 2020, a $29 million decrease due to lower third-party and intercompany volumes feeding our Marcus Hook Terminal, a $16 million decrease due to lower expense reimbursements in 2020, and a $14 million decrease due to less domestic demand for jet fuel and other refined products. These decreases were partially offset by a $60 million increase due to higher throughput on our Mariner East system; and
- a decrease of $56 million in marketing margin primarily due to an $87 million decrease due to lower margin from our butane blending business, a $37 million decrease in gasoline blending and optimization due primarily to unfavorable market conditions primarily attributable to the COVID-19 pandemic. These decreases were partially offset by a $47 million increase due to higher optimization gains from the sale of NGL component products at our Mont Belvieu facility and a $21 million increase in NGL export and rack volumes.

Crude Oil Transportation and Services

	Years Ended December 31,		
	2020	2019	Change
Crude transportation volumes (MBbls/d)	3,763	4,217	(454)
Crude terminals volumes (MBbls/d)	2,553	2,513	40
Revenue	$ 11,679	$ 18,447	$ (6,768)
Cost of products sold	8,838	14,832	(5,994)
Segment margin	2,841	3,615	(774)
Unrealized (gains) losses on commodity risk management activities	12	(69)	81
Operating expenses, excluding non-cash compensation expense	(526)	(570)	44
Selling, general and administrative expenses, excluding non-cash compensation expense	(118)	(85)	(33)
Adjusted EBITDA related to unconsolidated affiliates	37	8	29
Other	12	(1)	13
Segment Adjusted EBITDA	$ 2,258	$ 2,898	$ (640)

Volumes. For the year ended December 31, 2020 compared to the prior year, crude transportation volumes were lower on our Texas pipeline system and our Bakken pipeline, driven by lower production in these regions due to lower crude oil prices as well as lower refinery utilization caused by COVID-19 demand destruction, partially offset by contributions from assets acquired in 2019. Crude terminal volumes were higher due to contributions from assets acquired in 2019, partially offset by lower Permian and Bakken pipeline volumes, reduced refinery utilization, and reduced export demand at our Nederland Terminal.

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to our crude oil transportation and services segment decreased due to the net impacts of the following:

- a decrease of $693 million in segment margin (excluding unrealized gains and losses on commodity risk management activities) primarily due to a $430 million decrease from our Texas crude pipeline system due to lower utilization and lower average tariff rates realized, a $286 million decrease (excluding a net change of $84 million in unrealized gains and losses on commodity risk management activities) from our crude oil acquisition and marketing business primarily due to a significant contraction in spreads in 2020 as compared to 2019 primarily impacting our Permian to Gulf Coast and Bakken to Gulf Coast trading operations, a $224 million decrease due to lower volumes on our Bakken Pipeline due to lower basin production, and a $35 million decrease in throughput at our crude terminals primarily driven by lower Permian and Bakken volumes, reduced refinery utilization from COVID-19 demand destruction, reduced export demand, and hurricanes impacting operations in the third quarter of 2020; partially offset by a $285 million increase related to assets acquired in 2019; and
- an increase of $33 million in selling, general and administrative expenses primarily due to legal expenses, higher insurance expenses, and an increase related to assets acquired in 2019; partially offset by
- a decrease of $44 million in operating expenses primarily due to lower volume-driven pipeline expenses and corporate cost-cutting initiatives, partially offset by increased costs related to assets acquired in 2019; and
- an increase of $29 million in Adjusted EBITDA related to unconsolidated affiliates due to assets acquired in 2019.

Investment in Sunoco LP

	Years Ended December 31,		
	2020	2019	Change
Revenues	$ 10,710	$ 16,596	$ (5,886)
Cost of products sold	9,654	15,380	(5,726)
Segment margin	1,056	1,216	(160)
Unrealized (gains) losses on commodity risk management activities	6	(5)	11
Operating expenses, excluding non-cash compensation expense	(336)	(365)	29
Selling, general and administrative, excluding non-cash compensation expense	(98)	(123)	25
Adjusted EBITDA related to unconsolidated affiliates	10	4	6
Inventory valuation adjustments	82	(79)	161
Other, net	19	17	2
Segment Adjusted EBITDA	$ 739	$ 665	$ 74

The Investment in Sunoco LP segment reflects the consolidated results of Sunoco LP.

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA related to the Investment in Sunoco LP segment increased due to the net impacts of the following:

- an increase in the gross profit on motor fuel sales of $32 million, primarily due to a 18% increase in gross profit per gallon sold and the receipt of a $13 million make-up payment under Sunoco LP's fuel supply agreement with 7-Eleven, Inc., partially offset by a 13% decrease in gallons sold; and
- a decrease in operating expenses and selling, general and administrative expenses, excluding non-cash compensation expense of $54 million, primarily attributable to lower employee costs, maintenance, advertising, credit card fees and utilities, which was partially offset by a $12 million charge for current expected credit losses on Sunoco LP's accounts receivable in connection with the financial impact from COVID-19; and
- an increase of $6 million in Adjusted EBITDA related to unconsolidated affiliates due to Sunoco LP's investment in the JC Nolan joint venture; partially offset by
- a decrease of $18 million in non-motor fuel sales and lease gross profit primarily due to reduced credit card transactions related to the COVID-19 pandemic and rent concessions in 2020.

Investment in USAC

	Years Ended December 31,		
	2020	2019	Change
Revenues	$ 667	$ 698	$ (31)
Cost of products sold	82	91	(9)
Segment margin	585	607	(22)
Operating expenses, excluding non-cash compensation expense	(124)	(134)	10
Selling, general and administrative, excluding non-cash compensation expense	(51)	(53)	2
Other, net	4	—	4
Segment Adjusted EBITDA	$ 414	$ 420	$ (6)

The investment in USAC segment reflects the consolidated results of USAC.

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to last year, Segment Adjusted EBITDA related to our investment in USAC segment increased due to the net impacts of the following:

- a decrease of $10 million in operating expenses primarily driven by a decrease in average revenue generating horsepower and reduced headcount; partially offset by
- a decrease of $22 million in segment margin primarily driven by a decrease in revenues primarily due to a decrease in average revenue generating horsepower as a result of a decline in demand for compression services primarily driven by a

decrease in U.S. crude oil and natural gas activities and a reduction of ancillary maintenance work, offset by a decrease in costs of products sold of $9 million.

All Other

	Years Ended December 31,		
	2020	2019	Change
Revenue	$ 1,838	$ 1,689	$ 149
Cost of products sold	1,527	1,504	23
Segment margin	311	185	126
Unrealized (gains) losses on commodity risk management activities	1	(4)	5
Operating expenses, excluding non-cash compensation expense	(133)	(77)	(56)
Selling, general and administrative expenses, excluding non-cash compensation expense	(101)	(66)	(35)
Adjusted EBITDA related to unconsolidated affiliates	2	2	—
Other and eliminations	25	58	(33)
Segment Adjusted EBITDA	$ 105	$ 98	$ 7

Amounts reflected in our all other segment primarily include:

- our natural gas marketing operations;
- our wholly-owned natural gas compression operations;
- our investment in coal handling facilities.
- our Canadian operations, which were acquired in the SemGroup acquisition in December 2019 and include natural gas gathering and processing assets.

Segment Adjusted EBITDA. For the year ended December 31, 2020 compared to the prior year, Segment Adjusted EBITDA increased due to the net impacts of the following:

- an increase of $97 million from the acquisition of Energy Transfer Canada; and
- an increase of $26 million primarily due to insurance proceeds received on settled claims related to our MTBE litigation; partially offset by
- a decrease of $22 million due to lower coal royalties and producer demand from our natural resources business;
- a decrease of $35 million due to lower revenue from our compressor equipment business;
- a decrease of $12 million from adverse market conditions due to COVID-19 related demand destruction;
- a decrease of $28 million due to higher merger and acquisition expenses;
- a decrease of $10 million due to intercompany eliminations; and
- a decrease of $6 million due to the elimination of Sunoco LP’s interest in the JC Nolan Joint Venture.

Year Ended December 31, 2019 Compared to the Year Ended December 31, 2018

Consolidated Results

	Years Ended December 31,		
	2019	2018	Change
Segment Adjusted EBITDA:			
Intrastate transportation and storage	$ 999	$ 927	$ 72
Interstate transportation and storage	1,792	1,680	112
Midstream	1,602	1,627	(25)
NGL and refined products transportation and services	2,666	1,979	687

Loss from discontinued operations, net of income taxes	—	(265)	265
Net income	$ 4,825	$ 3,420	$ 1,405

Adjusted EBITDA (*consolidated*). For the year ended December 31, 2019 compared to the prior year, Adjusted EBITDA increased approximately $1.58 billion, or 16%. The increase was primarily due to the impact of multiple revenue-generating assets being placed in service and recent acquisitions, as well as increased demand for services on existing assets. The impact of new assets and acquisitions was approximately $784 million, of which the largest increases were from increased volumes to our Mariner East pipeline and terminal assets due to the addition of pipeline capacity in the fourth quarter of 2018 (a $274 million impact to the NGL and refined products transportation and services segment), the commissioning of our fifth and sixth fractionators (a $131 million impact to the NGL and refined products transportation and services segment), the ramp up of volumes on our Bayou Bridge system due to placing phase II in service in the second quarter of 2019 (a $60 million impact to our crude oil transportation and services segment), the Rover pipeline (a $78 million impact to the interstate transportation and storage segment), the addition of gas processing capacity to our Arrowhead gas plant (a $31 million impact to our midstream segment), placing our Permian Express 4 pipeline in service in October 2019 (a $26 million impact to our crude oil transportation and services segment) and the acquisition of USAC (a net impact of $131 million among the investment in USAC and all other segments). The remainder of the increase in Adjusted EBITDA was primarily due to stronger demand on existing assets, particularly due to increased throughput on our Bakken Pipeline system as well as increased production in the Permian, which impacted multiple segments. Additional discussion of these and other factors affecting Adjusted EBITDA is included in the analysis of Segment Adjusted EBITDA in the “Segment Operating Results” section below.

Depreciation, Depletion and Amortization. Depreciation, depletion and amortization increased primarily due to additional depreciation and amortization from assets recently placed in service.

Interest Expense, Net of Interest Capitalized. Interest expense, net of interest capitalized, increased primarily due to the following:

- an increase of $198 million recognized by the Partnership (excluding Sunoco LP and USAC, which are discussed below) primarily due to increases in ETO's long-term debt.
- an increase of $49 million recognized by USAC primarily attributable to higher overall debt balances and higher interest rates on borrowings under the credit agreement. These increases were partially offset by the decrease in borrowings under the credit agreement; and
- an increase of $29 million recognized by Sunoco LP due to an increase in total long-term debt.

Impairment Losses. During the year ended December 31, 2019, the Partnership recognized goodwill impairments of $12 million related to the Southwest Gas operations within the interstate transportation and storage segment and $9 million related to our North Central operations within the midstream segment, both of which were primarily due to changes in assumptions related to projected future revenues and cash flows. Also during the year ended December 31, 2019, Sunoco LP recognized a $47 million write-down on assets held for sale related to its ethanol plant in Fulton, New York, and USAC recognized a $6 million fixed asset impairment related to certain idle compressor assets.

During the year ended December 31, 2018, the Partnership recognized goodwill impairments of $378 million and asset impairments of $4 million related to our midstream operations and asset impairments of $9 million related to idle leased assets in our crude operations. Sunoco LP recognized a $30 million indefinite-lived intangible asset impairment related to contractual rights. USAC recognized a $9 million fixed asset impairment related to certain idle compressor assets. Additional discussion on these impairments is included in "Critical Accounting Estimates" below.

Gains (Losses) on Interest Rate Derivatives. Our interest rate derivatives are not designated as hedges for accounting purposes; therefore, changes in fair value are recorded in earnings each period. Losses on interest rate derivatives during the year ended December 31, 2019 resulted from a decrease in forward interest rates and gains in 2018 resulted from an increase in forward interest rates.

Unrealized Gains (Losses) on Commodity Risk Management Activities. The unrealized losses on our commodity risk management activities include changes in fair value of commodity derivatives and the hedged inventory included in designated fair value hedging relationships. Information on the unrealized gains and losses within each segment are included in "Segment Operating Results" below, and additional information on the commodity-related derivatives, including notional volumes, maturities and fair values, is available in "Item 7A. Quantitative and Qualitative Disclosures About Market Risk" and in Note 13 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data."

Inventory Valuation Adjustments. Inventory valuation reserve adjustments were recorded for the inventory associated with Sunoco LP primarily driven by changes in fuel prices between periods.

Losses on Extinguishments of Debt. Amounts were related to Sunoco LP's senior note and term loan redemption in January 2018.

Adjusted EBITDA Related to Unconsolidated Affiliates and *Equity in Earnings of Unconsolidated Affiliates.* See additional information in "Supplemental Information on Unconsolidated Affiliates" and "Segment Operation Results" below.

Adjusted EBITDA Related to Discontinued Operations. Amounts were related to the operations of Sunoco LP's retail business that were disposed of in January 2018.

Other, net. Other, net primarily includes amortization of regulatory assets and other income and expense amounts.

Income Tax Expense. For the year ended December 31, 2019 compared to the prior year, income tax expense increased due to an increase in income at our corporate subsidiaries and the recognition of a favorable state tax rate change in the prior period.

Supplemental Information on Unconsolidated Affiliates

The following table presents financial information related to unconsolidated affiliates:

	Years Ended December 31,		
	2019	2018	Change
Equity in earnings of unconsolidated affiliates:			
Citrus	$ 148	$ 141	$ 7
FEP	59	55	4
MEP	15	31	(16)
White Cliffs	4	—	4
Other	76	117	(41)
Total equity in earnings of unconsolidated affiliates	$ 302	$ 344	$ (42)
Adjusted EBITDA related to unconsolidated affiliates[(1)]:			
Citrus	$ 342	$ 337	$ 5
FEP	75	74	1
MEP	60	81	(21)
Other	149	163	(14)
Total Adjusted EBITDA related to unconsolidated affiliates	$ 626	$ 655	$ (29)
Distributions received from unconsolidated affiliates:			
Citrus	$ 178	$ 171	$ 7
FEP	73	68	5
MEP	36	48	(12)
Other	101	110	(9)
Total distributions received from unconsolidated affiliates	$ 388	$ 397	$ (9)

(1) These amounts represent our proportionate share of the Adjusted EBITDA of our unconsolidated affiliates and are based on our equity in earnings or losses of our unconsolidated affiliates adjusted for our proportionate share of the unconsolidated affiliates' interest, depreciation, depletion, amortization, non-cash items and taxes.

Segment Operating Results

Intrastate Transportation and Storage

	Years Ended December 31,		
	2019	2018	Change
Natural gas transported (BBtu/d)	12,442	10,873	1,569
Revenues	$ 3,099	$ 3,737	$ (638)
Cost of products sold	1,909	2,665	(756)
Segment margin	1,190	1,072	118
Unrealized losses on commodity risk management activities	2	38	(36)
Operating expenses, excluding non-cash compensation expense	(190)	(189)	(1)
Selling, general and administrative, excluding non-cash compensation expense	(29)	(27)	(2)
Adjusted EBITDA related to unconsolidated affiliates	25	32	(7)
Other	1	1	—
Segment Adjusted EBITDA	$ 999	$ 927	$ 72

Volumes. For the year ended December 31, 2019 compared to the prior year, transported volumes increased primarily due to the impact of reflecting RIGS as a consolidated subsidiary beginning April 2018 and the impact of the Red Bluff Express pipeline coming online in May 2018, as well as the impact of favorable market pricing spreads.

Segment Margin. The components of our intrastate transportation and storage segment margin were as follows:

	Years Ended December 31,		
	2019	2018	Change
Transportation fees	$ 614	$ 525	$ 89
Natural gas sales and other (excluding unrealized gains and losses)	505	510	(5)
Retained fuel revenues (excluding unrealized gains and losses)	50	59	(9)
Storage margin, including fees (excluding unrealized gains and losses)	23	16	7
Unrealized losses on commodity risk management activities	(2)	(38)	36
Total segment margin	$ 1,190	$ 1,072	$ 118

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to our intrastate transportation and storage segment increased due to the net impacts of the following:

- an increase of $64 million in transportation fees, excluding the impact of consolidating RIGS beginning April 2018 as discussed below, primarily due to the Red Bluff Express pipeline coming online in May 2018, as well as new contracts;
- a net increase of $11 million primarily due to the consolidation of RIGS beginning April 2018, resulting in increases in transportation fees, retained fuel revenues and operating expenses of $24 million, $2 million and $6 million, respectively, partially offset by a decrease in Adjusted EBITDA related to unconsolidated affiliates of $9 million; and
- an increase of $7 million in realized storage margin primarily due to a realized adjustment to the Bammel storage inventory of $25 million in 2018 and higher storage fees, partially offset by a $20 million decrease due to lower physical withdrawals; partially offset by
- a decrease of $9 million in retained fuel revenues primarily due to lower gas prices; and
- a decrease of $5 million in realized natural gas sales and other due to lower realized gains from pipeline optimization activity.

Interstate Transportation and Storage

	Years Ended December 31,		
	2019	2018	Change
Natural gas transported (BBtu/d)	11,346	9,542	1,804
Natural gas sold (BBtu/d)	17	17	—
Revenues	$ 1,963	$ 1,682	$ 281
Operating expenses, excluding non-cash compensation, amortization and accretion expenses	(569)	(431)	(138)
Selling, general and administrative, excluding non-cash compensation, amortization and accretion expenses	(72)	(63)	(9)
Adjusted EBITDA related to unconsolidated affiliates	477	492	(15)
Other	(7)	—	(7)
Segment Adjusted EBITDA	$ 1,792	$ 1,680	$ 112

Volumes. For the year ended December 31, 2019 compared to the prior year, transported volumes increased as a result of the addition of new contracted volumes for delivery out of the Haynesville Shale, higher volumes on our Rover pipeline as a result of the full year availability of new supply connections, and higher throughput on Trunkline and Panhandle due to increased utilization of higher contracted capacity.

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to our interstate transportation and storage segment increased due to the net impacts of the following:

- an increase in margin of $231 million from the Rover pipeline due to higher reservation and usage resulting from additional connections and utilization of additional compression;
- an increase of $40 million in reservation and usage fees due to improved market conditions allowing us to successfully bring new volumes to the system at improved rates, primarily on our Transwestern, Tiger and Panhandle systems; and
- an increase of $6 million from the Sea Robin pipeline due to higher rates resulting from the rate case filed in June 2019, as well as fewer third-party supply interruptions on the Sea Robin system; partially offset by
- an increase of $138 million in operating expense primarily due to an increase in ad valorem taxes of $126 million on the Rover pipeline system resulting from placing the final portions of this asset into service in November 2018, an increase of $24 million in transportation expense on Rover due to an increase in transportation volumes, an increase of $5 million in allocated overhead costs and additional operating expense of $4 million for assets acquired in June 2019, partially offset by lower gas imbalance and system gas activity of $15 million and lower storage capacity leased on the Panhandle system of $8 million;
- an increase of $9 million in selling, general and administrative expenses primarily due to an increase in insurance expense of $8 million, an increase in employee cost of $4 million, and an increase in allocated overhead costs of $3 million, partially offset by lower Ohio excise tax on our Rover system; and
- a decrease of $15 million in adjusted EBITDA related to unconsolidated affiliates primarily resulting from a $20 million decrease due to lower earnings from MEP as a result of lower capacity being re-contracted at lower rates on expiring contracts, partially offset by a $5 million increase from our Citrus joint venture as we brought new volumes to the system in 2019.

Midstream

	Years Ended December 31,		
	2019	2018	Change
Gathered volumes (BBtu/d):	13,468	12,126	1,342
NGLs produced (MBbls/d):	571	540	31
Equity NGLs (MBbls/d):	31	29	2
Revenues	$ 6,031	$ 7,522	$ (1,491)
Cost of products sold	3,577	5,145	(1,568)
Segment margin	2,454	2,377	77
Operating expenses, excluding non-cash compensation expense	(791)	(705)	(86)
Selling, general and administrative, excluding non-cash compensation expense	(90)	(81)	(9)
Adjusted EBITDA related to unconsolidated affiliates	27	33	(6)
Other	2	3	(1)
Segment Adjusted EBITDA	$ 1,602	$ 1,627	$ (25)

Volumes. For the year ended December 31, 2019 compared to the prior year, gathered volumes increased primarily due to increases in the Northeast, Permian, Ark-La-Tex, South Texas and North Texas regions. NGL production increased due to increases in the Permian and North Texas regions partially offset by ethane rejection in the South Texas region.

Segment Margin. The table below presents the components of our midstream segment margin. For the year ended December 31, 2018, the amounts previously reported for fee-based and non-fee-based margin have been adjusted to reflect reclassification of

certain contractual minimum fees from fee-based margin to non-fee-based margin in order to conform to the current period classification.

	Years Ended December 31,		
	2019	2018	Change
Gathering and processing fee-based revenues	$ 2,132	$ 1,855	$ 277
Non-fee-based contracts and processing (excluding unrealized gains and losses)	322	522	(200)
Total segment margin	$ 2,454	$ 2,377	$ 77

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to our midstream segment decreased due to the net impacts of the following:

- a decrease of $200 million in non-fee-based margin due to lower NGL prices of $183 million and lower gas prices of $50 million, offset by an increase of $33 million in non-fee-based margin due to increased throughput volume in North Texas and Permian regions;
- an increase of $86 million in operating expenses due to increases of $33 million in outside services, $29 million in maintenance project costs, $17 million in employee costs and $6 million in office expenses and materials; and
- an increase of $9 million in selling, general and administrative expenses primarily due to a decrease of $5 million in capitalized overhead and an increase of $4 million in insurance expense; partially offset by
- an increase of $277 million in fee-based margin due to volume growth in the Northeast, Permian, Ark-La-Tex, North Texas and South Texas regions.

NGL and Refined Products Transportation and Services

	Years Ended December 31,		
	2019	2018	Change
NGL transportation volumes (MBbls/d)	1,289	1,027	262
Refined products transportation volumes (MBbls/d)	583	621	(38)
NGL and refined products terminal volumes (MBbls/d)	844	812	32
NGL fractionation volumes (MBbls/d)	706	527	179
Revenues	$ 11,641	$ 11,123	$ 518
Cost of products sold	8,393	8,462	(69)
Segment margin	3,248	2,661	587
Unrealized gains (losses) on commodity risk management activities	81	(86)	167
Operating expenses, excluding non-cash compensation expense	(656)	(604)	(52)
Selling, general and administrative expenses, excluding non-cash compensation expense	(93)	(74)	(19)
Adjusted EBITDA related to unconsolidated affiliates	86	82	4
Segment Adjusted EBITDA	$ 2,666	$ 1,979	$ 687

Volumes. For the year ended December 31, 2019 compared to the prior year, throughput barrels on our Texas NGL pipeline system increased due to higher receipt of liquids production from both wholly-owned and third-party gas plants primarily in the Permian and North Texas regions. In addition, NGL transportation volumes on our Northeast assets increased due to the initiation of service on the Mariner East 2 pipeline system.

Refined products transportation volumes decreased for the year ended December 31, 2019 compared to prior year due to the closure of a third-party refinery during the third quarter of 2019, negatively impacting supply to our refined products transportation system. These decreases in volumes are partially offset by the initiation of service on the JC Nolan Pipeline in the third quarter of 2019.

NGL and refined products terminal volumes increased for the year ended December 31, 2019 compared to the prior year primarily due to the initiation of service on our Mariner East 2 pipeline system which commenced operations in the fourth quarter of 2018.

Average volumes fractionated at our Mont Belvieu, Texas fractionation facility increased for the year ended December 31, 2019 compared to the prior year primarily due to the commissioning of our fifth and sixth fractionators in July 2018 and February 2019, respectively.

Segment Margin. The components of our NGL and refined products transportation and services segment margin were as follows:

	Years Ended December 31,		
	2019	2018	Change
Fractionators and refinery services margin	$ 664	$ 511	$ 153
Transportation margin	1,716	1,233	483
Storage margin	223	211	12
Terminal Services margin	630	494	136
Marketing margin	96	126	(30)
Unrealized gains (losses) on commodity risk management activities	(81)	86	(167)
Total segment margin	$ 3,248	$ 2,661	$ 587

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to our NGL and refined products transportation and services segment increased due to the net impacts of the following:

- an increase of $483 million in transportation margin primarily due to a $265 million increase resulting from the initiation of service on our Mariner East 2 pipeline in the fourth quarter of 2018, a $212 million increase resulting from higher throughput volumes received from the Permian region on our Texas NGL pipelines, a $29 million increase due to higher throughput volumes from the Barnett region, a $9 million increase from the Eagle Ford region, and a $9 million increase due to the initiation of service on the JC Nolan Pipeline. These increases were partially offset by a $21 million decrease resulting from Mariner East 1 pipeline downtime, a $13 million decrease due to the closure of a third-party refinery during the third quarter of 2019, negatively impacting refined product supply to our system, and a $5 million decrease due to the timing of deficiency fees on Mariner West;
- an increase of $153 million in fractionation and refinery services margin primarily due to a $167 million increase resulting from the commissioning of our fifth and sixth fractionators in July 2018 and February 2019, respectively, and higher NGL volumes from the Permian region feeding our Mont Belvieu fractionation facility. This increase was partially offset by a reclassification between our fractionation and storage margins;
- an increase of $136 million in terminal services margin primarily due to a $171 million increase from the initiation of service of our Mariner East 2 pipeline which commenced operations in the fourth quarter of 2018 and a $7 million increase due to increased tank lease revenue from third-party customers. These increases were partially offset by a $16 million decrease in volumes and expense reimbursements from third parties on Mariner East 1, a $16 million decrease due to lower volumes from third-party pipeline, truck and rail deliveries into our Marcus Hook Terminal, a $5 million decrease due to fewer vessels exported out of our Nederland Terminal, and a $4 million decrease due to the closure of a third-party refinery during the third quarter of 2019; and
- an increase of $12 million in storage margin primarily due to a reclassification between our storage and fractionation margins; partially offset by
- a decrease of $30 million in marketing margin primarily due to capacity lease fees incurred by our marketing affiliate on our Mariner East 2 pipeline, offset by increased gains from our butane blending business due to more favorable market conditions and increased volumes, as well as increased optimization gains from the sale of NGL component products at our Mont Belvieu facility;
- an increase of $52 million in operating expenses primarily due to a $26 million increase in employee and ad valorem tax expenses on our terminals, fractionation, and transportation operations, a $14 million increase in utility costs to operate our pipelines and our fifth and sixth fractionators which commenced July 2018 and February 2019, respectively, and an $8 million increase in maintenance project costs due to the timing of multiple projects on our transportation assets; and
- an increase of $19 million in general and administrative expenses primarily due to a $10 million increase in allocated overhead costs, a $5 million increase in insurance expenses, a $4 million increase in legal fees, and a $2 million increase in employee costs.

Crude Oil Transportation and Services

	Years Ended December 31,		
	2019	2018	Change
Crude Transportation Volumes (MBbls/d)	4,217	3,713	504
Crude Terminals Volumes (MBbls/d)	2,513	2,555	(42)
Revenue	$ 18,447	$ 17,332	$ 1,115
Cost of products sold	14,832	14,384	448
Segment margin	3,615	2,948	667
Unrealized (gains) losses on commodity risk management activities	(69)	55	(124)
Operating expenses, excluding non-cash compensation expense	(570)	(547)	(23)
Selling, general and administrative expenses, excluding non-cash compensation expense	(85)	(86)	1
Adjusted EBITDA related to unconsolidated affiliates	8	15	(7)
Other	(1)	—	(1)
Segment Adjusted EBITDA	$ 2,898	$ 2,385	$ 513

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to our crude oil transportation and services segment increased due to the net impacts of the following:

- an increase of $543 million in segment margin (excluding unrealized gains and losses on commodity risk management activities) primarily due to a $282 million increase resulting from higher throughput on our Texas crude pipeline system primarily due to increased production from the Permian region and contributions from capacity expansion projects placed into service, a $219 million increase in throughput on our Bakken pipeline, a favorable change due to inventory valuation adjustment of $75 million, partially offset by a $90 million reduction due to lower pipeline basis spreads net of hedges. We also realized a $66 million increase from higher volumes on our Bayou Bridge Pipeline, a $31 million increase due to the inclusion of assets acquired in 2019, and a $26 million increase primarily from higher throughput, ship loading and tank rental fees at our Nederland Terminal; partially offset by a $54 million decrease from our Oklahoma assets resulting from lower volumes to the system as well as from the timing of a deficiency payment made in the prior year, a $12 million decrease due to the closure of a third-party refinery which was the primary customer utilizing one of our northeast crude terminals. The remainder of the offsetting decrease was primarily attributable to a change in the presentation of certain intrasegment transactions, which were eliminated in the current period presentation but were shown on a gross basis in revenues and operating expenses in the prior period; partially offset by
- an increase of $23 million in operating expenses primarily due to a $30 million increase in throughput-related costs on existing assets, partially offset by a $14 million decrease in management fees as well as the impact of certain intrasegment transactions discussed above; and
- a decrease of $7 million in Adjusted EBITDA related to unconsolidated affiliates due to lower margin from jet fuel sales by our joint ventures.

Investment in Sunoco LP

	Years Ended December 31,		
	2019	2018	Change
Revenues	$ 16,596	$ 16,994	$ (398)
Cost of products sold	15,380	15,872	(492)
Segment margin	1,216	1,122	94
Unrealized (gains) losses on commodity risk management activities	(5)	6	(11)
Operating expenses, excluding non-cash compensation expense	(365)	(435)	70
Selling, general and administrative, excluding non-cash compensation expense	(123)	(129)	6
Adjusted EBITDA related to unconsolidated affiliates	4	—	4
Inventory valuation adjustments	(79)	85	(164)
Adjusted EBITDA from discontinued operations	—	(25)	25
Other, net	17	14	3
Segment Adjusted EBITDA	$ 665	$ 638	$ 27

The Investment in Sunoco LP segment reflects the consolidated results of Sunoco LP.

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA related to the Investment in Sunoco LP segment increased due to the net impacts of the following:

- a decrease in operating costs of $76 million, primarily as a result of the conversion of 207 retail sites to commission agent sites during April 2018. These expenses include other operating expense, general and administrative expense and lease expense; and
- an increase of $25 million related to Adjusted EBITDA from discontinued operations related to the divestment of 1,030 company-operated fuel sites to 7-Eleven in January 2018; and
- an increase of $4 million in Adjusted EBITDA related to unconsolidated affiliates due to Sunoco LP's investment in the JC Nolan joint venture; partially offset by
- a decrease in the gross profit on motor fuel sales of $76 million (excluding the change in inventory fair value adjustments and unrealized gains and losses on commodity risk management activities) primarily due to lower fuel margins, a one-time benefit of approximately $25 million related to a cash settlement with a fuel supplier recorded in 2018 and an $8 million one-time charge related to a reserve for an open contractual dispute recorded in 2019, partially offset by an increase in gallons sold.

Investment in USAC

	Years Ended December 31,		
	2019	2018	Change
Revenues	$ 698	$ 508	$ 190
Cost of products sold	91	67	24
Segment margin	607	441	166
Operating expenses, excluding non-cash compensation expense	(134)	(110)	(24)
Selling, general and administrative, excluding non-cash compensation expense	(53)	(50)	(3)
Other, net	—	8	(8)
Segment Adjusted EBITDA	$ 420	$ 289	$ 131

The investment in USAC segment reflects the consolidated results of USAC from April 2, 2018, the date ET obtained control of USAC, through December 31, 2019. Changes between periods are due to the consolidation of USAC beginning April 2, 2018.

All Other

	Years Ended December 31,		
	2019	2018	Change
Revenue	$ 1,689	$ 2,228	$ (539)
Cost of products sold	1,504	2,006	(502)
Segment margin	185	222	(37)
Unrealized gains on commodity risk management activities	(4)	(2)	(2)
Operating expenses, excluding non-cash compensation expense	(77)	(56)	(21)
Selling, general and administrative expenses, excluding non-cash compensation expense	(66)	(124)	58
Adjusted EBITDA related to unconsolidated affiliates	2	1	1
Other and eliminations	58	(1)	59
Segment Adjusted EBITDA	$ 98	$ 40	$ 58

Amounts reflected in our all other segment during the periods presented above primarily include:

- our natural gas marketing operations;
- our wholly-owned natural gas compression operations;
- a noncontrolling interest in PES. Prior to PES's reorganization in August 2018, ETO's 33% interest in PES was reflected as an unconsolidated affiliate; for the period subsequent to the August 2018 reorganization through 2019, ETO held an approximately 7.4% interest in PES and no longer reflected PES as an affiliate;
- our investment in coal handling facilities; and
- our Canadian operations, which were acquired in the SemGroup acquisition in December 2019 and include natural gas gathering and processing assets.

Segment Adjusted EBITDA. For the year ended December 31, 2019 compared to the prior year, Segment Adjusted EBITDA increased due to the net impacts of the following:

- an increase of $8 million in gains from park and loan and storage activity;
- an increase of $11 million in optimized gains on residue gas sales;
- an increase of $7 million from settled derivatives;
- an increase of $15 million from a legal settlement;
- an increase of $12 million from payments related to the PES bankruptcy;
- an increase of $6 million from the recognition of deferred revenue related to a bankruptcy;
- an increase of $3 million from power trading activities;
- an increase of $3 million from the Energy Transfer Canada joint venture for the period subsequent to our acquisition of SemGroup on December 5, 2019, net of an increase due to SemGroup related corporate expenses; and
- a decrease of $21 million in merger and acquisition expenses; partially offset by
- a decrease of $36 million due to the contribution of CDM to USAC in April 2018, subsequent to which CDM is reflected in the Investment in USAC segment;
- a decrease of $8 million due to lower gas prices and increased power costs; and
- a decrease of $11 million due to lower revenue from our compressor equipment business.

LIQUIDITY AND CAPITAL RESOURCES

Overview

Parent Company Only

Subsequent to the Energy Transfer Merger in October 2018, substantially all of the Partnership's cash flows are derived from distributions related to its investment in ETO, whose cash flows are derived from its subsidiaries, including ETO's investments in Sunoco LP and USAC.

The Parent Company's primary cash requirements are for general and administrative expenses, debt service requirements and distributions to its partners. The Parent Company currently expects to fund its short-term needs for such items with cash flows from its direct and indirect investments in ETO. The Parent Company distributes its available cash remaining after satisfaction of the aforementioned cash requirements to its Unitholders on a quarterly basis.

The Parent Company expects ETO and its respective subsidiaries and investments in Sunoco LP and USAC to utilize their resources, along with cash from their operations, to fund their announced growth capital expenditures and working capital needs; however, the Parent Company may issue debt or equity securities from time to time as it deems prudent to provide liquidity for new capital projects of its subsidiaries or for other partnership purposes.

ETO

ETO's ability to satisfy its obligations and pay distributions to the Parent Company will depend on its future performance, which will be subject to prevailing economic, financial, business and weather conditions, and other factors, many of which are beyond the control of ETO's management.

ETO currently expects capital expenditures in 2021 to be within the following ranges (excluding capital expenditures related to our investments in Sunoco LP and USAC):

	Growth		Maintenance	
	Low	High	Low	High
Intrastate transportation and storage	$ 5	$ 10	$ 35	$ 40
Interstate transportation and storage [(1)]	25	50	120	125
Midstream	265	290	110	115
NGL and refined products transportation and services [(1)]	700	800	90	100
Crude oil transportation and services [(1)]	280	305	100	110
All other (including eliminations)	75	100	55	60
Total capital expenditures	$ 1,350	$ 1,555	$ 510	$ 550

[(1)] Includes capital expenditures related to ETO's proportionate ownership of the Bakken, Rover, and Bayou Bridge pipeline projects and our proportionate ownership of the Orbit Gulf Coast NGL export project.

The assets used in our natural gas and liquids operations, including pipelines, gathering systems and related facilities, are generally long-lived assets and do not require significant maintenance capital expenditures. Accordingly, we do not have any significant financial commitments for maintenance capital expenditures in our businesses. From time to time we experience increases in pipe costs due to a number of reasons, including but not limited to, delays from steel mills, limited selection of mills capable of producing large diameter pipe timely, higher steel prices and other factors beyond our control. However, we include these factors in our anticipated growth capital expenditures for each year.

ETO generally funds maintenance capital expenditures and distributions with cash flows from operating activities. ETO generally expects to funds growth capital expenditures with proceeds of borrowings under our credit facilities, along with cash from operations.

Sunoco LP expects to invest approximately $120 million in growth capital expenditures and approximately $45 million on maintenance capital expenditures in 2021.

USAC currently plans to spend approximately $22 million in maintenance capital expenditures and currently has budgeted between $30 million and $40 million in expansion capital expenditures in 2021.

Cash Flows

Our cash flows may change in the future due to a number of factors, some of which we cannot control. These include regulatory changes, the price of our products and services, the demand for such products and services, margin requirements resulting from significant changes in commodity prices, operational risks, the successful integration of our acquisitions, and other factors.

Operating Activities

Changes in cash flows from operating activities between periods primarily result from changes in earnings (as discussed in "Results of Operations" above), excluding the impacts of non-cash items and changes in operating assets and liabilities. Non-cash items include recurring non-cash expenses, such as depreciation, depletion and amortization expense and non-cash compensation expense. The increase in depreciation, depletion and amortization expense during the periods presented primarily resulted from construction and acquisitions of assets, while changes in non-cash compensation expense resulted from changes in the number of units granted and changes in the grant date fair value estimated for such grants. Cash flows from operating activities also differ from earnings as a result of non-cash charges that may not be recurring such as impairment charges and allowance for equity funds used during construction. The allowance for equity funds used during construction increases in periods when ETO has a significant amount of interstate pipeline construction in progress. Changes in operating assets and liabilities between periods result from factors such as the changes in the value of derivative assets and liabilities, timing of accounts receivable collection, payments on accounts payable, the timing of purchases and sales of inventories, and the timing of advances and deposits received from customers.

Following is a summary of operating activities by period:

Year Ended December 31, 2020

Cash provided by operating activities in 2020 was $7.36 billion and income from continuing operations was $140 million. The difference between net income and cash provided by operating activities in 2020 primarily consisted of non-cash items totaling $7.00 billion offset by net changes in operating assets and liabilities of $47 million. The non-cash activity in 2020 consisted primarily of depreciation, depletion and amortization of $3.68 billion, impairment losses of $2.88 billion, non-cash compensation expense of $121 million, equity in earnings of unconsolidated affiliates of $119 million, inventory valuation adjustments of $82 million, losses on extinguishment of debt of $75 million, and deferred income taxes of $210 million. The Partnership also received distributions of $220 million from unconsolidated affiliates.

Year Ended December 31, 2019

Cash provided by operating activities in 2019 was $8.06 billion and income from continuing operations was $4.83 billion. The difference between net income and cash provided by operating activities in 2019 primarily consisted of non-cash items totaling $3.37 billion offset by net changes in operating assets and liabilities of $391 million. The non-cash activity in 2019 consisted primarily of depreciation, depletion and amortization of $3.15 billion, impairment losses of $74 million, non-cash compensation expense of $113 million, equity in earnings of unconsolidated affiliates of $302 million, inventory valuation adjustments of $79 million, losses on extinguishment of debt of $18 million, and deferred income taxes of $217 million. The Partnership also received distributions of $290 million from unconsolidated affiliates.

Year Ended December 31, 2018

Cash provided by operating activities in 2018 was $7.51 billion and income from continuing operations was $3.69 billion. The difference between net income and cash provided by operating activities in 2018 primarily consisted of non-cash items totaling $3.30 billion and net changes in operating assets and liabilities of $234 million. The non-cash activity in 2018 consisted primarily of depreciation, depletion and amortization of $2.86 billion, impairment losses of $431 million, non-cash compensation expense of $105 million, equity in earnings of unconsolidated affiliates of $344 million, inventory valuation adjustments of $85 million, losses on extinguishment of debt of $112 million, and deferred income taxes of $7 million. The Partnership also received distributions of $328 million from unconsolidated affiliates.

Investing Activities

Cash flows from investing activities primarily consist of cash amounts paid for acquisitions, capital expenditures, cash distributions from our joint ventures, and cash proceeds from sales or contributions of assets or businesses. Changes in capital expenditures between periods primarily result from increases or decreases in our growth capital expenditures to fund our construction and expansion projects.

Following is a summary of investing activities by period:

Year Ended December 31, 2020

Cash used in investing activities in 2020 was $4.90 billion. Total capital expenditures (excluding the allowance for equity funds used during construction and net of contributions in aid of construction costs) were $5.06 billion. Additional detail related to our capital expenditures is provided in the table below. We received $19 million of cash proceeds from the sale of assets. The Partnership also received distributions of $187 million from unconsolidated affiliates.

Year Ended December 31, 2019

Cash used in investing activities in 2019 was $6.93 billion. Total capital expenditures (excluding the allowance for equity funds used during construction and net of contributions in aid of construction costs) were $5.88 billion. Additional detail related to our capital expenditures is provided in the table below. During 2020, we received $93 million of cash proceeds from the sale of a noncontrolling interest in a subsidiary, paid $787 million in net cash for the SemGroup acquisition, and paid $7 million in cash for all other acquisitions. We received $54 million of cash proceeds from the sale of assets. The Partnership also received distributions of $98 million from unconsolidated affiliates.

Year Ended December 31, 2018

Cash used in investing activities in 2018 was $7.08 billion. Total capital expenditures (excluding the allowance for equity funds used during construction and net of contributions in aid of construction costs) were $7.30 billion. Additional detail related to our capital expenditures is provided in the table below. We recorded a net increase in cash of $461 million related to the USAC acquisition and paid $429 million in cash from all other acquisitions. We received $87 million of cash proceeds from the sale of assets. The Partnership also received distributions of $69 million from unconsolidated affiliates.

The following is a summary of the Partnership's capital expenditures (including only our proportionate share of the Bakken, Rover, and Bayou Bridge pipeline projects, our proportionate share of the Orbit Gulf Coast NGL export project, and net of contributions in aid of construction costs) by period:

	Capital Expenditures Recorded During Period		
	Growth	Maintenance	Total
Year Ended December 31, 2020:			
Intrastate transportation and storage	$ 13	$ 36	$ 49
Interstate transportation and storage	52	98	150
Midstream	376	111	487
NGL and refined products transportation and services	2,305	98	2,403
Crude oil transportation and services	209	82	291
Investment in Sunoco LP	89	35	124
Investment in USAC	96	23	119
All other (including eliminations)	99	37	136
Total capital expenditures	$ 3,239	$ 520	$ 3,759
Year Ended December 31, 2019:			
Intrastate transportation and storage	$ 87	$ 37	$ 124
Interstate transportation and storage	239	136	375
Midstream	670	157	827
NGL and refined products transportation and services	2,854	122	2,976
Crude oil transportation and services	317	86	403
Investment in Sunoco LP [(1)]	108	40	148
Investment in USAC	170	30	200
All other (including eliminations)	165	50	215
Total capital expenditures	$ 4,610	$ 658	$ 5,268
Year Ended December 31, 2018:			
Intrastate transportation and storage	$ 311	$ 33	$ 344
Interstate transportation and storage	695	117	812
Midstream	1,026	135	1,161
NGL and refined products transportation and services	2,303	78	2,381
Crude oil transportation and services	414	60	474
Investment in Sunoco LP [(1)]	72	31	103
Investment in USAC	182	23	205
All other (including eliminations)	117	33	150
Total capital expenditures	$ 5,120	$ 510	$ 5,630

[(1)] Amounts related to Sunoco LP's capital expenditures include capital expenditures related to discontinued operations.

Financing Activities

Changes in cash flows from financing activities between periods primarily result from changes in the levels of borrowings and equity issuances, which are primarily used to fund our acquisitions and growth capital expenditures. Distributions to partners increased between the periods as a result of increases in the number of common units outstanding or increases in the distribution rate.

Following is a summary of financing activities by period:

Year Ended December 31, 2020

Cash used in financing activities was $2.39 billion in 2020. In 2020, our subsidiaries received $1.58 billion in proceeds from the issuance of preferred units. In 2020, we had a consolidated increase in our debt level of $307 million, primarily due to the issuance of subsidiary senior notes. During 2020, we paid distributions of $2.80 billion to our partners, we paid distributions of $1.65 billion to noncontrolling interests, and we paid distributions of $49 million to our redeemable noncontrolling interests. In addition, we received capital contributions of $222 million in cash from noncontrolling interests. During 2020, we incurred debt issuance costs of $59 million.

Year Ended December 31, 2019

Cash used in financing activities was $1.25 billion in 2019. Our subsidiaries received $780 million in proceeds from the issuance of preferred units. In 2019, we had a consolidated increase in our debt level of $2.48 billion, primarily due to the issuance of subsidiary notes. During 2019, we paid distributions of $3.05 billion to our partners, we paid distributions of $1.60 billion to noncontrolling interests, and we paid distributions of $53 million to our redeemable noncontrolling interests. In addition, we received capital contributions of $348 million in cash from noncontrolling interests. During 2019, we incurred debt issuance costs of $117 million.

Year Ended December 31, 2018

Cash used in financing activities was $3.08 billion in 2018. Our subsidiaries received $1.40 billion in proceeds from the issuance of common units, including $58 million from the issuance of ETO Common Units and $1.34 billion from the issuance of other subsidiary common units. In 2018, we had a consolidated increase in our debt level of $53 million, primarily due to the issuance of Parent Company and subsidiary senior notes. During 2018, we paid distributions of $1.68 billion to our partners, we paid distributions of $3.12 billion to noncontrolling interests, and we paid distributions of $24 million to our redeemable noncontrolling interests. In addition, we received capital contributions of $649 million in cash from noncontrolling interests. During 2018, we incurred debt issuance costs of $171 million.

Discontinued Operations

Following is a summary of activities related to discontinued operations by period:

Year Ended December 31, 2018

Cash provided by discontinued operations was $2.73 billion for the year ended December 31, 2018, which reflected the net impact of cash used in operating activities of $484 million, cash provided by investing activities of $3.21 billion and changes in cash included in current assets held for sale of $11 million.

Description of Indebtedness

Our outstanding consolidated indebtedness was as follows:

	December 31,	
	2020	2019
Parent Company Indebtedness:		
ET Senior Notes due October 2020	$ —	$ 52
ET Senior Notes due March 2023	5	5
ET Senior Notes due January 2024	23	23
ET Senior Notes due June 2027	44	44
Subsidiary Indebtedness:		
ETO Senior Notes	37,783	36,118
Transwestern Senior Notes	400	575
Panhandle Senior Notes	235	235
Bakken Senior Notes	2,500	2,500
Sunoco LP Senior Notes, Term Loan and lease-related obligations	3,139	2,935
USAC Senior Notes	1,475	1,475
HFOTCO Tax-Exempt Notes	225	225
Revolving Credit Facilities:		
ETO $2.00 billion Term Loan facility due October 2022	2,000	2,000
ETO $5.00 billion Revolving Credit Facility due December 2023	3,103	4,214
Sunoco LP $1.50 billion Revolving Credit Facility due July 2023	—	162
USAC $1.60 billion Revolving Credit Facility due April 2023	474	403
Energy Transfer Canada Revolver due February 2024	57	92
Energy Transfer Canada Revolver Term Loan A due February 2024	261	269
Other long-term debt	3	2
Unamortized premiums, net of discounts and fair value adjustments	(10)	4
Deferred debt issuance costs	(279)	(279)
Total debt	51,438	51,054
Less: current maturities of long-term debt	21	26
Long-term debt, less current maturities	$ 51,417	$ 51,028

The terms of our consolidated indebtedness and that of our subsidiaries are described in more detail below and in Note 6 to our consolidated financial statements, included in “Item 8. Financial Statements and Supplementary Data.”

Recent Financing Transactions

ETO January 2020 Senior Notes Offering and Redemption

On January 22, 2020, ETO completed a registered offering (the “January 2020 Senior Notes Offering”) of $1.00 billion aggregate principal amount of ETO’s 2.900% Senior Notes due 2025, $1.50 billion aggregate principal amount of ETO’s 3.750% Senior Notes due 2030, and $2.00 billion aggregate principal amount of ETO’s 5.000% Senior Notes due 2050, (collectively, the “Notes”). The Notes are fully and unconditionally guaranteed by the Partnership’s wholly-owned subsidiary, Sunoco Logistics Partners Operations L.P., on a senior unsecured basis.

Utilizing proceeds from the January 2020 Senior Notes Offering, ETO redeemed its $400 million aggregate principal amount of 5.75% Senior Notes due September 1, 2020, its $1.05 billion aggregate principal amount of 4.15% Senior Notes due October 1, 2020, its $1.14 billion aggregate principal amount of 7.50% Senior Notes due October 15, 2020, its $250 million aggregate principal amount of 5.50% Senior Notes due February 15, 2020, ET’s $52 million aggregate principal amount of 7.50% Senior Notes due October 15, 2020 and Transwestern’s $175 million aggregate principal amount of 5.36% Senior Notes due December 9, 2020.

Sunoco LP November 2020 Senior Notes Offering and Repurchase

On November 9, 2020, Sunoco LP completed a private offering of $800 million in aggregate principal amount of 4.500% senior notes due 2029. Sunoco LP used the proceeds to fund the tender offer on its 4.875% $1 billion senior notes due 2023. Approximately 56% of the 2023 senior notes were tendered. On January 15, 2021, Sunoco LP repurchased the remaining outstanding portion of its 2023 senior notes.

Credit Facilities, Term Loan and Commercial Paper

Parent Company

The Parent Company does not currently have any credit facilities.

ETO Credit Facilities

Borrowings under the ETO Credit Facilities (defined as the ETO Term Loan, ETO Five-Year Credit Facility and ETO 364-Day Credit Facility, each of which is described below) are unsecured and initially guaranteed by Sunoco Logistics Operations. Borrowings under the ETO Credit Facilities will bear interest at a eurodollar rate or a base rate, at our option, plus an applicable margin. In addition, we will be required to pay a quarterly commitment fee to each lender equal to the product of the applicable rate and such lender's applicable percentage of the unused portion of the aggregate commitments under the ETO Credit Facilities.

We typically repay amounts outstanding under the ETO Credit Facilities with proceeds from unit offerings or long-term notes offerings. The timing of borrowings depends on the Partnership's activities and the cash available to fund those activities. The repayments of amounts outstanding under the ETO Credit Facilities depend on multiple factors, including market conditions and expectations of future working capital needs, and ultimately are a financing decision made by management. Therefore, the balance outstanding under the ETO Credit Facilities may vary significantly between periods. We do not believe that such fluctuations indicate a significant change in our liquidity position, because we expect to continue to be able to repay amounts outstanding under the ETO Credit Facilities with proceeds from unit offerings or long-term note offerings.

ETO Term Loan

On October 17, 2019, ETO entered into a term loan credit agreement (the "ETO Term Loan") providing for a $2.00 billion three-year term loan credit facility. Borrowings under the term loan agreement mature on October 17, 2022 and are available for working capital purposes and for general partnership purposes. The term loan agreement is unsecured and is guaranteed by our subsidiary, Sunoco Logistics Operations.

As of December 31, 2020, the ETO Term Loan had $2.00 billion outstanding and was fully drawn. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 1.15%.

ETO Five-Year Credit Facility

ETO's revolving credit facility (the "ETO Five-Year Credit Facility") allows for unsecured borrowings up to $5.00 billion and matures on December 1, 2023. The ETO Five-Year Credit Facility contains an accordion feature, under which the total aggregate commitment may be increased up to $6.00 billion under certain conditions.

As of December 31, 2020, the ETO Five-Year Credit Facility had $3.10 billion outstanding, of which $1.66 billion was commercial paper. The amount available for future borrowings was $1.79 billion after accounting for outstanding letters of credit in the amount of $109 million. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 1.12%.

ETO 364-Day Facility

ETO's 364-day revolving credit facility (the "ETO 364-Day Facility") allows for unsecured borrowings up to $1.00 billion and matures on November 26, 2021. As of December 31, 2020, the ETO 364-Day Facility had no outstanding borrowings.

Sunoco LP Credit Facility

As of December 31, 2020, the Sunoco LP Credit Facility had no outstanding borrowings and $8 million in standby letters of credit. The amount available for future borrowings was at December 31, 2020 was $1.5 billion.

USAC Credit Facility

As of December 31, 2020, USAC had $474 million of outstanding borrowings and no outstanding letters of credit under the credit agreement. As of December 31, 2020, USAC had $1.13 billion of availability under its credit facility. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 3.27%.

Energy Transfer Canada Credit Facilities

Energy Transfer Canada is party to a credit agreement providing for a C$350 million (US$275 million at the December 31, 2020 exchange rate) senior secured term loan facility, a C$525 million (US$412 million at the December 31, 2020 exchange rate) senior secured revolving credit facility, and a C$300 million (US$236 million at the December 31, 2020 exchange rate) senior secured construction loan facility (the "KAPS Facility"). The term loan facility and the revolving credit facility mature on February 25, 2024. The KAPS Facility matures on June 13, 2024. Energy Transfer Canada may incur additional term loans and revolving commitments in an aggregate amount not to exceed C$250 million (US$196 million at the December 31, 2020 exchange rate), subject to receiving commitments for such additional term loans or revolving commitments from either new lenders or increased commitments from existing lenders.

Covenants Related to Our Credit Agreements

Covenants Related to the Parent Company

The Term Loan Facility and ET Revolving Credit Facility previously contained customary representations, warranties, covenants, and events of default, including a change of control event of default and limitations on incurrence of liens, new lines of business, merger, transactions with affiliates and restrictive agreements. Both facilities have been paid off and terminated.

Covenants Related to ETO

The agreements relating to the ETO senior notes contain restrictive covenants customary for an issuer with an investment-grade rating from the rating agencies, which covenants include limitations on liens and a restriction on sale-leaseback transactions.

The ETO Credit Facilities (defined as the ETO Term Loan, ETO Five-Year Credit Facility and ETO 364-Day Credit Facility) contain covenants that limit (subject to certain exceptions) the Partnership's and certain of the Partnership's subsidiaries' ability to, among other things:

- incur indebtedness;
- grant liens;
- enter into mergers;
- dispose of assets;
- make certain investments;
- make Distributions (as defined in the ETO Credit Facilities) during certain Defaults (as defined in the ETO Credit Facilities) and during any Event of Default (as defined in the ETO Credit Facilities);
- engage in business substantially different in nature than the business currently conducted by the Partnership and its subsidiaries;
- engage in transactions with affiliates; and
- enter into restrictive agreements.

The ETO Credit Facilities applicable margin and rate used in connection with the interest rates and commitment fees, respectively, are based on the credit ratings assigned to our senior, unsecured, non-credit enhanced long-term debt. The applicable margin for eurodollar rate loans under the ETO Five-Year Credit Facility ranges from 1.125% to 2.000% and the applicable margin for base rate loans ranges from 0.125% to 1.000%. The applicable rate for commitment fees under the ETO Five-Year Credit Facility ranges from 0.125% to 0.300%. The applicable margin for eurodollar rate loans under the ETO 364-Day Facility ranges from 1.500% to 2.000% and the applicable margin for base rate loans ranges from 0.500% to 1.000%. The applicable rate for commitment fees under the ETO 364-Day Facility ranges from 0.125% to 0.225%.

The ETO Credit Facilities contain various covenants including limitations on the creation of indebtedness and liens and related to the operation and conduct of our business. The ETO Credit Facilities also limit us, on a rolling four quarter basis, to a maximum Consolidated Funded Indebtedness to Consolidated EBITDA ratio, as defined in the underlying credit agreements, of

5.0 to 1, which can generally be increased to 5.5 to 1 during a Specified Acquisition Period. Our Leverage Ratio was 4.31 to 1 at December 31, 2020, as calculated in accordance with the credit agreements.

The agreements relating to the Transwestern senior notes contain certain restrictions that, among other things, limit the incurrence of additional debt, the sale of assets and the payment of dividends and specify a maximum debt to capitalization ratio.

Failure to comply with the various restrictive and affirmative covenants of our revolving credit facilities could require us to pay debt balances prior to scheduled maturity and could negatively impact the Partnership's or our subsidiaries' ability to incur additional debt and/or our ability to pay distributions to Unitholders.

Covenants Related to Panhandle

Panhandle is not party to any lending agreement that would accelerate the maturity date of any obligation due to a failure to maintain any specific credit rating, nor would a reduction in any credit rating, by itself, cause an event of default under any of Panhandle's lending agreements.

Panhandle's restrictive covenants include restrictions on liens securing debt and guarantees and restrictions on mergers and on the sales of assets. A breach of any of these covenants could result in acceleration of Panhandle's debt.

Covenants Related to Sunoco LP

The Sunoco LP Credit Facility contains various customary representations, warranties, covenants and events of default, including a change of control event of default, as defined therein. Sunoco LP's Credit Facility requires Sunoco LP to maintain a Net Leverage Ratio of not more than 5.5 to 1. The maximum Net Leverage Ratio is subject to upwards adjustment of not more than 6.0 to 1 for a period not to exceed three fiscal quarters in the event Sunoco LP engages in certain specified acquisitions of not less than $50 million (as permitted under Sunoco LP's Credit Facility agreement). The Sunoco LP Credit Facility also requires Sunoco LP to maintain an Interest Coverage Ratio (as defined in the Sunoco LP's Credit Facility agreement) of not less than 2.25 to 1.

Covenants Related to USAC

The USAC Credit Facility contains covenants that limit (subject to certain exceptions) USAC's ability to, among other things:

- grant liens;
- make certain loans or investments;
- incur additional indebtedness or guarantee other indebtedness;
- merge or consolidate;
- sell our assets; or
- make certain acquisitions.

The credit facility is also subject to the following financial covenants, including covenants requiring us to maintain:

- a minimum EBITDA to interest coverage ratio of 2.5 to 1.0, determined as of the last day of each fiscal quarter; and
- a maximum funded debt to EBITDA ratio, determined as of the last day of each fiscal quarter, for the annualized trailing three months of (i) 5.75 to 1 through the end of the fiscal quarter ending December 31, 2020 and (ii) 5.5 to 1 for the fiscal quarters ending March 31, 2021 and June 30, 2021, (iii) 5.25 to 1 for the fiscal quarters ending September 30, 2021 and December 31, 2021 and (iv) 5.0 to 1 thereafter, subject to a provision for increases to such thresholds, in the case of any fiscal quarter ending September 30, 2021 or thereafter, by 0.50 in connection with certain future acquisitions for the six consecutive month period following the period in which any such acquisition occurs, provided that, in any event, such ratio shall not exceed 5.5 to 1.

Covenants Related to the HFOTCO Tax Exempt Notes

The indentures covering HFOTCO's tax exempt notes due 2050 ("IKE Bonds") include customary representations and warranties and affirmative and negative covenants. Such covenants include limitations on the creation of new liens, indebtedness, making of certain restricted payments and payments on indebtedness, making certain dispositions, making material changes in business activities, making fundamental changes including liquidations, mergers or consolidations, making certain investments, entering into certain transactions with affiliates, making amendments to certain credit or organizational agreements, modifying the fiscal year, creating or dealing with hazardous materials in certain ways, entering into certain

hedging arrangements, entering into certain restrictive agreements, funding or engaging in sanctioned activities, taking actions or causing the trustee to take actions that materially adversely affect the rights, interests, remedies or security of the bondholders, taking actions to remove the trustee, making certain amendments to the bond documents, and taking actions or omitting to take actions that adversely impact the tax exempt status of the IKE Bonds.

Compliance with our Covenants

We and our subsidiaries were in compliance with all requirements, tests, limitations, and covenants related to our debt agreements as of December 31, 2020.

Contractual Obligations

The following table summarizes our long-term debt and other contractual obligations as of December 31, 2020:

	Payments Due by Period				
Contractual Obligations	Total	Less Than 1 Year	1-3 Years	3-5 Years	More Than 5 Years
Long-term debt	$ 51,727	$ 1,420	$ 13,023	$ 7,029	$ 30,255
Interest on long-term debt[1]	28,980	2,421	4,330	3,448	18,781
Payments on derivatives	451	212	239	—	—
Purchase commitments[2]	3,731	2,599	703	356	73
Transportation, natural gas storage and fractionation contracts	286	62	120	104	—
Operating lease obligations	1,554	99	164	151	1,140
Service concession arrangement[3]	364	15	31	32	286
Other[4]	196	26	50	41	79
Total[5]	$ 87,289	$ 6,854	$ 18,660	$ 11,161	$ 50,614

(1) Interest payments on long-term debt are based on the principal amount of debt obligations as of December 31, 2020. With respect to variable rate debt, the interest payments were estimated using the interest rate as of December 31, 2020. To the extent interest rates change, our contractual obligations for interest payments will change. See “Item 7A. Quantitative and Qualitative Disclosures About Market Risk” for further discussion.

(2) We define a purchase commitment as an agreement to purchase goods or services that is enforceable and legally binding (unconditional) on us that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transactions. We have long and short-term product purchase obligations for refined product and energy commodities with third-party suppliers. These purchase obligations are entered into at either variable or fixed prices. The purchase prices that we are obligated to pay under variable price contracts approximate market prices at the time we take delivery of the volumes. Our estimated future variable price contract payment obligations are based on the December 31, 2020 market price of the applicable commodity applied to future volume commitments. Actual future payment obligations may vary depending on market prices at the time of delivery. The purchase prices that we are obligated to pay under fixed price contracts are established at the inception of the contract. Our estimated future fixed price contract payment obligations are based on the contracted fixed price under each commodity contract. Obligations shown in the table represent estimated payment obligations under these contracts for the periods indicated.

(3) Includes minimum guaranteed payments under service concession arrangements with New Jersey Turnpike Authority and New York Thruway Authority.

(4) Expected contributions to fund our pension and postretirement benefit plans were included in “Other” above. Environmental liabilities, AROs, unrecognized tax benefits, contingency accruals and deferred revenue, which were included in “Other non-current liabilities” in our consolidated balance sheets, were excluded from the table above as the amounts do not represent contractual obligations or, in some cases, the amount and/or timing of the cash payments is uncertain.

(5) Excludes non-current deferred tax liabilities of $3.43 billion due to uncertainty of the timing of future cash flows for such liabilities.

Cash Distributions

Cash Distributions Paid by the Parent Company

Under the Parent Company Partnership Agreement, the Parent Company will distribute all of its Available Cash, as defined, within 50 days following the end of each fiscal quarter. Available cash generally means, with respect to any quarter, all cash on hand at the end of such quarter less the amount of cash reserves that are necessary or appropriate in the reasonable discretion of the General Partner that is necessary or appropriate to provide for future cash requirements.

Distributions declared and paid are as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2017	February 8, 2018	February 20, 2018	$ 0.3050
March 31, 2018	May 7, 2018	May 21, 2018	0.3050
June 30, 2018	August 6, 2018	August 20, 2018	0.3050
September 30, 2018	November 8, 2018	November 19, 2018	0.3050
December 31, 2018	February 8, 2019	February 19, 2019	0.3050
March 31, 2019	May 7, 2019	May 20, 2019	0.3050
June 30, 2019	August 6, 2019	August 19, 2019	0.3050
September 30, 2019	November 5, 2019	November 19, 2019	0.3050
December 31, 2019	February 7, 2020	February 19, 2020	0.3050
March 31, 2020	May 7, 2020	May 19, 2020	0.3050
June 30, 2020	August 7, 2020	August 19, 2020	0.3050
September 30, 2020	November 6, 2020	November 19, 2020	0.1525
December 31, 2020	February 8, 2021	February 19, 2021	0.1525

Certain common unitholders elected to participate in a plan pursuant to which those unitholders elected to forego their cash distributions on all or a portion of their common units for a period of up to nine quarters commencing with the distribution for the quarter ended March 31, 2016 and, in lieu of receiving cash distributions on these common units for each such quarter, each said unitholder received ET Series A Convertible Preferred Units (on a one-for-one basis for each common unit as to which the participating unitholder elected be subject to this plan) that entitled them to receive a cash distribution of up to $0.11 per unit. In May 2018, the ET Series A Convertible Preferred Units converted into ET Common Units. See Note 8 to the Partnership's consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data."

Our distributions declared and paid with respect to ET Series A Convertible Preferred Unit were as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2016	February 7, 2017	February 21, 2017	$ 0.1100
March 31, 2017	May 10, 2017	May 19, 2017	0.1100
June 30, 2017	August 7, 2017	August 21, 2017	0.1100
September 30, 2017	November 7, 2017	November 20, 2017	0.1100
December 31, 2017	February 8, 2018	February 20, 2018	0.1100
March 31, 2018	May 7, 2018	May 21, 2018	0.1100

The total amounts of distributions declared and paid during the periods presented (all from Available Cash from the Parent Company's operating surplus and are shown in the period to which they relate) are as follows:

	Years Ended December 31,		
	2020	2019	2018
Limited Partners	$ 2,468	$ 3,221	$ 2,215
General Partner interest	3	4	3
Total Parent Company distributions	$ 2,471	$ 3,225	$ 2,218

Cash Distributions Paid by Subsidiaries

Certain of our subsidiaries are required by their respective partnership agreements to distribute all cash on hand at the end of each quarter, less appropriate reserves determined by the board of directors of their respective general partners.

ETO Preferred Unit Distributions

Distributions on the ETO's Series A, Series B, Series C, Series D, Series E, Series F and Series G preferred units declared and/or paid by ETO were as follows:

Period Ended	Record Date	Payment Date	Series A [1]	Series B [1]	Series C	Series D	Series E	Series F [1]	Series G [1]
June 30, 2018	August 1, 2018	August 15, 2018	$ 31.2500	$ 33.1250	$ 0.5634 *	$ —	$ —	$ —	$ —
September 30, 2018	November 1, 2018	November 15, 2018	—	—	0.4609	0.5931 *	—	—	—
December 31, 2018	February 1, 2019	February 15, 2019	31.2500	33.1250	0.4609	0.4766	—	—	—
March 31, 2019	May 1, 2019	May 15, 2019	—	—	0.4609	0.4766	—	—	—
June 30, 2019	August 1, 2019	August 15, 2019	31.2500	33.1250	0.4609	0.4766	0.5806 *	—	—
September 30, 2019	November 1, 2019	November 15, 2019	—	—	0.4609	0.4766	0.4750	—	—
December 31, 2019	February 3, 2020	February 18, 2020	31.2500	33.1250	0.4609	0.4766	0.4750	—	—
March 31, 2020	May 1, 2020	May 15, 2020	—	—	0.4609	0.4766	0.4750	21.19 *	22.36 *
June 30, 2020	August 3, 2020	August 17, 2020	31.2500	33.1250	0.4609	0.4766	0.4750	—	—
September 30, 2020	November 2, 2020	November 15, 2020	—	—	0.4609	0.4766	0.4750	33.75	35.625
December 31, 2020	February 1, 2021	February 16, 2021	31.2500	33.1250	0.4609	0.4766	0.4750	—	—

* Represent prorated initial distributions.

[1] ETO Series A Preferred Unit, ETO Series B Preferred Unit, ETO Series F Preferred Unit and ETO Series G Preferred Unit distributions are paid on a semi-annual basis.

Sunoco LP Cash Distributions

The following table illustrates the percentage allocations of available cash from operating surplus between Sunoco LP's common unitholders and the holder of its IDRs based on the specified target distribution levels, after the payment of distributions to Class C unitholders. The amounts set forth under "marginal percentage interest in distributions" are the percentage interests of the IDR holder and the common unitholders in any available cash from operating surplus which Sunoco LP distributes up to and including the corresponding amount in the column "total quarterly distribution per unit target amount."

The percentage interests shown for common unitholders and IDR holder for the minimum quarterly distribution are also applicable to quarterly distribution amounts that are less than the minimum quarterly distribution.

		Marginal Percentage Interest in Distributions	
	Total Quarterly Distribution Target Amount	Common Unitholders	Holder of IDRs
Minimum Quarterly Distribution	$0.4375	100%	—%
First Target Distribution	$0.4375 to $0.503125	100%	—%
Second Target Distribution	$0.503125 to $0.546875	85%	15%
Third Target Distribution	$0.546875 to $0.656250	75%	25%
Thereafter	Above $0.656250	50%	50%

Distributions on Sunoco LP's units declared and/or paid by Sunoco LP were as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2017	February 6, 2018	February 14, 2018	$ 0.8255
March 31, 2018	May 7, 2018	May 15, 2018	0.8255
June 30, 2018	August 7, 2018	August 15, 2018	0.8255
September 30, 2018	November 6, 2018	November 14, 2018	0.8255
December 31, 2018	February 6, 2019	February 14, 2019	0.8255
March 31, 2019	May 7, 2019	May 15, 2019	0.8255
June 30, 2019	August 6, 2019	August 14, 2019	0.8255
September 30, 2019	November 5, 2019	November 19, 2019	0.8255
December 31, 2019	February 7, 2020	February 19, 2020	0.8255
March 31, 2020	May 7, 2020	May 19, 2020	0.8255
June 30, 2020	August 7, 2020	August 19, 2020	0.8255
September 30, 2020	November 6, 2020	November 19, 2020	0.8255
December 31, 2020	February 8, 2021	February 19, 2021	0.8255

The total amount of distributions to the Partnership from Sunoco LP for the periods presented below is as follows:

	Years Ended December 31,		
	2020	2019	2018
Distributions from Sunoco LP			
Limited Partner interests	$ 94	$ 94	$ 94
General Partner interest and IDRs	70	70	70
Series A Preferred	—	—	2
Total distributions from Sunoco LP	$ 164	$ 164	$ 166

USAC Cash Distributions

Subsequent to the Energy Transfer Merger and USAC Transactions described in Note 1 and Note 3, respectively, ETO owned approximately 39.7 million USAC common units and 6.4 million USAC Class B units. Subsequent to the conversion of the USAC Class B Units to USAC common units on July 30, 2019, ETO owns approximately 46.1 million USAC common units. As of December 31, 2020, USAC had approximately 97.0 million common units outstanding. USAC currently has a non-economic general partner interest and no outstanding IDRs.

Distributions on USAC's units declared and/or paid by USAC subsequent to the USAC transaction on April 2, 2018 were as follows:

Quarter Ended	Record Date	Payment Date	Rate
March 31, 2018	May 1, 2018	May 11, 2018	$ 0.5250
June 30, 2018	July 30, 2018	August 10, 2018	0.5250
September 30, 2018	October 29, 2018	November 9, 2018	0.5250
December 31, 2018	January 28, 2019	February 8, 2019	0.5250
March 31, 2019	April 29, 2019	May 10, 2019	0.5250
June 30, 2019	July 29, 2019	August 9, 2019	0.5250
September 30, 2019	October 28, 2019	November 8, 2019	0.5250
December 31, 2019	January 27, 2020	February 7, 2020	0.5250
March 31, 2020	April 27, 2020	May 8, 2020	0.5250
June 30, 2020	July 31, 2020	August 10, 2020	0.5250
September 30, 2020	October 26, 2020	November 6, 2020	0.5250
December 31, 2020	January 25, 2021	February 5, 2021	0.5250

The total amount of distributions to the Partnership from USAC for the periods presented below is as follows:

	Years Ended December 31,		
	2020	2019	2018
Distributions from USAC			
Limited Partner interests	$ 97	$ 90	$ 73
Total distributions from USAC	$ 97	$ 90	$ 73

Critical Accounting Estimates

The selection and application of accounting policies is an important process that has developed as our business activities have evolved and as the accounting rules have developed. Accounting rules generally do not involve a selection among alternatives, but involve an implementation and interpretation of existing rules, and the use of judgment applied to the specific set of circumstances existing in our business. We make every effort to properly comply with all applicable rules, and we believe the proper implementation and consistent application of the accounting rules are critical. Our critical accounting policies are discussed below. For further details on our accounting policies see Note 2 to our consolidated financial statements.

Use of Estimates. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the accrual for and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The natural gas industry conducts its business by processing actual transactions at the end of the month following the month of delivery. Consequently, the most current month's financial results for the midstream, NGL and intrastate transportation and storage segments are estimated using volume estimates and market prices. Any differences between estimated results and actual results are recognized in the following month's financial statements. Management believes that the operating results estimated for the year ended December 31, 2020 represent the actual results in all material respects.

Some of the other significant estimates made by management include, but are not limited to, the timing of certain forecasted transactions that are hedged, the fair value of derivative instruments, useful lives for depreciation, depletion and amortization, purchase accounting allocations and subsequent realizability of intangible assets, fair value measurements used in the goodwill impairment test, market value of inventory, assets and liabilities resulting from the regulated ratemaking process, contingency reserves and environmental reserves. Actual results could differ from those estimates.

Impairment of Long-Lived Assets, Goodwill, Intangible Assets and Investments in Unconsolidated Affiliates. Long-lived assets are required to be tested for recoverability whenever events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. Goodwill and intangibles with indefinite lives must be tested for impairment annually or more frequently if events or changes in circumstances indicate that the related asset might be impaired. An impairment of an investment in an unconsolidated affiliate is recognized when circumstances indicate that a decline in the investment value is

other than temporary. An impairment loss should be recognized only if the carrying amount of the asset/goodwill is not recoverable and exceeds its fair value.

In order to test for recoverability when performing a quantitative impairment test, we must make estimates of projected cash flows related to the asset, which include, but are not limited to, assumptions about the use or disposition of the asset, estimated remaining life of the asset, and future expenditures necessary to maintain the asset's existing service potential. In order to determine fair value, we make certain estimates and assumptions, including, among other things, changes in general economic conditions in regions in which our markets are located, the availability and prices of natural gas, our ability to negotiate favorable sales agreements, the risks that natural gas exploration and production activities will not occur or be successful, our dependence on certain significant customers and producers of natural gas, and competition from other companies, including major energy producers. While we believe we have made reasonable assumptions to calculate the fair value, if future results are not consistent with our estimates, we could be exposed to future impairment losses that could be material to our results of operations.

The Partnership determines the fair value of its reporting units using a discounted cash flow method, the guideline company method, or a weighted combination of these methods. Determining the fair value of a reporting unit requires judgment and the use of significant estimates and assumptions. Such estimates and assumptions include revenue growth rates, operating margins, weighted average costs of capital and future market conditions, among others. The Partnership believes the estimates and assumptions used in our impairment assessments are reasonable and based on available market information, but variations in any of the assumptions could result in materially different calculations of fair value and determinations of whether or not an impairment is indicated. Under the discounted cash flow method, the Partnership determines fair value based on estimated future cash flows of each reporting unit including estimates for capital expenditures, discounted to present value using the risk-adjusted industry rate, which reflect the overall level of inherent risk of the reporting unit. Cash flow projections are derived from one year budgeted amounts and five year operating forecasts plus an estimate of later period cash flows, all of which are evaluated by management. Subsequent period cash flows are developed for each reporting unit using growth rates that management believes are reasonably likely to occur. Under the guideline company method, the Partnership determines the estimated fair value of each of our reporting units by applying valuation multiples of comparable publicly-traded companies to each reporting unit's projected EBITDA and then averaging that estimate with similar historical calculations using a three year average. In addition, the Partnership estimates a reasonable control premium, when appropriate, representing the incremental value that accrues to the majority owner from the opportunity to dictate the strategic and operational actions of the business.

One key assumption for the measurement of an impairment is management's estimate of future cash flows and EBITDA. These estimates are based on the annual budget for the upcoming year and forecasted amounts for multiple subsequent years. The annual budget process is typically completed near the annual goodwill impairment testing date, and management uses the most recent information for the annual impairment tests. The forecast is also subjected to a comprehensive update annually in conjunction with the annual budget process and is revised periodically to reflect new information and/or revised expectations. The estimates of future cash flows and EBITDA are subjective in nature and are subject to impacts from the business risks described in "Item 1A. Risk Factors." Therefore, the actual results could differ significantly from the amounts used for goodwill impairment testing, and significant changes in fair value estimates could occur in a given period. Such changes in fair value estimates could result in additional impairments in future periods; therefore, the actual results could differ significantly from the amounts used for goodwill impairment testing, and significant changes in fair value estimates could occur in a given period, resulting in additional impairments.

In addition, we may change our method of impairment testing, including changing the weight assigned to different valuation models. Such changes could be driven by various factors, including the level of precision or availability of data for our assumptions. Any changes in the method of testing could also result in an impairment or impact the magnitude of an impairment.

During the years ended December 31, 2020, 2019 and 2018, the Partnership recorded impairments totaling $3.01 billion, $74 million and $431 million, respectively, including $129 million in impairments in unconsolidated affiliates in 2020, and $66 million, $53 million and $52 million of long-lived asset impairments in 2020, 2019 and 2018, respectively. Additional information on the impairments recorded during these periods is available in "Item 8. Financial Statements and Supplementary Data."

The goodwill impairments recorded by the Partnership during the years ended December 31, 2020, 2019 and 2018 represented all of the goodwill within the respective reporting units.

Management does not believe that any of the Partnership's goodwill balances, long-lived assets or investments in unconsolidated affiliates is currently at significant risk of a material impairment; however, of the $2.39 billion of goodwill on

the Partnership's consolidated balance sheet as of December 31, 2020, approximately $368 million is recorded in reporting units for which the estimated fair value exceeded the carrying value by less than 20% in the most recent quantitative test.

Estimated Useful Lives of Long-Lived Assets. Depreciation and amortization of long-lived assets is provided using the straight-line method based on their estimated useful lives. Changes in the estimated useful lives of the assets could have a material effect on our results of operation. The Partnership's results of operations have not been significantly impacted by changes in the estimated useful lives of our long-lived assets during the periods presented, and we do not anticipate any such significant changes in the future. However, changes in facts and circumstances could cause us to change the estimated useful lives of the assets, which could significantly impact the Partnership's results of operations. Additional information on our accounting policies and the estimated useful lives associated with our long-lived assets is available in "Item 8. Financial Statements and Supplementary Data."

Legal and Regulatory Matters. We are subject to litigation and regulatory proceedings as a result of our business operations and transactions. We utilize both internal and external counsel in evaluating our potential exposure to adverse outcomes from claims, orders, judgments or settlements. To the extent that actual outcomes differ from our estimates, or additional facts and circumstances cause us to revise our estimates, our earnings will be affected. We expense legal costs as incurred, and all recorded legal liabilities are revised, as required, as better information becomes available to us. The factors we consider when recording an accrual for contingencies include, among others: (i) the opinions and views of our legal counsel; (ii) our previous experience; and (iii) the decision of our management as to how we intend to respond to the complaints. As of December 31, 2020 and 2019, accruals of $77 million and $120 million, respectively, were reflected in our consolidated balance sheets related to these contingent obligations.

For more information on our litigation and contingencies, see Note 11 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data" in this report.

Environmental Remediation Activities. The Partnership's accrual for environmental remediation activities reflects anticipated work at identified sites where an assessment has indicated that cleanup costs are probable and reasonably estimable. The accrual for known claims is undiscounted and is based on currently available information, estimated timing of remedial actions and related inflation assumptions, existing technology and presently enacted laws and regulations. It is often extremely difficult to develop reasonable estimates of future site remediation costs due to changing regulations, changing technologies and their associated costs, and changes in the economic environment. Engineering studies, historical experience and other factors are used to identify and evaluate remediation alternatives and their related costs in determining the estimated accruals for environmental remediation activities.

Losses attributable to unasserted claims are generally reflected in the accruals on an undiscounted basis, to the extent they are probable of occurrence and reasonably estimable. We have established a wholly-owned captive insurance company to bear certain risks associated with environmental obligations related to certain sites that are no longer operating. The premiums paid to the captive insurance company include estimates for environmental claims that have been incurred but not reported, based on an actuarially determined fully developed claims expense estimate. In such cases, we accrue losses attributable to unasserted claims based on the discounted estimates that are used to develop the premiums paid to the captive insurance company.

In general, each remediation site/issue is evaluated individually based upon information available for the site/issue and no pooling or statistical analysis is used to evaluate an aggregate risk for a group of similar items (e.g., service station sites) in determining the amount of probable loss accrual to be recorded. The Partnership's estimates of environmental remediation costs also frequently involve evaluation of a range of estimates. In many cases, it is difficult to determine that one point in the range of loss estimates is more likely than any other. In these situations, existing accounting guidance requires that the minimum of the range be accrued. Accordingly, the low end of the range often represents the amount of loss which has been recorded. The Partnership's consolidated balance sheet reflected $306 million and $320 million in environmental accruals as of December 31, 2020 and 2019, respectively.

Total future costs for environmental remediation activities will depend upon, among other things, the identification of any additional sites, the determination of the extent of the contamination at each site, the timing and nature of required remedial actions, the nature of operations at each site, the technology available and needed to meet the various existing legal requirements, the nature and terms of cost-sharing arrangements with other potentially responsible parties, the availability of insurance coverage, the nature and extent of future environmental laws and regulations, inflation rates, terms of consent agreements or remediation permits with regulatory agencies and the determination of the Partnership's liability at the sites, if any, in light of the number, participation level and financial viability of the other parties. The recognition of additional losses, if and when they were to occur, would likely extend over many years. Management believes that the Partnership's exposure to adverse developments with respect to any individual site is not expected to be material. However, if changes in environmental laws or regulations occur or the assumptions used to estimate losses at multiple sites are adjusted, such changes could impact

multiple facilities, formerly owned facilities and third-party sites at the same time. As a result, from time to time, significant charges against income for environmental remediation may occur; however, management does not believe that any such charges would have a material adverse impact on the Partnership's consolidated financial position.

Deferred Income Taxes. ET recognizes benefits in earnings and related deferred tax assets for net operating loss carryforwards ("NOLs") and tax credit carryforwards. If necessary, a charge to earnings and a related valuation allowance are recorded to reduce deferred tax assets to an amount that is more likely than not to be realized by the Partnership in the future. Deferred income tax assets attributable to state and federal NOLs and federal excess business interest expense carryforwards totaling $1.047 billion have been included in ET's consolidated balance sheet as of December 31, 2020. The state NOL carryforward benefits of $220 million ($174 million net of federal benefit) begin to expire in 2021 with a substantial portion expiring between 2033 and 2039. ET's corporate subsidiaries have federal NOLs of $3.73 billion ($784 million in benefits) of which $1.3 billion will expire between 2031 and 2037. A total of $787 million of the federal net operating loss carryforward is limited under IRC §382. Although we expect to fully utilize the IRC §382 limited federal net operating loss, the amount utilized in a particular year may be limited. Any federal NOL generated in 2018 and future years can be carried forward indefinitely. We have determined that a valuation allowance totaling $113 million ($89 million net of federal income tax effects) is required for state NOLs as of December 31, 2020 primarily due to significant restrictions on their use in the Commonwealth of Pennsylvania. A separate valuation allowance of $45 million is attributable to foreign tax credits. In making the assessment of the future realization of the deferred tax assets, we rely on future reversals of existing taxable temporary differences, tax planning strategies and forecasted taxable income based on historical and projected future operating results. The potential need for valuation allowances is regularly reviewed by management. If it is more likely than not that the recorded asset will not be realized, additional valuation allowances which increase income tax expense may be recognized in the period such determination is made. Likewise, if it is more likely than not that additional deferred tax assets will be realized, an adjustment to the deferred tax asset will increase income in the period such determination is made.

Forward-Looking Statements

This annual report contains various forward-looking statements and information that are based on our beliefs and those of our General Partner, as well as assumptions made by and information currently available to us. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. When used in this annual report, words such as "anticipate," "project," "expect," "plan," "goal," "forecast," "estimate," "intend," "could," "believe," "may," "will" and similar expressions and statements regarding our plans and objectives for future operations, are intended to identify forward-looking statements. Although we and our General Partner believe that the expectations on which such forward-looking statements are based are reasonable, neither we nor our General Partner can give assurances that such expectations will prove to be correct. Forward-looking statements are subject to a variety of risks, uncertainties and assumptions. If one or more of these risks or uncertainties materialize, or if underlying assumptions prove incorrect, our actual results may vary materially from those anticipated, estimated, projected or expected. Among the key risk factors that may have a direct bearing on our results of operations and financial condition are:

- the ability of our subsidiaries to make cash distributions to us, which is dependent on their results of operations, cash flows and financial condition;
- the actual amount of cash distributions by our subsidiaries to us;
- the volumes transported on our subsidiaries' pipelines and gathering systems;
- the level of throughput in our subsidiaries' processing and treating facilities;
- the fees our subsidiaries charge and the margins they realize for their gathering, treating, processing, storage and transportation services;
- the prices and market demand for, and the relationship between, natural gas and NGLs;
- energy prices generally;
- impacts of world health events, including the COVID-19 pandemic;
- the prices of natural gas and NGLs compared to the price of alternative and competing fuels;
- the general level of petroleum product demand and the availability and price of NGL supplies;
- the level of domestic oil, natural gas and NGL production;
- the availability of imported oil, natural gas and NGLs;
- actions taken by foreign oil and gas producing nations;
- the political and economic stability of petroleum producing nations;

- the effect of weather conditions on demand for oil, natural gas and NGLs;
- availability of local, intrastate and interstate transportation systems;
- the continued ability to find and contract for new sources of natural gas supply;
- availability and marketing of competitive fuels;
- the impact of energy conservation efforts;
- energy efficiencies and technological trends;
- governmental regulation and taxation;
- changes to, and the application of, regulation of tariff rates and operational requirements related to our subsidiaries' interstate and intrastate pipelines;
- hazards or operating risks incidental to the gathering, treating, processing and transporting of natural gas and NGLs;
- competition from other midstream companies and interstate pipeline companies;
- loss of key personnel;
- loss of key natural gas producers or the providers of fractionation services;
- reductions in the capacity or allocations of third-party pipelines that connect with our subsidiaries pipelines and facilities;
- the effectiveness of risk-management policies and procedures and the ability of our subsidiaries liquids marketing counterparties to satisfy their financial commitments;
- the nonpayment or nonperformance by our subsidiaries' customers;
- regulatory, environmental, political and legal uncertainties that may affect the timing and cost of our subsidiaries' internal growth projects, such as our subsidiaries' construction of additional pipeline systems;
- risks associated with the construction of new pipelines and treating and processing facilities or additions to our subsidiaries' existing pipelines and facilities, including difficulties in obtaining permits and rights-of-way or other regulatory approvals and the performance by third-party contractors;
- the availability and cost of capital and our subsidiaries' ability to access certain capital sources;
- a deterioration of the credit and capital markets;
- risks associated with the assets and operations of entities in which our subsidiaries own a noncontrolling interests, including risks related to management actions at such entities that our subsidiaries may not be able to control or exert influence;
- the ability to successfully identify and consummate strategic acquisitions at purchase prices that are accretive to our financial results and to successfully integrate acquired businesses;
- changes in laws and regulations to which we are subject, including tax, environmental, transportation and employment regulations or new interpretations by regulatory agencies concerning such laws and regulations; and
- the costs and effects of legal and administrative proceedings.

You should not put undue reliance on any forward-looking statements. When considering forward-looking statements, please review the risks described under "Item 1A. Risk Factors" in this annual report. Any forward-looking statement made by us in this Annual Report on Form 10-K is based only on information currently available to us and speaks only as of the date on which it is made. We undertake no obligation to publicly update any forward-looking statement, whether written or oral, that may be made from time to time, whether as a result of new information, future developments or otherwise.

Inflation

Interest rates on existing and future credit facilities and future debt offerings could be significantly higher than current levels, causing our financing costs to increase accordingly. Although increased financing costs could limit our ability to raise funds in the capital markets, we expect to remain competitive with respect to acquisitions and capital projects since our competitors would face similar circumstances.

Inflation in the United States has been relatively low in recent years and has not had a material effect on our results of operations. It may in the future, however, increase the cost to acquire or replace property, plant and equipment and may increase the costs of labor and supplies. Our operating revenues and costs are influenced to a greater extent by commodity price

changes. To the extent permitted by competition, regulation and our existing agreements, we have and will continue to pass along a portion of increased costs to our customers in the form of higher fees.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

(Tabular dollar amounts are in millions)

Market risk includes the risk of loss arising from adverse changes in market rates and prices. We face market risk from commodity variations, risk and interest rate variations, and to a lesser extent, credit risks. From time to time, we may utilize derivative financial instruments as described below to manage our exposure to such risks.

Commodity Price Risk

We are exposed to market risks related to the volatility of commodity prices. To manage the impact of volatility from these prices, we utilize various exchange-traded and OTC commodity financial instrument contracts. These contracts consist primarily of futures, swaps and options and are recorded at fair value in our consolidated balance sheets.

We use futures and basis swaps, designated as fair value hedges, to hedge our natural gas inventory stored in our Bammel storage facility. At hedge inception, we lock in a margin by purchasing gas in the spot market or off peak season and entering into a financial contract. Changes in the spreads between the forward natural gas prices and the physical inventory spot price result in unrealized gains or losses until the underlying physical gas is withdrawn and the related designated derivatives are settled. Once the gas is withdrawn and the designated derivatives are settled, the previously unrealized gains or losses associated with these positions are realized.

We use futures, swaps and options to hedge the sales price of natural gas we retain for fees in our intrastate transportation and storage segment and operational gas sales on our interstate transportation and storage segment. These contracts are not designated as hedges for accounting purposes.

We use NGL and crude derivative swap contracts to hedge forecasted sales of NGL and condensate equity volumes we retain for fees in our midstream segment whereby our subsidiaries generally gather and process natural gas on behalf of producers, sell the resulting residue gas and NGL volumes at market prices and remit to producers an agreed upon percentage of the proceeds based on an index price for the residue gas and NGL. These contracts are not designated as hedges for accounting purposes.

We utilize swaps, futures and other derivative instruments to mitigate the risk associated with market movements in the price of refined products and NGLs to manage our storage facilities and the purchase and sale of purity NGL. These contracts are not designated as hedges for accounting purposes.

We use futures and swaps to achieve ratable pricing of crude oil purchases, to convert certain expected refined product sales to fixed or floating prices, to lock in margins for certain refined products and to lock in the price of a portion of natural gas purchases or sales. These contracts are not designated as hedges for accounting purposes.

We use financial commodity derivatives to take advantage of market opportunities in our trading activities which complement our transportation and storage segment’s operations and are netted in cost of products sold in our consolidated statements of operations. We also have trading and marketing activities related to power and natural gas in our all other segment which are also netted in cost of products sold. As a result of our trading activities and the use of derivative financial instruments in our transportation and storage segment, the degree of earnings volatility that can occur may be significant, favorably or unfavorably, from period to period. We attempt to manage this volatility through the use of daily position and profit and loss reports provided to our risk oversight committee, which includes members of senior management, and the limits and authorizations set forth in our commodity risk management policy.

The tables below summarize commodity-related financial derivative instruments, fair values and the effect of an assumed hypothetical 10% change in the underlying price of the commodity as of December 31, 2020 and 2019 for ETO and Sunoco LP, including derivatives related to their respective subsidiaries. Dollar amounts are presented in millions.

	December 31, 2020			December 31, 2019		
	Notional Volume	Fair Value Asset (Liability)	Effect of Hypothetical 10% Change	Notional Volume	Fair Value Asset (Liability)	Effect of Hypothetical 10% Change
Mark-to-Market Derivatives						
(Trading)						
Natural Gas (BBtu):						
Fixed Swaps/Futures	1,603	$ —	$ —	1,483	$ —	$ —
Basis Swaps IFERC/NYMEX[(1)]	(44,225)	2	5	(35,208)	2	5
Power (Megawatt):						
Forwards	1,392,400	4	—	3,213,450	6	8
Futures	18,706	(1)	—	(353,527)	1	2
Options – Puts	519,071	—	—	51,615	1	—
Options – Calls	2,343,293	1	—	(2,704,330)	1	—
(Non-Trading)						
Natural Gas (BBtu):						
Basis Swaps IFERC/NYMEX	(29,173)	—	1	(18,923)	(35)	15
Swing Swaps IFERC	11,208	(2)	—	(9,265)	—	4
Fixed Swaps/Futures	(53,575)	6	31	(3,085)	(1)	1

Fair Value Hedging Derivatives						
(Non-Trading)						
Natural Gas (BBtu):						
Basis Swaps IFERC/NYMEX	(30,113)	(1)	—	(31,780)	1	7
Fixed Swaps/Futures	(30,113)	(6)	8	(31,780)	23	7

[(1)] Includes aggregate amounts for open positions related to Houston Ship Channel, Waha Hub, NGPL TexOk, West Louisiana Zone and Henry Hub locations.

The fair values of the commodity-related financial positions have been determined using independent third-party prices, readily available market information and appropriate valuation techniques. Non-trading positions offset physical exposures to the cash market; none of these offsetting physical exposures are included in the above tables. Price-risk sensitivities were calculated by assuming a theoretical 10% change (increase or decrease) in price regardless of term or historical relationships between the contractual price of the instruments and the underlying commodity price. Results are presented in absolute terms and represent a potential gain or loss in net income or in other comprehensive income. In the event of an actual 10% change in prompt month natural gas prices, the fair value of our total derivative portfolio may not change by 10% due to factors such as when the financial instrument settles and the location to which the financial instrument is tied (i.e., basis swaps) and the relationship between prompt month and forward months.

Interest Rate Risk

As of December 31, 2020, our subsidiaries had $6.72 billion of floating rate debt outstanding. A hypothetical change of 100 basis points would result in a maximum potential change to interest expense of $67 million annually; however, our actual change in interest expense may be less in a given period due to interest rate floors included in our variable rate debt instruments.

We manage a portion of our interest rate exposure by utilizing interest rate swaps, including forward-starting interest rate swaps to lock-in the rate on a portion of anticipated debt issuances.

The following table summarizes our interest rate swaps outstanding, none of which were designated as hedges for accounting purposes (dollar amounts presented in millions):

		Notional Amount Outstanding	
Term	Type[1]	December 31, 2020	December 31, 2019
July 2020 [2][3]	Forward-starting to pay a fixed rate of 3.52% and receive a floating rate	$ —	$ 400
July 2021 [2]	Forward-starting to pay a fixed rate of 3.55% and receive a floating rate	400	400
July 2022 [2]	Forward-starting to pay a fixed rate of 3.80% and receive a floating rate	400	400

[1] Floating rates are based on 3-month LIBOR.

[2] Represents the effective date. These forward-starting swaps have terms of 30 years with a mandatory termination date the same as the effective date.

[3] The July 2020 interest rate swaps were terminated in January 2020.

A hypothetical change of 100 basis points in interest rates for these interest rate swaps would result in a net change in the fair value of interest rate derivatives and earnings (recognized in gains (losses) on interest rate derivatives) of $275 million as of December 31, 2020. For the forward-starting interest rate swaps, a hypothetical change of 100 basis points in interest rates would not affect cash flows until the swaps are settled.

Credit Risk

Credit risk refers to the risk that a counterparty may default on its contractual obligations resulting in a loss to the Partnership. Credit policies have been approved and implemented to govern the Partnership's portfolio of counterparties with the objective of mitigating credit losses. These policies establish guidelines, controls and limits to manage credit risk within approved tolerances by mandating an appropriate evaluation of the financial condition of existing and potential counterparties, monitoring agency credit ratings, and by implementing credit practices that limit exposure according to the risk profiles of the counterparties. Furthermore, the Partnership may, at times, require collateral under certain circumstances to mitigate credit risk as necessary. The Partnership also uses industry standard commercial agreements which allow for the netting of exposures associated with transactions executed under a single commercial agreement. Additionally, we utilize master netting agreements to offset credit exposure across multiple commercial agreements with a single counterparty or affiliated group of counterparties.

The Partnership's counterparties consist of a diverse portfolio of customers across the energy industry, including petrochemical companies, commercial and industrial end-users, oil and gas producers, municipalities, gas and electric utilities, midstream companies and independent power generators. Our overall exposure may be affected positively or negatively by macroeconomic or regulatory changes that impact our counterparties to one extent or another. Currently, management does not anticipate a material adverse effect in our financial position or results of operations as a consequence of counterparty non-performance.

For financial instruments, failure of a counterparty to perform on a contract could result in our inability to realize amounts that have been recorded on our consolidated balance sheets and recognized in net income or other comprehensive income.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The financial statements starting on page F-1 of this report are incorporated by reference.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

An evaluation was performed under the supervision and with the participation of our management, including Marshall S. McCrea, III and Thomas E. Long, Co-Chief Executive Officers of our General Partner (Co-Principal Executive Officers), and Bradford D. Whitehurst (Principal Financial Officer), of the effectiveness of the design and operation of our disclosure controls and procedures (as such terms are defined in Rules 13a–15(e) and 15d–15(e) of the Exchange Act) as of the end of the period covered by this report. Based upon that evaluation, management, including Messrs. McCrea, Long and Whitehurst, concluded that our disclosure controls and procedures were adequate and effective as of December 31, 2020.

Management's Report on Internal Control over Financial Reporting

The management of Energy Transfer LP and subsidiaries is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our management, including the Co-Chief Executive Officers and Chief Financial Officer of our General Partner, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control – Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO Framework").

Based on our evaluation under the COSO framework, our management concluded that our internal control over financial reporting was effective as of December 31, 2020.

Grant Thornton LLP, an independent registered public accounting firm, has audited the effectiveness of our internal control over financial reporting as of December 31, 2020, as stated in their report, which is included herein.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors of LE GP, LLC and
Unitholders of Energy Transfer LP

Opinion on internal control over financial reporting

We have audited the internal control over financial reporting of Energy Transfer LP (a Delaware limited partnership) and subsidiaries (the "Partnership") as of December 31, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). In our opinion, the Partnership maintained, in all material respects, effective internal control over financial reporting as of December 31, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by COSO.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated financial statements of the Partnership as of and for the year ended December 31, 2020, and our report dated February 19, 2021 expressed unqualified opinion on those financial statements.

Basis for opinion

The Partnership's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Partnership's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Partnership in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and limitations of internal control over financial reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/ GRANT THORNTON LLP

Dallas, Texas
February 19, 2021

Changes in Internal Controls over Financial Reporting

There has been no change in our internal controls over financial reporting (as defined in Rules 13a–15(f) or Rule 15d–15(f)) that occurred in the three months ended December 31, 2020 that has materially affected, or is reasonably likely to materially affect, our internal controls over financial reporting.

ITEM 9B. OTHER INFORMATION

None.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

Board of Directors

Our general partner, LE GP, LLC, manages and directs all of our activities. The officers and directors of ET are officers and directors of LE GP, LLC. The members of our general partner elect our general partner's Board of Directors. The board of directors of our general partner has the authority to appoint our executive officers, subject to provisions in the limited liability company agreement of our general partner. Pursuant to other authority, the board of directors of our general partner may appoint additional management personnel to assist in the management of our operations and, in the event of the death, resignation or removal of our chief executive officer, to appoint a replacement.

As of January 1, 2021, our Board of Directors is comprised of 11 persons, five of whom qualify as "independent" under the NYSE's corporate governance standards. We have determined that Messrs. Anderson, Brannon, Grimm, Perry and Washburne are all "independent" under the NYSE's corporate governance standards.

As a limited partnership, we are not required by the rules of the NYSE to seek Unitholder approval for the election of any of our directors. We believe that the members of our general partner have appointed as directors individuals with experience, skills and qualifications relevant to the business of the Parent Company, such as experience in energy or related industries or with financial markets, expertise in natural gas operations or finance, and a history of service in senior leadership positions. We do not have a formal process for identifying director nominees, nor do we have a formal policy regarding consideration of diversity in identifying director nominees, but we believe that the members of our general partner have endeavored to assemble a group of individuals with the qualities and attributes required to provide effective oversight of the Parent Company.

Board Leadership Structure. We have no policy requiring either that the positions of the Chairman of the Board and the Chief Executive Officer, or CEO, be separate or that they be occupied by the same individual. The Board of Directors believes that this issue is properly addressed as part of the succession planning process and that a determination on this subject should be made when it elects a new chief executive officer or at such other times as when consideration of the matter is warranted by circumstances. Previously, the Board of Directors believed that the CEO was best situated to serve as Chairman because he was the director most familiar with the Partnership's business and industry, and most capable of effectively identifying strategic priorities and leading the discussion and execution of strategy. Beginning in 2021, the Board of Directors has established separate roles for the Executive Chairman and Co-Chief Executive Officers. Independent directors and management have different perspectives and roles in strategy development. Our independent directors bring experience, oversight and expertise from outside the Partnership and from a variety of industries, while the Executive Chairman and Co-Chief Executive Officers bring extensive experience and expertise specifically related to the Partnership's business.

Risk Oversight. Our Board of Directors generally administers its risk oversight function through the board as a whole. Our Co-CEOs, who report to the Board of Directors, have day-to-day risk management responsibilities. Our Co-CEOs attend the meetings of our Board of Directors, where the Board of Directors routinely receives reports on our financial results, the status of our operations, and other aspects of implementation of our business strategy, with ample opportunity for specific inquiries of management. In addition, at each regular meeting of the Board, management provides a report of the Parent Company's financial and operational performance, which often prompts questions or feedback from the Board of Directors. The Audit Committee provides additional risk oversight through its quarterly meetings, where it receives a report from the Parent Company's internal auditor, who reports directly to the Audit Committee, and reviews the Parent Company's contingencies with management and our independent auditors.

Corporate Governance

The Board of Directors has adopted both a Code of Business Conduct and Ethics applicable to our directors, officers and employees, and Corporate Governance Guidelines for directors and the Board. Current copies of our Code of Business Conduct and Ethics, Corporate Governance Guidelines and charters of the Audit and Compensation Committees of our Board of Directors are available on our website at www.energytransfer.com and will be provided in print form to any Unitholder requesting such information.

Please note that the preceding Internet address is for information purposes only and is not intended to be a hyperlink. Accordingly, no information found and/or provided at such Internet addresses or at our website in general is intended or deemed to be incorporated by reference herein.

Annual Certification

In 2020, our Chief Executive Officer provided to the NYSE the annual CEO certification regarding our compliance with the NYSE's corporate governance listing standards.

Conflicts Committee

Our Partnership Agreement provides that the Board of Directors may, from time to time, appoint members of the Board to serve on the Conflicts Committee with the authority to review specific matters for which the Board of Directors believes there may be a conflict of interest in order to determine if the resolution of such conflict proposed by the general partner is fair and reasonable to the Parent Company and our Unitholders. As a policy matter, the Conflicts Committee generally reviews any proposed related-party transaction that may be material to the Parent Company to determine if the transaction presents a conflict of interest and whether the transaction is fair and reasonable to the Parent Company. Pursuant to the terms of our partnership agreement, any matters approved by the Conflicts Committee will be conclusively deemed to be fair and reasonable to the Parent Company, approved by all partners of the Parent Company and not a breach by the general partner or its Board of Directors of any duties they may owe the Parent Company or the Unitholders. These duties are limited by our Partnership Agreement (see "Risks Related to Conflicts of Interest" in "Item 1A. Risk Factors" in this annual report).

Audit Committee

The Board of Directors has established an Audit Committee in accordance with Section 3(a)(58)(A) of the Exchange Act. The Board of Directors appoints persons who are independent under the NYSE's standards for audit committee members to serve on its Audit Committee. In addition, the Board determines that at least one member of the Audit Committee has such accounting or related financial management expertise sufficient to qualify such person as the audit committee financial expert in accordance with Item 407(d)(5) of Regulation S-K. The Board determined that based on relevant experience, Audit Committee member Michael K. Grimm qualified as an audit committee financial expert during 2020. A description of the qualifications of Mr. Grimm may be found elsewhere in this Item 10 under "Directors and Executive Officers of the General Partner."

The Audit Committee meets on a regularly scheduled basis with our independent accountants at least four times each year and is available to meet at their request. The Audit Committee has the authority and responsibility to review our external financial reporting, review our procedures for internal auditing and the adequacy of our internal accounting controls, consider the qualifications and independence of our independent accountants, engage and direct our independent accountants, including the letter of engagement and statement of fees relating to the scope of the annual audit work and special audit work which may be recommended or required by the independent accountants, and to engage the services of any other advisors and accountants as the Audit Committee deems advisable. The Audit Committee reviews and discusses the audited financial statements with management, discusses with our independent auditors matters required to be discussed by auditing standards, and approves the filing of our Form 10-K, which includes our audited financial statements. The Audit Committee periodically recommends to the Board of Directors any changes or modifications to its charter that may be required. The Audit Committee has received written disclosures and the letter from Grant Thornton required by applicable requirements of the Audit Committee concerning independence and has discussed with Grant Thornton that firm's independence. The Audit Committee recommended to the Board that the audited financial statements of ET be included in ET's Annual Report on Form 10-K for the year ended December 31, 2020.

The Board of Directors adopts the charter for the Audit Committee. Steven R. Anderson, Richard D. Brannon and Michael K. Grimm serve as elected members of the Audit Committee.

Compensation and Nominating/Corporate Governance Committees

Although we are not required under NYSE rules to appoint a Compensation Committee or a Nominating/Corporate Governance Committee because we are a limited partnership, the Board of Directors of LE GP, LLC has previously established a Compensation Committee to establish standards and make recommendations concerning the compensation of our officers and directors. In addition, the Compensation Committee determines and establishes the standards for any awards to our employees and officers under the equity compensation plans, including the performance standards or other restrictions pertaining to the vesting of any such awards. Messrs. Anderson, Grimm and Washburne serve as members of the Compensation Committee.

Matters relating to the nomination of directors or corporate governance matters were addressed to and determined by the full Board of Directors for the period ET did not have a compensation committee.

The responsibilities of the ET Compensation Committee include, among other duties, the following:

- annually review and approve goals and objectives relevant to compensation of our CEO and CFO, if applicable;

- annually evaluate the CEO and CFO's performance in light of these goals and objectives, and make recommendations to the Board of Directors with respect to the CEO and CFO's compensation levels, if applicable, based on this evaluation;
- make determinations with respect to the grant of equity-based awards to executive officers under ET's equity incentive plans;
- periodically evaluate the terms and administration of ET's long-term incentive plans to assure that they are structured and administered in a manner consistent with ET's goals and objectives;
- periodically evaluate incentive compensation and equity-related plans and consider amendments if appropriate;
- periodically evaluate the compensation of the directors;
- retain and terminate any compensation consultant to be used to assist in the evaluation of director, CEO and CFO or executive officer compensation; and
- perform other duties as deemed appropriate by the Board of Directors.

Code of Business Conduct and Ethics

The Board of Directors has adopted a Code of Business Conduct and Ethics applicable to our officers, directors and employees. Specific provisions are applicable to the co-principal executive officers, principal financial officer, principal accounting officer and controller, or those persons performing similar functions, of our general partner. Amendments to, or waivers from, the Code of Business Conduct and Ethics will be available on our website and reported as may be required under SEC rules. Any technical, administrative or other non-substantive amendments to the Code of Business Conduct and Ethics may not be posted.

Meetings of Non-management Directors and Communications with Directors

Our non-management directors meet in regularly scheduled sessions. Our non-management directors alternate as the presiding director of such meetings.

We have established a procedure by which Unitholders or interested parties may communicate directly with the Board of Directors, any committee of the Board, any of the independent directors, or any one director serving on the Board of Directors by sending written correspondence addressed to the desired person, committee or group to the attention of Sonia Aubé at Energy Transfer LP 8111 Westchester Drive, Suite 600, Dallas, Texas, 75225. Communications are distributed to the Board of Directors, or to any individual director or directors as appropriate, depending on the facts and circumstances outlined in the communication.

Directors and Executive Officers of Our General Partner

The following table sets forth certain information with respect to the executive officers and members of the Board of Directors of our general partner as of February 19, 2021. Executive officers and directors are elected for indefinite terms.

Name	Age	Position with Our General Partner
Kelcy L. Warren	65	Executive Chairman of the Board of Directors
Thomas E. Long	64	Co-Chief Executive Officer and Director (Co-Principal Executive Officer)
Marshall S. (Mackie) McCrea, III	61	Co-Chief Executive Officer and Director (Co-Principal Executive Officer)
Bradford D. Whitehurst	46	Chief Financial Officer (Principal Financial Officer)
Matthew S. Ramsey	65	Chief Operating Officer and Director
Thomas P. Mason	64	Executive Vice President, General Counsel and President - LNG
A. Troy Sturrock	50	Senior Vice President and Controller (Principal Accounting Officer)
Steven R. Anderson	71	Director
Richard D. Brannon	62	Director
Ray C. Davis	79	Director
Michael K. Grimm	66	Director
John W. McReynolds	70	Director
James R. (Rick) Perry	70	Director
Ray W. Washburne	60	Director

Messrs. Warren, McCrea and Ramsey also serve as directors of the board of ETO's general partner. Mr. Ramsey serves as chairman of the board of the general partner of Sunoco LP, and Mr. Long serves as a director of the board of the general partners of Sunoco LP and of USAC. Mr. Mason and Mr. Whitehurst serve as directors of the general partner of USAC.

Set forth below is biographical information regarding the foregoing officers and directors of our general partner:

Kelcy L. Warren. Mr. Warren serves as Executive Chairman of our general partner. Mr. Warren served as Chief Executive Officer from August 2007 through December 2020. He was appointed Co-Chairman of the Board of Directors of our general partner, effective upon the closing of our IPO, and in August 2007, he became the sole Chairman of the Board of our general partner and the Chief Executive Officer and Chairman of the Board of the general partner of ETO. Prior to that, Mr. Warren had served as Co-Chief Executive Officer and Co-Chairman of the Board of the general partner of ETO since the combination of the midstream and intrastate transportation storage operations of La Grange Acquisition, L.P. and the retail propane operations of Heritage in January 2004. Mr. Warren also served as the Chief Executive Officer of PennTex Midstream Partners, LP's general partner from November 2016 to July 2017. Prior to the combination of the operations of ETO and Heritage Propane, Mr. Warren served as President of the general partner of ET Company I, Ltd. the entity that operated ETO's midstream assets before it acquired Aquila, Inc.'s midstream assets, having served in that capacity since 1996. From 1996 to 2000, he also served as a Director of Crosstex Energy, Inc. From 1993 to 1996, he served as President, Chief Operating Officer and a Director of Cornerstone Natural Gas, Inc. Mr. Warren has more than 30 years of business experience in the energy industry. Mr. Warren was selected to serve as a director and as Executive Chairman because he previously served as Chief Executive Officer and has more than 30 years in the natural gas industry. Mr. Warren also has relationships with chief executives and other senior management at natural gas transportation companies throughout the United States and brings a unique and valuable perspective to the Board of Directors.

Thomas E. Long. Mr. Long has served as the Co-Chief Executive Officer of our general partner since January 2021. Mr. Long served as Chief Financial Officer ET's general partner from February 2016 until January 2021, and has been a director of our general partner since April 2019. Mr. Long also served as the Chief Financial Officer and as a director of PennTex Midstream Partners, LP's general partner from November 2016 to July 2017. Mr. Long also serves as Chief Financial Officer of ETO and was previously Executive Vice President and Chief Financial Officer of Regency GP LLC from November 2010 to April 2015. From May 2008 to November 2010, Mr. Long served as Vice President and Chief Financial Officer of Matrix Service Company. Prior to joining Matrix, he served as Vice President and Chief Financial Officer of DCP Midstream Partners, LP, a publicly traded natural gas and natural gas liquids midstream business company located in Denver, Colorado. In that position, he was responsible for all financial aspects of the company since its formation in December 2005. From 1998 to 2005, Mr. Long served in several executive positions with subsidiaries of Duke Energy Corp., one of the nation's largest electric power companies. Mr. Long has served as a director of Sunoco LP since May 2016, and as Executive Chairman of the Board of USAC since April 2018. Mr. Long was selected to serve on our Board of Directors because of his understanding of energy-related corporate finance gained through his extensive experience in the energy industry.

Marshall S. (Mackie) McCrea, III. Mr. McCrea has served as the Co-Chief Executive Officer of our general partner since January 2021. Prior to that he was the President and Chief Commercial Officer of our general partner, having served in that role since October 2018 following the merger of Energy Transfer Equity, L.P. and Energy Transfer Partners, L.P. Prior to that time, he had been the Group Chief Operating Officer and Chief Commercial Officer of the Energy Transfer family since November 2015. Mr. McCrea has served on the Board of Directors of our general partner since December 2009. Mr. McCrea was appointed as a director of the general partner of ETO in December 2009. Prior to that, he served as President and Chief Operating Officer of ETO's general partner from June 2008 to November 2015 and President – Midstream from March 2007 to June 2008. Previously he served as the Senior Vice President – Commercial Development since January 2004. In March 2005, Mr. McCrea was named President of La Grange Acquisition LP, ETO's primary operating subsidiary, after serving as Senior Vice President-Business Development and Producer Services since 1997. Mr. McCrea also served as the Chairman of the Board of Directors of the general partner of Sunoco Logistics Partners L.P. from October 2012 to April 2017. Mr. McCrea was selected to serve as a director because he brings extensive project development and operational experience to the Board. He has held various positions in the natural gas business over the past 25 years and is able to assist the Board of Directors in creating and executing the Partnership's strategic plan.

Bradford D. Whitehurst. Mr. Whitehurst was appointed Chief Financial Officer of Energy Transfer in January 2021. From August 2014 through December 2020 he served as Executive Vice President – Head of Tax. Prior to joining Energy Transfer, Mr. Whitehurst was a partner in the Washington, DC office of Bingham McCutchen LLP and an attorney in the Washington, DC offices of both McKee Nelson LLP and Hogan & Hartson. Mr. Whitehurst has specialized in partnership taxation and has advised ET and its subsidiaries in his role as outside counsel since 2006. He has served as a member of the board of directors of USAC since April 2018.

Matthew S. Ramsey. Mr. Ramsey was appointed as a director of ET's general partner in July 2012 and as a director of ETO's general partner in November 2015. Mr. Ramsey has been the Chief Operating Officer or our general partner since October 2018 following the merger of Energy Transfer Equity, L.P. and Energy Transfer Partners, L.P., and currently serves as President and Chief Operating Officer of ETO's general partner since November 2015. Mr. Ramsey also served as President and Chief Operating Officer and Chairman of the board of directors of PennTex Midstream Partners, LP's general partner from November 2016 to July 2017. Mr. Ramsey is also a director of Sunoco LP, having served as chairman of Sunoco LP's board since April 2015, and of USAC, having served on that board since April 2018. Mr. Ramsey previously served as President of RPM Exploration, Ltd., a private oil and gas exploration partnership, and previously served as a director of RSP Permian, Inc. where he served on the audit and compensation committees. Mr. Ramsey formerly served as President of DDD Energy, Inc. until its sale in 2002. From 1996 to 2000, Mr. Ramsey served as President and Chief Executive Officer of OEC Compression Corporation, Inc., a publicly traded oil field service company, providing gas compression services to a variety of energy clients. Previously, Mr. Ramsey served as Vice President of Nuevo Energy Company, an independent energy company. Additionally, he was employed by Torch Energy Advisors, Inc., a company providing management and operations services to energy companies including Nuevo Energy, last serving as Executive Vice President. Mr. Ramsey joined Torch Energy as Vice President of Land and was named Senior Vice President of Land in 1992. Mr. Ramsey holds a B.B.A. in Marketing from the University of Texas at Austin and a J.D. from South Texas College of Law. Mr. Ramsey is a graduate of Harvard Business School Advanced Management Program. Mr. Ramsey is licensed to practice law in the State of Texas. He is qualified to practice in the Western District of Texas and the United States Court of Appeals for the Fifth Circuit. Mr. Ramsey formerly served as a director of Southern Union Company. Mr. Ramsey was selected to serve based on vast experience in the oil and gas space and ET believes that he provides valuable industry insight as a member of our Board of Directors.

Thomas P. Mason. Mr. Mason became Executive Vice President and General Counsel of the general partner of ET in December 2015, and has served as the Executive Vice President, General Counsel and President - LNG since October 2018 following the merger of Energy Transfer Equity, L.P. and Energy Transfer Partners, L.P. In February 2021, Mr. Mason assumed leadership responsibility over the Partnership's new Alternative Energy Group, which focuses on the development of alternative energy projects aimed at continuing to reduce ET's environmental footprint throughout its operations. Mr. Mason also served as a director of PennTex Midstream Partners, LP's general partner from November 2016 to July 2017. Mr. Mason previously served as Senior Vice President, General Counsel and Secretary of ETO's general partner from April 2012 to December 2015, as Vice President, General Counsel and Secretary from June 2008 and as General Counsel and Secretary from February 2007. Prior to joining ETO, he was a partner in the Houston office of Vinson & Elkins. Mr. Mason has specialized in securities offerings and mergers and acquisitions for more than 25 years. Mr. Mason also served on the Board of Directors of the general partner of Sunoco Logistics from October 2012 to April 2017 and has served on the Board of Directors of USAC since April 2018.

John W. McReynolds. Mr. McReynolds became Special Advisor to ET in October 2018 and served in that role until February 2021. Prior to that time, Mr. McReynolds served as our President from March 2005 until October 2018. He has served as a Director since August 2005. He served as our Chief Financial Officer from August 2005 to June 2013, and previously served as a Director of ETO's general partner from August 2001 through May 2010. Mr. McReynolds has been in the energy industry for his entire career. Prior to joining Energy Transfer, Mr. McReynolds was in private law practice for over 20 years, specializing exclusively in energy-related finance, securities, corporations and partnerships, mergers and acquisitions, syndications, and a wide variety of energy-related litigation. His practice dealt with all forms of fossil fuels, and the transportation and handling thereof, together with the financing and structuring of all forms of business entities related thereto. Mr. McReynolds was selected to serve in the indicated roles with the Energy Transfer partnerships because of this extensive background and experience, as well as his many contacts and relationships in the industry.

A. Troy Sturrock. Mr. Sturrock is the Senior Vice President and Controller of our general partner having assumed that role in October 2018 following the merger of Energy Transfer Equity, L.P. and Energy Transfer Partners, L.P. He has served as the Senior Vice President and Controller of the general partner of ETO since August 2016 and previously served as Vice President and Controller of our General Partner beginning in June 2015. Mr. Sturrock also served as a Senior Vice President of PennTex Midstream Partners, LP's general partner, from November 2016 until July 2017, and as its Controller and Principal Accounting Officer from January 2017 until July 2017. Mr. Sturrock previously served as Vice President and Controller of Regency GP LLC from February 2008, and in November 2010 was appointed as the principal accounting officer. From June 2006 to February 2008, Mr. Sturrock served as the Assistant Controller and Director of financial reporting and tax for Regency GP LLC. Mr. Sturrock is a Certified Public Accountant.

Steven R. Anderson. Mr. Anderson was elected to the Board of Directors of our general partner in June 2018 and serves on the audit committee and compensation committee. Mr. Anderson began his career in the energy business in the early 1970's with Conoco in the Permian Basin area. He then spent some 25 years with ANR Pipeline and its successor, The Coastal Corporation, as a natural gas supply and midstream executive. He later was Vice President of Commercial Operations with Aquila Midstream and, upon the sale of that business to Energy Transfer in 2002, he became a part of the management team there. For

the six years prior to his retirement from Energy Transfer in October 2009, he served as Vice President of Mergers and Acquisitions. Since that time, he has been involved in private investments and has served on the boards of directors of the St. John Health System and Saint Simeon's Episcopal Home in Tulsa, Oklahoma, as well as various other community and civic organizations. Mr. Anderson also served as a member of the board of directors of Sunoco Logistics Partners L.P. from October 2012 until April 2017. Mr. Anderson was selected to serve on our Board of Directors based on his experience in the midstream energy industry generally, and his knowledge of Energy Transfer's business specifically. Mr. Anderson also brings recent experience on audit and compensation committees of another publicly traded partnership.

Richard D. Brannon. Mr. Brannon was appointed to the Board of Directors of our general partner in March 2016 and has served as the Chairman of the audit committee since April 2016. Mr. Brannon is the CEO of CH4 Energy II, CH4 Energy Six, and CH4 Energy-Finley Utah, LLC, all independent companies focused on horizontal oil and gas development. Mr. Brannon previously served on the board of directors of WildHorse Resource Development from its IPO in December 2016 until June 2018. Mr. Brannon also formerly served on the Board of Directors and as a member of the audit committee and compensation committee of Sunoco LP, Regency, OEC Compression and Cornerstone Natural Gas Corp. He has over 35 years of experience in the energy business, having started his career in 1981 with Texas Oil & Gas. The members of our general partner selected Mr. Brannon to serve as director based on his knowledge of the energy industry and his experience as a director and audit and compensation committee member for other public companies.

Ray C. Davis. Mr. Davis was appointed to the Board of Directors of the general partner of Energy Transfer LP in July 2018 and served on the Board of Directors of Energy Transfer Partners, L.L.C. from February 2018 until July 2018. From February 2013 until February 2018, Mr. Davis was an independent investor. He has also been a principal owner, and served as co-chairman of the board of directors, of the Texas Rangers major league baseball club since August 2010. Mr. Davis previously served on the Board of Directors of Energy Transfer LP (formerly Energy Transfer Equity, L.P.), effective upon the closing of its IPO in February 2006 until his resignation in February 2013. Mr. Davis also served as ETO's Co-Chief Executive Officer from the combination of the midstream and transportation operations and the retail propane operations in January 2004 until his retirement from these positions in August 2007, and as the Co-Chairman of the Board of Directors of our general partner from January 2004 until June 2011. Mr. Davis also held various executive positions with Energy Transfer prior to 2004. From 1996 to 2000, he served as a Director of Crosstex Energy, Inc. From 1993 to 1996, he served as Chairman of the Board of Directors and Chief Executive Officer of Cornerstone Natural Gas, Inc. Mr. Davis was selected to serve as director based on his over 40 years of business experience in the energy industry and his expertise in the Partnership's asset portfolio.

Michael K. Grimm. Mr. Grimm was appointed to the Board of Directors of our general partner in October 2018, and has served on the audit committee and compensation committee since that time. Prior to that time, Mr. Grimm served as a director of ETO's general partner beginning in December 2005, and served on the audit and compensation committee during that time. Mr. Grimm is one of the original founders of Rising Star Energy, L.L.C., a privately held upstream exploration and production company active in onshore continental United States, and served as its President and Chief Executive Officer from 1995 until 2006 when it was sold. Mr. Grimm is currently President of Rising Star Petroleum, LLC. Mr. Grimm was formerly Chairman of the Board of RSP Permian, Inc. (NYSE: RSPP) from January 2014 until June 2018. From November 2018 until it was sold in 2019, Mr. Grimm served on the Board of Directors of Anadarko Petroleum Corporation. Prior to the formation of Rising Star, Mr. Grimm was Vice President of Worldwide Exploration and Land for Placid Oil Company from 1990 to 1994. Prior to joining Placid Oil Company, Mr. Grimm was employed by Amoco Production Company for thirteen years where he held numerous positions throughout the exploration department in Houston, New Orleans and Chicago. Mr. Grimm has been an active member of the American Association of Professional Landmen, Dallas Wildcat Committee, Dallas Producers Club, and the All-American Wildcatters. He has a B.B.A. from the University of Texas at Austin. Mr. Grimm was selected to serve as a director because of his extensive experience in the energy industry and his service as a senior executive at several energy-related companies, in addition to his contacts in the industry gained through his involvement in energy-related organizations.

James R. (Rick) Perry. Mr. Perry was appointed to the Board of Directors of our general partner in January 2020. He formerly served as U.S. Secretary of Energy from March 2017 until December 2019. Prior to that, he served as the Governor of the State of Texas from 2000 until January 2015. Mr. Perry served as Lieutenant Governor of Texas from 1998 to 2000, and as Agriculture Commissioner from 1991 to 1998. Prior to 1991, he also served in the Texas House of Representatives. Mr. Perry previously served on the Board of Directors of Energy Transfer Operating, L.P. (formerly Energy Transfer Partners, L.P.) from February 2015 until December 2016. Mr. Perry was selected to serve as a director because of his vast experience as an executive in the highest office of state government. In addition, Mr. Perry has been involved in finance and budget planning processes throughout his career in government as a member of the Texas House Appropriations Committee, the Legislative Budget Board and as Governor.

Ray W. Washburne. Mr. Washburne was appointed to the Board of Directors of our general partner in April 2019. He is currently President and Chief Executive Officer of Charter Holdings, Inc., a Dallas-based investment company involved in real estate, restaurants and diversified financial investments. In addition, he currently serves on the President's Intelligence

Advisory Board (PIAB). From August 2017 to February 2019, Mr. Washburne served as the President and Chief Executive Officer of the Overseas Private Investment Corporation (OPIC), the United States government's development finance institution. From 2000 to 2017, Mr. Washburne served on the board of directors of Veritex Holdings, Inc. (Nasdaq: VBTX), a Texas -based bank holding company that conducts banking activities through its subsidiary, Veritex Community Bank. He has also served as an adjunct professor at the Cox School of Business at Southern Methodist University. Mr. Washburne is also a member of the Republican Governors Association Executive Roundtable, the American Enterprise Institute, the Council on Foreign Relations, and is on the Advisory Board of the United States Southern Command. Mr. Washburne was selected to serve on the Board of Directors because of his expertise in international finance, his relationships in government, and his experience on the board of a publicly traded company.

Compensation of the General Partner

Our general partner does not receive any management fee or other compensation in connection with its management of the Partnership.

Delinquent Section 16(a) Reports

Section 16(a) of the Securities Exchange Act of 1934 requires the directors and executive officers of our general partner, as well as persons who own more than ten percent of the common units representing limited partnership interests in us, to file reports of ownership and changes of ownership on Forms 3, 4 and 5 with the SEC. The SEC regulations also require that copies of these Section 16(a) reports be furnished to us by such reporting persons. Based upon a review of copies of these reports, we believe all applicable Section 16(a) reports were timely filed in 2020.

ITEM 11. EXECUTIVE COMPENSATION

Overview

As a limited partnership, we are managed by our General Partner. Our General Partner is majority owned by Mr. Kelcy Warren.

We own 100% of ETP GP and its general partner, ETP LLC. We refer to ETP GP and ETP LLC together as the "ETP GP Entities." ETP GP is the general partner of ETO.

Compensation Discussion and Analysis

Named Executive Officers

ET does not have officers or directors. Instead, we are managed by the board of directors of our General Partner, and the executive officers of our General Partner perform all of ET's management functions. As a result, the executive officers of our General Partner are ET's executive officers, and their compensation is administered by our General Partner. This Compensation Discussion and Analysis is, therefore, focused on the total compensation of the executive officers of our General Partner as set forth below. The persons we refer to in this discussion as our "named executive officers" are the following:

- Kelcy L. Warren, Executive Chairman and Chief Executive Officer during 2020 (Executive Chairman effective January 1, 2021);
- Thomas E. Long, Chief Financial Officer during 2020 (Co-Chief Executive Officer effective January 1, 2021);
- Marshall S. (Mackie) McCrea, III, President and Chief Commercial Officer during 2020 (Co-Chief Executive Officer effective January 1, 2021);
- Matthew S. Ramsey, Chief Operating Officer; and
- Thomas P. Mason, Executive Vice President, General Counsel and President — LNG.

Effective January 1, 2021, Mr. Warren assumed the role of Executive Chairman, and Messrs. Long and McCrea were appointed Co-Chief Executive Officers.

Bradford D. Whitehurst was appointed Chief Financial Officer of our General Partner effective January 8, 2021. Mr. Whitehurst is excluded from the compensation discussion and analysis and compensation tables herein, as he was not a named executive officer during 2020.

Our Philosophy for Compensation of Executives

In general, our General Partner's philosophy for executive compensation is based on the premise that a significant portion of each executive's compensation should be incentive-based or "at-risk" compensation and that executives' total compensation levels should be highly competitive in the marketplace for executive talent and abilities. Our General Partner seeks a total compensation program for its executive officers, including the named executive officers, that provides for a slightly below the median market annual base compensation (i.e. approximately the 30th to 40th percentile of market) but incentive-based compensation composed of a combination of compensation vehicles to reward both short and long-term performance that are both targeted to pay-out at approximately the top-quartile of market. Our General Partner believes the incentive-based balance is achieved by (i) the payment of annual discretionary cash bonuses that consider the achievement of the Partnership's financial performance objectives for a fiscal year set at the beginning of such fiscal year and the individual contributions of its executive officers, including the named executive officers to the success of the Partnership and the achievement of the annual financial performance objectives and (ii) the annual grant of time-based restricted unit, phantom unit awards or cash restricted unit awards under the Partnership's equity incentive plan(s) or the equity incentive programs of Sunoco LP, as applicable based on the allocation of executive officers awards, including awards to the named executive officers, which awards are intended to provide a longer term incentive and retention value to its key employees to focus their efforts on increasing the market price of its publicly traded units and to increase the cash distribution the Partnership and/or the other affiliated partnerships pay to their respective unitholders.

The Partnership has historically granted restricted unit and/or phantom unit awards ("RSUs") that vest, based generally upon continued employment, at a rate of 60% after the third year of service and the remaining 40% after the fifth year of service. In 2020, ET also granted cash restricted units ("CRSUs") that vest, based generally upon continued employment, at a rate of 1/3 annually over a three-year period. For 2020, the awards to employees were generally split equally between RSUs and CRSUs. The Partnership believes that these equity-based incentive arrangements are important in attracting and retaining executive

officers and key employees as well as motivating these individuals to achieve stated business objectives. The equity-based compensation reflects the importance our General Partner places on aligning the interests of its named executive officers with those of Unitholders.

As discussed below, our compensation committee and/or the compensation committee of the general partner of Sunoco LP, as applicable, all in consultation with our General Partner, are responsible for the compensation policies and compensation level of our executive officers, including the named executive officers of our General Partner. In this discussion, we refer to our compensation committee as the "ET Compensation Committee."

For a more detailed description of the compensation to the Partnership's named executive officers, please see "– Compensation Tables" below.

Distributions to Our General Partner

Our General Partner is majority-owned by Mr. Warren. We pay quarterly distributions to our General Partner in accordance with our partnership agreement with respect to its ownership of its general partner interest as specified in our partnership agreement. The cash distributions we make to our General Partner bear no relationship to the level or components of compensation of our General Partner's executive officers. Distributions to our General Partner are described in detail in Note 8 to our consolidated financial statements. Our named executive officers also own directly and indirectly certain of our limited partner interests and, accordingly, receive quarterly distributions. Such per unit distributions equal the per unit distributions made to all our limited partners and bear no relationship to the level of compensation of the named executive officers or the services they perform as employees.

For a more detailed description of the compensation of our named executive officers, please see "Compensation Tables" below.

Compensation Philosophy

Our compensation programs are structured to achieve the following:

- reward executives with an industry-competitive total compensation package of base salaries and significant incentive opportunities yielding a total compensation package approaching the top-quartile of the market;
- attract, retain and reward talented executive officers and key management employees by providing total compensation competitive with that of other executive officers and key management employees employed by publicly traded limited partnerships of similar size and in similar lines of business;
- motivate executive officers and key employees to achieve strong financial and operational performance;
- emphasize performance-based, or "at-risk," compensation; and
- reward individual performance.

Components of Executive Compensation

For the year ended December 31, 2020, the compensation paid to our named executive officers consisted of the following components:

- annual base salary;
- non-equity incentive plan compensation consisting solely of discretionary cash bonuses;
- time-vested restricted/phantom unit awards and cash restricted units under the equity incentive plan(s);
- payment of distribution equivalent rights ("DERs") on unvested time-based restricted unit awards under our equity incentive plan;
- vesting of previously issued time-based restricted unit and/or phantom unit awards issued pursuant to our equity incentive plans or the equity incentive plans(s) of affiliates; and
- 401(k) plan employer contributions.

Methodology

The ET Compensation Committee considers relevant data available to it to assess our competitive position with respect to base salary, annual short-term incentives and long-term incentive compensation for our executive officers, including the named executive officers. The ET Compensation Committee also considers individual performance, levels of responsibility, skills and experience.

Periodically, the ET Compensation Committee engages a third-party independent compensation consultant to provide a full market competitive compensation analysis for compensation levels at peer companies in order to assist in the determination of compensation levels for our executive officers, including the named executive officers. Most recently, Longnecker & Associates ("Longnecker") evaluated the market competitiveness of total compensation levels of a number of officers of the Partnership to provide market information with respect to compensation of those executives during the year ended December 31, 2019. In particular, the review by Longnecker was designed to (i) evaluate the market competitiveness of total compensation levels for certain members of senior management, including our named executive officers; (ii) assist in the determination of appropriate compensation levels for our senior management, including the named executive officers; and (iii) confirm that our compensation programs were yielding compensation packages consistent with our overall compensation philosophy.

In conducting its review, Longnecker specifically considered the larger size of the combined ET entities from an energy industry perspective. During 2019, Longnecker assisted in the development of the final "peer group" of leading companies in the energy industry that most closely reflect the profile of ET in terms of revenues, assets and market value as well as competition for talent at the senior management level and similarly situated general industry companies with similar revenues, assets and market value. In setting such peer group, the size of ET on a combined basis was considered. As part of the evaluation conducted by Longnecker, a determination was made to focus the analysis specifically on the energy industry peers. This decision was based on a determination that an energy industry peer group provided a more than sufficient amount of comparative data to consider and evaluate total compensation. This focus allowed Longnecker to report on specific industry related data comparing the levels of annual base salary, annual short-term cash bonus and long-term equity incentive awards at industry peer group companies with those of the named executive officers to ensure that compensation of the named executive officers is both consistent with the compensation philosophy and competitive with the compensation for executive officers of these other companies. The identified companies were:

Energy Peer Group:

• Conoco Phillips	• Marathon Petroleum Corporation
• Enterprise Products Partners, L.P.	• Kinder Morgan, Inc.
• Plains All American Pipeline, L.P.	• The Williams Companies, Inc.
• Valero Energy Corporation	• Phillips 66

The compensation analysis provided by Longnecker in 2019 covered all major components of total compensation, including annual base salary, annual short-term cash bonus and long-term incentive awards for the senior executives of these companies. In preparing the review materials, Longnecker utilized generally accepted compensation principles as determined by WorldatWork and gathered data from public disclosures of peer companies, including 10-K and proxy data and published survey data from multiple sources that are relevant to ET's peer group, industry, financial size and operational breadth. The Longnecker review process also included significant engagement with management to fully understand job scope, responsibilities and roles of each of the executive officers, which discussions allow Longnecker the ability to completely evaluate specific aspects of an executive officer's position to allow for more accurate comparisons.

Following Longnecker's 2019 review, the ET Compensation Committee reviewed the information provided, including Longnecker's specific conclusions and recommended considerations for all compensation going forward. The ET Compensation Committee considered and reviewed the results of the study performed by Longnecker to determine if the results indicated that the compensation programs were yielding a competitive total compensation model prioritizing incentive-based compensation and rewarding achievement of short and long-term performance objectives and considered Longnecker's conclusions and recommendations. While Longnecker found that the Partnership is achieving its stated objectives with respect to the "at-risk" approach, they also found that certain adjustments could be considered moving forward to allow the Partnership to continue to achieve its targeted percentiles on base compensation and incentive compensation (short and long-term). Longnecker's suggested adjustments as part of the 2019 were not implemented in 2020 as management and the ET Compensation Committee determined to postpone any changes in light of the impacts of the COVID-19 pandemic on ET and on the global energy market.

In addition to the information received as part of Longnecker's 2019 review, the ET Compensation Committee also utilizes information obtained from other sources in its determination of compensation levels for our named executive officers, such as annual third party surveys, although third party survey data is not used by the ET Compensation Committee to benchmark the amount of total compensation or any specific element of compensation for the named executive officers.

In addition to the 2019 compensation analysis for executive officers, Longnecker also provided advice and feedback on certain other matters, including the appropriateness, targets and composition of the annual equity award pools and the annual bonus awards under the Energy Transfer Annual Bonus Plan (the "Bonus Plan") and benchmarking on certain non-named executive officer hires and promotions.

In 2020, Longnecker also provided advice and recommendations on the total compensation packages for Messrs. McCrea and Long in connection with their joint appointment as Co-Chief Executive Officers, including with respect to certain one-time equity and cash awards, as applicable.

Base Salary. Base salary is designed to provide for a competitive fixed level of pay that attracts and retains executive officers and compensates them for their level of responsibility and sustained individual performance (including experience, scope of responsibility and results achieved). The salaries of the named executive officers are reviewed on an annual basis. As discussed above, the base salaries of our named executive officers are targeted to yield an annual base salary slightly below the median level of market (i.e. approximately the 30th to 40th percentile of market) and are determined by the ET Compensation Committee after taking into account the recommendations of Mr. Warren.

During the merit review process, the ET Compensation Committee considers the recommendations of Mr. Warren, any relevant compensation study data (with the data aged as appropriate) and the merit increase pool set for all employees of the Partnership and/or its employing affiliates. During 2020, given the challenging conditions within the industry, including the impacts of the COVID-19 pandemic, the ET Compensation Committee did not approve any increases to base salaries of the named executive officers. Thus, 2020 base salaries for the named executive officers were consistent with the prior year amounts: $1,114,555 for Mr. McCrea; $600,000 for Mr. Long; $696,598 for Mr. Ramsey; and $631,396 for Mr. Mason. Mr. Warren has voluntarily determined that his salary will be $1.00 per year (plus an amount sufficient to cover his allocated payroll deductions for health and welfare benefits).

In connection with their promotions to Co-Chief Executive Officer effective January 1, 2021, the ET Compensation Committee approved increases in the annual base salaries of Messrs. McCrea and Long to $1,300,000.

Annual Bonus. In addition to base salary, the ET Compensation Committee makes determinations whether to make discretionary annual cash bonus awards to executives, including our named executive officers, following the end of the year under the Bonus Plan.

The Bonus Plan is a discretionary annual cash bonus plan available to all employees, including the named executive officers. The purpose of the Bonus Plan is to reward employees for contributions towards the Partnership's business goals and to aid in motivating employees. The Bonus Plan is administered by the ET Compensation Committee and the ET Compensation Committee has the authority to establish and interpret the rules and regulations relating to the Bonus Plan, to select participants, to determine and approve the size of any actual award amount, to make all determinations, including factual determinations, under the Bonus Plan, and to take all other actions necessary or appropriate for the proper administration of the Bonus Plan.

For each calendar year (the "Performance Period"), the ET Compensation Committee will evaluate and determine an overall funded cash bonus pool based on achievement of (i) an internal Adjusted EBITDA target ("Adjusted EBITDA Target"), (ii) an internal distributable cash flow target ("DCF Target") and (iii) performance of each department compared to the applicable departmental budget ("Departmental Budget Target"). The Adjusted EBITDA Target and the DCF Target are defined for purposes of the Bonus Plan using the same definitions as used in the Partnership's audited financial statements included in its annual and quarterly filings on Forms 10-K and 10-Q for the terms Adjusted EBITDA and Distributable Cash Flow. The performance criteria are weighted 60% on the achievement of the Adjusted EBITDA Target, 20% on the achievement of the DCF Target and 20% on the achievement of the Departmental Budget Target (collectively, "Budget Targets"). The total amount of cash to be allocated to the funded bonus pool will range from 0% to 120% for each of the budgeted DCF Target and Adjusted EBITDA Target and will range from 0% to 100% of the Departmental Budget Target. The maximum funding of the bonus pool is 116% of the total pool target and to achieve such funding each of the Adjusted EBITDA and the DCF Target must achieve 120% funding and the Department Budget target must achieve its 100% target. While the funded bonus pool will reflect an aggregation of performance under each target, in the event performance under the Adjusted EBITDA Target is below 80% of its target, no bonus pool will be funded. If the bonus pool is funded, a participant may earn a cash award for the Performance Period based upon the level of attainment of the Budget Targets and his or her individual performance. Awards are paid in cash as soon as practicable after the end of the Performance Period but in no event later than two and one-half months after the end of the Performance Period.

While the achievement of the Budget Targets sets a bonus pool under the Bonus Plan, actual bonus awards are discretionary. These discretionary bonuses, if awarded, are intended to reward our named executive officers for the achievement of the Budget Targets during the Performance Period in light of the contribution of each individual to our profitability and success during such year. The ET Compensation Committee also considers the recommendation of Mr. Warren in determining the specific annual cash bonus amounts for each of the named executive officers. The ET Compensation Committee does not establish its own financial performance objectives in advance for purposes of determining whether to approve any annual bonuses, and it does not utilize any formulaic approach to determine annual bonuses.

For 2020, the ET Compensation Committee approved short-term annual cash bonus pool targets for Mr. McCrea of 160% of his annual base earnings and for Messrs. Long, Ramsey and Mason of 130% of their annual base earnings. The named executive officer bonus pool targets remained the same for the 2020 Performance Period as they were for the 2019 period. In connection with their promotions to Co-Chief Executive Officer effective January 1, 2021, the ET Compensation Committee established bonus pool targets for Messrs. McCrea and Long of 160% of their annual base earnings.

In respect of a 2020 bonus pool funding, executive management recommended to the Compensation Committee that the bonus be paid at a 0% payout. This recommendation was made in consideration of a number of factors including (i) the challenging conditions within the industry, specifically the impacts of the COVID-19 pandemic on ET and the global energy market; (ii) the impact of market conditions on current capital projects and certain planned future capital growth projects; and (ii) the reduction of quarterly cash distributions payable to ET common unit holders by 50% in 2020. After considering quantitative and qualitative factors, including performance level achieved, the Compensation Committee exercised its negative discretion, to award a 0% payout of the non-equity incentive bonus.

Equity Awards. ET maintains and operates (i) the Second Amended and Restated Energy Transfer LP 2008 Incentive Plan (the "2008 Incentive Plan"); (ii) the Energy Transfer LP 2011 Long-Term Incentive Plan (the "2011 Incentive Plan"); the (iii) Energy Transfer LP 2015 Long-Term Incentive Plan (the "2015 Plan"); (iv) the Amended and Restated Energy Transfer LP Long-Term Incentive Plan (the "ET Plan," together with the 2008 Incentive Plan, the 2011 Incentive Plan and the 2015 Plan, the "ET Incentive Plans"). The ET Incentive Plans authorize the ET Compensation Committee, in its discretion, to grant awards, as applicable, under each respective plan of RSUs upon such terms and conditions as it may determine appropriate and in accordance with general guidelines as defined by the ET Incentive Plans. ET has generally used time-vested restricted units and/or phantom units as the vehicle for its annual equity awards to eligible employees, including the named executive officers.

In addition, in 2020, ET adopted the Energy Transfer LP Long-Term Cash Restricted Unit Plan (the "CRU Plan"). The CRU Plan authorizes the ET Compensation Committee, in its discretion, to grant awards, as applicable, of CRSUs, upon such terms and conditions as it may determine appropriate and in accordance with general guidelines as defined by the CRU Plan. Like awards from the ET Incentive Plans, awards from the CRU Plan will be used to incentivize and reward eligible employees over a long-term basis, and the CRU Plan is included for purposes of these discussions as an "ET Incentive Plan."

For 2020, the annual long-term incentive targets set by the ET Compensation Committee for the named executive officers were 900% of annual base salary for Mr. McCrea and 500% of annual base salary for Messrs. Long, Ramsey and Mason. The targets of the named executive officers were the same as the prior year's targets.

The annual long-term incentive targets are used as the basis to determine the target number of units to be awarded to the eligible participant, including the named executive officers. A multiple of base salary is used to set the pool target, that number is then divided by a weighted average price determined by considering ET's modified total unitholder return "(TUR") performance as measured against the average return of ET's identified peer group over defined time periods. The modified TUR is designed to create a recognition of a performance adjustment to the equity awards based on the prior periods measured to add an element of performance impact in setting grant date value even though the RSUs and CRSUs themselves are a time-vested vehicle. For purposes of establishing an initial price, ET utilizes a 60 trading-day trailing weighted average price of ET common units prior to November 13, 2020. This average trading price is then subject to adjustment when ET's TUR is more than 5% greater or less than that of its identified peer group. If the TUR analysis yields a result that is within 5% percent of its identified peer group, the ET Compensation Committee will simply use the 60 trading day trailing weighted average price divided by the applicable salary multiple to establish a target pool for each eligible participant, including the named executive officers. If ET's TUR is outside of the 5% deviation, the 60 trading day trailing weighted average will be adjusted up or down to a maximum of 15% from the trailing weighted average price based on ET's performance as compared to the identified group. For 2019, the peer group included the following:

• Enterprise Products Partners, L.P.	• Kinder Morgan, Inc.
• The Williams Companies, Inc.	• Plains All American Pipeline, L.P.
• Phillips 66 Partners LP	• MPLX LP

For 2020, the Partnership's TUR underperformed the identified peer group by between 14% and 16% based on the average of the identified three comparison periods: (i) year-to-date 2020, (ii) trailing twelve months, and (iii) full-year 2019. Consequently, the 2020 long-term incentive base price was increased to reduce the total available restricted pool by approximately 15%.

In December 2020, the ET Compensation Committee in consultation with Mr. Warren approved grants of RSUs to Messrs. McCrea, Long, Ramsey and Mason of 746,350 units, 178,550 units, 207,300 units and 234,900 units, respectively. The ET Compensation Committee also approved grants of CRSUs to Messrs. Long, Ramsey and Mason of 178,500, 207,300 and 234,900 units, respectively. As with base salary and annual bonus, Mr. Warren does not accept or receive annual long-term incentive awards.

As more fully described below under "*Affiliate and Subsidiary Equity Awards*," for 2020, in discussions between the General Partner, the ET Compensation Committee and the compensation committee of the general partner of Sunoco LP, it was determined that for 2020, Messrs. Long and Ramsey's awards would be comprised of RSUs and CRSUs under the ET Incentive Plans and RSUs under the Sunoco LP 2018 Long-Term Incentive Plan (the "2018 Sunoco LP Plan") in consideration of their roles and responsibilities for Sunoco LP and their status, as members of the Boards of Directors of the general partner of Sunoco LP. Messrs. Long and Ramsey's total 2020 long-term awards were allocated approximately 80% to the ET Incentive Plans and approximately 20% to the 2018 Sunoco LP Plan. The awards of Messrs. McCrea and Mason for 2020 were allocated entirely to the ET Incentive Plans. While Mr. Long likely will not receive future long-term incentive awards under the 2018 Sunoco LP Plan in his role as Co-CEO, it is anticipated that Mr. Ramsey will continue to recognize an aggregation of RSUs and CRSUs under the ET Incentive Plans and the 2018 Sunoco LP Plan, as applicable. For purposes of establishing a pool value for awards to eligible participants, including Messrs. Ramsey and Long, Sunoco LP utilized the same practices in terms of peer group TUR analysis to set a grant date valuation.

The RSUs granted in 2020 provide for incremental vesting over a five-year period, with 60% vesting at the end of the third year and the remaining 40% vesting at the end of the fifth year. Vesting of the awards are generally subject to continued employment through each specified vesting date. The RSU awards entitle the recipients to receive, with respect to each ET unit subject to such award that has not either vested or been forfeited, a DER cash payment promptly following each such distribution by ET to its common unitholders.

The CRSUs granted in 2020 provide for incremental vesting over a three-year period, with 1/3 vesting at the end of each year. Each CRSU entitles the award recipient to receive cash equal to the market value of one ET common unit upon vesting. The CRSU do not include rights to DER cash payments.

In approving the grant of such RSUs and CRSUs, including to the named executive officers, the ET Compensation Committee considered several factors, including the long-term objective of retaining such individuals as key drivers of ET's future success, the existing level of equity ownership of such individuals and the previous awards to such individuals of equity awards subject to vesting. Vesting of the 2020 awards would accelerate in the event of the death or disability of the recipient, including the named executive officers, or in the event of a change in control of ET as that term is defined under the ET Incentive Plans.

For 2020, Mr. McCrea did not receive an award of CRSUs; instead, he received a special one-time time vested cash award of $5,000,000 payable as follows:

- $1,800,000.00 on December 31, 2020;
- $1,600,000.00 on July 1, 2020; and
- $1,600,00.00 on December 5, 2022.

This amount is intended to approximate 50% of Mr. McCrea's targeted annual equity award and replace the award of CRSUs made to other named executive officers.

As discussed below under "Potential Payments Upon a Termination or Change of Control," all outstanding equity awards would automatically accelerate upon a change in control event, which means vesting automatically accelerates upon a change of control irrespective of whether the officer is terminated. In addition, the award agreements for the restricted units and cash restricted units awarded in 2020, as well as other awards outstanding held by Partnership employees, including the named executive officers, also include certain acceleration provisions upon retirement with the ability to accelerate 40% of outstanding unvested awards under the ET Incentive Plans at age 65 and 50% at age 68. These acceleration provisions require that the participant have not less than five (5) years of employment service to the Partnership or an affiliate and require a six (6) month delay in the vesting after retirement pursuant to the requirements of Section 409(A) of the Code.

We believe that permitting the accelerated vesting of equity awards upon a change in control creates an important retention tool for us by enabling employees to realize value from these awards in the event that we undergo a change in control transaction. In

addition, we believe permitting acceleration of vesting upon a change in control creates a sense of stability in the course of transactions that could create uncertainty regarding their future employment and encourage these officers to remain focused on their job responsibilities.

Affiliate and Subsidiary Equity Awards. In addition to their roles as officers for ET during 2020, Messrs. Long and Ramsey have certain responsibilities for Sunoco LP, including as members of the Board of Directors of the general partner of Sunoco LP.
The Sunoco LP Compensation Committee in December 2020 approved grants of RSUs to Messrs. Long and Ramsey of 27,800 and 32,300 restricted units, respectively, under the 2018 Sunoco LP Plan. The terms and conditions of the restricted unit to Messrs. Long and Ramsey under the 2018 Sunoco LP Plan, as applicable, were the same and provided for vesting over a five-year period, with 60% vesting at the end of the third year and the remaining 40% vesting at the end of the fifth year, subject generally to continued employment through each specified vesting date. All of the awards would be accelerated in the event of their death, disability, upon a change in control or retirement at ages 65 or 68. The retirement acceleration provisions for these awards under the 2018 Sunoco Plan are the same as the retirement acceleration provisions under ET Incentive Plans with the ability to accelerate at retirement 40% of outstanding unvested awards at age 65 and 50% at age 68.

Special One-Time Awards to Co-Chief Executive Officers. In recognition of their assumption of their new roles as Co-Chief Executive Officers, the ET Compensation Committee approved certain one-time awards to Messrs. McCrea and Long which occurred in 2021 and therefore are not reflected within the executive compensation tables that follow this discussion.

Mr. McCrea received a special one-time award of 241,815 RSUs under the ET Incentive Plans and a special cash payment of $1,625,000 in connection with his appointment as Co-Chief Executive Officer.

Mr. Long received a special one-time award of 483,630 RSUs under the ET Incentive Plans in connection with his appointment as Co-Chief Executive Officer.

The RSU awards to Messrs. McCrea and Long were made at the same grant date valuation and vesting schedules used for the annual equity awards described above under “—Equity Awards” section above. These awards were approved by the ET Compensation Committee on December 30, 2020 to be effective immediately upon Messrs. McCrea and Long assuming their new roles on January 1, 2021 and will be reflected in the 2021 Summary Compensation Tables.

Unit Ownership Guidelines. The Board of Directors of our General Partner has adopted the Executive Unit Ownership Guidelines (the “Guidelines”), which set forth minimum ownership guidelines applicable to certain executives of ET with respect to ET and Sunoco LP common units representing limited partnership interests, as applicable. The applicable Guidelines are denominated as a multiple of base salary, and the amount of common units required to be owned increases with the level of responsibility. Under these Guidelines, the President and Chief Commercial Officer and the Chief Operating Officer are expected to own common units having a minimum value of five times his base salary, while each of the remaining named executive officers (other than the CEO) are expected to own common units having a minimum value of four times their respective base salary. In addition to the named executive officers, these Guidelines also apply to other covered executives, which executives are expected to own either directly or indirectly in accordance with the terms of the Guidelines, common units having minimum values ranging from two to four times their respective base salary.

The ET Compensation Committee believes that the ownership of ET and/or Sunoco LP common units, as reflected in these Guidelines, is an important means of tying the financial risks and rewards for its executives to ET’s total unitholder return, aligning the interests of such executives with those of Unitholders, and promoting ET’s interest in good corporate governance.

Covered executives are generally required to achieve their ownership level within five years of becoming subject to the Guidelines; however, certain covered executives, based on their tenure as an executive, were required to achieve compliance within two years of the December 2013 effective date of the Guidelines. Thus, compliance with the Guidelines was required for Messrs. McCrea and Mason beginning in December 2015, Mr. Long in December 2018 and Mr. Ramsey in December 2020. As of December 31, 2020, all of the named executive officers were compliant with the Guidelines.

Covered executives may satisfy the Guidelines through direct ownership of ET and/or Sunoco LP common units or indirect ownership by certain immediate family members. Direct or indirect ownership of ET and/or Sunoco LP common units shall count on a one-to-one ratio for purposes of satisfying minimum ownership requirements; however, unvested unit awards may not be used to satisfy the minimum ownership requirements.

Executive officers, including the named executive officers, who have not yet met their respective guideline must retain and hold all common units (less common units sold to cover the executive’s applicable taxes and withholding obligation) received in connection with long-term incentive awards. Once the required ownership level is achieved, ownership of the required common units must be maintained for as long as the covered executive is subject to the Guidelines. However, those individuals who have

met or exceeded their applicable ownership level guideline may dispose of the common units in a manner consistent with applicable laws, rules and regulations, including regulations of the SEC and our internal policies, but only to the extent that such individual's remaining ownership of common units would continue to exceed the applicable ownership level.

Qualified Retirement Plan Benefits. The Energy Transfer LP 401(k) Plan (the "ET 401(k) Plan") is a defined contribution 401(k) plan, which covers substantially all of our employees, including the named executive officers. Employees may elect to defer up to 100% of their eligible compensation after applicable taxes, as limited under the Internal Revenue Code. We make a matching contribution that is not less than the aggregate amount of matching contributions that would be credited to a participant's account based on a rate of match equal to 100% of each participant's elective deferrals up to 5% of covered compensation. During 2020, in response to challenging conditions within the industry, including impacts of the COVID-19 pandemic, ET suspended its 401(k) matching contribution from July 1, 2020 through December 31, 2020. The amounts deferred by the participant are fully vested at all times, and the amounts contributed by the Partnership become vested based on years of service. We provide this benefit as a means to incentivize employees and provide them with an opportunity to save for their retirement.

The Partnership provides a 3% profit sharing contribution to employee 401(k) accounts for all employees with a base compensation below a specified threshold. The contribution is in addition to the 401(k) matching contribution and employees become vested based on years of service. As with the 401(k) matching contributions, ET suspended the profit sharing contribution from July 1, 2020 through December 31, 2020.

Health and Welfare Benefits. All full-time employees, including our named executive officers may participate in ETP GP's health and welfare benefit programs including medical, dental, vision, flexible spending, life insurance and disability insurance.

Termination Benefits. Our named executive officers do not have any employment agreements that call for payments of termination or severance benefits or that provide for any payments in the event of a change in control of our General Partner; however, the award agreement to the named executive officers under the ET Incentive Plans, the 2018 Sunoco LP Plan and the Sunoco LP 2012 Long-Term Incentive Plan (the "2012 Sunoco LP Plan") provide for immediate vesting of all unvested restricted unit awards in the event of a (i) change of control, as defined in the plan; (ii) death or (iii) disability, as defined in the applicable plan. Please refer to "Compensation Tables - Potential Payments Upon a Termination or Change of Control" for additional information.

In addition, ETP GP has also adopted the ETP GP Severance Plan and Summary Plan Description effective as of June 12, 2013, (the "Severance Plan"), which provides for payment of certain severance benefits in the event of Qualifying Termination (as that term is defined in the Severance Plan). In general, the Severance Plan provides payment of two weeks of annual base salary for each year or partial year of employment service up to a maximum of fifty-two weeks or one year of annual base salary (with a minimum of four weeks of annual base salary) and up to three months of continued group health insurance coverage. The Severance Plan also provides that we may determine to pay benefits in addition to those provided under the Severance Plan based on special circumstances, which additional benefits shall be unique and non-precedent setting. The Severance Plan is available to all salaried employees on a nondiscriminatory basis; therefore, amounts that would be payable to our named executive officers upon a Qualified Termination have been excluded from "Compensation Tables – Potential Payments Upon a Termination or Change of Control" below.

Energy Transfer LP Non-Qualified Deferred Compensation Plan (the "ET NQDC Plan") is a deferred compensation plan, which permits eligible highly compensated employees to defer a portion of their salary, bonus, and/or quarterly non-vested phantom unit distribution equivalent income until retirement, termination of employment or other designated distribution event. Each year under the ET NQDC Plan, eligible employees are permitted to make an irrevocable election to defer up to 50% of their annual base salary, 50% of their quarterly non-vested phantom unit distribution income, and/or 50% of their discretionary performance bonus compensation during the following year. Pursuant to the ET NQDC Plan, ET may make annual discretionary matching contributions to participants' accounts; however, ET has not made any discretionary contributions to participants' accounts and currently has no plans to make any discretionary contributions to participants' accounts. All amounts credited under the ET NQDC Plan (other than discretionary credits) are immediately 100% vested. Participant accounts are credited with deemed earnings or losses based on hypothetical investment fund choices made by the participants among available funds.

Participants may elect to have their account balances distributed in one lump sum payment or in annual installments over a period of three or five years upon retirement, and in a lump sum upon other termination events. Participants may also elect to take lump-sum in-service withdrawals five years or longer in the future, and such scheduled in-service withdrawals may be further deferred prior to the withdrawal date. Upon a change in control (as defined in the ET NQDC Plan) of ET, all ET NQDC Plan accounts are immediately vested in full. However, distributions are not accelerated and, instead, are made in accordance

with the ET NQDC Plan's normal distribution provisions unless a participant has elected to receive a change of control distribution pursuant to his deferral agreement. None of our named executive officers currently participate in this plan.

Risk Assessment Related to our Compensation Structure. We believe that the compensation plans and programs for our named executive officers, as well as our other employees, are appropriately structured and are not reasonably likely to result in material risk to us. We believe these compensation plans and programs are structured in a manner that does not promote excessive risk-taking that could harm our value or reward poor judgment. We also believe we have allocated compensation among base salary and short and long-term compensation in such a way as to not encourage excessive risk-taking. In particular, we generally do not adjust base annual salaries for executive officers and other employees significantly from year to year, and therefore the annual base salary of our employees is not generally impacted by our overall financial performance or the financial performance of a portion of our operations. Our subsidiaries generally determine whether, and to what extent, their respective named executive officers receive a cash bonus based on achievement of specified financial performance objectives as well as the individual contributions of our named executive officers to the Partnership's success. We and our subsidiaries use restricted units and phantom units rather than unit options for equity awards because restricted units and phantom units retain value even in a depressed market so that employees are less likely to take unreasonable risks to get, or keep, options "in-the-money." Finally, the time-based vesting over five years for our long-term incentive awards ensures that the interests of employees align with those of Unitholders and our subsidiaries' unitholders for our long-term performance.

Tax and Accounting Implications of Equity-Based Compensation Arrangements

Deductibility of Executive Compensation

We are a limited partnership and not a corporation for United States federal income tax purposes. Therefore, we believe that the compensation paid to the named executive officers is not subject to the deduction limitations under Section 162(m) of the Internal Revenue Code and therefore is generally fully deductible for United States federal income tax purposes.

Accounting for Non-Cash Compensation

For non-cash compensation arrangements, we record compensation expense over the vesting period of the awards, as discussed further in Note 9 to our consolidated financial statements.

Compensation Committee Interlocks and Insider Participation

Mr. Steven R. Anderson, Mr. Michael K. Grimm and Mr. Ray W. Washburne are the only members of the ET Compensation Committee. During 2020, no member of the ET Compensation Committee was an officer or employee of us or any of our subsidiaries or served as an officer of any company with respect to which any of our executive officers served on such company's board of directors. Mr. Grimm is not a former employee of ours or any of our subsidiaries. Mr. Anderson was previously an employee of the Partnership until his retirement in October 2009, as discussed in his biographical information included in "Item 10. Directors, Executive Officers and Corporate Governance."

Report of Compensation Committee

The board of directors of our General Partner has reviewed and discussed the section entitled "Compensation Discussion and Analysis" with the management of ET. Based on this review and discussion, we have recommended that the Compensation Discussion and Analysis be included in this annual report on Form 10-K.

The Compensation Committee of the
Board of Directors of LE GP, LLC,
general partner of Energy Transfer LP

Steven R. Anderson
Michael K. Grimm
Ray W. Washburne

The foregoing report shall not be deemed to be incorporated by reference by any general statement or reference to this annual report on Form 10-K into any filing under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended, except to the extent that we specifically incorporate this information by reference, and shall not otherwise be deemed filed under those Acts.

Executive Vice President, General Counsel and President – LNG	2019	619,899	—	2,749,440	805,900	—	19,544	4,194,783
	2018	600,477	—	2,466,882	858,700	—	19,294	3,945,353

(1) Equity award amounts reflect the aggregate grant date fair value of unit awards granted for the periods presented, computed in accordance with FASB ASC Topic 718, disregarding any estimates for forfeitures. For Messrs. Long and Ramsey amounts include equity awards of our subsidiary, Sunoco LP, as reflected in the "Grants of Plan-Based Awards Table." See Note 9 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data" for additional assumptions underlying the value of the equity awards. Although the CRSU awards may only be settled in cash, they are based upon the value of ET common units and are accounted for as equity awards within these compensation tables.

(2) ET maintains the Bonus Plan which provides for discretionary bonuses. Awards of discretionary bonuses are tied to achievement of targeted performance objectives and described in the Compensation Discussion and Analysis.

(3) The amounts reflected for 2020 in this column include (i) matching contributions to the ET 401(k) Plan made on behalf of the named executive officers of $13,846 for Mr. Long, $10,288 for Mr. McCrea and $14,250 each for Messrs. Ramsey and Mason, and (ii) health savings account contributions made on behalf of the named executive officers of $2,000 each for Messrs. Long and McCrea, and (iii) the dollar value of life insurance premiums paid for the benefit of the named executive officers. The amounts reflected for all periods exclude distribution payments in connection with distribution equivalent rights on unvested unit awards, because the dollar value of such distributions are factored into the grant date fair value reported in the "Equity Awards" column of the Summary Compensation Table at the time that the unit awards and distribution equivalent rights were originally granted. For 2020, distribution payments in connection with distribution equivalent rights totaled $913,658 for Mr. Long, $2,284,899 for Mr. McCrea, $916,013 for Mr. Ramsey, and $774,910 for Mr. Mason.

(4) Mr. Warren has voluntarily determined that his salary will be reduced to $1.00 per year (plus an amount sufficient to cover his allocated payroll deductions for health and welfare benefits). He also does not accept a cash bonus or any equity or incentive awards under any applicable incentive plans.

(5) The amounts reflected in the bonus column for Mr. McCrea represents the first payment of Mr. McCrea's time-vested cash award, which award represents 50% of Mr. McCrea's total equity award target. This amount was paid on December 31, 2020.

Grants of Plan-Based Awards in 2020

Name	Grant Date	All Other Unit Awards: Number of Units (#)	Grant Date Fair Value of Unit Awards [1]
ET Unit Awards:			
Kelcy L. Warren	N/A	—	$ —
Thomas E. Long	12/30/2020	178,550	1,099,868
Marshal S. (Mackie) McCrea, III	12/30/2020	746,350	4,597,516
Matthew S. Ramsey	12/30/2020	207,300	1,276,968
Thomas P. Mason	12/30/2020	234,900	1,446,984
ET Cash Restricted Unit Awards:			
Thomas E. Long	12/30/2020	178,550	883,527
Matthew S. Ramsey	12/30/2020	207,300	1,025,792
Thomas P. Mason	12/30/2020	234,900	1,162,366
Sunoco LP Unit Awards:			
Thomas E. Long	12/30/2020	27,800	797,860
Matthew S. Ramsey	12/30/2020	32,300	927,010

(1) We have computed the grant date fair value of unit awards in accordance with FASB ASC Topic 718, as further described above and in Note 9 to our consolidated financial statements. For ET cash restricted unit awards, the grant date fair value is discounted for the expected distribution yield during the vesting period, as those awards do not include distribution equivalent rights.

Narrative Disclosure to Summary Compensation Table and Grants of the Plan-Based Awards Table

A description of material factors necessary to understand the information disclosed in the tables above with respect to salaries, bonuses, equity awards, and 401(k) plan contributions can be found in the Compensation Discussion and Analysis that precedes these tables.

	12/29/2016	9,320	268,230

(1) Certain of these outstanding awards represent former Energy Transfer Partners, L.P. awards that converted into ET awards upon the merger of Energy Transfer Equity, L.P. (now named Energy Transfer LP) and Energy Transfer Partners, L.P. (now named Energy Transfer Operating, L.P.) in October 2018. Furthermore, some of those converted awards had previously been converted in connection with the merger of Energy Transfer Partners, L.P. and Sunoco Logistics Partners L.P. in April 2017.

(2) ET and Sunoco LP unit awards outstanding vest as follows:

- at a rate of 60% in December 2023 and 40% in December 2025 for awards granted in December 2020;
- at a rate of 60% in December 2022 and 40% in December 2024 for awards granted in December 2019;
- at a rate of 60% in December 2021 and 40% in December 2023 for awards granted in October and December 2018;
- 100% in December 2022 for the remaining outstanding portion of awards granted in December 2017; and
- 100% in December 2021 for the remaining outstanding portion of awards granted in December 2016.

Such awards may be settled at the election of the ET Compensation Committee in (i) common units of ET (subject to the approval of the ET Incentive Plans prior to the first vesting date by a majority of Unitholders pursuant to the rules of the New York Stock Exchange); (ii) cash equal to the Fair Market Value (as such term is defined in the ET Incentive Plans) of the ET common units that would otherwise be delivered pursuant to the terms of each named executive officers grant agreement; or (iii) other securities or property in an amount equal to the Fair Market Value of ET common units that would otherwise be delivered pursuant to the terms of the grant agreement, or a combination thereof as determined by the ET Compensation Committee in its discretion.

ET cash restricted unit awards granted in December 2020 vest 1/3 per year in December 2021, 2022 and 2023.

(3) Market value was computed as the number of unvested awards as of December 31, 2020 multiplied by the closing price of respective common units of ET and Sunoco LP. For ET cash restricted unit awards, the grant date fair value is discounted for the expected distribution yield during the vesting period, as those awards do not include distribution equivalent rights.

Units Vested in 2020

	Unit Awards	
Name	**Number of Units Acquired on Vesting (#)**	**Value Realized on Vesting ($) [1]**
ET Unit Awards:		
Kelcy L. Warren	N/A	$ —
Thomas E. Long	92,610	641,787
Marshall S. (Mackie) McCrea, III	465,098	3,223,129
Matthew S. Ramsey	193,626	1,341,828
Thomas P. Mason	114,858	795,966
Sunoco LP Unit Awards:		
Thomas E. Long	15,908	459,900
Matthew S. Ramsey	814	25,584
Thomas P. Mason	18,873	545,618

(1) Amounts presented represent the value realized upon vesting of these awards, which is calculated as the number of units vested multiplied by the applicable closing market price of applicable common units upon the vesting date.

We have not issued option awards.

Potential Payments Upon a Termination or Change of Control

Equity Awards. As discussed in our Compensation Discussion and Analysis above, any unvested equity awards (including cash restricted unit awards) granted pursuant the ET Incentive Plans will automatically become vested upon a change of control, which is generally defined as the occurrence of one or more of the following events: (i) any person or group becomes the beneficial owner of 50% or more of the voting power or voting securities of ET or its general partner; (ii) LE GP, LLC or an affiliate of LE GP, LLC ceases to be the general partner of ET; or (iii) the sale or other disposition, including by liquidation or dissolution, of all or substantially all of the assets of ET in one or more transactions to anyone other than an affiliate of ET.

In addition, as explained in *Equity Awards* section of our Compensation Discussion and Analysis above, the restricted unit awards, phantom unit awards and cash restricted unit awards under the ET Incentive Plans, the Sunoco LP Plan and the 2012 Sunoco LP Plan generally require the continued employment of the recipient during the vesting period, provided however, the unvested awards will be accelerated in the event of the death or disability of the award recipient prior to the applicable vesting

period being satisfied. All awards outstanding to the named executive officers under the ET Incentive Plans, the 2018 Sunoco LP Plan or the 2012 Sunoco LP Plan would be accelerated in the event of a change in control of the Partnership.

The October 2018 equity award to Mr. Long included a provision in the applicable award agreement for acceleration of unvested restricted unit/restricted phantom unit awards upon a termination of employment by the general partner of the applicable partnership issuing the award without "cause." For purposes of the awards the term "cause" shall mean: (i) a conviction (treating a nolo contendere plea as a conviction) of a felony (whether or not any right to appeal has been or may be exercised), (ii) willful refusal without proper cause to perform duties (other than any such refusal resulting from incapacity due to physical or mental impairment), (iii) misappropriation, embezzlement or reckless or willful destruction of property of the partnership or any of its affiliates, (iv) knowing breach of any statutory or common law duty of loyalty to the partnership or any of its or their affiliates, (v) improper conduct materially prejudicial to the business of the partnership or any of its or their affiliates, (vi) material breach of the provisions of any agreement regarding confidential information entered into with the partnership or any of its or their affiliates or (vii) the continuing failure or refusal to satisfactorily perform essential duties to the partnership or any of its or their affiliates.

In addition, the ET Compensation Committee and the compensation committee of the general partner of Sunoco LP, have approved a retirement provision, which provides that employees, including the named executive officers with at least ten years of service with the general partner, who leave the respective general partner voluntarily due to retirement (i) after age 65 but prior to age 68 are eligible for accelerated vesting of 40% of his or her award; or (ii) after 68 are eligible for accelerated vesting of 50% his or her award. The acceleration of the awards is subject to the applicable provisions of IRC Section 409(A).

Mr. Mason previously received a one-time special incentive retention bonus, for which he would be obligated to repay $3,150,000 if his employment terminates (other than as a result of (x) a termination without cause by ET or by Mr. Mason for Good Reason; (y) his death; or (z) his permanent disability) prior to February 24, 2021.

Deferred Compensation Plan. As discussed in our Compensation Discussion and Analysis above, all amounts under the ET NQDC Plan (other than discretionary credits) are immediately 100% vested. Upon a change of control (as defined in the ET NQDC Plan), distributions from the respective plan would be made in accordance with the normal distribution provisions of the respective plan. A change of control is generally defined in the ET NQDC Plan as any change of control event within the meaning of Treasury Regulation Section 1.409A-3(i)(5).

CEO Pay Ratio

In accordance with Section 953(b) of the Dodd-Frank Wall Street Reform and Consumer Protection Act, and Item 402(u) of Regulation S-K, set forth below is information about the relationship of the annual total compensation of Mr. Warren, the Chairman and Chief Executive Officer and the annual total compensation of our employees.

For the 2020 calendar year, the annual total compensation of Mr. Warren, as reported in the Summary Compensation Table of this Item 11 was $6,392.

The median total compensation of the employees supporting the Partnership (other than Mr. Warren) was $110,358 for 2020.

Based on this information, for 2020 the ratio of the annual total compensation of Mr. Warren to the median of the annual total compensation of the 8,149 employees supporting ETO as of December 31, 2020 was approximately 1 to 17 as Mr. Warren has voluntarily elected not to accept any salary, bonus or equity incentive compensation (other than a salary of $1.00 per year plus an amount sufficient to cover his allocated employee premium contributions for health and welfare benefits).

To identify the median of the annual total compensation of the employees supporting the Partnership, the following steps were taken:

1. It was determined that, as of December 31, 2020, the applicable employee populations consisted of 8,149 with all of the identified individuals being employed in the United States. This population consisted of all of our full-time and part-time employees. We did not engage any independent contractors in 2020 that are required to be included in our employee population for the CEO pay ratio evaluation.
2. To identify the "median employee" from our employee population, we compared the total earnings of our employees as reflected in our payroll records as reported on Form W-2 for 2020.
3. We identified our median employee using W-2 reporting and applied this compensation measure consistently to all of our employees required to be included in the calculation. We did not make any cost of living adjustments in identifying the "median employee."

4. Once we identified our median employee, we combined all elements of the employee's compensation for 2020 resulting in an annual compensation of $110,358. The difference between such employee's total earnings and the employee's total compensation represents the estimated value of the employee's health care benefits (estimated for the employee and such employee's eligible dependents at $11,119) and the employee's 401(k) matching contribution and profit sharing contribution (estimated at $3,130 per employee, includes $1,972 per employee on average matching contribution and $1,158 per employee on average profit sharing contribution (employees earning over $175,000 in base are ineligible for profit sharing)).

5. With respect to Mr. Warren, we used the amount reported in the "Total" column of our 2020 Summary Compensation Table under this Item 11.

Director Compensation

In 2020, the compensation arrangements for outside directors included a $100,000 annual retainer for services on the board. If a director served on the ET Audit Committee, such director would receive an annual cash retainer ($15,000 or $25,000 in the case of the chairman). If a director served on the ET Compensation Committee, such director would receive an annual cash retainer ($7,500 or $15,000 in the case of the chairman). The fees for membership on the Conflicts Committee are determined on a per instance basis for each committee assignment.

The outside directors of our General Partner are also entitled to an annual restricted unit award under the ET Incentive Plans equal to an aggregate of $100,000 divided by the closing price of ET common units on the date of grant. These ET common units will vest 60% after the third year and the remaining 40% after the fifth year after the grant date. The compensation expense recorded is based on the grant-date market value of the ET common units and is recognized over the vesting period. Distributions are paid during the vesting period.

The compensation paid to the non-employee directors of our General Partner in 2020 is reflected in the following table:

Name	Fees Paid in Cash[1] ($)	Unit Awards[2] ($)	All Other Compensation ($)	Total ($)
Steven R. Anderson	$ 122,500	$ 99,997	$ —	$ 222,497
Richard D. Brannon	125,000	99,997	—	224,997
Ray C. Davis	100,000	99,997	—	199,997
Michael K. Grimm	130,000	99,997	—	229,997
James R. Perry[3]	75,000	99,997	—	174,997
Ray W. Washburne	107,500	99,997	—	207,497

(1) Fees paid in cash are based on amounts paid during the period.

(2) Equity award amounts reflect the aggregate grant date fair value of unit awards granted for the periods presented, computed in accordance with FASB ASC Topic 718, disregarding any estimates for forfeitures. See Note 9 to our consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data" for additional assumptions underlying the value of the equity awards.

(3) Mr. Perry was appointed as a director of our General Partner on January 1, 2020.

As of December 31, 2020, Mr. Anderson had 17,543 unvested ET restricted units outstanding, Mr. Brannon had 23,767 unvested ET restricted units outstanding, Mr. Davis had 17,543 unvested ET restricted units outstanding, Mr. Grimm had 26,259 unvested ET restricted units outstanding, Mr. Perry had 9,996 unvested ET restricted units outstanding and Mr. Washburne had 9,996 unvested ET restricted units outstanding.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED UNITHOLDER MATTERS

Equity Compensation Plan Information

The following table sets forth in tabular format, a summary of our equity plan information as of December 31, 2020:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights (a)	Weighted-average exercise price of outstanding options, warrants and rights (b)	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by security holders	—	$ —	—
Equity compensation plans not approved by security holders:	29,451,869	—	34,298,844
Total	29,451,869	$ —	34,298,844

Energy Transfer LP Units

The following table sets forth certain information as of February 12, 2021, regarding the beneficial ownership of our voting securities by (i) certain beneficial owners of more than 5% of our Common Units, (ii) each director and named executive officer of our General Partner and (iii) all current directors and executive officers of our General Partner as a group. The General Partner knows of no other person not disclosed herein who beneficially owns more than 5% of our Common Units.

Name and Address of Beneficial Owner [1]	Beneficially Owned [2]	Percent of Class
Kelcy L. Warren [3]	259,940,845	9.6 %
Ray C. Davis [4]	89,974,506	3.3 %
Thomas E. Long	395,231	*

James R. Perry	120,020	*
Ray W. Washburne [10]	100,040	*
All Directors and Executive Officers as a group (14 persons)	386,634,279	14.3 %

* Less than 1%

[1] The address for Mr. Davis is 5950 Sherry Lane, Dallas, Texas 75225. The address for all other listed beneficial owners is 8111 Westchester Drive, Suite 600, Dallas, Texas 75225.

[2] Beneficial ownership for the purposes of this table is defined by Rule 13d-3 under the Exchange Act of 1934. Under that rule, a person is generally considered to be the beneficial owner of a security if he has or shares the power to vote or direct the voting thereof or to dispose or direct the disposition thereof or has the right to acquire either of those powers within sixty days. The nature of beneficial ownership for all listed persons is direct with sole investment and disposition power unless otherwise noted. The beneficial ownership of each listed person is based on 2,702,436,307 common units outstanding in the aggregate as of February 12, 2021.

(3) Includes 104,276,511 common units held by Kelcy Warren Partners, L.P. and 10,244,429 common units held by Kelcy Warren Partners II, L.P., the general partners of which are owned by Mr. Warren. Also includes 97,577,803 common units held by Kelcy Warren Partners III, LLC formerly known as Seven Bridges Holdings, LLC, of which Mr. Warren is a member. Also includes 328,383 common units attributable to the interest of Mr. Warren in ET Company Ltd and Three Dawaco, Inc., over which Mr. Warren exercises shared voting and dispositive power with Ray Davis. Also includes 601,076 common units held by LE GP, LLC. Mr. Warren may be deemed to own common units held by LE GP, LLC due to his ownership of 81.2% of its member interests. The voting and disposition of these common units is directly controlled by the board of directors of LE GP, LLC. Mr. Warren disclaims beneficial ownership of common units owned by LE GP, LLC other than to the extent of his interest in such entity. Also includes 104,166 common units held by Mr. Warren's spouse.

(4) Includes 51,701 Common Units held by Avatar Holdings LLC, 1,941,721 common units held by Avatar BW, Ltd., 28,203,003 common units held by Avatar ETC Stock Holdings LLC, 3,557,757 common units held by Avatar Investments LP, 121,117 common units held by Avatar Stock Holdings, LP and 1,112,069 common units held by RCD Stock Holdings, LLC, all of which entities are owned or controlled by Mr. Davis. Also includes 15,987,283 common units held by a remainder trust for Mr. Davis' spouse and 9,536,054 Common Units held by two trusts for the benefit of Mr. Davis' grandchildren, for which Mr. Davis serves as trustee. Mr. Davis shares voting and dispositive power with his wife with respect to common units held directly. Also includes 328,383 common units attributable to ET Company Ltd. Mr. Davis is a former executive officer and director of ETO and is currently a director of the general partner of ET, LE GP, LLC.

(5) Includes 186,898 common units held by Mr. Whitehurst in a margin account.

(6) Includes 337,820 common units held by B4 Capital Investments, LP, a limited partnership of which a limited liability company owned by Mr. Brannon and his wife is the sole general partner and of which Mr. Brannon and his wife are the sole limited partners.

(7) Includes 1,544,558 common units held by Steven R. Anderson Revocable Trust, for which Mr. Anderson serves as trustee. As of December 31, 2020, 603,100 common units were pledged as collateral.

(8) Includes 6,660 common units held by two trusts for the benefit of Mr. Grimm's children, for which Mr. Grimm serves as trustee.

(9) Includes 17,445,608 common units held by McReynolds Energy Partners L.P. and 12,142,593 common units held by McReynolds Equity Partners L.P., the general partners of which are owned by Mr. McReynolds. Mr. McReynolds disclaims beneficial ownership of common units owned by such limited partnerships other than to the extent of his interest in such entities.

(10) Includes 2,090 common units held by Mr. Washburne's wife.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

As of December 31, 2020, our interests in ETO consisted of 100% of the general partner interests and 2,458,702,066 ETO common units.

The Parent Company's principal sources of cash flow are derived from its direct and indirect investments in the limited partner and general partner interests in ETO, Sunoco LP and USAC, all of which are limited partnerships engaged in diversified energy-related services, and cash flows from the operations of Lake Charles LNG.

Mr. McCrea and Mr. Ramsey, current directors of LE GP, LLC, our general partner, are also directors and executive officers of ETO's general partner. Mr. Long, also currently a director of LE GP, LLC, is also an executive officer of ETO's general partner. In addition, Mr. Warren, our Executive Chairman, is also the Executive Chairman of ETO's general partner.

For a discussion of director independence, see "Item 10. Directors, Executive Officers and Corporate Governance."

As a policy matter, our Conflicts Committee generally reviews any proposed related party transaction that may be material to the Partnership to determine whether the transaction is fair and reasonable to the Partnership. The Partnership's board of directors makes the determinations as to whether there exists a related party transaction in the normal course of reviewing transactions for approval as the Partnership's board of directors is advised by its management of the parties involved in each material transaction as to which the board of directors' approval is sought by the Partnership's management. In addition, the Partnership's board of directors makes inquiries to independently ascertain whether related parties may have an interest in the proposed transaction. While there are no written policies or procedures for the board of directors to follow in making these determinations, the Partnership's board makes those determinations in light of its contractually-limited fiduciary duties to the Unitholders. The partnership agreement of ET provides that any matter approved by the Conflicts Committee will be

conclusively deemed to be fair and reasonable to ET, approved by all the partners of ET and not a breach by the General Partner or its Board of Directors of any duties they may owe ET or the Unitholders (see “Risks Related to Conflicts of Interest” in “Item 1A. Risk Factors” in this annual report).

The Parent Company has agreements with subsidiaries to provide or receive various general and administrative services. The Parent Company pays ETO to provide services on its behalf and the behalf of other subsidiaries of the Parent Company. The Parent Company receives management fees from certain of its subsidiaries, which include the reimbursement of various general and administrative services for expenses incurred by ETO on behalf of those subsidiaries. All such amounts have been eliminated in our consolidated financial statements.

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

The following sets forth fees billed by Grant Thornton LLP for the audit of our annual financial statements and other services rendered (dollars in millions):

	Years Ended December 31,	
	2020	2019
Audit fees [1]	$ 10.7	$ 11.6
Audit-related fees	—	0.1
Total	$ 10.7	$ 11.7

[1] Includes fees for audits of annual financial statements of our companies, reviews of the related quarterly financial statements, and services that are normally provided by the independent accountants in connection with statutory and regulatory filings or engagements, including reviews of documents filed with the SEC and services related to the audit of our internal control over financial reporting.

Pursuant to the charter of the Audit Committee, the Audit Committee is responsible for the oversight of our accounting, reporting and financial practices. The Audit Committee has the responsibility to select, appoint, engage, oversee, retain, evaluate and terminate our external auditors; pre-approve all audit and non-audit services to be provided, consistent with all applicable laws, to us by our external auditors; and establish the fees and other compensation to be paid to our external auditors. The Audit Committee also oversees and directs our internal auditing program and reviews our internal controls.

The Audit Committee has adopted a policy for the pre-approval of audit and permitted non-audit services provided by our principal independent accountants. The policy requires that all services provided by Grant Thornton LLP including audit services, audit-related services, tax services and other services, must be pre-approved by the Audit Committee. All fees paid or expected to be paid to Grant Thornton LLP for fiscal years 2020 and 2019 were pre-approved by the Audit Committee in accordance with this policy.

The Audit Committee reviews the external auditors’ proposed scope and approach as well as the performance of the external auditors. It also has direct responsibility for and sole authority to resolve any disagreements between our management and our external auditors regarding financial reporting, regularly reviews with the external auditors any problems or difficulties the auditors encountered in the course of their audit work, and, at least annually, uses its reasonable efforts to obtain and review a report from the external auditors addressing the following (among other items):

- the auditors’ internal quality-control procedures;
- any material issues raised by the most recent internal quality-control review, or peer review, of the external auditors;
- the independence of the external auditors;
- the aggregate fees billed by our external auditors for each of the previous two years; and
- the rotation of the lead partner.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

The following documents are filed as a part of this Report:	Page
(1) Financial Statements – see Index to Financial Statements	F - 1
(2) Financial Statement Schedules – None	
(3) Exhibits – see Index to Exhibits	155

ITEM 16. FORM 10-K SUMMARY

None.

INDEX TO EXHIBITS

The exhibits listed on the following Exhibit Index are filed as part of this report. Exhibits required by Item 601 of Regulation S-K, but which are not listed below, are not applicable.

Exhibit Number	Description
	Energy Transfer Equity, L.P.
2.1	Agreement and Plan of Merger, dated as of September 28, 2015, among Energy Transfer Corp LP, ETE Corp GP, LLC, Energy Transfer Equity, L.P., LE GP, LLC, ETE GP, LLC and The Williams Companies, Inc. (incorporated by reference to Exhibit 2.1 to Form 8-K/A (File No. 1-32740) filed October 2, 2015)

Unitholders of Energy Transfer LP

Opinion on the financial statements
We have audited the accompanying consolidated balance sheets of Energy Transfer LP (a Delaware limited partnership) and subsidiaries (the "Partnership") as of December 31, 2020 and 2019, the related consolidated statements of operations, comprehensive income (loss), equity, and cash flows for each of the three years in the period ended December 31, 2020, and the related notes (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Partnership as of December 31, 2020 and 2019, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2020, in conformity with accounting principles generally accepted in the United States of America.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Partnership's internal control over financial reporting as of December 31, 2020, based on criteria established in the 2013 *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"), and our report dated February 19, 2021 expressed an unqualified opinion thereon.

Change in accounting principle
As discussed in Note 2 to the consolidated financial statements, the Partnership has changed its method of accounting for certain inventories.

Basis for opinion
These financial statements are the responsibility of the Partnership's management. Our responsibility is to express an opinion on the Partnership's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Partnership in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical audit matters
The critical audit matters communicated below are matters arising from the current period audit of the financial statements that were communicated or required to be communicated to the audit committee and that (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

Goodwill Impairment Assessment
As described in Note 2 to the consolidated financial statements, the Partnership recognized $2.8 billion of goodwill impairment during 2020 and the remaining consolidated goodwill balance was $2.4 billion at December 31, 2020. Annually, or whenever events or changes in circumstances indicate potential asset impairment has occurred, the Partnership evaluates the recoverability of the carrying value of goodwill. The COVID-19 pandemic and the corresponding decrease in demand for crude oil, natural gas liquids and natural gas negatively impacted the Partnership's current and projected operating results, cash flow and market capitalization. Therefore, the Partnership determined that a triggering event had occurred and completed an interim goodwill impairment assessment of its reporting units during the first and third quarters of 2020 along with the Partnership's annual impairment assessment during the fourth quarter of 2020. The results of the quantitative impairment tests indicated that certain reporting units had a carrying value that exceeded their fair values. As a result, the Partnership recorded $2.8 billion of impairment charges to goodwill for these reporting units during the year ended December 31, 2020. In addition, as of December 31, 2020, there was $368 million of goodwill that was recorded within a reporting unit for which the estimated fair value exceeded the carrying value by less than 20% in the most recent quantitative test. We identified the Partnership's determination of the fair value of the reporting units where carrying value exceeded their fair values and the 1 reporting unit where the estimated fair value exceeded the carrying value by less than 20% as a critical audit matter.

The determination of the fair value of the reporting units was a critical audit matter due to the significant judgment required by management when determining the fair value of a reporting unit. In particular, the fair value estimates were sensitive to significant assumptions such as management's cash flow projections, discount rates, and the inherent uncertainty around the timing of increases or decreases in future projected results utilized to estimate the fair value of reporting units.

Our audit procedures related to the estimation of the fair value of the reporting units included the following procedures, among others. We tested the effectiveness of controls relating to management's review of the assumptions used to develop the future cash flows, the discount rates used, and valuation methodologies applied. In addition to testing the effectiveness of controls, we also performed the following:

a. Evaluated the reasonableness of management's forecasted financial results by:
   i. Assessing the reasonableness of management's forecast of future projected results and the underlying timing of recovery in comparison to relevant industry data and other supporting evidence obtained,
   ii. Testing forecasted revenues and gross margins by comparing forecasted amounts to actual historical results to identify material changes, corroborating the basis for increases or decreases in forecasted revenues and gross margins, as applicable, and
   iii. Testing significant operating expenses and cash expenditures by comparing to historical trends and evaluating significant deviations from recent actual amounts.
b. Utilized an internal valuation specialist to evaluate:
   i. The methodologies used and whether they were acceptable for the underlying assets or operations and whether such methodologies were being applied correctly, and
   ii. The appropriateness of the discount rates by recalculating the weighted average costs of capital or developing independent ranges of acceptable discount rates and comparing those ranges to the amounts selected and applied by management.

Environmental Remediation
As discussed in Note 10 to the consolidated financial statements, the Partnership's operations are subject to extensive federal, tribal, state and local environmental and safety laws and regulations that require expenditures for remediation at current and former facilities. At December 31, 2020, the Partnership's consolidated environmental obligations totaled $306 million. We identified the identification, assessment and estimation of the environmental exposure associated with certain sites of ETC Sunoco Holdings LLC as a critical audit matter.

The determination that the identification, assessment and estimation of the environmental exposure was a critical audit matter was due to high estimation uncertainty primarily driven by the complexity of the actuarial methods utilized, the discount rate applied and the potential for changes in the timing and extent of remediation. This required an increased extent of effort when performing audit procedures, related to identification, assessment and estimation of the environmental exposure, including the need to involve an actuarial specialist.

Our audit procedures related to the identification, assessment and estimation of the Partnership's environmental exposure included the following procedures, among others. We tested the effectiveness of controls relating to the identification and review of the historical claims, payments and reserve data provided to the third-party actuarial specialist and the reconciliation of that data used in the actuary report, and the review of the discount rate and actuarial methods applied. In addition to testing the effectiveness of controls, we performed the following procedures:

a. Utilized an auditor-engaged actuarial specialist to evaluate:
   i. The methodologies used and whether they were acceptable for the underlying operations, and
   ii. The qualifications of the actuarial specialist engaged by the Partnership based on their credentials and experience.
b. Evaluated the discount rate used by comparing it to the historical rate of return related to the investment portfolio used to fund the underlying liabilities, and
c. Evaluated the life-to-date payments, reserves, and payment patterns by agreeing the historical claims and payment amounts to underlying claims or general ledger.

/s/ GRANT THORNTON LLP

We have served as the Partnership's auditor since 2004.

ENERGY TRANSFER LP AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(Tabular dollar and unit amounts, except per unit data, are in millions)

1. OPERATIONS AND BASIS OF PRESENTATION:

The consolidated financial statements presented herein contain the results of Energy Transfer LP and its subsidiaries (the "Partnership," "we," "us," "our" or "ET"). References to the "Parent Company" mean Energy Transfer LP on a stand-alone basis.

In October 2018, we completed the merger of ETO with a wholly-owned subsidiary of ET in a unit-for-unit exchange (the "Energy Transfer Merger"). In connection with the transaction, the former common unitholders (other than ET and its subsidiaries) received 1.28 common units of ET for each common unit of ETO they owned. Following the closing of the Energy Transfer Merger, Energy Transfer Partners, L.P. was renamed Energy Transfer Operating, L.P. In addition, Energy Transfer Equity, L.P. was renamed Energy Transfer LP, and its common units began trading on the NYSE under the "ET" ticker symbol on Friday, October 19, 2018.

Immediately prior to the closing of the Energy Transfer Merger, the following also occurred:

- the IDRs in Energy Transfer Partners, L.P. were converted into 1,168,205,710 common units;
- the general partner interest in ETO was converted to a non-economic general partner interest and ETO issued 18,448,341 ETO common units to ETP GP;
- ET contributed its 2,263,158 Sunoco LP common units to ETO in exchange for 2,874,275 ETO common units and 100 percent of the limited liability company interests in Sunoco GP LLC, the sole general partner of Sunoco LP, and all of the IDRs in Sunoco LP, to ETO in exchange for 42,812,389 ETO common units;
- ET contributed its 12,466,912 common units representing limited partner interests in USAC and 100 percent of the limited liability company interests in USA Compression GP, LLC, the general partner of USAC, to ETO in exchange for 16,134,903 ETO common units; and
- ET contributed its 100 percent limited liability company interest in Lake Charles LNG and a 60 percent limited liability company interest in each of Energy Transfer LNG Export, LLC, ET Crude Oil Terminals, LLC and ETC Illinois LLC (collectively, "Lake Charles LNG and Other") to ETO in exchange for 37,557,815 ETO common units.

Subsequent to the Energy Transfer Merger, substantially all of the Partnership's cash flows are derived from distributions related to its investment in ETO, whose cash flows are derived from its subsidiaries, including ETO's investments in Sunoco LP and USAC. The Parent Company's primary cash requirements are for general and administrative expenses, debt service requirements and distributions to its partners. Parent Company-only assets are not available to satisfy the debts and other obligations of ET's subsidiaries.

Our financial statements reflect the following reportable segments:

- intrastate transportation and storage;
- interstate transportation and storage;
- midstream;
- NGL and refined products transportation and services;
- crude oil transportation and services;
- investment in Sunoco LP;
- investment in USAC; and
- corporate and other, including the following:
  - activities of the Parent Company; and
  - certain operations and investments that are not separately reflected as reportable segments.

The Partnership owns and operates intrastate natural gas pipeline systems and storage facilities that are engaged in the business of purchasing, gathering, transporting, processing, and marketing natural gas and NGLs in the states of Texas, Louisiana, New Mexico and West Virginia.

The Partnership owns and operates interstate pipelines, either directly or through equity method investments, that transport natural gas to various markets in the United States.

The Partnership is engaged in the gathering and processing, compression, treating and transportation of natural gas, focusing on providing midstream services in some of the most prolific natural gas producing regions in the United States, including the Eagle Ford, Haynesville, Barnett, Fayetteville, Marcellus, Utica, Bone Spring and Avalon shales.

The Partnership owns and operates a logistics business, consisting of a geographically diverse portfolio of complementary pipeline, terminalling, and acquisition and marketing assets, which are used to facilitate the purchase and sale of crude oil, NGLs and refined products.

The Partnership owns a controlling interest in Sunoco LP which is engaged in the wholesale distribution of motor fuels to convenience stores, independent dealers, commercial customers, and distributors, as well as the retail sale of motor fuels and merchandise through Sunoco LP operated convenience stores and retail fuel sites. As of December 31, 2020, our interest in Sunoco LP consisted of 100% of the general partner and IDRs, as well as 28.5 million common units.

The Partnership owns a controlling interest in USAC which provides compression services to producers, processors, gatherers and transporters of natural gas and crude oil. As of December 31, 2020, our interest in USAC consisted of 100% of the general partner and 46.1 million common units.

Basis of Presentation. The consolidated financial statements of Energy Transfer LP presented herein for the years ended December 31, 2020, 2019 and 2018, have been prepared in accordance with GAAP and pursuant to the rules and regulations of the SEC. We consolidate all majority-owned subsidiaries and limited partnerships, which we control as the general partner or owner of the general partner. All significant intercompany transactions and accounts are eliminated in consolidation.

The consolidated financial statements of ET presented herein include the results of operations of:

- the Parent Company;
- our controlled subsidiary, Energy Transfer Operating, L.P.; and
- Energy Transfer Partners GP, L.P. (“ETP GP”), the general partner of ETO, and Energy Transfer Partners, L.L.C. (“ETP LLC”), the general partner of ETP GP.

For prior periods herein, certain balances have been reclassified to assets and liabilities held for sale and certain revenues and expenses to discontinued operations. These reclassifications had no impact on net income or total equity.

2. ESTIMATES, SIGNIFICANT ACCOUNTING POLICIES AND BALANCE SHEET DETAIL:

Change in Accounting Policy

Effective January 1, 2020, the Partnership elected to change its accounting policy related to certain barrels of crude oil that were previously accounted for as inventory. Under the revised accounting policy, certain amounts of crude oil that are not available for sale have been reclassified from inventory to non-current assets. These crude oil barrels, which are owned by the Partnership’s crude oil acquisition and marketing business, include pipeline linefill and tank bottoms and are not considered to be available for sale because the volumes must be maintained in order to continue normal operation of the related pipelines or tanks and because there is no expectation of liquidation or sale of these volumes in the near term.

Under the previous accounting policy, all crude oil barrels were recorded as inventory under the weighted average cost method. Under the revised accounting policy, barrels related to pipeline linefill and tank bottoms are accounted for as long-lived assets and reflected as non-current assets on the consolidated balance sheet. These crude oil barrels will be tested for impairment consistent with the Partnership’s existing accounting policy for impairments of long-lived assets. The Partnership’s management believes that the change in accounting policy is preferable as it more closely aligns the accounting policies across the consolidated entity, given that similar assets in the Partnership’s natural gas, NGLs and refined products businesses are accounted for as non-current assets. In addition, management believes that reflecting these crude oil barrels as non-current assets better represents the economic results of the Partnership’s crude oil acquisition and marketing business by reducing volatility resulting from market price adjustments to crude oil barrels that are not expected to be sold or liquidated in the near term.

As a result of this change in accounting policy, the Partnership’s consolidated balance sheet for the prior period has been retrospectively adjusted as follows:

	December 31, 2019		
	As Originally Reported	Effect of Change	As Adjusted
Inventories	$ 1,935	$ (403)	$ 1,532
Total current assets	7,867	(403)	7,464
Other non-current assets, net	1,075	496	1,571
Total assets	98,880	93	98,973
Total partners' capital	21,827	93	21,920

In addition, the Partnership's consolidated statements of operations, comprehensive income and cash flows for prior periods have been retrospectively adjusted as follows:

	Year Ended December 31,	
	2019	2018
As originally reported:		
Consolidated Statements of Operations and Comprehensive Income		
Cost of products sold	$ 39,727	$ 41,658
Operating income	7,277	5,348
Income from continuing operations before income tax expense	5,094	3,634
Net income	4,899	3,365
Net income per limited partner unit	1.37	1.16
Comprehensive income	4,930	3,322
Comprehensive income attributable to partners	3,623	1,651
Consolidated Statements of Cash Flows		
Net income	4,899	3,365
Net change in operating assets and liabilities	(465)	289
Effect of change:		
Consolidated Statements of Operations and Comprehensive Income		
Cost of products sold	74	(55)
Operating income	(74)	55
Income from continuing operations before income tax expense	(74)	55
Net income	(74)	55
Net income per limited partner unit	(0.03)	0.04
Comprehensive income	(74)	55
Comprehensive income attributable to partners	(74)	55
Consolidated Statements of Cash Flows		
Net income	(74)	55
Net change in operating assets and liabilities	74	(55)
As adjusted:		
Consolidated Statements of Operations and Comprehensive Income		
Cost of products sold	39,801	41,603
Operating income	7,203	5,403
Income from continuing operations before income tax expense	5,020	3,689
Net income	4,825	3,420
Net income per limited partner unit	1.34	1.20
Comprehensive income	4,856	3,377
Comprehensive income attributable to partners	3,549	1,706
Consolidated Statements of Cash Flows		
Net income	4,825	3,420
Net change in operating assets and liabilities	(391)	234

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the accrual for and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period.

The natural gas industry conducts its business by processing actual transactions at the end of the month following the month of delivery. Consequently, the most current month's financial results for the midstream, NGL and intrastate transportation and storage operations are estimated using volume estimates and market prices. Any differences between estimated results and actual results are recognized in the following month's financial statements. Management believes that the estimated operating results represent the actual results in all material respects.

Some of the other significant estimates made by management include, but are not limited to, the timing of certain forecasted transactions that are hedged, the fair value of derivative instruments, useful lives for depreciation and amortization, purchase accounting allocations and subsequent realizability of intangible assets, fair value measurements used in the goodwill impairment test, market value of inventory, assets and liabilities resulting from the regulated ratemaking process, contingency reserves and environmental reserves. Actual results could differ from those estimates.

Regulatory Accounting – Regulatory Assets and Liabilities

Our interstate transportation and storage segment is subject to regulation by certain state and federal authorities, and certain subsidiaries in that segment have accounting policies that conform to the accounting requirements and ratemaking practices of the regulatory authorities. The application of these accounting policies allows certain of our regulated entities to defer expenses and revenues on the balance sheet as regulatory assets and liabilities when it is probable that those expenses and revenues will be allowed in the ratemaking process in a period different from the period in which they would have been reflected in the consolidated statement of operations by an unregulated company. These deferred assets and liabilities will be reported in results of operations in the period in which the same amounts are included in rates and recovered from or refunded to customers. Management's assessment of the probability of recovery or pass through of regulatory assets and liabilities will require judgment and interpretation of laws and regulatory commission orders. If, for any reason, we cease to meet the criteria for application of regulatory accounting treatment for these entities, the regulatory assets and liabilities related to those portions ceasing to meet such criteria would be eliminated from the consolidated balance sheet for the period in which the discontinuance of regulatory accounting treatment occurs.

Although Panhandle's natural gas transmission systems and storage operations are subject to the jurisdiction of the FERC in accordance with the Natural Gas Act of 1938 and Natural Gas Policy Act of 1978, it does not currently apply regulatory accounting policies in accounting for its operations. Panhandle does not apply regulatory accounting policies primarily due to the level of discounting from tariff rates and its inability to recover specific costs.

Cash, Cash Equivalents and Supplemental Cash Flow Information

Cash and cash equivalents include all cash on hand, demand deposits, and investments with original maturities of three months or less. We consider cash equivalents to include short-term, highly liquid investments that are readily convertible to known amounts of cash and that are subject to an insignificant risk of changes in value.

We place our cash deposits and temporary cash investments with high credit quality financial institutions. At times, our cash and cash equivalents may be uninsured or in deposit accounts that exceed the Federal Deposit Insurance Corporation insurance limit.

The net change in operating assets and liabilities (net of effects of acquisitions) included in cash flows from operating activities is comprised as follows:

	Years Ended December 31,		
	2020	2019	2018
Accounts receivable	$ 1,163	$ (473)	$ 541
Accounts receivable from related companies	(290)	(69)	162
Inventories	(271)	(19)	237
Other current assets	172	117	7
Other non-current assets, net	(7)	(102)	(102)
Accounts payable	(1,327)	146	(766)
Accounts payable to related companies	367	(32)	(202)
Accrued and other current liabilities	163	(44)	382
Other non-current liabilities	8	(133)	28
Derivative assets and liabilities, net	69	218	(53)
Net change in operating assets and liabilities, net of effects of acquisitions	$ 47	$ (391)	$ 234

Non-cash investing and financing activities and supplemental cash flow information are as follows:

	Years Ended December 31,		
	2020	2019	2018
NON-CASH INVESTING ACTIVITIES:			
Accrued capital expenditures	$ 604	$ 1,334	$ 1,030
Lease assets obtained in exchange for new lease liabilities	42	68	—
Net losses from subsidiary common unit transactions	—	—	(126)
SUPPLEMENTAL CASH FLOW INFORMATION:			
Cash paid for interest, net of interest capitalized	$ 2,092	$ 1,932	$ 1,870
Cash paid for income taxes (net of refunds)	(64)	31	508

Accounts Receivable

Our operations deal with a variety of counterparties across the energy sector, some of which are investment grade, and most of which are not. Internal credit ratings and credit limits are assigned to all counterparties and limits are monitored against credit exposure. Letters of credit or prepayments may be required from those counterparties that are not investment grade depending on the internal credit rating and level of commercial activity with the counterparty.

We have a diverse portfolio of customers; however, because of the midstream and transportation services we provide, many of our customers are engaged in the exploration and production segment. We manage trade credit risk to mitigate credit losses and exposure to uncollectible trade receivables. Prospective and existing customers are reviewed regularly for creditworthiness to manage credit risk within approved tolerances. Customers that do not meet minimum credit standards are required to provide additional credit support in the form of a letter of credit, prepayment, or other forms of security. We establish an allowance for credit losses on trade receivables based on the expected ultimate recovery of these receivables and consider many factors including historical customer collection experience, general and specific economic trends, and known specific issues related to individual customers, sectors, and transactions that might impact collectability. Changes in the allowance are recorded as a component of operating expenses; reductions in the allowance are recorded when receivables are subsequently collected or written-off. Past due receivable balances are written-off when our efforts have been unsuccessful in collecting the amount due.

Inventories

Inventories consist principally of natural gas held in storage, NGLs and refined products, crude oil and spare parts, all of which are valued at the lower of cost or net realizable value utilizing the weighted-average cost method.

Sunoco LP's fuel inventories are stated at the lower of cost or market using the last-in-first-out ("LIFO") method. As of December 31, 2020 and 2019, the carrying value of Sunoco LP's fuel inventory included lower of cost or market reserves of $311 million and $229 million, respectively, and the inventory carrying value equaled or exceeded its replacement cost. For the years ended December 31, 2020, 2019 and 2018, the Partnership's consolidated statements of operations did not include any material amounts of income from the liquidation of Sunoco LP's LIFO fuel inventory.

Inventories consisted of the following:

	December 31,	
	2020	2019
Natural gas, NGLs and refined products [1]	$ 1,013	$ 833
Crude oil	287	251
Spare parts and other	439	448
Total inventories	$ 1,739	$ 1,532

[1] Due to changes in fuel prices, Sunoco LP recorded a write-down on the value of its fuel inventory of $82 million for the year ended December 31, 2020.

We utilize commodity derivatives to manage price volatility associated with our natural gas inventory. Changes in fair value of designated hedged inventory are recorded in inventory on our consolidated balance sheets and cost of products sold in our consolidated statements of operations.

Other Current Assets

Other current assets consisted of the following:

	December 31,	
	2020	2019
Deposits paid to vendors	$ 75	$ 95
Prepaid expenses and other	138	180
Total other current assets	$ 213	$ 275

Property, Plant and Equipment

Property, plant and equipment are stated at cost less accumulated depreciation. Depreciation is computed using the straight-line method over the estimated useful or FERC-mandated lives of the assets, if applicable. Expenditures for maintenance and repairs that do not add capacity or extend the useful life are expensed as incurred. Expenditures to refurbish assets that either extend the useful lives of the asset or prevent environmental contamination are capitalized and depreciated over the remaining useful life of the asset. Additionally, we capitalize certain costs directly related to the construction of assets including internal labor costs, interest and engineering costs. Upon disposition or retirement of pipeline components or natural gas plant components, any gain or loss is recorded to accumulated depreciation. When entire pipeline systems, gas plants or other property and equipment are retired or sold, any gain or loss is included in our consolidated statements of operations.

Property, plant and equipment is reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of such assets may not be recoverable. If such a review should indicate that the carrying amount of long-lived assets is not recoverable, we reduce the carrying amount of such assets to fair value.

In 2020, the Partnership recognized a $58 million fixed asset impairment primarily due to decreases in projected future cash flow as a result of the overall market demand decline. USAC recorded an $8 million impairment of compression equipment as a result of its evaluations of the future deployment of its idle fleet.

In 2019, USAC recognized a $6 million fixed asset impairment related to certain idle compressor assets. Sunoco LP recognized a $47 million write-down on assets held for sale related to its ethanol plant in Fulton, New York.

In 2018, USAC recognized a $9 million fixed asset impairment related to certain idle compressor assets.

Capitalized interest is included for pipeline construction projects, except for certain interstate projects for which an allowance for funds used during construction ("AFUDC") is accrued. Interest is capitalized based on the current borrowing rate of our revolving credit facilities when the related costs are incurred. AFUDC is calculated under guidelines prescribed

by the FERC and capitalized as part of the cost of utility plant for interstate projects. It represents the cost of servicing the capital invested in construction work-in-process. AFUDC is segregated into two component parts – borrowed funds and equity funds.

Components and useful lives of property, plant and equipment were as follows:

	December 31,	
	2020	2019
Land and improvements	$ 1,233	$ 1,232
Buildings and improvements (1 to 45 years)	4,236	2,664
Pipelines and equipment (5 to 83 years)	69,120	64,678
Product storage and related facilities (2 to 83 years)	6,393	5,898
Right of way (20 to 83 years)	5,099	4,859
Other (1 to 48 years)	2,263	1,964
Construction work-in-process	5,771	8,495
	94,115	89,790
Less – Accumulated depreciation and depletion	(19,008)	(15,597)
Property, plant and equipment, net	$ 75,107	$ 74,193

We recognized the following amounts for the periods presented:

	Years Ended December 31,		
	2020	2019	2018
Depreciation, depletion and amortization expense	$ 3,275	$ 2,839	$ 2,538
Capitalized interest	189	166	294

Investments in Unconsolidated Affiliates

We own interests in a number of related businesses that are accounted for by the equity method. In general, we use the equity method of accounting for an investment for which we exercise significant influence over, but do not control, the investee's operating and financial policies. An impairment of an investment in an unconsolidated affiliate is recognized when circumstances indicate that a decline in the investment value is other than temporary. During the year ended December 31, 2020, the Partnership recorded an impairment of its investment in White Cliffs of $129 million during the year ended December 31, 2020 due to a decrease in projected future revenues and cash flows as a result of the overall market demand decline that occurred subsequent to the SemGroup acquisition and related purchase price allocation in December 2019.

Other Non-Current Assets, net

Other non-current assets, net are stated at cost less accumulated amortization. Other non-current assets, net consisted of the following:

	December 31,	
	2020	2019
Crude pipeline linefill and tank bottoms	$ 517	$ 496
Regulatory assets	41	$ 42
Pension assets	103	84
Deferred charges	188	178
Restricted funds	179	178
Other	629	593
Total other non-current assets, net	$ 1,657	$ 1,571

Restricted funds include an immaterial amount of restricted cash primarily held in our wholly-owned captive insurance companies.

Intangible Assets

Intangible assets are stated at cost, net of amortization computed on the straight-line method. The Partnership removes the gross carrying amount and the related accumulated amortization for any fully amortized intangibles in the year they are fully amortized.

Components and useful lives of intangible assets were as follows:

	December 31, 2020		December 31, 2019	
	Gross Carrying Amount	Accumulated Amortization	Gross Carrying Amount	Accumulated Amortization
Amortizable intangible assets:				
Customer relationships, contracts and agreements (3 to 46 years)	$ 7,513	$ (2,117)	$ 7,535	$ (1,743)
Patents (10 years)	48	(40)	48	(35)
Trade names (20 years)	66	(35)	66	(31)
Other (5 to 20 years)	19	(15)	19	(12)
Total amortizable intangible assets	7,646	(2,207)	7,668	(1,821)
Non-amortizable intangible assets:				
Trademarks	295	—	295	—
Other	12	—	12	—
Total non-amortizable intangible assets	307	—	307	—
Total intangible assets	$ 7,953	$ (2,207)	$ 7,975	$ (1,821)

Aggregate amortization expense of intangible assets was as follows:

	Years Ended December 31,		
	2020	2019	2018
Reported in depreciation, depletion and amortization expense	$ 403	$ 308	$ 321

Estimated aggregate amortization of intangible assets for the next five years is as follows:

Years Ending December 31:	
2021	$ 393
2022	379
2023	363
2024	349
2025	335

We review amortizable intangible assets for impairment whenever events or changes in circumstances indicate that the carrying amount of such assets may not be recoverable. If such a review should indicate that the carrying amount of amortizable intangible assets is not recoverable, we reduce the carrying amount of such assets to fair value. We review non-amortizable intangible assets for impairment annually, or more frequently if circumstances dictate.

Sunoco LP performed impairment tests on its indefinite-lived intangible assets during the fourth quarter of 2018 and recognized a $30 million impairment charge on its contractual rights primarily due to decreases in projected future revenues and cash flows from the date the intangible assets were originally recorded.

Goodwill

Goodwill is tested for impairment annually or more frequently if circumstances indicate that goodwill might be impaired. The annual impairment test is performed during the fourth quarter.

Changes in the carrying amount of goodwill were as follows:

	Intrastate Transportation and Storage	Interstate Transportation and Storage	Midstream	NGL and Refined Products Transportation and Services	Crude Oil Transportation and Services	Investment in Sunoco LP	Investment in USAC	All Other	Total
Balance, December 31, 2018	$ 10	$ 196	$ 492	$ 693	$ 1,167	$ 1,559	$ 619	$ 149	$ 4,885
Acquired	—	42	—	—	230	—	—	35	307
Impaired	—	(12)	(9)	—	—	—	—	—	(21)
Other	—	—	—	—	—	(4)	—	—	(4)
Balance, December 31, 2019	10	226	483	693	1,397	1,555	619	184	5,167
Acquired	—	—	—	—	—	9	—	—	9
Impaired	(10)	(226)	(483)	—	(1,279)	—	(619)	(198)	(2,815)
Other	—	—	—	—	(66)	—	—	96	30
Balance, December 31, 2020	$ —	$ —	$ —	$ 693	$ 52	$ 1,564	$ —	$ 82	$ 2,391

During the first quarter of 2020, due to the impacts of the COVID-19 pandemic, the decline in commodity prices and the decreases in the Partnership's market capitalization, we determined that interim impairment testing should be performed on certain reporting units. The Partnership performed the interim impairment tests consistent with our approach for annual impairment testing, including using similar models, inputs and assumptions. As a result of the interim impairment test, the Partnership recognized goodwill impairments of $483 million related to our Ark-La-Tex and South Texas operations within the midstream segment, $183 million related to our Lake Charles LNG regasification operations within the interstate transportation and storage segment due to contractually scheduled reductions in payments for the remainder of the contract term, and $40 million related to our all other operations primarily due to decreases in projected future revenues and cash flows as a result of the overall market demand decline. In addition, USAC recognized a goodwill impairment of $619 million during the three months ended March 31, 2020, which is included in the Partnership's consolidated results of operations.

During the third quarter of 2020, the Partnership performed interim impairment testing on certain reporting units within its midstream, interstate, crude, NGL and all other operations. As a result, the Partnership recognized goodwill impairments of $1.28 billion related to our crude operations, $132 million related to our Energy Transfer Canada operations within the all other segment and $43 million related to our interstate operations primarily due to decreases in projected future cash flow as a result of the overall market demand decline.

During the fourth quarter of 2020, the Partnership performed annual impairment testing on certain reporting units within its midstream, interstate, crude, NGL and all other operations. As a result, the Partnership recognized goodwill impairments of $10 million related to our intrastate operations, $11 million related to our PEI operations and $15 million related to our Natural Resources operations within the all other segment primarily due to decreases in projected future cash flow as a result of the overall market demand decline. No other impairments of the Partnership's goodwill were identified.

Goodwill is recorded at the acquisition date based on a preliminary purchase price allocation and generally may be adjusted when the purchase price allocation is finalized. During the fourth quarter of 2019, $265 million goodwill was recorded in conjunction with the acquisition of SemGroup.

During the third quarter of 2019, the Partnership recognized a goodwill impairment of $12 million related to the Southwest Gas operations within the interstate segment primarily due to decreases in projected future revenues and cash flows. During the fourth quarter of 2019, the Partnership recognized a goodwill impairment of $9 million related to our North Central operations within the midstream segment primarily due to changes in assumptions related to projected future revenues and cash flows.

During the fourth quarter of 2018, the Partnership recognized goodwill impairments of $378 million related to our Northeast operations within the midstream segment primarily due to changes in assumptions related to projected future revenues and cash flows from the dates the goodwill was originally recorded. These changes in assumptions reflect delays in the construction of third-party takeaway capacity in the Northeast.

The Partnership determines the fair value of our reporting units using the discounted cash flow method, the guideline company method, or a weighted combination of the discounted cash flow method and the guideline company method. Determining the fair value of a reporting unit requires judgment and the use of significant estimates and assumptions. Such estimates and assumptions include revenue growth rates, operating margins, weighted average costs of capital and future

market conditions, among others. The Partnership believes the estimates and assumptions used in our impairment assessments are reasonable and based on available market information, but variations in any of the assumptions could result in materially different calculations of fair value and determinations of whether or not an impairment is indicated. Under the discounted cash flow method, the Partnership determines fair value based on estimated future cash flows of each reporting unit including estimates for capital expenditures, discounted to present value using the risk-adjusted industry rate, which reflect the overall level of inherent risk of the reporting unit. Cash flow projections are derived from one year budgeted amounts and five year operating forecasts plus an estimate of later period cash flows, all of which are evaluated by management. Subsequent period cash flows are developed for each reporting unit using growth rates that management believes are reasonably likely to occur. Under the guideline company method, the Partnership determines the estimated fair value of each of our reporting units by applying valuation multiples of comparable publicly-traded companies to each reporting unit's projected EBITDA and then averaging that estimate with similar historical calculations using a three year average. In addition, the Partnership estimates a reasonable control premium representing the incremental value that accrues to the majority owner from the opportunity to dictate the strategic and operational actions of the business.

Management does not believe that any of the goodwill balances in its reporting units is currently at significant risk of impairment; however, of the $2.39 billion of goodwill on the Partnership's consolidated balance sheet as of December 31, 2020, approximately $368 million is recorded in reporting units for which the estimated fair value exceeded the carrying value by less than 20% in the most recent quantitative test.

Asset Retirement Obligations

We have determined that we are obligated by contractual or regulatory requirements to remove facilities or perform other remediation upon retirement of certain assets. The fair value of any ARO is determined based on estimates and assumptions related to retirement costs, which the Partnership bases on historical retirement costs, future inflation rates and credit-adjusted risk-free interest rates. These fair value assessments are considered to be Level 3 measurements, as they are based on both observable and unobservable inputs. Changes in the liability are recorded for the passage of time (accretion) or for revisions to cash flows originally estimated to settle the ARO.

An ARO is required to be recorded when a legal obligation to retire an asset exists and such obligation can be reasonably estimated. We will record an ARO in the periods in which management can reasonably estimate the settlement dates.

As of December 31, 2020 and 2019, other non-current liabilities in the Partnership's consolidated balance sheets included AROs of $270 million and $247 million, respectively. For the years ended December 31, 2020, 2019 and 2018 aggregate accretion expense related to AROs was $16 million, $5 million and $13 million, respectively.

Except for the AROs discussed above, management was not able to reasonably measure the fair value of AROs as of December 31, 2020 and 2019, in most cases because the settlement dates were indeterminable. Although a number of onshore assets in our systems are subject to agreements or regulations that give rise to an ARO upon discontinued use of these assets, AROs were not recorded because these assets have an indeterminate removal or abandonment date given the expected continued use of the assets with proper maintenance or replacement. Our subsidiaries also have legal obligations for several other assets at previously owned refineries, pipelines and terminals, for which it is not possible to estimate when the obligations will be settled. Consequently, the retirement obligations for these assets cannot be measured at this time. At the end of the useful life of these underlying assets, our subsidiaries are legally or contractually required to abandon in place or remove the asset. We believe we may have additional AROs related to pipeline assets and storage tanks, for which it is not possible to estimate whether or when the AROs will be settled. Consequently, these AROs cannot be measured at this time. Sunoco LP also has AROs related to the estimated future cost to remove underground storage tanks.

Individual component assets have been and will continue to be replaced, but the pipeline and the natural gas gathering and processing systems will continue in operation as long as supply and demand for natural gas exists. Based on the widespread use of natural gas in industrial and power generation activities, management expects supply and demand to exist for the foreseeable future. We have in place a rigorous repair and maintenance program that keeps the pipelines and the natural gas gathering and processing systems in good working order. Therefore, although some of the individual assets may be replaced, the pipelines and the natural gas gathering and processing systems themselves will remain intact indefinitely.

As of December 31, 2020 and 2019, other non-current assets on the Partnership's consolidated balance sheets included $34 million and $31 million, respectively, of funds that were legally restricted for the purpose of settling AROs.

Accrued and Other Current Liabilities

Accrued and other current liabilities consisted of the following:

	December 31,	
	2020	2019
Interest payable	$ 600	$ 579
Customer advances and deposits	161	123
Accrued capital expenditures	604	1,334
Accrued wages and benefits	109	217
Taxes payable other than income taxes	446	263
Exchanges payable	127	67
Other	728	759
Total accrued and other current liabilities	$ 2,775	$ 3,342

Deposits or advances are received from our customers as prepayments for natural gas deliveries in the following month. Prepayments and security deposits may be required when customers exceed their credit limits or do not qualify for open credit.

Redeemable Noncontrolling Interests

Our redeemable noncontrolling interests relate to certain preferred unitholders of one of our consolidated subsidiaries that have the option to convert their preferred units to such subsidiary's common units at the election of the holders and the noncontrolling interest holders in one of our consolidated subsidiaries that have the option to sell their interests to us. In accordance with applicable accounting guidance, the noncontrolling interest is excluded from total equity and reflected as redeemable noncontrolling interests on our consolidated balance sheets. See Note 7 for further information.

Environmental Remediation

We accrue environmental remediation costs for work at identified sites where an assessment has indicated that cleanup costs are probable and reasonably estimable. Such accruals are undiscounted and are based on currently available information, estimated timing of remedial actions and related inflation assumptions, existing technology and presently enacted laws and regulations. If a range of probable environmental cleanup costs exists for an identified site, the minimum of the range is accrued unless some other point in the range is more likely in which case the most likely amount in the range is accrued.

Fair Value of Financial Instruments

The carrying amounts of cash and cash equivalents, accounts receivable and accounts payable approximate their fair value.

Based on the estimated borrowing rates currently available to us and our subsidiaries for loans with similar terms and average maturities, the aggregate fair value and carrying amount of our debt obligations as of December 31, 2020 was $56.21 billion and $51.44 billion, respectively. As of December 31, 2019, the aggregate fair value and carrying amount of our debt obligations was $54.79 billion and $51.05 billion, respectively. The fair value of our consolidated debt obligations is a Level 2 valuation based on the observable inputs used for similar liabilities.

We have commodity derivatives, interest rate derivatives and embedded derivatives in our preferred units that are accounted for as assets and liabilities at fair value in our consolidated balance sheets. We determine the fair value of our assets and liabilities subject to fair value measurement by using the highest possible "level" of inputs. Level 1 inputs are observable quotes in an active market for identical assets and liabilities. We consider the valuation of marketable securities and commodity derivatives transacted through a clearing broker with a published price from the appropriate exchange as a Level 1 valuation. Level 2 inputs are inputs observable for similar assets and liabilities. We consider OTC commodity derivatives entered into directly with third parties as a Level 2 valuation since the values of these derivatives are quoted on an exchange for similar transactions. Additionally, we consider our options transacted through our clearing broker as having Level 2 inputs due to the level of activity of these contracts on the exchange in which they trade. We consider the valuation of our interest rate derivatives as Level 2 as the primary input, the LIBOR curve, is based on quotes from an active exchange of Eurodollar futures for the same period as the future interest swap settlements. Level 3 inputs are unobservable. During the year ended December 31, 2020, no transfers were made between any levels within the fair value hierarchy.

The following tables summarize the fair value of our financial assets and liabilities measured and recorded at fair value on a recurring basis as of December 31, 2020 and 2019 based on inputs used to derive their fair values:

		Fair Value Measurements at December 31, 2020	
	Fair Value Total	Level 1	Level 2
Assets:			
Commodity derivatives:			
Natural Gas:			
Basis Swaps IFERC/NYMEX	$ 12	$ 12	$ —

Contributions in Aid of Construction Costs

On certain of our capital projects, third parties are obligated to reimburse us for all or a portion of project expenditures. The majority of such arrangements are associated with pipeline construction and production well tie-ins. Contributions in aid of construction costs (“CIAC”) are netted against our project costs as they are received, and any CIAC which exceeds our total project costs, is recognized as other income in the period in which it is realized.

Shipping and Handling Costs

Shipping and handling costs are included in cost of products sold, except for shipping and handling costs related to fuel consumed for compression and treating which are included in operating expenses.

Costs and Expenses

Cost of products sold include actual cost of fuel sold, adjusted for the effects of our hedging and other commodity derivative activities, and the cost of appliances, parts and fittings. Operating expenses include all costs incurred to provide

products to customers, including compensation for operations personnel, insurance costs, vehicle maintenance, advertising costs, purchasing costs and plant operations. Selling, general and administrative expenses include all partnership related expenses and compensation for executive, partnership, and administrative personnel.

We record the collection of taxes to be remitted to government authorities on a net basis, except for consumer excise taxes collected by Sunoco LP on sales of refined products and merchandise which are included in both revenues and costs and expenses in the consolidated statements of operations, with no effect on net income. For the years ended December 31, 2020, 2019 and 2018, excise taxes collected by Sunoco LP were $301 million, $386 million and $370 million, respectively.

Issuances of Subsidiary Units

We record changes in our ownership interest of our subsidiaries as equity transactions, with no gain or loss recognized in consolidated net income or comprehensive income. For example, upon our subsidiary's issuance of common units in a public offering, we record any difference between the amount of consideration received or paid and the amount by which the noncontrolling interests are adjusted as a change in partners' capital.

Income Taxes

ET is a publicly traded limited partnership and is not taxable for federal and most state income tax purposes. As a result, our earnings or losses, to the extent not included in a taxable subsidiary, for federal and most state purposes are included in the tax returns of the individual partners. Net earnings for financial statement purposes may differ significantly from taxable income reportable to Unitholders as a result of differences between the tax basis and financial reporting basis of assets and liabilities, in addition to the allocation requirements related to taxable income under our Third Amended and Restated Agreement of Limited Partnership (the "Partnership Agreement").

As a publicly traded limited partnership, we are subject to a statutory requirement that our "qualifying income" (as defined by the Internal Revenue Code, related Treasury Regulations, and Internal Revenue Service ("IRS") pronouncements) exceed 90% of our total gross income, determined on a calendar year basis. If our qualifying income does not meet this statutory requirement, ET would be taxed as a corporation for federal and state income tax purposes. For the years ended December 31, 2020, 2019 and 2018, our qualifying income met the statutory requirement.

The Partnership conducts certain activities through corporate subsidiaries which are subject to federal, state and local income taxes. These corporate subsidiaries include ETP Holdco, Inland Corporation, Sunoco Property Company LLC and Aloha. The Partnership and its corporate subsidiaries account for income taxes under the asset and liability method.

Under this method, deferred tax assets and liabilities are recognized for the estimated future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. Deferred tax assets and liabilities are measured using enacted tax rates in effect for the year in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rate is recognized in earnings in the period that includes the enactment date. Valuation allowances are established when necessary to reduce deferred tax assets to the amounts more likely than not to be realized.

The determination of the provision for income taxes requires significant judgment, use of estimates, and the interpretation and application of complex tax laws. Significant judgment is required in assessing the timing and amounts of deductible and taxable items and the probability of sustaining uncertain tax positions. The benefits of uncertain tax positions are recorded in our financial statements only after determining a more-likely-than-not probability that the uncertain tax positions will withstand challenge, if any, from taxing authorities. When facts and circumstances change, we reassess these probabilities and record any changes through the provision for income taxes.

Accounting for Derivative Instruments and Hedging Activities

For qualifying hedges, we formally document, designate and assess the effectiveness of transactions that receive hedge accounting treatment and the gains and losses offset related results on the hedged item in the statement of operations. The market prices used to value our financial derivatives and related transactions have been determined using independent third-party prices, readily available market information, broker quotes and appropriate valuation techniques.

At inception of a hedge, we formally document the relationship between the hedging instrument and the hedged item, the risk management objectives, and the methods used for assessing and testing effectiveness and how any ineffectiveness will be measured and recorded. We also assess, both at the inception of the hedge and on a quarterly basis, whether the derivatives that are used in our hedging transactions are highly effective in offsetting changes in cash flows. If we determine that a derivative is no longer highly effective as a hedge, we discontinue hedge accounting prospectively by including changes in the fair value of the derivative in net income for the period.

If we designate a commodity hedging relationship as a fair value hedge, we record the changes in fair value of the hedged asset or liability in cost of products sold in our consolidated statements of operations. This amount is offset by the changes in fair value of the related hedging instrument. Any ineffective portion or amount excluded from the assessment of hedge ineffectiveness is also included in the cost of products sold in the consolidated statements of operations.

Cash flows from derivatives accounted for as cash flow hedges are reported as cash flows from operating activities, in the same category as the cash flows from the items being hedged.

If we designate a derivative financial instrument as a cash flow hedge and it qualifies for hedge accounting, the change in the fair value is deferred in AOCI until the underlying hedged transaction occurs. Any ineffective portion of a cash flow hedge's change in fair value is recognized each period in earnings. Gains and losses deferred in AOCI related to cash flow hedges remain in AOCI until the underlying physical transaction occurs, unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period or within an additional two-month period of time thereafter. For financial derivative instruments that do not qualify for hedge accounting, the change in fair value is recorded in cost of products sold in the consolidated statements of operations.

We manage a portion of our interest rate exposures by utilizing interest rate swaps and similar instruments. Certain of our interest rate derivatives are accounted for as either cash flow hedges or fair value hedges. For interest rate derivatives accounted for as either cash flow or fair value hedges, we report realized gains and losses and ineffectiveness portions of those hedges in interest expense. For interest rate derivatives not designated as hedges for accounting purposes, we report realized and unrealized gains and losses on those derivatives in "Gains (losses) on interest rate derivatives" in the consolidated statements of operations.

Non-Cash Compensation

For awards of restricted units, we recognize compensation expense over the vesting period based on the grant-date fair value, which is determined based on the market price of the underlying common units on the grant date. For awards of cash restricted units, we remeasure the fair value of the award at the end of each reporting period based on the market price of the underlying common units as of the reporting date, and the fair value is recorded in other non-current liabilities on our consolidated balance sheets.

Pensions and Other Postretirement Benefit Plans

The Partnership recognizes the overfunded or underfunded status of defined benefit pension and other postretirement plans, measured as the difference between the fair value of the plan assets and the benefit obligation (the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for other postretirement plans). Each overfunded plan is recognized as an asset and each underfunded plan is recognized as a liability. Changes in the funded status of the plan are recorded in the year in which the change occurs within AOCI in equity or, for entities applying regulatory accounting, as a regulatory asset or regulatory liability.

Allocation of Income

For purposes of maintaining partner capital accounts, the Partnership Agreement specifies that items of income and loss shall generally be allocated among the partners in accordance with their percentage interests.

3. ACQUISITIONS, DIVESTITURES AND RELATED TRANSACTIONS:

Pending Enable Acquisition

On February 17, 2021, the Partnership announced its entry into a definitive merger agreement to acquire Enable. Under the terms of the merger agreement, Enable's common unitholders will receive 0.8595 of an ET common unit in exchange for each Enable common unit. In addition, each outstanding Enable Series A preferred unit will be exchanged for 0.0265 of an ET Series G preferred unit, and ET will make a $10 million cash payment for Enable's general partner. The transaction is subject to the approval of Enable's unitholders and other customary regulatory approvals.

SemGroup Acquisition and ET Contribution of SemGroup Assets to ETO

On December 5, 2019, ET completed the acquisition of SemGroup pursuant to the terms of the Agreement and Plan of Merger, dated as of September 15, 2019 (the "Merger Agreement"). Under the terms of the Merger Agreement, a wholly owned subsidiary of ET merged with and into SemGroup (the "SemGroup Transaction"), with SemGroup surviving the merger. At the effective time of the SemGroup Transaction on December 5, 2019, each share of class A common stock, par value $0.01 per share, of SemGroup issued and outstanding immediately prior to the effective time was converted into the

right to receive (i) $6.80 in cash, without interest, and (ii) 0.7275 ET Common Units representing limited partner interests in ET. Each share of Series A Cumulative Perpetual Convertible Preferred Stock, par value $0.01 per share, of SemGroup that was issued and outstanding as of immediately prior to the effective time was redeemed by SemGroup for cash at a price per share equal to 101% of the liquidation preference.

During the first and second quarters of 2020, ET contributed former SemGroup assets to ETO through sale and contribution transactions. The following table represents the fair value, as of December 5, 2019, of the SemGroup assets and liabilities transferred from ET to ETO:

	At December 5, 2019
Total current assets	$ 794
Property, plant and equipment	3,891
Other non-current assets	617
Goodwill	295
Intangible assets	460
Total assets	$ 6,057
Total current liabilities	$ 629
Long-term debt, less current maturities [(1)]	2,576
Other non-current liabilities	197
Energy Transfer Canada Preferred shares	241
Total liabilities	3,643
Noncontrolling interest	822
Partners' capital	1,592
Total liabilities and partners' capital	$ 6,057

[(1)] Long-term debt at December 5, 2019 includes SemGroup senior notes with an aggregate principal amount of $1.375 billion and SemGroup subsidiary debt of $593 million, all of which was redeemed in December 2019, subsequent to the close of the SemGroup Transaction.

During 2020, the Partnership has recorded impairments on certain of the contributed SemGroup assets. Those impairments include a $244 million impairment of goodwill and a $129 million impairment of other non-current assets.

ET Contribution of Assets to ETO

Immediately prior to the closing of the Energy Transfer Merger discussed in Note 1, ET contributed the following to ETO:

- 2,263,158 common units representing limited partner interests in Sunoco LP to ETO in exchange for 2,874,275 ETO common units;
- 100 percent of the limited liability company interests in Sunoco GP LLC, the sole general partner of Sunoco LP, and all of the IDRs in Sunoco LP, to ETO in exchange for 42,812,389 ETO common units;
- 12,466,912 common units representing limited partner interests in USAC and 100 percent of the limited liability company interests in USA Compression GP, LLC, the general partner of USAC, to ETO in exchange for 16,134,903 ETO common units; and
- a 100 percent limited liability company interest in Lake Charles LNG and a 60 percent limited liability company interest in each of Energy Transfer LNG Export, LLC, ET Crude Oil Terminals, LLC and ETC Illinois LLC to ETO in exchange for 37,557,815 ETO common units.

USAC Acquisition

On April 2, 2018, ET acquired a controlling interest in USAC, a publicly traded partnership that provides compression services in the United States. Specifically, the Partnership acquired (i) all of the outstanding limited liability company interests in USA Compression GP, LLC ("USAC GP"), the general partner of USAC, and (ii) 12,466,912 USAC common

units representing limited partner interests in USAC for cash consideration equal to $250 million (the "USAC Transaction"). Concurrently, USAC cancelled its IDRs and converted its economic general partner interest into a non-economic general partner interest in exchange for the issuance of 8,000,000 USAC common units to USAC GP.

Concurrent with these transactions, ETO contributed to USAC all of the issued and outstanding membership interests of CDM for aggregate consideration of approximately $1.7 billion, consisting of (i) 19,191,351 USAC common units, (ii) 6,397,965 units of a newly authorized and established class of units representing limited partner interests in USAC ("USAC Class B Units") and (iii) $1.23 billion in cash, including customary closing adjustments (the "CDM Contribution"). The USAC Class B Units are a new class of partnership interests of USAC that have substantially all of the rights and obligations of a USAC common unit, except the USAC Class B Units will not participate in distributions for the first four quarters following the closing date of April 2, 2018. Each USAC Class B Unit will automatically convert into one USAC common unit on the first business day following the record date attributable to the quarter ending June 30, 2019.

Prior to the USAC acquisition, the CDM entities were indirect wholly-owned subsidiaries of ETO. Beginning April 2018, ETE's consolidated financial statements reflected USAC as a consolidated subsidiary.

Summary of Assets Acquired and Liabilities Assumed

The USAC Transaction was recorded using the acquisition method of accounting, which requires, among other things, that assets acquired and liabilities assumed be recognized on the balance sheet at their fair values as of the acquisition date.

The total purchase price was allocated as follows:

	At April 2, 2018
Total current assets[2]	$ 786
Property, plant and equipment	1,332
Other non-current assets	15
Goodwill[1]	366
Intangible assets	222
Total assets	$ 2,721
Total current liabilities	$ 110
Long-term debt, less current maturities	1,527
Other non-current liabilities	2
Total liabilities	1,639
Noncontrolling interest	832
Partners' capital	250
Total liabilities and partners' capital	$ 2,721

(1) None of the goodwill is expected to be deductible for tax purposes. Goodwill recognized from the business combination primarily relates to the value attributed to additional growth opportunities, synergies and operating leverage within USAC's operations.

(2) Includes cash and cash equivalents of $711 million held by USAC as of the acquisition date.

The fair values of the assets acquired and liabilities assumed were determined using various valuation techniques, including the income and market approaches.

Sunoco LP Retail Store Divestment

On January 23, 2018, Sunoco LP completed the disposition of assets pursuant to the purchase agreement with 7-Eleven, Inc. (the "7-Eleven Transaction"). As a result of the 7-Eleven Transaction, previously eliminated wholesale motor fuel sales to Sunoco LP's retail locations are reported as wholesale motor fuel sales to third parties.

In connection with the 7-Eleven Transaction, Sunoco LP entered into a 15-year take-or-pay fuel supply arrangement with 7-Eleven and SEI Fuel. For the period from January 1, 2018 through January 22, 2018, Sunoco LP recorded sales to the sites that were subsequently sold to 7-Eleven of $199 million, which sales were eliminated in consolidation.

The Partnership has concluded that it meets the accounting requirements for reporting the financial position, results of operations and cash flows of the 7-Eleven Transaction and the operations of the related assets as discontinued operations.

There were no results of operations associated with discontinued operations for the year ended December 31, 2019. The results of operations associated with discontinued operations for the years ended December 31, 2018 and 2017 are presented in the following table:

	Year Ended December 31, 2018
REVENUES	$ 349
COSTS AND EXPENSES	
Cost of products sold	305
Operating expenses	61
Selling, general and administrative	7
Total costs and expenses	373
OPERATING LOSS	(24)
OTHER EXPENSE	
Interest expense, net	2
Loss on extinguishment of debt	20
Other, net	61
LOSS FROM DISCONTINUED OPERATIONS BEFORE INCOME TAX EXPENSE	(107)
Income tax expense	158
LOSS FROM DISCONTINUED OPERATIONS, NET OF INCOME TAXES	(265)
LOSS FROM DISCONTINUED OPERATIONS, NET OF INCOME TAXES ATTRIBUTABLE TO ET	$ (10)

4. INVESTMENTS IN UNCONSOLIDATED AFFILIATES:

Citrus

ETO owns CrossCountry Energy, LLC, a wholly-owned subsidiary of ETO, which in turn owns a 50% interest in Citrus. The other 50% interest in Citrus is owned by a subsidiary of KMI. Citrus owns 100% of FGT, an approximately 5,362-mile natural gas pipeline system that originates in Texas and delivers natural gas to the Florida peninsula. Our investment in Citrus is reflected in our interstate transportation and storage segment.

FEP

ETO has a 50% interest in FEP which owns the Fayetteville Express Pipeline, an approximately 185-mile natural gas pipeline that originates in Conway County, Arkansas, continues eastward through White County, Arkansas and terminates at an interconnect with Trunkline in Panola County, Mississippi. ETO’s investment in FEP is reflected in the interstate transportation and storage segment.

MEP

ETO owns a 50% interest in MEP, which owns the Midcontinent Express Pipeline, an approximately 500-miles natural gas pipeline that extends from Southeast Oklahoma, across Northeast Texas, Northern Louisiana and Central Mississippi to an interconnect with the Transcontinental natural gas pipeline system in Butler, Alabama. ETO’s investment in MEP is reflected in the interstate transportation and storage segment.

White Cliffs

We own a 51% interest in White Cliffs, which was acquired by ET in the SemGroup acquisition and contributed to ETO in January 2020. White Cliffs consists of two parallel, 12-inch common carrier pipelines: one crude oil pipeline and one NGL pipeline. These pipelines transport crude and NGLs from Platteville, Colorado to Cushing, Oklahoma. The Partnership recorded an impairment of its investment in White Cliffs of $129 million during the year ended December 31, 2020 due to a decrease in projected future revenues and cash flows as a result of the overall market demand decline that occurred subsequent to the SemGroup acquisition and related purchase price allocation in December 2019.

The carrying values of the Partnership's investments in unconsolidated affiliates as of December 31, 2020 and 2019 were as follows:

	December 31,	
	2020	2019
Citrus	$ 1,867	$ 1,876
FEP	4	218
MEP	406	429
White Cliffs	274	436
Other	509	501
Total	$ 3,060	$ 3,460

The following table presents equity in earnings (losses) of unconsolidated affiliates:

	Years Ended December 31,		
	2020	2019	2018
Citrus	$ 162	$ 148	$ 141
FEP [(1)]	(139)	59	55
MEP	(6)	15	31
White Cliffs	20	4	—
Other	82	76	117
Total equity in earnings of unconsolidated affiliates	$ 119	$ 302	$ 344

[(1)] For the year ended December 31, 2020, equity in earnings (losses) of unconsolidated affiliates includes the impact of non-cash impairments recorded by FEP, which reduced the Partnership's equity in earnings by $208 million.

Summarized Financial Information

The following tables present aggregated selected balance sheet and income statement data for our unconsolidated affiliates, Citrus, FEP, MEP, and White Cliffs (on a 100% basis) for all periods presented, except as noted below:

	December 31,	
	2020	2019
Current assets	$ 227	$ 247
Property, plant and equipment, net	7,339	7,680
Other assets	58	40
Total assets	$ 7,624	$ 7,967
Current liabilities	$ 600	$ 738
Non-current liabilities	3,298	3,242
Equity	3,726	3,987
Total liabilities and equity	$ 7,624	$ 7,967

	Years Ended December 31,		
	2020	2019	2018
Revenue	$ 1,243	$ 1,192	$ 1,249
Operating income	6	683	723
Net income (loss)	(199)	443	460

In addition to the equity method investments described above we have other equity method investments which are not significant to our consolidated financial statements.

5. NET INCOME PER LIMITED PARTNER UNIT:

Basic net income per limited partner unit is computed by dividing net income, after considering the General Partner's interest, by the weighted average number of limited partner interests outstanding. Diluted net income per limited partner unit is computed by dividing net income (as adjusted as discussed herein), after considering the General Partner's interest, by the weighted average number of limited partner interests outstanding and the assumed conversion of the ET Series A Convertible Preferred Units, as discussed in Note 8. For the diluted earnings per share computation, income allocable to the limited partners is reduced, where applicable, for the decrease in earnings from ET's limited partner unit ownership in ETO or Sunoco LP that would have resulted assuming the incremental units related to our or Sunoco LP's equity incentive plans, as applicable, had been issued during the respective periods. Such units have been determined based on the treasury stock method.

A reconciliation of net income and weighted average units used in computing basic and diluted net income per unit is as follows:

	Years Ended December 31,		
	2020	2019	2018
Income from continuing operations	$ 140	$ 4,825	$ 3,685
Less: Net income attributable to redeemable noncontrolling interests	49	51	39
Less: Income from continuing operations attributable to noncontrolling interests	739	1,256	1,888
Income (loss) from continuing operations, net of noncontrolling interests	(648)	3,518	1,758
Less: General Partner's interest in income (loss) from continuing operations	(1)	4	3
Less: ET Series A Convertible Preferred Unitholders' interest in net income from continuing operations	—	—	33
Income (loss) from continuing operations available to Limited Partners	$ (647)	$ 3,514	$ 1,722
Basic Income (Loss) from Continuing Operations per Limited Partner Unit:			
Weighted average limited partner units	2,695.6	2,628.0	1,423.8
Basic income (loss) from continuing operations per Limited Partner unit	$ (0.24)	$ 1.34	$ 1.21
Basic loss from discontinued operations per Limited Partner unit	$ —	$ —	$ (0.01)
Diluted Income (Loss) from Continuing Operations per Limited Partner Unit:			
Income (loss) from continuing operations available to Limited Partners	$ (647)	$ 3,514	$ 1,722
Dilutive effect of equity-based compensation of subsidiaries and distributions to convertible units	—	(1)	33
Diluted income (loss) from continuing operations available to Limited Partners	(647)	3,513	1,755
Weighted average limited partner units	2,695.6	2,628.0	1,423.8
Dilutive effect of unconverted unit awards and ET Series A Convertible Preferred Units	—	—	30.3
Dilutive effect of unvested unit awards	—	9.6	7.3
Weighted average limited partner units, assuming dilutive effect of unvested unit awards	2,695.6	2,637.6	1,461.4
Diluted income (loss) from continuing operations per Limited Partner unit	$ (0.24)	$ 1.33	$ 1.20
Diluted loss from discontinued operations per Limited Partner unit	$ —	$ —	$ (0.01)

6. DEBT OBLIGATIONS:

Our debt obligations consist of the following:

Long-term debt reflected on our consolidated balance sheets includes fair value adjustments related to interest rate swaps, which represent fair value adjustments that had been recorded in connection with fair value hedge accounting prior to the termination of the interest rate swap.

Notes and Debentures

ET Senior Notes

The ET Senior Notes are the Parent Company's senior obligations, ranking equally in right of payment with our other existing and future unsubordinated debt and senior to any of its future subordinated debt. The Parent Company's obligations under the ET Senior Notes previously were secured on a first-priority basis with its obligations under the Revolver Credit Agreement and the ET Term Loan Facility, by a lien on substantially all of the Parent Company's and certain of its subsidiaries' tangible and intangible assets, subject to certain exceptions and permitted liens. Subsequent to the termination of the Revolver Credit Agreement and the ET Term Loan Facility, the collateral securing the ET Senior Notes was released. The ET Senior Notes are not guaranteed by any of the Parent Company's subsidiaries.

The covenants related to the ET Senior Notes include a limitation on liens, a limitation on transactions with affiliates, a restriction on sale-leaseback transactions and limitations on mergers and sales of all or substantially all of the Parent Company's assets.

ETO Senior Notes

The ETO senior notes were registered under the Securities Act of 1933 (as amended). The Partnership may redeem some or all of the ETO senior notes at any time, or from time to time, pursuant to the terms of the indenture and related indenture supplements related to the ETO senior notes. The balance is payable upon maturity. Interest on the ETO senior notes is paid semi-annually.

The ETO senior notes are unsecured obligations of the Partnership and as a result, the ETO senior notes effectively rank junior to any future indebtedness of ours or our subsidiaries that is both secured and unsubordinated to the extent of the value of the assets securing such indebtedness, and the ETO senior notes effectively rank junior to all indebtedness and other liabilities of our existing and future subsidiaries.

ETO January 2020 Senior Notes Offering and Redemption

On January 22, 2020, ETO completed a registered offering (the "January 2020 Senior Notes Offering") of $1 billion aggregate principal amount of ETO's 2.900% Senior Notes due 2025, $1.5 billion aggregate principal amount of ETO's 3.750% Senior Notes due 2030, and $2 billion aggregate principal amount of ETO's 5.000% Senior Notes due 2050, (collectively, the "Notes"). The Notes are fully and unconditionally guaranteed by the Partnership's wholly-owned subsidiary, Sunoco Logistics Partners Operations L.P., on a senior unsecured basis.

Utilizing proceeds from the January 2020 Senior Notes Offering, ETO redeemed its $400 million aggregate principal amount of 5.75% Senior Notes due September 1, 2020, its $1.05 billion aggregate principal amount of 4.15% Senior Notes due October 1, 2020, its $1.14 billion aggregate principal amount of 7.50% Senior Notes due October 15, 2020, its $250 million aggregate principal amount of 5.50% Senior Notes due February 15, 2020, ET's $52 million aggregate principal amount of 7.50% Senior Notes due October 15, 2020 and Transwestern's $175 million aggregate principal amount of 5.36% Senior Notes due December 9, 2020.

Transwestern Senior Notes

The Transwestern senior notes are redeemable at any time in whole or pro rata, subject to a premium or upon a change of control event or an event of default, as defined. The balance is payable upon maturity. Interest is paid semi-annually.

Sunoco LP November 2020 Senior Notes Offering and Repurchase

On November 9, 2020, Sunoco LP completed a private offering of $800 million in aggregate principal amount of 4.500% senior notes due 2029. Sunoco LP used the proceeds to fund the tender offer on its 4.875% $1 billion senior notes due 2023. Approximately 56% of the 2023 senior notes were tendered. On January 15, 2021, Sunoco LP repurchased the remaining outstanding portion of its 2023 senior notes.

Term Loans, Credit Facilities and Commercial Paper

ETO Term Loan

On October 17, 2019, ETO entered into a term loan credit agreement (the "ETO Term Loan") providing for a $2.00 billion three-year term loan credit facility. Borrowings under the term loan agreement mature on October 17, 2022 and are available for working capital purposes and for general partnership purposes. The term loan agreement is unsecured and is guaranteed by our subsidiary, Sunoco Logistics Operations.

As of December 31, 2020, the ETO Term Loan had $2.00 billion outstanding and was fully drawn. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 1.15%.

ETO Five-Year Credit Facility

ETO's revolving credit facility (the "ETO Five-Year Credit Facility") allows for unsecured borrowings up to $5.00 billion and matures on December 1, 2023. The ETO Five-Year Credit Facility contains an accordion feature, under which the total aggregate commitment may be increased up to $6.00 billion under certain conditions.

As of December 31, 2020, the ETO Five-Year Credit Facility had $3.10 billion outstanding, of which $1.66 billion was commercial paper. The amount available for future borrowings was $1.79 billion after accounting for outstanding letters of credit in the amount of $109 million. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 1.12%.

ETO 364-Day Facility

ETO's 364-day revolving credit facility (the "ETO 364-Day Facility") allows for unsecured borrowings up to $1.00 billion and matures on November 26, 2021. As of December 31, 2020, the ETO 364-Day Facility had no outstanding borrowings.

Sunoco LP Credit Facility

Sunoco LP maintains a $1.50 billion revolving credit facility (the "Sunoco LP Credit Facility"). As of December 31, 2020, the Sunoco LP Credit Facility had no outstanding borrowings and $8 million in standby letters of credit. The amount available for future borrowings was $1.5 billion at December 31, 2020.

USAC Credit Facility

USAC maintains a $1.60 billion revolving credit facility (the "USAC Credit Facility"), which matures on April 2, 2023 and permits up to $400 million of future increases in borrowing capacity. As of December 31, 2020, USAC had $474 million of outstanding borrowings and no outstanding letters of credit under the credit agreement. As of December 31, 2020, USAC had $1.1 billion of availability under its credit facility. The weighted average interest rate on the total amount outstanding as of December 31, 2020 was 3.27%.

Energy Transfer Canada Credit Facilities

Energy Transfer Canada is party to a credit agreement providing for a C$350 million (US$275 million at the December 31, 2020 exchange rate) senior secured term loan facility, a C$525 million (US$412 million at the December 31, 2020 exchange rate) senior secured revolving credit facility, and a C$300 million (US$236 million at the December 31, 2020 exchange rate) senior secured construction loan facility (the "KAPS Facility"). The term loan facility and the revolving credit facility mature on February 25, 2024. The KAPS Facility matures on June 13, 2024. Energy Transfer Canada may incur additional term loans and revolving commitments in an aggregate amount not to exceed C$250 million (US$196

million at the December 31, 2020 exchange rate), subject to receiving commitments for such additional term loans or revolving commitments from either new lenders or increased commitments from existing lenders.

Covenants Related to Our Credit Agreements

Covenants Related to the Parent Company

The Term Loan Facility and ET Revolving Credit Facility previously contained customary representations, warranties, covenants, and events of default, including a change of control event of default and limitations on incurrence of liens, new lines of business, merger, transactions with affiliates and restrictive agreements. Both facilities have been paid off and terminated.

Covenants Related to ETO

The agreements relating to the ETO senior notes contain restrictive covenants customary for an issuer with an investment-grade rating from the rating agencies, which covenants include limitations on liens and a restriction on sale-leaseback transactions.

The ETO Credit Facilities (defined as the ETO Term Loan, ETO Five-Year Credit Facility and ETO 364-Day Credit Facility) contain covenants that limit (subject to certain exceptions) the Partnership's and certain of the Partnership's subsidiaries' ability to, among other things:

- incur indebtedness;
- grant liens;
- enter into mergers;
- dispose of assets;
- make certain investments;
- make Distributions (as defined in the ETO Credit Facilities) during certain Defaults (as defined in the ETO Credit Facilities) and during any Event of Default (as defined in the ETO Credit Facilities);
- engage in business substantially different in nature than the business currently conducted by the Partnership and its subsidiaries;
- engage in transactions with affiliates; and
- enter into restrictive agreements.

The ETO Credit Facilities applicable margin and rate used in connection with the interest rates and commitment fees, respectively, are based on the credit ratings assigned to our senior, unsecured, non-credit enhanced long-term debt. The applicable margin for eurodollar rate loans under the ETO Five-Year Credit Facility ranges from 1.125% to 2.000% and the applicable margin for base rate loans ranges from 0.125% to 1.000%. The applicable rate for commitment fees under the ETO Five-Year Credit Facility ranges from 0.125% to 0.300%. The applicable margin for eurodollar rate loans under the ETO 364-Day Facility ranges from 1.500% to 2.000% and the applicable margin for base rate loans ranges from 0.500% to 1.000%. The applicable rate for commitment fees under the ETO 364-Day Facility ranges from 0.125% to 0.225%.

The ETO Credit Facilities contain various covenants including limitations on the creation of indebtedness and liens and related to the operation and conduct of our business. The ETO Credit Facilities also limit us, on a rolling four quarter basis, to a maximum Consolidated Funded Indebtedness to Consolidated EBITDA ratio, as defined in the underlying credit agreements, of 5.0 to 1, which can generally be increased to 5.5 to 1 during a Specified Acquisition Period. Our Leverage Ratio was 4.31 to 1 at December 31, 2020, as calculated in accordance with the credit agreements.

The agreements relating to the Transwestern senior notes contain certain restrictions that, among other things, limit the incurrence of additional debt, the sale of assets and the payment of dividends and specify a maximum debt to capitalization ratio.

Failure to comply with the various restrictive and affirmative covenants of our revolving credit facilities could require us to pay debt balances prior to scheduled maturity and could negatively impact the Partnership's or our subsidiaries' ability to incur additional debt and/or our ability to pay distributions to Unitholders.

Covenants Related to Panhandle

Panhandle is not party to any lending agreement that would accelerate the maturity date of any obligation due to a failure to maintain any specific credit rating, nor would a reduction in any credit rating, by itself, cause an event of default under any of Panhandle's lending agreements.

Panhandle's restrictive covenants include restrictions on liens securing debt and guarantees and restrictions on mergers and on the sales of assets. A breach of any of these covenants could result in acceleration of Panhandle's debt.

Covenants Related to Sunoco LP

The Sunoco LP Credit Facility contains various customary representations, warranties, covenants and events of default, including a change of control event of default, as defined therein. Sunoco LP's Credit Facility requires Sunoco LP to maintain a Net Leverage Ratio of not more than 5.5 to 1. The maximum Net Leverage Ratio is subject to upwards adjustment of not more than 6.0 to 1 for a period not to exceed three fiscal quarters in the event Sunoco LP engages in certain specified acquisitions of not less than $50 million (as permitted under Sunoco LP's Credit Facility agreement). The Sunoco LP Credit Facility also requires Sunoco LP to maintain an Interest Coverage Ratio (as defined in the Sunoco LP's Credit Facility agreement) of not less than 2.25 to 1.

Covenants Related to USAC

The USAC Credit Facility contains covenants that limit (subject to certain exceptions) USAC's ability to, among other things:

- grant liens;
- make certain loans or investments;
- incur additional indebtedness or guarantee other indebtedness;
- merge or consolidate;
- sell our assets; or
- make certain acquisitions.

The credit facility is also subject to the following financial covenants, including covenants requiring us to maintain:

- a minimum EBITDA to interest coverage ratio of 2.5 to 1.0, determined as of the last day of each fiscal quarter; and
- a maximum funded debt to EBITDA ratio, determined as of the last day of each fiscal quarter, for the annualized trailing three months of (i) 5.75 to 1 through the end of the fiscal quarter ending December 31, 2020 and (ii) 5.5 to 1 for the fiscal quarters ending March 31, 2021 and June 30, 2021, (iii) 5.25 to 1 for the fiscal quarters ending September 30, 2021 and December 31, 2021 and (iv) 5.0 to 1 thereafter, subject to a provision for increases to such thresholds, in the case of any fiscal quarter ending September 30, 2021 or thereafter, by 0.50 in connection with certain future acquisitions for the six consecutive month period following the period in which any such acquisition occurs, provided that, in any event, such ratio shall not exceed 5.5 to 1.

Covenants Related to the HFOTCO Tax Exempt Notes

The indentures covering HFOTCO's tax exempt notes due 2050 ("IKE Bonds") include customary representations and warranties and affirmative and negative covenants. Such covenants include limitations on the creation of new liens, indebtedness, making of certain restricted payments and payments on indebtedness, making certain dispositions, making material changes in business activities, making fundamental changes including liquidations, mergers or consolidations, making certain investments, entering into certain transactions with affiliates, making amendments to certain credit or organizational agreements, modifying the fiscal year, creating or dealing with hazardous materials in certain ways, entering into certain hedging arrangements, entering into certain restrictive agreements, funding or engaging in sanctioned activities, taking actions or causing the trustee to take actions that materially adversely affect the rights, interests, remedies or security of the bondholders, taking actions to remove the trustee, making certain amendments to the bond documents, and taking actions or omitting to take actions that adversely impact the tax exempt status of the IKE Bonds.

Compliance with our Covenants

Failure to comply with the various restrictive and affirmative covenants of our revolving credit facilities and note agreements could require us or our subsidiaries to pay debt balances prior to scheduled maturity and could negatively impact the subsidiaries ability to incur additional debt and/or our ability to pay distributions.

We and our subsidiaries were in compliance with all requirements, tests, limitations, and covenants related to our debt agreements as of December 31, 2020.

7. REDEEMABLE NONCONTROLLING INTERESTS:

Certain redeemable noncontrolling interests in the Partnership's subsidiaries are reflected as mezzanine equity on the consolidated balance sheet. Redeemable noncontrolling interests as of December 31, 2020 included a balance of $477 million related to the USAC Preferred Units described below and a balance of $15 million related to noncontrolling interest holders in one of the Partnership's consolidated subsidiaries that have the option to sell their interests to the Partnership. In addition, redeemable noncontrolling interests includes a balance of $270 million in Energy Transfer Canada preferred shares acquired as part of the 2019 merger with SemGroup.

USAC Series A Preferred Units

In 2018, USAC issued 500,000 USAC Preferred Units in a private placement at a price of $1,000 per USAC Preferred Unit, for total gross proceeds of $500 million in a private placement.

The USAC Preferred Units are entitled to receive cumulative quarterly distributions equal to $24.375 per USAC Preferred Unit, subject to increase in certain limited circumstances. The USAC Preferred Units will have a perpetual term, unless converted or redeemed. Certain portions of the USAC Preferred Units will be convertible into USAC common units at the election of the holders beginning in 2021. To the extent the holders of the USAC Preferred Units have not elected to convert their preferred units by the fifth anniversary of the issue date, USAC will have the option to redeem all or any portion of the USAC Preferred Units for cash. In addition, at any time on or after the tenth anniversary of the issue date, the holders of the USAC Preferred Units will have the right to require USAC to redeem all or any portion of the USAC Preferred Units, and the Partnership may elect to pay up to 50% of such redemption amount in USAC common units.

Energy Transfer Canada Redeemable Preferred Stock

Energy Transfer Canada has 300,000 shares of cumulative preferred stock issued and outstanding. The preferred stock is redeemable at Energy Transfer Canada's option subsequent to January 3, 2021 at a redemption price of C$1,100 (US$864 at the December 31, 2020 exchange rate) per share. The preferred stock is redeemable by the holder contingent upon a change of control or liquidation of Energy Transfer Canada. The preferred stock is convertible to Energy Transfer Canada common shares in the event of an initial public offering by Energy Transfer Canada.

The preferred stock was recorded at fair value in connection with the SemGroup purchase accounting. Dividends on the preferred stock are payable in-kind through the quarter ending June 30, 2020. The dividends paid-in-kind increased the liquidation preference such that as of December 31, 2020, the preferred stock was convertible into 344,419 shares.

8. EQUITY:

Limited Partner Units

Limited partner interests in the Partnership are represented by Common Units that entitle the holders thereof to the rights and privileges specified in the Partnership Agreement. The Partnership's Common Units are registered under the Securities Exchange Act of 1934 (as amended) and are listed for trading on the NYSE. Each holder of a Common Unit is entitled to one vote per unit on all matters presented to the Limited Partners for a vote. In addition, if at any time any person or group (other than the Partnership's General Partner and its affiliates) owns beneficially 20% or more of all Common Units, any Common Units owned by that person or group may not be voted on any matter and are not considered to be outstanding when sending notices of a meeting of Unitholders (unless otherwise required by law), calculating required votes, determining the presence of a quorum or for other similar purposes under the Partnership Agreement. The Common Units are entitled to distributions of Available Cash as described below under "Parent Company Quarterly Distributions of Available Cash."

As of December 31, 2020, there were issued and outstanding 2.70 billion Common Units representing an aggregate 99.9% limited partner interest in the Partnership.

Our Partnership Agreement contains specific provisions for the allocation of net earnings and losses to the partners for purposes of maintaining the partner capital accounts. For any fiscal year that the Partnership has net profits, such net profits are first allocated to the General Partner until the aggregate amount of net profits for the current and all prior fiscal years equals the aggregate amount of net losses allocated to the General Partner for the current and all prior fiscal years. Second, such net profits shall be allocated to the Limited Partners pro rata in accordance with their respective sharing ratios. For any fiscal year in which the Partnership has net losses, such net losses shall be first allocated to the Limited Partners in proportion to their respective adjusted capital account balances, as defined by the Partnership Agreement, (before taking into account such net losses) until their adjusted capital account balances have been reduced to zero. Second, all remaining net losses shall be allocated to the General Partner. The General Partner may distribute to the Limited Partners funds of the Partnership that the General Partner reasonably determines are not needed for the payment of existing or foreseeable Partnership obligations and expenditures.

Common Units

The change in ET Common Units during the years ended December 31, 2020, 2019 and 2018 was as follows:

	Years Ended December 31,		
	2020	2019	2018
Number of Common Units, beginning of period	2,689.6	2,619.4	1,079.1
Conversion of ET Series A Convertible Preferred Units to common units	—	—	79.1
Common Units issued in mergers and acquisitions	—	57.6	1,458.9
Common Units repurchased	—	(1.9)	—
Issuance of Common Units	12.8	14.5	2.3
Number of Common Units, end of period	2,702.4	2,689.6	2,619.4

In October 2018, ET issued 1.46 billion ET Common Units in connection with the Energy Transfer Merger.

In December 2019, ET issued 57.6 million ET Common Units in connection with the SemGroup acquisition.

ET Series A Convertible Preferred Units

In May 2018, the Partnership converted its 329.3 million Series A Convertible Preferred Units into approximately 79.1 million ET common units in accordance with the terms of ET's partnership agreement.

ET Class A Units

In connection with the Energy Transfer Merger, the Partnership issued 647,745,099 Class A units ("ET Class A Units") representing limited partner interests in the Partnership to LE GP, LLC ("LE GP"), the general partner of ET. The number of ET Class A Units issued allows LE GP and its affiliates to retain a voting interest in the Partnership that is identical to their voting interest in the Partnership prior to the completion of the Merger. The ET Class A Units are entitled to vote together with the Partnership's common units, as a single class, except as required by law. Additionally, ET's partnership agreement provides that, under certain circumstances, upon the issuance by the Partnership of additional common units or any securities that have voting rights that are pari passu with the Partnership common units, the Partnership will issue to any holder of ET Class A Units additional ET Class A Units such that the holder maintains a voting interest in the Partnership that is identical to its voting interest in the Partnership prior to such issuance. The ET Class A Units are not entitled to distributions and otherwise have no economic attributes.

ET Repurchase Program

In February 2015, the Partnership announced a common unit repurchase program, whereby the Partnership may repurchase up to an additional $2 billion of ET Common Units in the open market at the Partnership's discretion, subject to market conditions and other factors, and in accordance with applicable regulatory requirements. The Partnership repurchased no ET Common Units under this program in 2020 and 1.9 million ET Common Units in 2019. As of December 31, 2020, $911 million remained available to repurchase under the current program.

ET Distribution Reinvestment Program

During the year ended December 31, 2020, distributions of $78 million were reinvested under the distribution reinvestment program. As of December 31, 2020, a total of 21 million common units remain available to be issued under the existing registration statement in connection with the distribution reinvestment program.

Sale of Common Units by Subsidiaries

The Parent Company accounts for the difference between the carrying amount of its investment in subsidiaries and the underlying book value arising from issuance of units by subsidiaries (excluding unit issuances to the Parent Company) as a capital transaction. If a subsidiary issues units at a price less than the Parent Company's carrying value per unit, the Parent Company assesses whether the investment has been impaired, in which case a provision would be reflected in our statement of operations. The Parent Company did not recognize any impairment related to the issuances of subsidiary common units during the periods presented.

ETO Class K Units

As of December 31, 2020, a total of 101.5 million Class K Units were held by wholly-owned subsidiaries of ETO. Each Class K Unit is entitled to a quarterly cash distribution of $0.67275 per Class K Unit prior to ETO making distributions of available cash to any class of units, excluding any cash available distributions or dividends or capital stock sales proceeds received by ETO from ETP Holdco. If the Partnership is unable to pay the Class K Unit quarterly distribution with respect to any quarter, the accrued and unpaid distributions will accumulate until paid and any accumulated balance will accrue 1.5% per annum until paid.

ETO Class L Units

On December 31, 2018, ETO issued a new class of limited partner interests titled Class L Units to two wholly-owned subsidiaries of the Partnership when the Partnership's previously outstanding Class E units and Class G units held by such subsidiaries were converted into Class L Units. As a result of the conversion, the Class E units and Class G units were cancelled.

The Class L Units generally do not have any voting rights. The Class L Units are entitled to aggregate cash distributions equal to 7.65% per annum of the total amount of cash generated by us and our subsidiaries, other than ETP Holdco, and available for distribution. Distributions shall be paid quarterly, in arrears, within 45 days after the end of each quarter. As the Class L Units are owned by a wholly-owned subsidiary, the cash distributions on those units are eliminated in our consolidated financial statements.

ETO Class M Units

On July 1, 2019, ETO issued a new class of limited partner interests titled Class M Units to ETP Holdco, a wholly-owned subsidiary of the Partnership, in exchange for the contribution of ETP Holdco's equity ownership interest in Panhandle to the Partnership.

The Class M Units generally do not have any voting rights. The Class M Units are entitled to aggregate cash distributions equal to 8.00% per annum of the total amount of cash generated by us and our subsidiaries, other than ETP Holdco, and available for distribution. Distributions shall be paid quarterly, in arrears, within 45 days after the end of each quarter. As the Class M Units are owned by a wholly-owned subsidiary, the cash distributions on those units are eliminated in our consolidated financial statements.

ETO Class N Units

In April and May, 2020, ETO issued a new class of limited partner interests titles Class N Units in connection with a series of internal transactions to simplify its capital structure. All of the Class N Units are held by ETP Holdco.

The Class N Units generally do not have any voting rights. each Class N Unit is entitled to a quarterly cash distribution of $0.2375 per Class N Unit prior to ETO making distributions of available cash to any class of units, excluding any cash available distributions or dividends or capital stock sales proceeds received by ETO from ETP Holdco. Distributions shall be paid quarterly, in arrears, within 45 days after the end of each quarter. If the Partnership is unable to pay the Class N Unit quarterly distribution with respect to any quarter, the accrued and unpaid distributions will accumulate until paid and any accumulated balance will accrue 1.5% per annum until paid. As the Class N Units are owned by a wholly-owned subsidiary, the cash distributions on those units are eliminated in our consolidated financial statements.

ETO Preferred Units

As of December 31, 2020 and 2019, ETO's outstanding preferred units included 950,000 Series A Preferred Units, 550,000 Series B Preferred Units, 18,000,000 Series C Preferred Units, 17,800,000 Series D Preferred Units and 32,000,000 Series E Preferred Units. As of December 31, 2020, ETO's outstanding preferred units also included 500,000 Series F Preferred Units and 1,100,000 Series G Preferred Units.

ETO Series A Preferred Units

Distributions on the ETO Series A Preferred Units will accrue and be cumulative from and including the date of original issue to, but excluding, February 15, 2023, at a rate of 6.250% per annum of the stated liquidation preference of $1,000. On and after February 15, 2023, distributions on the ETO Series A Preferred Units will accumulate at a percentage of the $1,000 liquidation preference equal to an annual floating rate of the three-month LIBOR, determined quarterly, plus a spread of 4.028% per annum. The ETO Series A Preferred Units are redeemable at ETO's option on or after February 15, 2023 at a redemption price of $1,000 per ETO Series A Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series B Preferred Units

Distributions on the ETO Series B Preferred Units will accrue and be cumulative from and including the date of original issue to, but excluding, February 15, 2028, at a rate of 6.625% per annum of the stated liquidation preference of $1,000. On and after February 15, 2028, distributions on the ETO Series B Preferred Units will accumulate at a percentage of the $1,000 liquidation preference equal to an annual floating rate of the three-month LIBOR, determined quarterly, plus a spread of 4.155% per annum. The ETO Series B Preferred Units are redeemable at ETO's option on or after February 15, 2028 at a redemption price of $1,000 per ETO Series B Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series C Preferred Units

Distributions on the ETO Series C Preferred Units will accrue and be cumulative from and including the date of original issue to, but excluding, May 15, 2023, at a rate of 7.375% per annum of the stated liquidation preference of $25. On and after May 15, 2023, distributions on the ETO Series C Preferred Units will accumulate at a percentage of the $25 liquidation preference equal to an annual floating rate of the three-month LIBOR, determined quarterly, plus a spread of 4.530% per annum. The ETO Series C Preferred Units are redeemable at ETO's option on or after May 15, 2023 at a redemption price of $25 per ETO Series C Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series D Preferred Units

Distributions on the ETO Series D Preferred Units will accrue and be cumulative from and including the date of original issue to, but excluding, August 15, 2023, at a rate of 7.625% per annum of the stated liquidation preference of $25. On and after August 15, 2023, distributions on the ETO Series D Preferred Units will accumulate at a percentage of the $25 liquidation preference equal to an annual floating rate of the three-month LIBOR, determined quarterly, plus a spread of 4.738% per annum. The ETO Series D Preferred Units are redeemable at ETO's option on or after August 15, 2023 at a redemption price of $25 per ETO Series D Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series E Preferred Units

Distributions on the ETO Series E Preferred Units will accrue and be cumulative from and including the date of original issue to, but excluding, May 15, 2024, at a rate of 7.600% per annum of the stated liquidation preference of $25. On and after May 15, 2024, distributions on the ETO Series E Preferred Units will accumulate at a percentage of the $25 liquidation preference equal to an annual floating rate of the three-month LIBOR, determined quarterly, plus a spread of 5.161% per annum. The ETO Series E Preferred Units are redeemable at ETO's option on or after May 15, 2024 at a redemption price of $25 per ETO Series E Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series F Preferred Units

On January 22, 2020, ETO issued 500,000 of its 6.750% Series F Fixed-Rate Reset Cumulative Redeemable Perpetual Preferred Units representing limited partner interest in ETO, at a price to the public of $1,000 per unit. Distributions on the Series F Preferred Units are cumulative from and including the original issue date and will be payable semi-annually in

arrears on the 15th day of May and November of each year, commencing on May 15, 2020 to, but excluding, May 15, 2025, at a rate equal to 6.750% per annum of the $1,000 liquidation preference. On and after May 15, 2025, the distribution rate on the ETO Series F Preferred Units will equal a percentage of the $1,000 liquidation preference equal to the five-year U.S. treasury rate plus a spread of 5.134% per annum. The ETO Series F Preferred Units are redeemable at ETO's option on or after May 15, 2025 at a redemption price of $1,000 per ETO Series F Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

ETO Series G Preferred Units

On January 22, 2020, ETO issued 1,100,000 of its 7.125% Series G Fixed-Rate Reset Cumulative Redeemable Perpetual Preferred Units representing limited partner interest in ETO, at a price to the public of $1,000 per unit. Distributions on the ETO Series G Preferred Units are cumulative from and including the original issue date and will be payable semi-annually in arrears on the 15th day of May and November of each year, commencing on May 15, 2020 to, but excluding, May 15, 2030, at a rate equal to 7.125% per annum of the $1,000 liquidation preference. On and after May 15, 2030, the distribution rate on the ETO Series G Preferred Units will equal a percentage of the $1,000 liquidation preference equal to the five-year U.S. treasury rate plus a spread of 5.306% per annum. The ETO Series G Preferred Units are redeemable at ETO's option on or after May 15, 2030 at a redemption price of $1,000 per ETO Series G Preferred Unit, plus an amount equal to all accumulated and unpaid distributions thereon to, but excluding, the date of redemption.

Subsidiary Equity Transactions

Sunoco LP's Equity Distribution Program

Sunoco LP is party to an equity distribution agreement for an at-the-market ("ATM") offering pursuant to which Sunoco LP may sell its common units from time to time. For the years ended December 31, 2020, 2019 and 2018, Sunoco LP issued no units under its ATM program. As of December 31, 2020, $295 million of Sunoco LP common units remained available to be issued under the currently effective equity distribution agreement.

USAC's Distribution Reinvestment Program

During the year ended December 31, 2020 and 2019, distributions of $1.9 million and $1 million, respectively, were reinvested under the USAC distribution reinvestment program resulting in the issuance of approximately 188,695 and 60,584 USAC common units, respectively.

USAC's Warrant Private Placement

On April 2, 2018, USAC issued two tranches of warrants to purchase USAC common units (the "USAC Warrants"), which included USAC Warrants to purchase 5,000,000 common units with a strike price of $17.03 per unit and USAC Warrants to purchase 10,000,000 common units with a strike price of $19.59 per unit. The USAC Warrants may be exercised by the holders thereof at any time beginning on the one year anniversary of the closing date and before the tenth anniversary of the closing date. Upon exercise of the USAC Warrants, USAC may, at its option, elect to settle the USAC Warrants in common units on a net basis.

USAC's Class B Units

The USAC Class B Units, all of which are owned by ETO, are a new class of partnership interests of USAC that have substantially all of the rights and obligations of a USAC common unit, except the USAC Class B Units will not participate in distributions for the first four quarters following the closing date of the USAC Transaction on April 2, 2018. Each USAC Class B Unit automatically converted into one USAC common unit on the first business day following the record date attributable to the quarter ending June 30, 2019.

On July 30, 2019, the 6,397,965 USAC Class B units held by the Partnership converted into 6,397,965 common units representing limited partner interests in USAC. These common units participate in distributions declared by USAC.

Parent Company Quarterly Distributions of Available Cash

Our distribution policy is consistent with the terms of our Partnership Agreement, which requires that we distribute all of our available cash quarterly. The Parent Company's only cash-generating assets currently consist of distributions from its interest in ETO.

Our distributions declared and paid with respect to our common units were as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2017 [1]	February 8, 2018	February 20, 2018	$ 0.3050
March 31, 2018 [1]	May 7, 2018	May 21, 2018	0.3050
June 30, 2018	August 6, 2018	August 20, 2018	0.3050
September 30, 2018	November 8, 2018	November 19, 2018	0.3050
December 31, 2018	February 8, 2019	February 19, 2019	0.3050
March 31, 2019	May 7, 2019	May 20, 2019	0.3050
June 30, 2019	August 6, 2019	August 19, 2019	0.3050
September 30, 2019	November 5, 2019	November 19, 2019	0.3050

September 30, 2020	November 6, 2020	November 19, 2020	0.1525
December 31, 2020	February 8, 2021	February 19, 2021	0.1525

(1) Certain common unitholders elected to participate in a plan pursuant to which those unitholders elected to forego their cash distributions on all or a portion of their common units for a period of up to nine quarters commencing with the distribution for the quarter ended March 31, 2016 and, in lieu of receiving cash distributions on these common units for each such quarter, each said unitholder received ET Series A Convertible Preferred Units (on a one-for-one basis for each common unit as to which the participating unitholder elected be subject to this plan) that entitled them to receive a cash distribution of up to $0.11 per unit. See additional information below.

Our distributions declared and paid with respect to ET Series A Convertible Preferred Unit were as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2016	February 7, 2017	February 21, 2017	$ 0.1100
March 31, 2017	May 10, 2017	May 19, 2017	0.1100

* Represent prorated initial distributions.

[1] ETO Series A Preferred Unit, ETO Series B Preferred Unit, ETO Series F Preferred Unit and ETO Series G Preferred Unit distributions are paid on a semi-annual basis.

Sunoco LP Cash Distributions

The following table illustrates the percentage allocations of available cash from operating surplus between Sunoco LP's common unitholders and the holder of its IDRs based on the specified target distribution levels, after the payment of distributions to Class C unitholders. The amounts set forth under "marginal percentage interest in distributions" are the percentage interests of the IDR holder and the common unitholders in any available cash from operating surplus which Sunoco LP distributes up to and including the corresponding amount in the column "total quarterly distribution per unit target amount." The percentage interests shown for common unitholders and IDR holder for the minimum quarterly distribution are also applicable to quarterly distribution amounts that are less than the minimum quarterly distribution.

		Marginal Percentage Interest in Distributions	
	Total Quarterly Distribution Target Amount	Common Unitholders	Holder of IDRs
Minimum Quarterly Distribution	$0.4375	100%	—%
First Target Distribution	$0.4375 to $0.503125	100%	—%
Second Target Distribution	$0.503125 to $0.546875	85%	15%
Third Target Distribution	$0.546875 to $0.656250	75%	25%
Thereafter	Above $0.656250	50%	50%

Distributions on Sunoco LP's units declared and/or paid by Sunoco LP were as follows:

Quarter Ended	Record Date	Payment Date	Rate
December 31, 2017	February 6, 2018	February 14, 2018	$ 0.8255
March 31, 2018	May 7, 2018	May 15, 2018	0.8255
June 30, 2018	August 7, 2018	August 15, 2018	0.8255
September 30, 2018	November 6, 2018	November 14, 2018	0.8255
December 31, 2018	February 6, 2019	February 14, 2019	0.8255
March 31, 2019	May 7, 2019	May 15, 2019	0.8255
June 30, 2019	August 6, 2019	August 14, 2019	0.8255
September 30, 2019	November 5, 2019	November 19, 2019	0.8255

June 30, 2020	August 7, 2020	August 19, 2020	0.8255
September 30, 2020	November 6, 2020	November 19, 2020	0.8255
December 31, 2020	February 8, 2021	February 19, 2021	0.8255

USAC Cash Distributions

Subsequent to the Energy Transfer Merger and USAC Transactions described in Note 1 and Note 3, respectively, ETO owned approximately 39.7 million USAC common units and 6.4 million USAC Class B units. Subsequent to the conversion of the USAC Class B Units to USAC common units on July 30, 2019, ETO owns approximately 46.1 million USAC common units. As of December 31, 2020, USAC had approximately 97.0 million common units outstanding. USAC currently has a non-economic general partner interest and no outstanding IDRs.

Distributions on USAC's units declared and/or paid by USAC subsequent to the USAC transaction on April 2, 2018 were as follows:

Quarter Ended	Record Date	Payment Date	Rate
March 31, 2018	May 1, 2018	May 11, 2018	$ 0.5250
June 30, 2018	July 30, 2018	August 10, 2018	0.5250
September 30, 2018	October 29, 2018	November 9, 2018	0.5250
December 31, 2018	January 28, 2019	February 8, 2019	0.5250
March 31, 2019	April 29, 2019	May 10, 2019	0.5250
June 30, 2019	July 29, 2019	August 9, 2019	0.5250
September 30, 2019	October 28, 2019	November 8, 2019	0.5250
December 31, 2019	January 27, 2020	February 7, 2020	0.5250
March 31, 2020	April 27, 2020	May 8, 2020	0.5250
June 30, 2020	July 31, 2020	August 10, 2020	0.5250
September 30, 2020	October 26, 2020	November 6, 2020	0.5250
December 31, 2020	January 25, 2021	February 5, 2021	0.5250

Accumulated Other Comprehensive Income

The following table presents the components of AOCI, net of tax:

	December 31,	
	2020	2019
Available-for-sale securities	$ 18	$ 13
Foreign currency translation adjustment	7	2
Actuarial loss related to pensions and other postretirement benefits	(7)	(25)
Investments in unconsolidated affiliates, net	(14)	(1)
Total AOCI, net of tax	4	(11)
Amounts attributable to noncontrolling interests	2	—
Total AOCI included in partners' capital, net of tax	$ 6	$ (11)

The table below sets forth the tax amounts included in the respective components of other comprehensive income:

	December 31,	
	2020	2019
Available-for-sale securities	$ (1)	$ (1)
Foreign currency translation adjustment	8	2
Actuarial loss relating to pension and other postretirement benefits	3	8
Total	$ 10	$ 9

9. NON-CASH COMPENSATION PLANS:

We, Sunoco LP and USAC, have issued equity incentive plans for employees, officers and directors, which provide for various types of awards, including options to purchase Common Units, restricted units, phantom units, distribution equivalent rights ("DERs"), common unit appreciation rights, cash restricted units and other non-cash compensation awards. As of December 31, 2020, an aggregate total of 34.3 million ET Common Units remain available to be awarded under our equity incentive plans.

ET Long-Term Incentive Plan

We have granted restricted unit awards to employees that vest over a specified time period, typically a five-year service vesting requirement, with vesting based on continued employment as of each applicable vesting date. Upon vesting, ET Common Units are issued. These unit awards entitle the recipients of the unit awards to receive, with respect to each Common Unit subject to such award that has not either vested or been forfeited, a cash payment equal to each cash distribution per Common Unit made by us on our Common Units promptly following each such distribution by us to our Unitholders. We refer to these rights as "distribution equivalent rights." Under our equity incentive plans, our non-employee directors each receive grants with a five-year service vesting requirement.

The following table shows the activity of the awards granted to employees and non-employee directors:

	Number of Units	Weighted Average Grant-Date Fair Value Per Unit
Unvested awards as of December 31, 2019	28.0	$ 13.89
Awards granted	9.4	6.29
Awards vested	(6.9)	14.78
Awards forfeited	(1.1)	13.85
Unvested awards as of December 31, 2020	29.4	11.26

During the years ended December 31, 2020, 2019, and 2018, the weighted average grant-date fair value per unit award granted was $6.29, $12.51 and $13.00, respectively. The total fair value of awards vested was $51 million, $47 million, and $49 million, respectively, based on the market price of the respective Common Units as of the vesting date. As of

December 31, 2020, a total of 29.4 million unit awards remain unvested, for which ET expects to recognize a total of $193 million in compensation expense over a weighted average period of 2.8 years.

Cash Restricted Units. The Partnership has also granted cash restricted units, which vest through three year of service. A cash restricted unit entitles the award recipient to receive cash equal to the market value of one one ET Common Unit upon vesting. In December 2020, the Partnership granted a total of 7.7 million cash restricted units.

Subsidiary Long-Term Incentive Plans

Each of Sunoco LP and USAC has granted restricted or phantom unit awards (collectively, the "Subsidiary Unit Awards") to employees and directors that entitle the grantees to receive common units of the respective subsidiary. In some cases, at the discretion of the respective subsidiary's compensation committee, the grantee may instead receive an amount of cash equivalent to the value of common units upon vesting. Substantially all of the Subsidiary Unit Awards are time-vested grants, which generally vest over a three or five-year period, that entitles the grantees of the unit awards to receive an amount of cash equal to the per unit cash distributions made by the respective subsidiaries during the period the restricted unit is outstanding.

The following table summarizes the activity of the Subsidiary Unit Awards:

	Sunoco LP		USAC	
	Number of Units	Weighted Average Grant-Date Fair Value Per Unit	Number of Units	Weighted Average Grant-Date Fair Value Per Unit
Unvested awards as of December 31, 2019	2.1	$ 29.21	1.8	$ 15.09
Awards granted	0.7	28.63	0.7	12.55
Awards vested	(0.5)	30.47	(0.2)	17.27
Awards forfeited	(0.2)	29.11	(0.2)	15.36
Unvested awards as of December 31, 2020	2.1	28.63	2.1	14.88

The following table summarizes the weighted average grant-date fair value per unit award granted:

	Years Ended December 31,		
	2020	2019	2018
Sunoco LP	$ 28.63	$ 30.70	$ 27.67
USAC	12.55	15.88	15.47

The total fair value of Subsidiary Unit Awards vested for the years ended December 31, 2020, 2019 and 2018 was $16 million, $17 million, and $22 million, respectively, based on the market price of Sunoco LP and USAC common units as of the vesting date for the years ended December 31, 2020. 2019 and 2018. As of December 31, 2020, estimated compensation cost related to Subsidiary Unit Awards not yet recognized was $39 million, and the weighted average period over which this cost is expected to be recognized in expense is 3.6 years.

10. INCOME TAXES:

As a partnership, we are not subject to United States federal income tax and most state income taxes. However, the Partnership conducts certain activities through corporate subsidiaries which are subject to federal and state income taxes.

The components of the federal and state income tax expense (benefit) of our taxable subsidiaries were summarized as follows:

	Years Ended December 31,		
	2020	2019	2018
Current expense (benefit):			
Federal	$ (6)	$ (20)	$ (8)
State	32	(2)	19
Foreign	1	—	—
Total	27	(22)	11
Deferred expense (benefit):			
Federal	176	174	181
State	41	43	(188)
Foreign	(7)	—	—
Total	210	217	(7)
Total income tax expense from continuing operations	$ 237	$ 195	$ 4

Historically, our effective tax rate has differed from the statutory rate primarily due to partnership earnings that are not subject to United States federal and most state income taxes at the partnership level. A reconciliation of income tax expense at the United States statutory rate to the Partnership's income tax benefit for the years ended December 31, 2020, 2019 and 2018 is as follows:

	Years Ended December 31,		
	2020	2019	2018
Income tax expense at United States statutory rate	$ 79	$ 1,054	$ 775
Increase (reduction) in income taxes resulting from:			
Partnership earnings not subject to tax	88	(866)	(647)
Noncontrolling interests	16	—	—
State tax, net of federal tax benefit	58	12	(125)
Dividend received deduction	—	(3)	(5)
Foreign taxes	(7)	—	—
Other	3	(2)	6
Income tax expense from continuing operations	$ 237	$ 195	$ 4

Deferred taxes result from the temporary differences between financial reporting carrying amounts and the tax basis of existing assets and liabilities. The table below summarizes the principal components of the deferred tax assets (liabilities) as follows:

	December 31,	
	2020	2019
Deferred income tax assets:		
Net operating losses, alternative minimum tax credit and other carryforwards	$ 1,047	$ 936
Pension and other postretirement benefits	—	7
Other	34	85
Total deferred income tax assets	1,081	1,028
Valuation allowance	(134)	(95)
Net deferred income tax assets	947	933
Deferred income tax liabilities:		
Property, plant and equipment	(298)	(501)
Investments in affiliates	(3,994)	(3,547)
Trademarks	(77)	(72)
Other	(6)	(21)
Total deferred income tax liabilities	(4,375)	(4,141)
Net deferred income taxes	$ (3,428)	$ (3,208)

As of December 31, 2020, ETP Holdco had a federal net operating loss carryforward of $3.73 billion, of which $1.3 billion will expire in 2031 through 2037 while the remaining can be carried forward indefinitely. A total of $787 million of the federal net operating loss carryforward is limited under IRC §382. Although we expect to fully utilize the IRC §382 limited federal net operating loss, the amount utilized in a particular year may be limited. As of December 31, 2020, Sunoco Property Company LLC, a corporate subsidiary of Sunoco LP, had a state net operating loss carrryforward of $121 million, which we expect to fully utilize. Sunoco Property Company LLC has no federal net operating loss carryforward.

Our corporate subsidiaries have state net operating loss carryforward benefits of $174 million, net of federal tax, some of which expire between 2021 and 2039, while others are carried forward indefinitely. Our corporate subsidiaries have Canadian net operating losses of $7 million that will begin to expire in 2033. Our corporate subsidiaries have cumulative excess business interest expense of $129 million available for carryforward indefinitely. A valuation allowance of $89 million is attributable to state net operating loss carryforward benefits primarily attributable to significant restrictions on their use in the Commonwealth of Pennsylvania. A separate valuation allowance of $45 million is attributable to foreign tax credits.

The following table sets forth the changes in unrecognized tax benefits:

	Years Ended December 31,		
	2020	2019	2018
Balance at beginning of year	$ 94	$ 624	$ 609
Additions attributable to tax positions taken in the current year	—	—	8
Additions attributable to tax positions taken in prior years	—	11	7
Reduction attributable to tax positions taken in prior years	—	(541)	—
Lapse of statute	(4)	—	—
Balance at end of year	$ 90	$ 94	$ 624

As of December 31, 2020, we had $90 million ($48 million after federal income tax benefits) related to tax positions which, if recognized, would impact our effective tax rate.

Our policy is to accrue interest expense and penalties on income tax underpayments (overpayments) as a component of income tax expense. During 2020, we recognized interest and penalties of less than $7 million. At December 31, 2020, we have interest and penalties accrued of $10 million, net of tax.

We appealed the adverse Court of Federal Claims decision against ETC Sunoco regarding the IRS' denial of ethanol blending credits claims under Section 6426 to the Federal Circuit. The Federal Circuit affirmed the CFC's denial on November 1, 2018. ETC Sunoco filed a petition for certiorari with the Supreme Court on May 24, 2019 to review the Federal Circuit's affirmation of the CFC's ruling, and the Court denied Sunoco's petition on October 7, 2019. The petition for certiorari applied to ETC Sunoco's 2004 through 2009 tax years, and 2010 through 2011 remained on extension with the IRS through September 28, 2020. We filed a petition for the 2010 and 2011 years in the Federal District Court for the Northern District of Texas on September 25, 2020. Due to the uncertainty surrounding the litigation, a reserve of $530 million was previously established for the full amount of the pending refund claims, and the receivable and reserve for this issue were netted in the consolidated balance sheet. Subsequent to the Supreme Court's denial of the petition in October 2019, the receivable and reserve have been reversed, with no impact to the Partnership's financial position and results of operations.

In November 2015, the Pennsylvania Commonwealth Court determined in Nextel Communications v. Commonwealth ("Nextel") that the Pennsylvania limitation on NOL carryforward deductions violated the uniformity clause of the Pennsylvania Constitution and struck the NOL limitation in its entirety. In October 2017, the Pennsylvania Supreme Court affirmed the decision with respect to the uniformity clause violation; however, the Court reversed with respect to the remedy and instead severed the flat-dollar limitation, leaving the percentage-based limitation intact. Nextel subsequently filed a petition for writ of certiorari with the United States Supreme Court, and this was denied on June 11, 2018. Now certain Pennsylvania taxpayers are proceeding with litigation in Pennsylvania state courts on issues not addressed by the Pennsylvania Supreme Court in Nextel, specifically, whether the Due Process and Equal Protection Clauses of the United States Constitution and the Remedies Clause of the Pennsylvania Constitution require a court to grant the taxpayer relief. ETC Sunoco has recognized approximately $67 million ($53 million after federal income tax benefits) in tax benefit based on previously filed tax returns and certain previously filed protective claims as relates to its cases currently held pending the Nextel matter. However, based upon the Pennsylvania Supreme Court's October 2017 decision, and because of uncertainty in the breadth of the application of the decision, we have reserved $34 million ($27 million after federal income tax benefits) against the receivable.

In general, ET and its subsidiaries are no longer subject to examination by the IRS, and most state jurisdictions, for the 2014 and prior tax years.

ET and its subsidiaries also have various state and local income tax returns in the process of examination or administrative appeal in various jurisdictions. We believe the appropriate accruals or unrecognized tax benefits have been recorded for any potential assessment with respect to these examinations.

11. REGULATORY MATTERS, COMMITMENTS, CONTINGENCIES AND ENVIRONMENTAL LIABILITIES:

FERC Proceedings

By order issued January 16, 2019, the FERC initiated a review of Panhandle's existing rates pursuant to Section 5 of the Natural Gas Act ("NGA") to determine whether the rates currently charged by Panhandle are just and reasonable and set the matter for hearing. On August 30, 2019, Panhandle filed a general rate proceeding under Section 4 of the NGA. The Natural Gas Act Section 5 and Section 4 proceedings were consolidated by the order of the Chief Judge dated October 1, 2019. A hearing in the combined proceedings commenced on August 25, 2020 and adjourned on September 15, 2020. By an order dated January 19, 2021, the Chief Judge has extended the deadline for the initial decision to March 2021.

Commitments

In the normal course of business, ETO purchases, processes and sells natural gas pursuant to long-term contracts and enters into long-term transportation and storage agreements. Such contracts contain terms that are customary in the industry. ETO believes that the terms of these agreements are commercially reasonable and will not have a material adverse effect on its financial position or results of operations.

Our joint venture agreements require that we fund our proportionate share of capital contributions to its unconsolidated affiliates. Such contributions will depend upon our unconsolidated affiliates' capital requirements, such as for funding capital projects or repayment of long-term obligations.

We have certain non-cancelable rights-of-way (“ROW”) commitments, which require fixed payments and either expire upon our chosen abandonment or at various dates in the future. The table below reflects ROW expense included in operating expenses in the accompanying statements of operations:

	Years Ended December 31,		
	2020	2019	2018
ROW expense	$ 47	$ 45	$ 46

PES Refinery Fire and Bankruptcy

We previously owned an approximately 7.4% indirect non-operating interest in PES, which owned a former refinery in Philadelphia. In addition, the Partnership previously provided logistics services to PES under commercial contracts and Sunoco LP previously purchased refined products from PES. In June 2019, an explosion and fire occurred at the refinery complex.

On July 21, 2019, PES Holdings, LLC and seven of its subsidiaries (collectively, the "Debtors") filed voluntary petitions in the United States Bankruptcy Court for the District of Delaware seeking relief under the provisions of Chapter 11 of the United States Bankruptcy Code, as a result of the explosion and fire at the Philadelphia refinery complex. The Debtors have also defaulted on a $75 million note payable to a subsidiary of the Partnership. In June 2020, the Partnership received $12 million from PES on the note payable and recorded a reserve for the remaining $63 million note balance.

In addition, the Partnership’s subsidiaries retained certain environmental remediation liabilities when the refinery was sold to PES. As of December 31, 2020, the Partnership has funded these environmental remediation liabilities through its wholly-owned captive insurance company, based upon actuarially determined estimates for such costs, and these liabilities are included in the total environmental liabilities discussed below under “Environmental Remediation.” It may be necessary for the Partnership to record additional environmental remediation liabilities in the future depending upon the use of such property by the buyer; however, management is not currently able to estimate such additional liabilities.

PES has rejected certain of the Partnership’s commercial contracts pursuant to Section 365 of the Bankruptcy Code; however, the impact of the bankruptcy on the Partnership’s commercial contracts and related revenue loss (temporary or permanent) is unknown at this time. In addition, Sunoco LP has been successful at acquiring alternative supplies to replace fuel volume lost from PES and does not anticipate any material impact to its business going forward.

Litigation and Contingencies

We may, from time to time, be involved in litigation and claims arising out of our operations in the normal course of business. Natural gas and crude oil are flammable and combustible. Serious personal injury and significant property damage can arise in connection with their transportation, storage or use. In the ordinary course of business, we are sometimes threatened with or named as a defendant in various lawsuits seeking actual and punitive damages for product liability, personal injury and property damage. We maintain liability insurance with insurers in amounts and with coverage and deductibles management believes are reasonable and prudent, and which are generally accepted in the industry. However, there can be no assurance that the levels of insurance protection currently in effect will continue to be available at reasonable prices or that such levels will remain adequate to protect us from material expenses related to product liability, personal injury or property damage in the future.

We or our subsidiaries are a party to various legal proceedings and/or regulatory proceedings incidental to our businesses. For each of these matters, we evaluate the merits of the case, our exposure to the matter, possible legal or settlement strategies, the likelihood of an unfavorable outcome and the availability of insurance coverage. If we determine that an unfavorable outcome of a particular matter is probable and can be estimated, we accrue the contingent obligation, as well as any expected insurance recoverable amounts related to the contingency. As new information becomes available, our estimates may change. The impact of these changes may have a significant effect on our results of operations in a single period.

As of December 31, 2020 and 2019, accruals of approximately $77 million and $120 million, respectively, were reflected on our consolidated balance sheets related to contingent obligations that met both the probable and reasonably estimable criteria. In addition, we may recognize additional contingent losses in the future related to (i) contingent matters for which a loss is currently considered reasonably possible but not probable and/or (ii) losses in excess of amounts that have already been accrued for such contingent matters. In some of these cases, we are not able to estimate possible losses or a range of possible losses in excess of amounts accrued. For such matters where additional contingent losses can be reasonably estimated, the range of additional losses is estimated to be up to approximately $80 million.

The outcome of these matters cannot be predicted with certainty and there can be no assurance that the outcome of a particular matter will not result in the payment of amounts that have not been accrued for the matter. Furthermore, we may revise accrual amounts or our estimates of reasonably possible losses prior to resolution of a particular contingency based on changes in facts and circumstances or changes in the expected outcome.

Dakota Access Pipeline

On July 27, 2016, the Standing Rock Sioux Tribe ("SRST") filed a lawsuit in the United States District Court for the District of Columbia ("District Court") that challenged permits issued by the United States Army Corps of Engineers ("USACE") that allowed Dakota Access, LLC ("Dakota Access") to cross the Missouri River at Lake Oahe in North Dakota. The case was subsequently amended to challenge an easement issued by the USACE that allowed the pipeline to cross land owned by the USACE adjacent to the Missouri River. Dakota Access and the Cheyenne River Sioux Tribe ("CRST") intervened. Separate lawsuits filed by the Oglala Sioux Tribe ("OST") and the Yankton Sioux Tribe ("YST") were consolidated with this action and several individual tribal members intervened (collectively, with SRST and CRST, the "Tribes"). On March 25, 2020, the District Court remanded the case back to the USACE for preparation of an Environment Impact Statement ("EIS"). On July 6, 2020, the District Court vacated the easement and ordered Dakota Access to be shut down and emptied of oil by August 5, 2020. Dakota Access and the USACE appealed to the United States Court of Appeals for the District of Columbia ("Court of Appeals"), which granted an administrative stay of the District Court's July 6 order and ordered further briefing on whether to fully stay the July 6 order. On August 5, 2020, the Court of Appeals 1) granted a stay of the portion of the District Court order that required Dakota Access to shut the pipeline down and empty it of oil, 2) denied a motion to stay the March 25 order pending a decision on the merits by the Court of Appeals as to whether the USACE would be required to prepare an EIS, and 3) denied a motion to stay the District Court's order to vacate the easement during this appeal process. The August 5 order also stated that the Court of Appeals expected the USACE to clarify its position with respect to whether the USACE intended to allow the continued operation of the pipeline notwithstanding the vacatur of the easement and that the District Court may consider additional relief, if necessary.

On August 10, 2020, the District Court ordered the USACE to submit a status report by August 31, 2020, clarifying its position with regard to its decision-making process with respect to the continued operation of the pipeline. On August 31, 2020, the USACE submitted a status report that indicated that it considered the presence of the pipeline at the Lake Oahe crossing without an easement to constitute an encroachment on federal land, and that it was still considering whether to exercise its enforcement discretion regarding this encroachment. Following the filing of this status report, the District Court ordered briefing on whether to enjoin the operation of the pipeline. That motion was fully briefed as of January 8, 2021. The District Court has yet to rule on this matter.

On January 26, 2021, the Court of Appeals affirmed the District Court's March 25, 2020 order requiring an EIS and its July 6, 2020 order vacating the easement. In this same January 26 order, the Court of Appeals also overturned the District Court's July 6, 2020 order that the pipeline shut down and be emptied of oil.

The District Court scheduled a status conference for February 10, 2021 to discuss the effects of the Court of Appeals' January 26, 2021 order on the pending motion for injunctive relief, as well as USACE's expectations as to how it will proceed regarding its enforcement discretion regarding the easement. At the request of the USACE, on February 9, 2021 the District Court granted a two-month continuance for the status conference until April 9, 2021.

The pipeline continues to operate pending rulings from the District Court. ET cannot determine when or how these lawsuits will be resolved or the impact they may have on the Dakota Access pipelines; however, ET expects after the law and complete record are fully considered, the issues in this litigation will be resolved in a manner that will allow the pipeline to continue to operate.

In addition, lawsuits and/or regulatory proceedings or actions of this or a similar nature could result in interruptions to construction or operations of current or future projects, delays in completing those projects and/or increased project costs, all of which could have an adverse effect on our business and results of operations.

Mont Belvieu Incident

On June 26, 2016, a hydrocarbon storage well located on another operator's facility adjacent to Lone Star NGL LLC's ("Lone Star") facilities in Mont Belvieu, Texas experienced an over-pressurization resulting in a subsurface release. The subsurface release caused a fire at Lone Star's South Terminal and damage to Lone Star's storage well operations at its South and North Terminals. Normal operations have resumed at the facilities with the exception of one of Lone Star's storage wells; however, Lone Star is still quantifying the extent of its incurred and ongoing damages and has obtained, and will continue to seek, reimbursement for these losses.

MTBE Litigation

ETC Sunoco Holdings LLC and Sunoco (R&M), LLC (collectively, "Sunoco Defendants") are defendants in lawsuits alleging MTBE contamination of groundwater. The plaintiffs, state-level governmental entities, assert product liability, nuisance, trespass, negligence, violation of environmental laws, and/or deceptive business practices claims. The plaintiffs seek to recover compensatory damages, and in some cases also seek natural resource damages, injunctive relief, punitive damages, and attorneys' fees.

As of December 31, 2020, Sunoco Defendants are defendants in five cases, including one case each initiated by the States of Maryland and Rhode Island, one by the Commonwealth of Pennsylvania and two by the Commonwealth of Puerto Rico. The more recent Puerto Rico action is a companion case alleging damages for additional sites beyond those at issue in the initial Puerto Rico action. The actions brought by the State of Maryland and Commonwealth of Pennsylvania have also named as defendants ETO, ETP Holdco Corporation, and Sunoco Partners Marketing & Terminals L.P. ("SPMT").

It is reasonably possible that a loss may be realized in the remaining cases; however, we are unable to estimate the possible loss or range of loss in excess of amounts accrued. An adverse determination with respect to one or more of the MTBE cases could have a significant impact on results of operations during the period in which any such adverse determination occurs, but such an adverse determination likely would not have a material adverse effect on the Partnership's consolidated financial position.

Regency Merger Litigation

On June 10, 2015, Adrian Dieckman ("Dieckman"), a purported Regency unitholder, filed a class action complaint related to the Regency-ETO merger (the "Regency Merger") in the Court of Chancery of the State of Delaware (the "Regency Merger Litigation"), on behalf of Regency's common unitholders against Regency GP LP, Regency GP LLC, ET, ETO, ETP GP, and the members of Regency's board of directors.

The Regency Merger Litigation alleges that the Regency Merger breached the Regency partnership agreement. On March 29, 2016, the Delaware Court of Chancery granted the defendants' motion to dismiss the lawsuit in its entirety. Plaintiff appealed, and the Delaware Supreme Court reversed the judgment of the Court of Chancery. Plaintiff then filed an Amended Verified Class Action Complaint, which defendants moved to dismiss. The Court of Chancery granted in part and denied in part the motions to dismiss, dismissing the claims against all defendants other than Regency GP LP and Regency GP LLC (the "Regency Defendants"). The Court of Chancery later granted plaintiff's unopposed motion for class certification. Trial was held on December 10-16, 2019, and a post-trial hearing was held on May 6, 2020. On February 15, 2021, the Court of Chancery ruled in favor of the Regency Defendants on both remaining counts at issue in this litigation.

The Regency Defendants cannot predict whether the plaintiff will appeal this decision.

Litigation Filed By or Against Williams

In April and May 2016, the Williams Companies, Inc. ("Williams") filed two lawsuits (the "Williams Litigation") against ET, LE GP, and, in one of the lawsuits, Energy Transfer Corp LP, ETE Corp GP, LLC, and Energy Transfer Equity GP, LLC (collectively, "ET Defendants"), alleging that ET Defendants breached their obligations under the ET-Williams merger agreement (the "Merger Agreement"). In general, Williams alleges that ET Defendants breached the Merger Agreement by (a) failing to use commercially reasonable efforts to obtain from Latham & Watkins LLP ("Latham") the delivery of a tax opinion concerning Section 721 of the Internal Revenue Code ("721 Opinion"), (b) issuing the Partnership's Series A Convertible Preferred Units (the "Issuance"), and (c) making allegedly untrue representations and warranties in the Merger Agreement.

After a two-day trial on June 20 and 21, 2016, the Court ruled in favor of ET Defendants and issued a declaratory judgment that ET could terminate the merger after June 28, 2016 because of Latham's inability to provide the required 721 Opinion. The Court did not reach a decision regarding Williams' claims related to the Issuance nor the alleged untrue representations and warranties. On March 23, 2017, the Delaware Supreme Court affirmed the Court's ruling on the June 2016 trial.

In September 2016, the parties filed amended pleadings. Williams filed an amended complaint seeking a $410 million termination fee based on the alleged breaches of the Merger Agreement listed above. ET Defendants filed amended counterclaims and affirmative defenses, asserting that Williams materially breached the Merger Agreement by, among other things, (a) failing to use its reasonable best efforts to consummate the merger, (b) failing to provide material information to ET for inclusion in the Form S-4 related to the merger, (c) failing to facilitate the financing of the merger, and (d) breaching the Merger Agreement's forum-selection clause.

In July 2020, the Court denied ET Defendant's Motion for Summary Judgment and Williams' Motion for Partial Summary Judgment. ET Defendants cannot predict the outcome of the Williams Litigation or any lawsuits that might be filed subsequent to the date of this filing; nor can ET Defendants predict the amount of time and expense that will be required to resolve these lawsuits. ET Defendants believe that Williams' claims are without merit and intend to defend vigorously against them.

Rover

On November 3, 2017, the State of Ohio and the Ohio Environmental Protection Agency ("Ohio EPA") filed suit against Rover and other defendants seeking to recover civil penalties allegedly owed and certain injunctive relief related to permit compliance. The defendants filed several motions to dismiss, which were granted on all counts. The Ohio EPA appealed, and on December 9, 2019, the Fifth District Court of Appeals entered a unanimous judgment affirming the trial court. The Ohio EPA sought review from the Ohio Supreme Court, which the defendants opposed in briefs filed in February 2020. On April 22, 2020, the Ohio Supreme Court granted the Ohio EPA's request for review. Briefing has concluded and oral argument was held on January 26, 2021.

Revolution

On September 10, 2018, a pipeline release and fire (the "Incident") occurred on the Revolution Pipeline, a natural gas gathering line located in Center Township, Beaver County, Pennsylvania. There were no injuries. On February 8, 2019, the Pennsylvania Department of Environmental Protection ("PADEP") issued a Permit Hold on any requests for approvals/permits or permit amendments for any project in Pennsylvania pursuant to the state's water laws. The Partnership filed an appeal of the Permit Hold with the Pennsylvania Environmental Hearing Board. On January 3, 2020, the Partnership entered into a Consent Order and Agreement with the PADEP in which, among other things, the Permit Hold was lifted, the Partnership agreed to pay a $28.6 million civil penalty and fund a $2 million community environmental project, and all related appeals were withdrawn. On November 11, 2020, the PADEP issued an order that required additional approvals and work prior to placing the Revolution Pipeline back in service. The Partnership filed an appeal of this order on December 8, 2020.

The Pennsylvania Office of Attorney General has commenced an investigation regarding the Incident, and the United States Attorney for the Western District of Pennsylvania has issued a federal grand jury subpoena for documents relevant to the Incident. The scope of these investigations is not further known at this time.

Chester County, Pennsylvania Investigation

In December 2018, the former Chester County District Attorney (the "Chester County DA") sent a letter to the Partnership stating that his office was investigating the Partnership and related entities for "potential crimes" related to the Mariner East pipelines.

Subsequently, the matter was submitted to an Investigating Grand Jury in Chester County, Pennsylvania, which has issued subpoenas seeking documents and testimony. On September 24, 2019, the Chester County DA sent a Notice of Intent to the Partnership of its intent to pursue an abatement action if certain conditions were not remediated. The Partnership responded to the Notice of Intent within the proscribed time period.

In December 2019, the Chester County DA announced charges against a current employee related to the provision of security services. On June 25, 2020, a preliminary hearing was held on the charges against the employee, and the judge dismissed all charges.

Delaware County, Pennsylvania Investigation

On March 11, 2019, the Delaware County District Attorney's Office (the "Delaware County DA") announced that the Delaware County DA and the Pennsylvania Attorney General's Office, at the request of the Delaware County DA, are conducting an investigation of alleged criminal misconduct involving the construction and related activities of the Mariner East pipelines in Delaware County. On March 16, 2020, the Pennsylvania Attorney General Office served a Statewide Investigating Grand Jury subpoena for documents relating to inadvertent returns and water supplies related to the Mariner East pipelines. While the Partnership will cooperate with the subpoena, it intends to vigorously defend itself.

Shareholder Litigation Regarding Pennsylvania Pipeline Construction

Four purported unitholders of ET filed derivative actions against various past and current members of ET's Board of Directors, LE GP, and ET, as a nominal defendant that assert claims for breach of fiduciary duties, unjust enrichment, waste of corporate assets, breach of ET's limited partnership agreement, tortious interference, abuse of control, and gross

mismanagement related primarily to matters involving the construction of pipelines in Pennsylvania. They also seek damages and changes to ET's corporate governance structure. See *Bettiol v. LE GP*, Case No. 3:19-cv-02890-X (N.D. Tex.); *Davidson v. Kelcy L. Warren*, Cause No. DC-20-02322 (44th Judicial District of Dallas County, Texas); *Harris v. Kelcy L. Warren*, Case No. 2:20-cv-00364-GAM (E.D. Pa.); and *King v. LE GP*, Case No. 3:20-cv-00719-X (N.D. Tex.). Another purported unitholder of ET, Allegheny County Employees' Retirement System ("ACERS"), individually and on behalf of all others similarly situated, filed a suit under the federal securities laws purportedly on behalf of a class, against ET and three of ET's directors, Kelcy L. Warren, John W. McReynolds, and Thomas E. Long. See *Allegheny County Emps.' Ret. Sys. v. Energy Transfer LP*, Case No. 2:20-00200-GAM (E.D. Pa.). On June 15, 2020, ACERS filed an amended complaint and added as additional defendants ET directors Marshall McCrea and Matthew Ramsey, as well as Michael J. Hennigan and Joseph McGinn. The amended complaint asserts claims for violations of Sections 10(b) and 20(a) of the Exchange Act and Rule 10b-5 promulgated thereunder related primarily to matters involving the construction of pipelines in Pennsylvania. On August 14, 2020, the defendants filed a motion to dismiss ACERS' amended complaint. The Court has not yet ruled on the motion to dismiss. The defendants cannot predict the outcome of these lawsuits or any lawsuits that might be filed subsequent to the date of this filing; nor can the defendants predict the amount of time and expense that will be required to resolve these lawsuits. However, the defendants believe that the claims are without merit and intend to vigorously contest them.

Cline Class Action Lawsuit

On July 7, 2017, Perry Cline filed a class action complaint in the Eastern District of Oklahoma against Sunoco, Inc. (R&M) and Sunoco Partners Marketing & Terminals L.P. (collectively, "SPMT") that alleged SPMT failed to make timely payments of oil and gas proceeds from Oklahoma wells and to pay statutory interest for those untimely payments. On October 3, 2019, the Court certified a class to include all persons who received untimely payments from Oklahoma wells on or after July 7, 2012 and who have not already been paid statutory interest on the untimely payments (the "Class"). Excluded from the Class are those entitled to payments of proceeds that qualify as "minimum pay," prior period adjustments, and pass through payments, as well as governmental agencies and publicly traded oil and gas companies.

After a bench trial, on August 17, 2020, Judge John Gibney (sitting from the Eastern District of Virginia) issued an opinion that awarded the Class actual damages of $74.8 million for late payment interest for identified and unidentified royalty owners and interest-on-interest. This amount was later amended to $80.7 million to account for interest accrued from trial (the "Order"). Judge Gibney also awarded punitive damages in the amount of $75 million. The Class is also seeking attorneys' fees.

On August 27, 2020, SPMT filed its Notice of Appeal with the 10th Circuit and appealed the entirety of the Order. SPMT cannot predict the outcome of the case, nor can SPMT predict the amount of time and expense that will be required to resolve the appeal, but intends to vigorously appeal the entirety of the Order.

Environmental Matters

Our operations are subject to extensive federal, tribal, state and local environmental and safety laws and regulations that require expenditures to ensure compliance, including related to air emissions and wastewater discharges, at operating facilities and for remediation at current and former facilities as well as waste disposal sites. Historically, our environmental compliance costs have not had a material adverse effect on our results of operations but there can be no assurance that such costs will not be material in the future or that such future compliance with existing, amended or new legal requirements will not have a material adverse effect on our business and operating results. Costs of planning, designing, constructing and operating pipelines, plants and other facilities must incorporate compliance with environmental laws and regulations and safety standards. Failure to comply with these laws and regulations may result in the assessment of administrative, civil and criminal penalties, the imposition of investigatory, remedial and corrective action obligations, natural resource damages, the issuance of injunctions in affected areas and the filing of federally authorized citizen suits. Contingent losses related to all significant known environmental matters have been accrued and/or separately disclosed. However, we may revise accrual amounts prior to resolution of a particular contingency based on changes in facts and circumstances or changes in the expected outcome.

Environmental exposures and liabilities are difficult to assess and estimate due to unknown factors such as the magnitude of possible contamination, the timing and extent of remediation, the determination of our liability in proportion to other parties, improvements in cleanup technologies and the extent to which environmental laws and regulations may change in the future. Although environmental costs may have a significant impact on the results of operations for any single period, we believe that such costs will not have a material adverse effect on our financial position.

Based on information available at this time and reviews undertaken to identify potential exposure, we believe the amount reserved for environmental matters is adequate to cover the potential exposure for cleanup costs.

In February 2017, we received letters from the DOJ on behalf of EPA and Louisiana Department of Environmental Quality ("LDEQ") notifying SPLP and Mid-Valley Pipeline Company ("Mid-Valley") that enforcement actions were being pursued for three separate crude oil releases: (a) an estimated 550 barrels released from the Colmesneil-to-Chester pipeline in Tyler County, Texas ("Colmesneil") which allegedly occurred in February 2013; (b) an estimated 4,509 barrels released from the Longview-to-Mayersville pipeline in Caddo Parish, Louisiana (a/k/a Milepost 51.5) which allegedly occurred in October 2014; and (c) an estimated 40 barrels released from the Wakita 4-inch gathering line in Oklahoma which allegedly occurred in January 2015. In January 2019, a Consent Decree approved by all parties as well as an accompanying Complaint was filed in the United States District Court for the Western District of Louisiana seeking public comment and final court approval to resolve all penalties with the DOJ and LDEQ for the three releases. Subsequently, the court approved the Consent Decree and the penalty payment of $5.4 million was satisfied. The Consent Decree requires certain injunctive relief to be completed on the Longview-to-Mayersville pipeline within three years, but the injunctive relief is not expected to have any material impact on operations. In addition to resolution of the civil penalty and injunctive relief, we continue to discuss natural resource damages with the Louisiana trustees related to the Caddo Parish, Louisiana release.

In October 2018, the Pipeline and Hazardous Materials Safety Administration ("PHMSA") issued a notice of proposed safety order (the "Notice") to SPMT, a wholly-owned subsidiary of ETO. The Notice alleged that conditions exist on certain pipeline facilities owned and operated by SPMT in Nederland, Texas that pose a pipeline integrity risk to public safety, property or the environment. The Notice also made preliminary findings of fact and proposed corrective measures. SPMT responded to the Notice by submitting a timely written response on November 2, 2018, attended an informal consultation held on January 30, 2019 and entered into a consent agreement with PHMSA resolving the issues in the Notice as of March 2019. The Remedial Work Plan was approved by PHMSA on August 28, 2020.

On June 4, 2019, the Oklahoma Corporation Commission's ("OCC") Transportation Division filed a complaint against SPLP seeking a penalty of up to $1 million related to a May 2018 rupture near Edmond, Oklahoma. The release occurred on the Noble to Douglas 8" pipeline in an area of external corrosion and caused the release of approximately fifteen barrels of crude oil. SPLP responded immediately to the release and remediated the surrounding environment and pipeline in cooperation with the OCC. The OCC filed the complaint alleging that SPLP failed to provide adequate cathodic protection to the pipeline causing the failure. SPLP is negotiating a settlement agreement with the OCC for a lesser penalty. The OCC has accepted our counter offer in conjunction with a proposed consent order. The Consent Order was presented to the OCC at a hearing on August 18, 2020, and is awaiting final signature by the OCC Commissioners.

Environmental Remediation

Our subsidiaries are responsible for environmental remediation at certain sites, including the following:

- certain of our interstate pipelines conduct soil and groundwater remediation related to contamination from past uses of PCBs. PCB assessments are ongoing and, in some cases, our subsidiaries could be contractually responsible for contamination caused by other parties.
- certain gathering and processing systems are responsible for soil and groundwater remediation related to releases of hydrocarbons.
- legacy sites related to Sunoco that are subject to environmental assessments, including formerly owned terminals and other logistics assets, retail sites that Sunoco no longer operates, closed and/or sold refineries and other formerly owned sites.
- Sunoco is potentially subject to joint and several liability for the costs of remediation at sites at which it has been identified as a potentially responsible party ("PRP"). As of December 31, 2020, Sunoco had been named as a PRP at approximately 35 identified or potentially identifiable "Superfund" sites under federal and/or comparable state law. Sunoco is usually one of a number of companies identified as a PRP at a site. Sunoco has reviewed the nature and extent of its involvement at each site and other relevant circumstances and, based upon Sunoco's purported nexus to the sites, believes that its potential liability associated with such sites will not be significant.

To the extent estimable, expected remediation costs are included in the amounts recorded for environmental matters in our consolidated balance sheets. In some circumstances, future costs cannot be reasonably estimated because remediation activities are undertaken as claims are made by customers and former customers. To the extent that an environmental remediation obligation is recorded by a subsidiary that applies regulatory accounting policies, amounts that are expected to be recoverable through tariffs or rates are recorded as regulatory assets on our consolidated balance sheets.

The table below reflects the amounts of accrued liabilities recorded in our consolidated balance sheets related to environmental matters that are considered to be probable and reasonably estimable. Currently, we are not able to estimate

possible losses or a range of possible losses in excess of amounts accrued. Except for matters discussed above, we do not have any material environmental matters assessed as reasonably possible that would require disclosure in our consolidated financial statements.

	December 31,	
	2020	2019
Current	$ 44	$ 46
Non-current	262	274
Total environmental liabilities	$ 306	$ 320

We have established a wholly-owned captive insurance company to bear certain risks associated with environmental obligations related to certain sites that are no longer operating. The premiums paid to the captive insurance company include estimates for environmental claims that have been incurred but not reported, based on an actuarially determined fully developed claims expense estimate. In such cases, we accrue losses attributable to unasserted claims based on the discounted estimates that are used to develop the premiums paid to the captive insurance company.

During the years ended December 31, 2020 and 2019, the Partnership recorded $29 million and $39 million, respectively, of expenditures related to environmental cleanup programs.

Our pipeline operations are subject to regulation by the United States Department of Transportation under PHMSA, pursuant to which PHMSA has established requirements relating to the design, installation, testing, construction, operation, replacement and management of pipeline facilities. Moreover, PHMSA, through the Office of Pipeline Safety, has promulgated a rule requiring pipeline operators to develop integrity management programs to comprehensively evaluate their pipelines, and take measures to protect pipeline segments located in what the rule refers to as “high consequence areas.” Activities under these integrity management programs involve the performance of internal pipeline inspections, pressure testing or other effective means to assess the integrity of these regulated pipeline segments, and the regulations require prompt action to address integrity issues raised by the assessment and analysis. Integrity testing and assessment of all of these assets will continue, and the potential exists that results of such testing and assessment could cause us to incur future capital and operating expenditures for repairs or upgrades deemed necessary to ensure the continued safe and reliable operation of our pipelines; however, no estimate can be made at this time of the likely range of such expenditures.

Our operations are also subject to the requirements of OSHA, and comparable state laws that regulate the protection of the health and safety of employees. In addition, the Occupational Safety and Health Administration’s hazardous communication standard requires that information be maintained about hazardous materials used or produced in our operations and that this information be provided to employees, state and local government authorities and citizens. We believe that our past costs for OSHA required activities, including general industry standards, record keeping requirements, and monitoring of occupational exposure to regulated substances have not had a material adverse effect on our results of operations but there is no assurance that such costs will not be material in the future.

12. REVENUE:

Disaggregation of revenue

The major types of revenue within our reportable segments, are as follows:

- intrastate transportation and storage;
- interstate transportation and storage;
- midstream;
- NGL and refined products transportation and services;
- crude oil transportation and services;
- investment in Sunoco LP;
  - fuel distribution and marketing;
  - all other;
- investment in USAC;
  - contract operations;

- retail parts and services; and
- all other.

Note 17 depicts the disaggregation of revenue by segment, with revenue amounts reflected in accordance with ASC Topic 606.

Intrastate transportation and storage revenue

Our intrastate transportation and storage segment's revenues are determined primarily by the volume of capacity our customers reserve as well as the actual volume of natural gas that flows through the transportation pipelines or that is injected or withdrawn into or out of our storage facilities. Firm transportation and storage contracts require customers to pay certain minimum fixed fees regardless of the volume of commodity they transport or store. These contracts typically include a variable incremental charge based on the actual volume of transportation commodity throughput or stored commodity injected/withdrawn. Under interruptible transportation and storage contracts, customers are not required to pay any fixed minimum amounts, but are instead billed based on actual volume of commodity they transport across our pipelines or inject/withdraw into or out of our storage facilities. Payment for services under these contracts are typically due the month after the services have been performed.

The performance obligation with respect to firm contracts is a promise to provide a single type of service (transportation or storage) daily over the life of the contract, which is fundamentally a "stand-ready" service. While there can be multiple activities required to be performed, these activities are not separable because such activities in combination are required to successfully transfer the overall service for which the customer has contracted. The fixed consideration of the transaction price is allocated ratably over the life of the contract and revenue for the fixed consideration is recognized over time, because the customer simultaneously receives and consumes the benefit of this "stand-ready" service. Incremental fees associated with actual volume for each respective period are recognized as revenue in the period the incremental volume of service is performed.

The performance obligation with respect to interruptible contracts is also a promise to provide a single type of service, but such promise is made on a case-by-case basis at the time the customer requests the service and we accept the customer's request. Revenue is recognized for interruptible contracts at the time the services are performed.

Our intrastate transportation and storage segment also generates revenues and margin from the sale of natural gas to electric utilities, independent power plants, local distribution companies, industrial end-users and other marketing companies on the HPL System. Generally, we purchase natural gas from the market, including purchases from our marketing operations, and from producers at the wellhead.

Interstate transportation and storage revenue

Our interstate transportation and storage segment's revenues are determined primarily by the amount of capacity our customers reserve as well as the actual volume of natural gas that flows through the transportation pipelines or that is injected into or withdrawn out of our storage facilities. Our interstate transportation and storage segment's contracts can be firm or interruptible. Firm transportation and storage contracts require customers to pay certain minimum fixed fees regardless of the volume of commodity transported or stored. In exchange for such fees, we must stand ready to perform a contractually agreed-upon minimum volume of services whenever the customer requests such services. These contracts typically include a variable incremental charge based on the actual volume of transportation commodity throughput or stored commodity injected or withdrawn. Under interruptible transportation and storage contracts, customers are not required to pay any fixed minimum amounts, but are instead billed based on actual volume of commodity they transport across our pipelines or inject into or withdraw out of our storage facilities. Consequently, we are not required to stand ready to provide any contractually agreed-upon volume of service, but instead provides the services based on existing capacity at the time the customer requests the services. Payment for services under these contracts are typically due the month after the services have been performed.

The performance obligation with respect to firm contracts is a promise to provide a single type of service (transportation or storage) daily over the life of the contract, which is fundamentally a "stand-ready" service. While there can be multiple activities required to be performed, these activities are not separable because such activities in combination are required to successfully transfer the overall service for which the customer has contracted. The fixed consideration of the transaction price is allocated ratably over the life of the contract and revenue for the fixed consideration is recognized over time, because the customer simultaneously receives and consumes the benefit of this "stand-ready" service. Incremental fees associated with actual volume for each respective period are recognized as revenue in the period the incremental volume of service is performed.

The performance obligation with respect to interruptible contracts is also a promise to provide a single type of services, but such promise is made on a case-by-case basis at the time the customer requests the service and we accept the customer's request. Revenue is recognized for interruptible contracts at the time the services are performed.

Lake Charles LNG's revenues are primarily derived from terminalling services for shippers by receiving LNG at the facility for storage and delivering such LNG to shippers, either in liquid state or gaseous state after regasification. Lake Charles LNG derives all of its revenue from a series of long-term contracts with a wholly-owned subsidiary of Shell. Terminalling revenue is generated from fees paid by Shell for storage and other associated services at the terminal. Payment for services under these contracts are typically due the month after the services have been performed.

The terminalling agreements are considered to be firm agreements, because they include fixed fee components that are charged regardless of the volumes transported by Shell or services provided at the terminal.

The performance obligation with respect to firm contracts is a promise to provide a single type of service (terminalling) daily over the life of the contract, which is fundamentally a "stand-ready" service. While there can be multiple activities required to be performed, these activities are not separable because such activities in combination are required to successfully transfer the overall service for which the customer has contracted. The fixed consideration of the transaction price is allocated ratably over the life of the contract and revenue for the fixed consideration is recognized over time, because the customer simultaneously receives and consumes the benefit of this "stand-ready" service. Incremental fees associated with actual volume for each respective period are recognized as revenue in the period the incremental volume of service is performed.

Midstream revenue

Our midstream segment's revenues are derived primarily from margins we earn for natural gas volumes that are gathered, processed, and/or transported. The various types of revenue contracts our midstream segment enters into include:

Fixed fee gathering and processing: Contracts under which we provide gathering and processing services in exchange for a fixed cash fee per unit of volume. Revenue for cash fees is recognized when the service is performed.

Keepwhole: Contracts under which we gather raw natural gas from a third-party producer, process the gas to convert it to pipeline quality natural gas, and redeliver to the producer a thermal-equivalent volume of pipeline quality natural gas. In exchange for these services, we retain the NGLs extracted from the raw natural gas received from the producer as well as cash fees paid by the producer. The value of NGLs retained as well as cash fees is recognized as revenue when the services are performed.

Percent of Proceeds ("POP"): Contracts under which we provide gathering and processing services in exchange for a specified percentage of the producer's commodity ("POP percentage") and also in some cases additional cash fees. The two types of POP revenue contracts are described below:

- *In-Kind POP:* We retain our POP percentage (non-cash consideration) and also any additional cash fees in exchange for providing the services. We recognize revenue for the non-cash consideration and cash fees at the time the services are performed.
- *Mixed POP:* We purchase NGLs from the producer and retain a portion of the residue gas as non-cash consideration for services provided. We may also receive cash fees for such services. Under Topic 606, these agreements were determined to be hybrid agreements which were partially supply agreements (for the NGLs we purchased) and customer agreements (for the services provided related to the product that was returned to the customer). Given that these are hybrid agreements, we split the cash and non-cash consideration between revenue and a reduction of costs based on the value of the service provided vs. the value of the supply received.

Payment for services under these contracts are typically due the month after the services have been performed.

The performance obligations with respect to our midstream segment's contracts are to provide gathering, transportation and processing services, each of which would be completed on or about the same time, and each of which would be recognized on the same line item on the income statement, therefore identification of separate performance obligations would not impact the timing or geography of revenue recognition.

Certain contracts of our midstream segment include throughput commitments under which customers commit to purchasing a certain minimum volume of service over a specified time period. If such volume of service is not purchased by the customer, deficiency fees are billed to the customer. In some cases, the customer is allowed to apply any deficiency fees paid to future purchases of services. In such cases, we defer revenue recognition until the customer uses the deficiency

fees for services provided or becomes unable to use the fees as payment for future services due to expiration of the contractual period the fees can be applied or physical inability of the customer to utilize the fees due to capacity constraints.

Our midstream segment also generates revenues from the sale of residue gas and NGLs at the tailgate of our processing facilities primarily to affiliates and some third-party customers.

NGL and refined products transportation and services revenue

Our NGL and refined products segment's revenues are primarily derived from transportation, fractionation, blending, and storage of NGL and refined products as well as acquisition and marketing activities. Revenues are generated utilizing a complementary network of pipelines, storage and blending facilities, and strategic off-take locations that provide access to multiple NGL markets. Transportation, fractionation, and storage revenue is generated from fees charged to customers under a combination of firm and interruptible contracts. Firm contracts are in the form of take-or-pay arrangements where certain fees will be charged to customers regardless of the volume of service they request for any given period. Under interruptible contracts, customers are not required to pay any fixed minimum amounts, but are instead billed based on actual volume of service provided for any given period. Payment for services under these contracts are typically due the month after the services have been performed.

The performance obligation with respect to firm contracts is a promise to provide a single type of service (transportation, fractionation, blending, or storage) daily over the life of the contract, which is fundamentally a "stand-ready" service. While there can be multiple activities required to be performed, these activities are not separable because such activities in combination are required to successfully transfer the overall service for which the customer has contracted. The fixed consideration of the transaction price is allocated ratably over the life of the contract and revenue for the fixed consideration is recognized over time, because the customer simultaneously receives and consumes the benefit of this "stand-ready" service. Incremental fees associated with actual volume for each respective period are recognized as revenue in the period the incremental volume of service is performed.

The performance obligation with respect to interruptible contracts is also a promise to provide a single type of services, but such promise is made on a case-by-case basis at the time the customer requests the service and we accept the customer's request. Revenue is recognized for interruptible contracts at the time the services are performed.

Acquisition and marketing contracts are in most cases short-term agreements involving purchase and/or sale of NGLs and other related hydrocarbons at market rates. These contracts were not affected by ASC 606.

Crude oil transportation and services revenue

Our crude oil transportation and services segment revenues are primarily derived from providing transportation, terminalling and acquisition and marketing services to crude oil markets throughout the southwest, midwest and northeastern United States. Crude oil transportation revenue is generated from tariffs paid by shippers utilizing our transportation services and is generally recognized as the related transportation services are provided. Crude oil terminalling revenue is generated from fees paid by customers for storage and other associated services at the terminal. Crude oil acquisition and marketing revenue is generated from sale of crude oil acquired from a variety of suppliers to third parties. Payment for services under these contracts are typically due the month after the services have been performed.

Certain transportation and terminalling agreements are considered to be firm agreements, because they include fixed fee components that are charged regardless of the volume of crude oil transported by the customer or services provided at the terminal. For these agreements, any fixed fees billed in excess of services provided are not recognized as revenue until the earlier of (i) the time at which the customer applies the fees against cost of service provided in a later period, or (ii) the customer becomes unable to apply the fees against cost of future service due to capacity constraints or contractual terms.

The performance obligation with respect to firm contracts is a promise to provide a single type of service (transportation or terminalling) daily over the life of the contract, which is fundamentally a "stand-ready" service. While there can be multiple activities required to be performed, these activities are not separable because such activities in combination are required to successfully transfer the overall service for which the customer has contracted. The fixed consideration of the transaction price is allocated ratably over the life of the contract and revenue for the fixed consideration is recognized over time, because the customer simultaneously receives and consumes the benefit of this "stand-ready" service. Incremental fees associated with actual volume for each respective period are recognized as revenue in the period the incremental volume of service is performed.

The performance obligation with respect to interruptible contracts is also a promise to provide a single type of service, but such promise is made on a case-by-case basis at the time the customer requests the service and/or product and we accept the customer's request. Revenue is recognized for interruptible contracts at the time the services are performed.

Acquisition and marketing contracts are in most cases short-term agreements involving purchase and/or sale of crude oil at market rates. These contracts were not affected by ASC 606.

Sunoco LP's fuel distribution and marketing revenue

Sunoco LP's fuel distribution and marketing operations earn revenue from the following channels: sales to dealers, sales to distributors, unbranded wholesale revenue, commission agent revenue, rental income and other income. Motor fuel revenue consists primarily of the sale of motor fuel under supply agreements with third party customers and affiliates. Fuel supply contracts with Sunoco LP's customers generally provide that Sunoco LP distribute motor fuel at a formula price based on published rates, volume-based profit margin, and other terms specific to the agreement. The customer is invoiced the agreed-upon price with most payment terms ranging less than 30 days. If the consideration promised in a contract includes a variable amount, Sunoco LP estimates the variable consideration amount and factors in such an estimate to determine the transaction price under the expected value method.

Revenue is recognized under the motor fuel contracts at the point in time the customer takes control of the fuel. At the time control is transferred to the customer the sale is considered final, because the agreements do not grant customers the right to return motor fuel. Under the new standard, to determine when control transfers to the customer, the shipping terms of the contract are assessed as shipping terms are considered a primary indicator of the transfer of control. For FOB shipping point terms, revenue is recognized at the time of shipment. The performance obligation with respect to the sale of goods is satisfied at the time of shipment since the customer gains control at this time under the terms. Shipping and/or handling costs that occur before the customer obtains control of the goods are deemed to be fulfillment activities and are accounted for as fulfillment costs. Once the goods are shipped, Sunoco LP is precluded from redirecting the shipment to another customer and revenue is recognized.

Commission agent revenue consists of sales from commission agent agreements between Sunoco LP and select operators. Sunoco LP supplies motor fuel to sites operated by commission agents and sells the fuel directly to the end customer. In commission agent arrangements, control of the product is transferred at the point in time when the goods are sold to the end customer. To reflect the transfer of control, Sunoco LP recognizes commission agent revenue at the point in time fuel is sold to the end customer.

Sunoco LP receives rental income from leased or subleased properties. Revenue from leasing arrangements for which Sunoco LP is the lessor are recognized ratably over the term of the underlying lease.

Sunoco LP's all other revenue

Sunoco LP's all other operations earn revenue from the following channels: motor fuel sales, rental income and other income. Motor fuel sales consist of fuel sales to consumers at company-operated retail stores. Other income includes merchandise revenue that comprises the in-store merchandise and food service sales at company-operated retail stores, and other revenue that represents a variety of other services within Sunoco LP's all other operations including credit card processing, car washes, lottery, automated teller machines, money orders, prepaid phone cards and wireless services. Revenue from all other operations is recognized when (or as) the performance obligations are satisfied (i.e. when the customer obtains control of the good or the service is provided).

USAC's contract operations revenue

USAC's revenue from contracted compression, station, gas treating and maintenance services is recognized ratably under its fixed-fee contracts over the term of the contract as services are provided to its customers. Initial contract terms typically range from six months to five years, however USAC usually continues to provide compression services at a specific location beyond the initial contract term, either through contract renewal or on a month-to-month or longer basis. USAC primarily enters into fixed-fee contracts whereby its customers are required to pay the monthly fee even during periods of limited or disrupted throughput. Services are generally billed monthly, one month in advance of the commencement of the service month, except for certain customers who are billed at the beginning of the service month, and payment is generally due 30 days after receipt of the invoice. Amounts invoiced in advance are recorded as deferred revenue until earned, at which time they are recognized as revenue. The amount of consideration USAC receives and revenue it recognizes is based upon the fixed fee rate stated in each service contract.

Variable consideration exists in select contracts when billing rates vary based on actual equipment availability or volume of total installed horsepower.

USAC's contracts with customers may include multiple performance obligations. For such arrangements, USAC allocates revenues to each performance obligation based on its relative standalone service fee. USAC generally determines standalone service fees based on the service fees charged to customers or using expected cost plus margin.

The majority of USAC's service performance obligations are satisfied over time as services are rendered at selected customer locations on a monthly basis and based upon specific performance criteria identified in the applicable contract. The monthly service for each location is substantially the same service month to month and is promised consecutively over the service contract term. USAC measures progress and performance of the service consistently using a straight-line, time-based method as each month passes, because its performance obligations are satisfied evenly over the contract term as the customer simultaneously receives and consumes the benefits provided by its service. If variable consideration exists, it is allocated to the distinct monthly service within the series to which such variable consideration relates. USAC has elected to apply the invoicing practical expedient to recognize revenue for such variable consideration, as the invoice corresponds directly to the value transferred to the customer based on its performance completed to date.

There are typically no material obligations for returns or refunds. USAC's standard contracts do not usually include material non-cash consideration.

USAC's retail parts and services revenue

USAC's retail parts and service revenue is earned primarily on freight and crane charges that are directly reimbursable by USAC's customers and maintenance work on units at its customers' locations that are outside the scope of its core maintenance activities. Revenue from retail parts and services is recognized at the point in time the part is transferred or service is provided and control is transferred to the customer. At such time, the customer has the ability to direct the use of the benefits of such part or service after USAC has performed its services. USAC bills upon completion of the service or transfer of the parts, and payment is generally due 30 days after receipt of the invoice. The amount of consideration USAC receives and revenue it recognizes is based upon the invoice amount. There are typically no material obligations for returns, refunds, or warranties. USAC's standard contracts do not usually include material variable or non-cash consideration.

All other revenue

Our all other segment primarily includes our compression equipment business which provides full-service compression design and manufacturing services for the oil and gas industry. It also includes the management of coal and natural resources properties and the related collection of royalties. We also earn revenues from other land management activities, such as selling standing timber, leasing coal-related infrastructure facilities, and collecting oil and gas royalties. These operations also include end-user coal handling facilities. There were no material changes to the manner in which revenues within this segment are recorded under the new standard.

Contract Balances with Customers

The Partnership satisfies its obligations by transferring goods or services in exchange for consideration from customers. The timing of performance may differ from the timing the associated consideration is paid to or received from the customer, thus resulting in the recognition of a contract asset or a contract liability.

The Partnership recognizes a contract asset when making upfront consideration payments to certain customers or when providing services to customers prior to the time at which the Partnership is contractually allowed to bill for such services.

The Partnership recognizes a contract liability if the customer's payment of consideration precedes the Partnership's fulfillment of the performance obligations. Certain contracts contain provisions requiring customers to pay a fixed minimum fee, but allows customers to apply such fees against services to be provided at a future point in time. These amounts are reflected as deferred revenue until the customer applies the deficiency fees to services provided or becomes unable to use the fees as payment for future services due to expiration of the contractual period the fees can be applied or physical inability of the customer to utilize the fees due to capacity constraints. Additionally, Sunoco LP maintains some franchise agreements requiring dealers to make one-time upfront payments for long-term license agreements. Sunoco LP recognizes a contract liability when the upfront payment is received and recognizes revenue over the term of the license.

The following table summarizes the consolidated activity of our contract liabilities:

	Contract Liabilities
Balance, December 31, 2019	$ 394
Additions	651
Revenue recognized	(680)
Balance, December 31, 2019	365
Additions	771
Revenue recognized	(846)
Balance, December 31, 2020	$ 290

The balances of Sunoco LP's contract assets and contract liabilities as of December 31, 2020 and 2019 were as follows:

	December 31, 2020	December 31, 2019
Contract Balances		
Contract asset	$ 121	$ 117
Accounts receivable from contracts with customers	256	366

Costs to Obtain or Fulfill a Contract

Sunoco LP recognizes an asset from the costs incurred to obtain a contract (e.g. sales commissions) only if it expects to recover those costs. On the other hand, the costs to fulfill a contract are capitalized if the costs are specifically identifiable to a contract, would result in enhancing resources that will be used in satisfying performance obligations in future and are expected to be recovered. These capitalized costs are recorded as a part of other current assets and other non-current assets and are amortized on a systematic basis consistent with the pattern of transfer of the goods or services to which such costs relate. The amount of amortization expense that Sunoco LP recognized for the years ended December 31, 2020, 2019 and 2018 was $18 million, $17 million and $14 million, respectively. Sunoco LP has also made a policy election of expensing the costs to obtain a contract, as and when they are incurred, in cases where the expected amortization period is one year or less.

Performance Obligations

At contract inception, the Partnership assesses the goods and services promised in its contracts with customers and identifies a performance obligation for each promise to transfer a good or service (or bundle of goods or services) that is distinct. To identify the performance obligations, the Partnership considers all the goods or services promised in the contract, whether explicitly stated or implied based on customary business practices. For a contract that has more than one performance obligation, the Partnership allocates the total contract consideration it expects to be entitled to, to each distinct performance obligation based on a standalone-selling price basis. Revenue is recognized when (or as) the performance obligations are satisfied, that is, when the customer obtains control of the good or service. Certain of our contracts contain variable components, which, when combined with the fixed component are considered a single performance obligation. For these types of contracts, only the fixed component of the contracts are included in the table below.

Sunoco LP distributes fuel under long-term contracts to branded distributors, branded and unbranded third-party dealers, and branded and unbranded retail fuel outlets. Sunoco LP branded supply contracts with distributors generally have both time and volume commitments that establish contract duration. These contracts have an initial term of approximately nine years, with an estimated, volume-weighted term remaining of approximately four years.

As part of the asset purchase agreement with 7-Eleven, Sunoco LP and 7-Eleven and SEI Fuel (collectively, the "Distributor") have entered into a 15-year take-or-pay fuel supply agreement in which the Distributor is required to purchase a volume of fuel that provides Sunoco LP a minimum amount of gross profit annually. Sunoco LP expects to recognize this revenue in accordance with the contract as Sunoco LP transfers control of the product to the customer. However, in case of annual shortfall Sunoco LP will recognize the amount payable by the Distributor at the sooner of the time at which the Distributor makes up the shortfall or becomes contractually or operationally unable to do so. The transaction price of the contract is variable in nature, fluctuating based on market conditions. The Partnership has elected to take the practical expedient not to estimate the amount of variable consideration allocated to wholly unsatisfied performance obligations.

In some contractual arrangements, Sunoco LP grants dealers a franchise license to operate Sunoco LP's retail stores over the life of a franchise agreement. In return for the grant of the retail store license, the dealer makes a one-time nonrefundable franchise fee payment to Sunoco LP plus sales based royalties payable to Sunoco LP at a contractual rate during the period of the franchise agreement. Under the requirements of ASC Topic 606, the franchise license is deemed to be a symbolic license for which recognition of revenue over time is the most appropriate measure of progress toward complete satisfaction of the performance obligation. Revenue from this symbolic license is recognized evenly over the life of the franchise agreement.

As of December 31, 2020, the aggregate amount of transaction price allocated to unsatisfied (or partially satisfied) performance obligations was $40.35 billion, and the Partnership expects to recognize this amount as revenue within the time bands illustrated below:

	Years Ending December 31,				
	2021	2022	2023	Thereafter	Total
Revenue expected to be recognized on contracts with customers existing as of December 31, 2020	$ 5,120	$ 5,475	$ 5,051	$ 24,701	$ 40,347

Practical Expedients Utilized by the Partnership

The Partnership elected the following practical expedients in accordance with Topic 606:

- *Right to invoice:* The Partnership elected to utilize an output method to recognize revenue that is based on the amount to which the Partnership has a right to invoice a customer for services performed to date, if that amount corresponds directly with the value provided to the customer for the related performance or its obligation completed to date. As such, the Partnership recognized revenue in the amount to which it had the right to invoice customers.
- *Significant financing component:* The Partnership elected not to adjust the promised amount of consideration for the effects of significant financing component if the Partnership expects, at contract inception, that the period between the transfer of a promised good or service to a customer and when the customer pays for that good or service will be one year or less.
- *Unearned variable consideration:* The Partnership elected to only disclose the unearned fixed consideration associated with unsatisfied performance obligations related to our various customer contracts which contain both fixed and variable components.
- *Incremental costs of obtaining a contract:* The Partnership generally expenses sales commissions when incurred because the amortization period would have been less than one year. We record these costs within general and administrative expenses. The Partnership elected to expense the incremental costs of obtaining a contract when the amortization period for such contracts would have been one year or less.
- *Shipping and handling costs:* The Partnership elected to account for shipping and handling activities that occur after the customer has obtained control of a good as fulfillment activities (i.e., an expense) rather than as a promised service.
- *Measurement of transaction price:* The Partnership has elected to exclude from the measurement of transaction price all taxes assessed by a governmental authority that are both imposed on and concurrent with a specific revenue-producing transaction and collected by the Partnership from a customer (i.e., sales tax, value added tax, etc.).
- *Variable consideration of wholly unsatisfied performance obligations:* The Partnership has elected to exclude the estimate of variable consideration to the allocation of wholly unsatisfied performance obligations.

13. LEASE ACCOUNTING:

Lessee Accounting

The Partnership leases terminal facilities, tank cars, office space, land and equipment under non-cancelable operating leases whose initial terms are typically five to 15 years, with some real estate leases having terms of 40 years or more, along with options that permit renewals for additional periods. At the inception of each, we determine if the arrangement is a lease or contains an embedded lease and review the facts and circumstances of the arrangement to classify lease assets as operating or finance leases under Topic 842. The Partnership has elected not to record any leases with terms of 12 months or less on the balance sheet.

At present, the majority of the Partnership's active leases are classified as operating in accordance with Topic 842. Balances related to operating leases are included in operating lease ROU assets, accrued and other current liabilities, operating lease current liabilities and non-current operating lease liabilities in our consolidated balance sheets. Finance leases represent a small portion of the active lease agreements and are included in finance lease ROU assets, current maturities of long-term debt and long-term debt, less current maturities in our consolidated balance sheets. The ROU assets represent the Partnership's right to use an underlying asset for the lease term and lease liabilities represent the obligation of the Partnership to make minimum lease payments arising from the lease for the duration of the lease term.

Most leases include one or more options to renew, with renewal terms that can extend the lease term from one to 20 years or greater. The exercise of lease renewal options is typically at the sole discretion of the Partnership and lease extensions are evaluated on a lease-by-lease basis. Leases containing early termination clauses typically require the agreement of both parties to the lease. At the inception of a lease, all renewal options reasonably certain to be exercised are considered when determining the lease term. Presently, the Partnership does not have leases that include options to purchase or automatic transfer of ownership of the leased property to the Partnership. The depreciable life of lease assets and leasehold improvements are limited by the expected lease term.

To determine the present value of future minimum lease payments, we use the implicit rate when readily determinable. Presently, because many of our leases do not provide an implicit rate, the Partnership applies its incremental borrowing rate based on the information available at the lease commencement date to determine the present value of minimum lease payments. The operating and finance lease ROU assets include any lease payments made and exclude lease incentives.

Minimum rent payments are expensed on a straight-line basis over the term of the lease. In addition, some leases require additional contingent or variable lease payments, which are based on the factors specific to the individual agreement. Variable lease payments the Partnership is typically responsible for include payment of real estate taxes, maintenance expenses and insurance.

For short-term leases (leases that have term of twelve months or less upon commencement), lease payments are recognized on a straight-line basis and no ROU assets are recorded.

The components of operating and finance lease amounts recognized in the accompanying consolidated balance sheet as of December 31, 2020 and 2019 were as follows:

	December 31,	
	2020	2019
Operating leases:		
Lease right-of-use assets, net	$ 863	$ 935
Operating lease current liabilities	53	60
Accrued and other current liabilities	1	1
Non-current operating lease liabilities	837	901
Finance leases:		
Property, plant and equipment, net	$ 1	1
Lease right-of-use assets, net	3	29
Accrued and other current liabilities	1	1
Current maturities of long-term debt	1	6
Long-term debt, less current maturities	6	26
Other non-current liabilities	1	2

The components of lease expense for the years ended December 31, 2020 and 2019 were as follows:

	Income Statement Location	Year Ended December 31, 2020	2019
Operating lease costs:			
Operating lease cost	Cost of goods sold	$ 14	$ 28
Operating lease cost	Operating expenses	75	73
Operating lease cost	Selling, general and administrative	17	16
Total operating lease costs		106	117
Finance lease costs:			
Amortization of lease assets	Depreciation, depletion and amortization	3	6
Interest on lease liabilities	Interest expense, net of capitalized interest	1	1
Total finance lease costs		4	7
Short-term lease cost	Operating expenses	31	42
Variable lease cost	Operating expenses	16	17
Lease costs, gross		157	183
Less: Sublease income	Other revenue	48	47
Lease costs, net		$ 109	$ 136

The weighted average remaining lease terms and weighted average discount rates as of December 31, 2020 and 2019 were as follows:

	December 31, 2020	2019
Weighted-average remaining lease term (years):		
Operating leases	22	24
Finance leases	9	5
Weighted-average discount rate (%):		
Operating leases	5 %	5 %
Finance leases	8 %	5 %

Cash flows and non-cash activity related to leases for the years ended December 31, 2020 and 2019 were as follows:

	Year Ended December 31, 2020	2019
Operating cash flows from operating leases	$ (117)	$ (159)
Lease assets obtained in exchange for new finance lease liabilities	—	28
Lease assets obtained in exchange for new operating lease liabilities	42	40

Maturities of lease liabilities as of December 31, 2020 are as follows:

	Operating leases	Finance leases	Total
2021	$ 99	$ 2	$ 101
2022	85	2	87
2023	79	2	81
2024	76	1	77
2025	75	1	76
Thereafter	1,140	4	1,144
Total lease payments	1,554	12	1,566
Less: present value discount	664	3	667
Present value of lease liabilities	$ 890	$ 9	$ 899

Lessor Accounting

The Partnership leases or subleases a portion of its real estate portfolio to third-party companies as a stable source of long-term revenue. Our lessor and sublease portfolio consists mainly of operating leases with convenience store operators. At this time, most lessor agreements contain five-year terms with renewal options to extend and early termination options based on established terms specific to the individual agreement.

Rental income included in other revenue in our consolidated statement of operations for the years ended December 31, 2020 and 2019 was $144 million and $149 million, respectively.

Future minimum operating lease payments receivable as of December 31, 2020 are as follows:

	Lease Payments
2021	$ 103
2022	64
2023	8
2024	3
2025	2
Thereafter	5
Total undiscounted cash flows	$ 185

14. DERIVATIVE ASSETS AND LIABILITIES:

Commodity Price Risk

We are exposed to market risks related to the volatility of commodity prices. To manage the impact of volatility from these prices, we utilize various exchange-traded and OTC commodity financial instrument contracts. These contracts consist primarily of futures, swaps and options and are recorded at fair value in our consolidated balance sheets.

We use futures and basis swaps, designated as fair value hedges, to hedge our natural gas inventory stored in our Bammel storage facility. At hedge inception, we lock in a margin by purchasing gas in the spot market or off peak season and entering into a financial contract. Changes in the spreads between the forward natural gas prices and the physical inventory spot price result in unrealized gains or losses until the underlying physical gas is withdrawn and the related designated derivatives are settled. Once the gas is withdrawn and the designated derivatives are settled, the previously unrealized gains or losses associated with these positions are realized.

We use futures, swaps and options to hedge the sales price of natural gas we retain for fees in our intrastate transportation and storage segment and operational gas sales on our interstate transportation and storage segment. These contracts are not designated as hedges for accounting purposes.

We use NGL and crude derivative swap contracts to hedge forecasted sales of NGL and condensate equity volumes we retain for fees in our midstream segment whereby our subsidiaries generally gather and process natural gas on behalf of

producers, sell the resulting residue gas and NGL volumes at market prices and remit to producers an agreed upon percentage of the proceeds based on an index price for the residue gas and NGL. These contracts are not designated as hedges for accounting purposes.

We utilize swaps, futures and other derivative instruments to mitigate the risk associated with market movements in the price of refined products and NGLs to manage our storage facilities and the purchase and sale of purity NGL. These contracts are not designated as hedges for accounting purposes.

We use futures and swaps to achieve ratable pricing of crude oil purchases, to convert certain expected refined product sales to fixed or floating prices, to lock in margins for certain refined products and to lock in the price of a portion of natural gas purchases or sales. These contracts are not designated as hedges for accounting purposes.

We use financial commodity derivatives to take advantage of market opportunities in our trading activities which complement our transportation and storage segment's operations and are netted in cost of products sold in our consolidated statements of operations. We also have trading and marketing activities related to power and natural gas in our all other segment which are also netted in cost of products sold. As a result of our trading activities and the use of derivative financial instruments in our transportation and storage segment, the degree of earnings volatility that can occur may be significant, favorably or unfavorably, from period to period. We attempt to manage this volatility through the use of daily position and profit and loss reports provided to our risk oversight committee, which includes members of senior management, and the limits and authorizations set forth in our commodity risk management policy.

The following table details our outstanding commodity-related derivatives:

	December 31, 2020		December 31, 2019	
	Notional Volume	Maturity	Notional Volume	Maturity
Mark-to-Market Derivatives				
(Trading)				
Natural Gas (BBtu):				
Fixed Swaps/Futures	1,603	2021-2022	1,483	2020
Basis Swaps IFERC/NYMEX[(1)]	(44,225)	2021-2022	(35,208)	2020-2024
Power (Megawatt):				
Forwards	1,392,400	2021-2029	3,213,450	2020-2029
Futures	18,706	2021-2022	(353,527)	2020
Options – Puts	519,071	2021	51,615	2020
Options – Calls	2,343,293	2021	(2,704,330)	2020-2021
(Non-Trading)				
Natural Gas (BBtu):				
Basis Swaps IFERC/NYMEX	(29,173)	2021-2022	(18,923)	2020-2022
Swing Swaps IFERC	11,208	2021	(9,265)	2020
Fixed Swaps/Futures	(53,575)	2021-2022	(3,085)	2020-2021
Forward Physical Contracts	(11,861)	2021	(13,364)	2020-2021
NGL (MBbls) – Forwards/Swaps	(5,840)	2021-2022	(1,300)	2020-2021
Crude (MBbls) – Forwards/Swaps	—	—	4,465	2020
Refined Products (MBbls) – Futures	(2,765)	2021	(2,473)	2020-2021
Corn (thousand bushels)	—	—	(1,210)	2020
Fair Value Hedging Derivatives				
(Non-Trading)				
Natural Gas (BBtu):				
Basis Swaps IFERC/NYMEX	(30,113)	2021	(31,780)	2020
Fixed Swaps/Futures	(30,113)	2021	(31,780)	2020
Hedged Item – Inventory	30,113	2021	31,780	2020

(1) Includes aggregate amounts for open positions related to Houston Ship Channel, Waha Hub, NGPL TexOk, West Louisiana Zone and Henry Hub locations.

Interest Rate Risk

We are exposed to market risk for changes in interest rates. To maintain a cost effective capital structure, we borrow funds using a mix of fixed rate debt and variable rate debt. We also manage our interest rate exposure by utilizing interest rate swaps to achieve a desired mix of fixed and variable rate debt. We also utilize forward starting interest rate swaps to lock in the rate on a portion of our anticipated debt issuances.

The following table summarizes our interest rate swaps outstanding, none of which were designated as hedges for accounting purposes:

		Notional Amount Outstanding	
Term	Type [1]	December 31, 2020	December 31, 2019
July 2020 [2][3]	Forward-starting to pay a fixed rate of 3.52% and receive a floating rate	$ —	$ 400
July 2021 [2]	Forward-starting to pay a fixed rate of 3.55% and receive a floating rate	400	400
July 2022 [2]	Forward-starting to pay a fixed rate of 3.80% and receive a floating rate	400	400

(1) Floating rates are based on 3-month LIBOR.

(2) Represents the effective date. These forward-starting swaps have terms of 30 years with a mandatory termination date the same as the effective date.

(3) The July 2020 interest rate swaps were terminated in January 2020.

Credit Risk

Credit risk refers to the risk that a counterparty may default on its contractual obligations resulting in a loss to the Partnership. Credit policies have been approved and implemented to govern the Partnership's portfolio of counterparties with the objective of mitigating credit losses. These policies establish guidelines, controls and limits to manage credit risk within approved tolerances by mandating an appropriate evaluation of the financial condition of existing and potential counterparties, monitoring agency credit ratings, and by implementing credit practices that limit exposure according to the risk profiles of the counterparties. Furthermore, the Partnership may, at times, require collateral under certain circumstances to mitigate credit risk as necessary. The Partnership also uses industry standard commercial agreements which allow for the netting of exposures associated with transactions executed under a single commercial agreement. Additionally, we utilize master netting agreements to offset credit exposure across multiple commercial agreements with a single counterparty or affiliated group of counterparties.

The Partnership's counterparties consist of a diverse portfolio of customers across the energy industry, including petrochemical companies, commercial and industrial end-users, oil and gas producers, municipalities, gas and electric utilities, midstream companies and independent power generators. Our overall exposure may be affected positively or negatively by macroeconomic or regulatory changes that impact our counterparties to one extent or another. Currently, management does not anticipate a material adverse effect in our financial position or results of operations as a consequence of counterparty non-performance.

The Partnership has maintenance margin deposits with certain counterparties in the OTC market, primarily with independent system operators and with clearing brokers. Payments on margin deposits are required when the value of a derivative exceeds our pre-established credit limit with the counterparty. Margin deposits are returned to us on or about the settlement date for non-exchange traded derivatives, and we exchange margin calls on a daily basis for exchange traded transactions. Since the margin calls are made daily with the exchange brokers, the fair value of the financial derivative instruments are deemed current and netted in deposits paid to vendors within other current assets in the consolidated balance sheets.

For financial instruments, failure of a counterparty to perform on a contract could result in our inability to realize amounts that have been recorded on our consolidated balance sheets and recognized in net income or other comprehensive income.

Derivative Summary

The following table provides a summary of our derivative assets and liabilities:

	Fair Value of Derivative Instruments			
	Asset Derivatives		Liability Derivatives	
	December 31, 2020	December 31, 2019	December 31, 2020	December 31, 2019
Derivatives designated as hedging instruments:				
Commodity derivatives (margin deposits)	$ 25	$ 24	$ (32)	$ —
	25	24	(32)	—
Derivatives not designated as hedging instruments:				
Commodity derivatives (margin deposits)	90	319	(166)	(350)
Commodity derivatives	53	41	(71)	(39)
Interest rate derivatives	—	—	(448)	(399)
	143	360	(685)	(788)
Total derivatives	$ 168	$ 384	$ (717)	$ (788)

The following table presents the fair value of our recognized derivative assets and liabilities on a gross basis and amounts offset on the consolidated balance sheets that are subject to enforceable master netting arrangements or similar arrangements:

		Asset Derivatives		Liability Derivatives	
	Balance Sheet Location	December 31, 2020	December 31, 2019	December 31, 2020	December 31, 2019
Derivatives without offsetting agreements	Derivative liabilities	$ —	$ —	$ (448)	$ (399)
Derivatives in offsetting agreements:					
OTC contracts	Derivative assets (liabilities)	53	41	(71)	(39)
Broker cleared derivative contracts	Other current assets (liabilities)	115	343	(198)	(350)
		168	384	(717)	(788)
Offsetting agreements:					
Counterparty netting	Derivative assets (liabilities)	(44)	(18)	44	18
Counterparty netting	Other current assets (liabilities)	(64)	(318)	64	318
Total net derivatives		$ 60	$ 48	$ (609)	$ (452)

We disclose the non-exchange traded financial derivative instruments as derivative assets and liabilities on our consolidated balance sheets at fair value with amounts classified as either current or long-term depending on the anticipated settlement

The following tables summarize the amounts recognized with respect to our derivative financial instruments:

	Location of Gain (Loss) Recognized in Income on Derivatives	Amount of Gain (Loss) Recognized in Income Representing Hedge Ineffectiveness and Amount Excluded from the Assessment of Effectiveness		
		Years Ended December 31,		
		2020	2019	2018
Derivatives in fair value hedging relationships (including hedged item):				
Commodity derivatives	Cost of products sold	$ —	$ —	$ (3)

	Location of Gain (Loss) Recognized in Income on Derivatives	Amount of Gain (Loss) Recognized in Income on Derivatives		
		Years Ended December 31,		
		2020	2019	2018
Derivatives not designated as hedging instruments:				
Commodity derivatives – Trading	Revenues	$ —	$ (3)	$ —
Commodity derivatives – Trading	Cost of products sold	8	21	32
Commodity derivatives – Non-trading	Cost of products sold	(34)	(100)	(102)
Interest rate derivatives	Gains (losses) on interest rate derivatives	(203)	(241)	47
Total		$ (229)	$ (323)	$ (23)

15. RETIREMENT BENEFITS:

Savings and Profit Sharing Plans

We and our subsidiaries sponsor defined contribution savings and profit sharing plans, which collectively cover virtually all eligible employees, including those of ETO, Lake Charles LNG, Sunoco LP and USAC. Employer matching contributions are calculated using a formula based on employee contributions. We and our subsidiaries made matching contributions of $35 million, $66 million and $62 million to these 401(k) savings plans for the years ended December 31, 2020, 2019 and 2018, respectively.

As a result of the economic conditions in 2020, effective June 8, 2020, the Partnership ceased employer matching and profit sharing contributions through December 31, 2020. The Partnership resumed all such contributions in 2021.

Pension and Other Postretirement Benefit Plans

Panhandle

Postretirement benefits expense for the years ended December 31, 2020, 2019, and 2018 reflect the impact of changes Panhandle or its affiliates adopted as of September 30, 2013, to modify its retiree medical benefits program, effective January 1, 2014. The modification placed all eligible retirees on a common medical benefit platform, subject to limits on Panhandle's annual contribution toward eligible retirees' medical premiums. Prior to January 1, 2013, affiliates of Panhandle offered postretirement health care and life insurance benefit plans (other postretirement plans) that covered substantially all employees. Effective January 1, 2013, participation in the plan was frozen and medical benefits were no longer offered to non-union employees. Effective January 1, 2014, retiree medical benefits were no longer offered to union employees.

Effective January 1, 2018, the plan was amended to extend coverage to a closed group of former employees based on certain criteria.

ETC Sunoco

ETC Sunoco has a plan which provides health care benefits for substantially all of its current retirees. The cost to provide the postretirement benefit plan is shared by ETC Sunoco. and its retirees. Access to postretirement medical benefits was phased out or eliminated for all employees retiring after July 1, 2010. ETC Sunoco has established a trust for its postretirement benefit liabilities. The funding of the trust eliminated substantially all of ETC Sunoco's future exposure to variances between actual results and assumptions used to estimate retiree medical plan obligations.

SemGroup

SemGroup sponsors two defined benefit pension plans and a supplemental defined benefit pension plan (collectively, the "Semgroup Plans") for certain employees. The Semgroup Plans are closed to new participants and do not accrue any additional benefits.

Obligations and Funded Status

Pension and other postretirement benefit liabilities are accrued on an actuarial basis during the years an employee provides services. The following table contains information at the dates indicated about the obligations and funded status of pension and other postretirement plans on a combined basis:

	December 31, 2020			December 31, 2019		
	Pension Benefits			Pension Benefits		
	Funded Plans	Unfunded Plans	Other Postretirement Benefits	Funded Plans	Unfunded Plans	Other Postretirement Benefits
Change in benefit obligation:						
Benefit obligation at beginning of period	$ 52	$ 34	$ 208	$ 1	$ 37	$ 198
Service cost	—	—	1	—	—	1
Interest cost	2	1	5	2	1	7
Benefits paid, net	(2)	(5)	(16)	(1)	(7)	(16)
Actuarial (gain) loss and other	5	1	10	4	—	18
Settlements	(2)	—	—	(4)	—	—
SemGroup Acquisition	—	—	—	50	3	—
Benefit obligation at end of period	55	31	208	52	34	208
Change in plan assets:						
Fair value of plan assets at beginning of period	43	—	270	1	—	241
Return on plan assets and other	5	—	28	6	—	35
Employer contributions	1	—	9	1	—	10
Benefits paid, net	(2)	—	(16)	(1)	—	(16)
Settlements	(2)	—	—	(4)	—	—
SemGroup Acquisition	—	—	—	40	—	—
Fair value of plan assets at end of period	45	—	291	43	—	270
Amount underfunded (overfunded) at end of period	$ 10	$ 31	$ (83)	$ 9	$ 34	$ (62)
Amounts recognized in the consolidated balance sheets consist of:						
Non-current assets		$ —	$ 108	$ —	$ —	$ 88
Current liabilities	—	(4)	(2)	—	(5)	(2)
Non-current liabilities	(10)	(27)	(23)	(9)	(29)	(24)
	$ (10)	$ (31)	$ 83	$ (9)	$ (34)	$ 62
Amounts recognized in accumulated other comprehensive income (loss) (pre-tax basis) consist of:						
Net actuarial gain (loss)	$ —	$ 2	$ (18)	$ —	$ 1	$ (5)
Prior service cost	—	—	21	—	—	40
	$ —	$ 2	$ 3	$ —	$ 1	$ 35

The following table summarizes information at the dates indicated for plans with an accumulated benefit obligation in excess of plan assets:

	December 31, 2020			December 31, 2019		
	Pension Benefits			Pension Benefits		
	Funded Plans	Unfunded Plans	Other Postretirement Benefits	Funded Plans	Unfunded Plans	Other Postretirement Benefits
Projected benefit obligation	$ 55	$ 31	N/A	$ 51	$ 34	N/A
Accumulated benefit obligation	55	31	208	52	34	208
Fair value of plan assets	45	—	291	43	—	270

Components of Net Periodic Benefit Cost

	December 31, 2020		December 31, 2019	
	Pension Benefits	Other Postretirement Benefits	Pension Benefits	Other Postretirement Benefits
Net periodic benefit cost:				
Service cost	$ —	$ 1	$ —	$ 1
Interest cost	3	5	3	7
Expected return on plan assets	(2)	(11)	(2)	(10)
Prior service cost amortization	—	19	—	26
Net periodic benefit cost	$ 1	$ 14	$ 1	$ 24

Assumptions

The weighted-average assumptions used in determining benefit obligations at the dates indicated are shown in the table below:

	December 31, 2020		December 31, 2019	
	Pension Benefits	Other Postretirement Benefits	Pension Benefits	Other Postretirement Benefits
Discount rate	2.40 %	2.04 %	4.00 %	2.71 %

The weighted-average assumptions used in determining net periodic benefit cost for the periods presented are shown in the table below:

	December 31, 2020		December 31, 2019	
	Pension Benefits	Other Postretirement Benefits	Pension Benefits	Other Postretirement Benefits
Discount rate	3.05 %	2.94 %	3.33 %	3.76 %
Expected return on assets:				
Tax exempt accounts	4.57 %	7.00 %	3.37 %	7.00 %
Taxable accounts	—	4.75 %	—	4.75 %

The long-term expected rate of return on plan assets was estimated based on a variety of factors including the historical investment return achieved over a long-term period, the targeted allocation of plan assets and expectations concerning future returns in the marketplace for both equity and fixed income securities. Current market factors such as inflation and interest rates are evaluated before long-term market assumptions are determined. Peer data and historical returns are reviewed to ensure reasonableness and appropriateness.

The assumed health care cost trend weighted-average rates used to measure the expected cost of benefits covered by the plans are shown in the table below:

	December 31,	
	2020	2019
Health care cost trend rate	7.30 %	7.25 %
Rate to which the cost trend is assumed to decline (the ultimate trend rate)	4.82 %	4.83 %
Year that the rate reaches the ultimate trend rate	2027	2026

Changes in the health care cost trend rate assumptions are not expected to have a significant impact on postretirement benefits.

Plan Assets

For the Panhandle plans, the overall investment strategy is to maintain an appropriate balance of actively managed investments with the objective of optimizing longer-term returns while maintaining a high standard of portfolio quality and achieving proper diversification. To achieve diversity within its other postretirement plan asset portfolio, Panhandle has targeted the following asset allocations: equity of 25% to 35%, fixed income of 65% to 75%.

The investment strategy of ETC Sunoco funded defined benefit plans is to achieve consistent positive returns, after adjusting for inflation, and to maximize long-term total return within prudent levels of risk through a combination of income and capital appreciation. The objective of this strategy is to reduce the volatility of investment returns and maintain a sufficient funded status of the plans. In anticipation of the pension plan termination, ETC Sunoco targeted the asset allocations to a more stable position by investing in growth assets and liability hedging assets.

The fair value of the pension plan assets by asset category at the dates indicated is as follows:

		Fair Value Measurements at December 31, 2020		
	Fair Value Total	Level 1	Level 2	Level 3
Asset Category:				
Cash and cash equivalents	$ 1	$ 1	$ —	$ —
Mutual funds [1]	20	20	—	—
Fixed income securities	24	—	24	—
Total	$ 45	$ 21	$ 24	$ —

[1] Comprised of approximately 100% equities as of December 31, 2020.

		Fair Value Measurements at December 31, 2019		
	Fair Value Total	Level 1	Level 2	Level 3
Asset Category:				
Cash and cash equivalents	$ 1	$ 1	$ —	$ —
Mutual funds [1]	19	19	—	—
Fixed income securities	23	—	23	—
Total	$ 43	$ 20	$ 23	$ —

[1] Comprised of approximately 100% equities as of December 31, 2019.

The fair value of other postretirement plan assets by asset category at the dates indicated is as follows:

		Fair Value Measurements at December 31, 2020		
	Fair Value Total	Level 1	Level 2	Level 3
Asset category:				
Cash and cash equivalents	$ 18	$ 18	$ —	$ —
Mutual funds[1]	202	202	—	—
Fixed income securities	71	—	71	—
Total	$ 291	$ 220	$ 71	$ —

(1) Primarily comprised of approximately 59% equities, 40% fixed income securities and 1% cash as of December 31, 2020.

		Fair Value Measurements at December 31, 2019		
	Fair Value Total	Level 1	Level 2	Level 3
Asset category:				
Cash and cash equivalents	$ 14	$ 14	$ —	$ —
Mutual funds[1]	177	177	—	—
Fixed income securities	79	—	79	—
Total	$ 270	$ 191	$ 79	$ —

(1) Primarily comprised of approximately 59% equities, 40% fixed income securities and 1% cash as of December 31, 2019.

The Level 1 plan assets are valued based on active market quotes. The Level 2 plan assets are valued based on the net asset value per share (or its equivalent) of the investments, which was not determinable through publicly published sources but was calculated consistent with authoritative accounting guidelines.

Contributions

We expect to contribute $6 million to pension plans and $8 million to other postretirement plans in 2021. The cost of the plans are funded in accordance with federal regulations, not to exceed the amounts deductible for income tax purposes.

Benefit Payments

The Partnership's estimate of expected benefit payments, which reflect expected future service, as appropriate, in each of the next five years and in the aggregate for the five years thereafter are shown in the table below:

Years	Pension Benefits - Funded Plans	Pension Benefits - Unfunded Plans	Other Postretirement Benefits (Gross, Before Medicare Part D)
2021	$ 3	$ 5	$ 18
2022	4	4	18
2023	4	4	16
2024	4	3	15
2025	2	3	14
2026 – 2030	12	9	58

The Medicare Prescription Drug Act provides for a prescription drug benefit under Medicare ("Medicare Part D") as well as a federal subsidy to sponsors of retiree health care benefit plans that provide a prescription drug benefit that is at least actuarially equivalent to Medicare Part D.

Panhandle does not expect to receive any Medicare Part D subsidies in any future periods.

16. RELATED PARTY TRANSACTIONS:

ET previously paid ETO to provide services on its behalf and on behalf of other subsidiaries of ET, which included the reimbursement of various operating and general and administrative expenses incurred by ETO on behalf of ET and its subsidiaries. These agreements expired in 2016.

The Partnership also has related party transactions with several of its equity method investees. In addition to commercial transactions, these transactions include the provision of certain management services and leases of certain assets.

The following table summarizes the revenues from related companies on our consolidated statements of operations:

	Years Ended December 31,		
	2020	2019	2018
Affiliated revenues	$ 466	$ 492	$ 431

The following table summarizes the related company accounts receivable and accounts payable balances on our consolidated balance sheets:

	December 31,	
	2020	2019
Accounts receivable from related companies:		
FGT	$ 12	$ 50
Phillips 66	30	36
Traverse Rover LLC	—	42
Other	37	31
Total accounts receivable from related companies	$ 79	$ 159

As of December 31, 2020 and 2019, accounts payable with related companies in the Partnership's consolidated balance sheets totaled $27 million and $31 million, respectively.

17. REPORTABLE SEGMENTS:

Our reportable segments currently reflect the following segments, which conduct their business primarily in the United States:

- intrastate transportation and storage;
- interstate transportation and storage;
- midstream;
- NGL and refined products transportation and services;
- crude oil transportation and services;
- investment in Sunoco LP;
- investment in USAC; and
- all other.

Consolidated revenues and expenses reflect the elimination of all material intercompany transactions.

The investment in USAC segment reflects the results of USAC beginning April 2018, the date that the Partnership obtained control of USAC.

Revenues from our intrastate transportation and storage segment are primarily reflected in natural gas sales and gathering, transportation and other fees. Revenues from our interstate transportation and storage segment are primarily reflected in gathering, transportation and other fees. Revenues from our midstream segment are primarily reflected in natural gas sales, NGL sales and gathering, transportation and other fees. Revenues from our NGL and refined products transportation and services segment are primarily reflected in NGL sales and gathering, transportation and other fees. Revenues from our crude oil transportation and services segment are reflected in crude sales and gathering, transportation and other fees. Revenues from our investment in Sunoco LP segment are primarily reflected in refined product sales. Revenues from our investment in USAC segment are primarily reflected in gathering, transportation and other fees. Revenues from our all other segment are primarily reflected in natural gas sales.

We report Segment Adjusted EBITDA as a measure of segment performance. We define Segment Adjusted EBITDA as total Partnership earnings before interest, taxes, depreciation, depletion, amortization and other non-cash items, such as non-cash compensation expense, gains and losses on disposals of assets, the allowance for equity funds used during construction, unrealized gains and losses on commodity risk management activities, inventory valuation adjustments, non-cash impairment charges, losses on extinguishments of debt and other non-operating income or expense items. Segment Adjusted EBITDA reflect amounts for unconsolidated affiliates based on the same recognition and measurement methods used to record equity in earnings of unconsolidated affiliates. Adjusted EBITDA related to unconsolidated affiliates excludes the same items with respect to the unconsolidated affiliate as those excluded from the calculation of Segment Adjusted EBITDA and consolidated Adjusted EBITDA, such as interest, taxes, depreciation, depletion, amortization and other non-cash items. Although these amounts are excluded from Adjusted EBITDA related to unconsolidated affiliates, such exclusion should not be understood to imply that we have control over the operations and resulting revenues and expenses of such affiliates. We do not control our unconsolidated affiliates; therefore, we do not control the earnings or

cash flows of such affiliates. The use of Segment Adjusted EBITDA or Adjusted EBITDA related to unconsolidated affiliates as an analytical tool should be limited accordingly.

The following tables present financial information by segment:

	Years Ended December 31,		
	2020	2019	2018
Revenues:			
Intrastate transportation and storage:			
Revenues from external customers	$ 2,312	$ 2,749	$ 3,428

18. QUARTERLY FINANCIAL DATA (UNAUDITED):

Summarized unaudited quarterly financial data is presented below. Earnings per unit are computed on a stand-alone basis for each quarter and total year.

	Quarters Ended				
	March 31	June 30	September 30 [1]	December 31	Total Year
2020:					
Revenues	$ 11,627	$ 7,338	$ 9,955	$ 10,034	$ 38,954
Operating income	61	1,336	244	1,339	2,980
Net income (loss)	(964)	672	(401)	833	140
Limited Partners' interest in net income (loss)	(854)	353	(655)	509	(647)
Net income (loss) per limited partner unit:					
Basic	$ (0.32)	$ 0.13	$ (0.24)	$ 0.19	$ (0.24)
Diluted	$ (0.32)	$ 0.13	$ (0.24)	$ 0.19	$ (0.24)

[1] For the three months ended September 30, 2020, the net loss attributable to partners presented above reflects a change from the amount previously reported in the Partnership's interim financial statements, due to an adjustment to the allocation of income between the general and limited partners and the noncontrolling interest in a less than wholly-owned subsidiary of the Partnership. Basic and diluted net loss per limited partner unit have also been adjusted accordingly.

	Quarters Ended				
	March 31	June 30	September 30	December 31	Total Year
2019:					
Revenues	$ 13,121	$ 13,877	$ 13,495	$ 13,720	$ 54,213
Operating income	1,927	1,819	1,830	1,627	7,203
Income from continuing operations	1,180	1,208	1,161	1,276	4,825
Net income	1,180	1,208	1,161	1,276	4,825
Limited Partners' interest in net income	869	877	831	937	3,514
Net income per limited partner unit:					
Basic	$ 0.31	$ 0.33	$ 0.33	$ 0.37	$ 1.34
Diluted	$ 0.31	$ 0.33	$ 0.33	$ 0.37	$ 1.33

Exhibit 10.2

FIRST AMENDMENT TO THE
AMENDED AND RESTATED ENERGY TRANSFER EQUITY, L.P.
LONG-TERM INCENTIVE PLAN
January 14, 2019

This amendment (the "***Amendment***") to the Amended and Restated Energy Transfer Equity, L.P. Long-Term Incentive Plan (the "***Plan***"), is hereby adopted as of October 19, 2018 (the "***Effective Date***") by LE GP, LLC (the "***Company***"), in its capacity as the general partner of Energy Transfer LP (the "***Partnership***"), on behalf of the Partnership. Terms used but not defined herein shall have the meanings given to such terms in the Plan.

WHEREAS, the Partnership maintains the Plan for the purposes set forth therein; and

WHEREAS, the Board of Directors of the Company has previously approved the change in the name of the Partnership from Energy Transfer Equity, L.P. to Energy Transfer LP; and

WHEREAS, the officers of the Company have caused the aforementioned changes in the names of the Partnership to become effective in its jurisdictions of formation and qualifications and are now memorializing those changes in the books and records of the Partnership; and

WHEREAS, the Company now desires to amend the Plan to give the full and proper effect to such name change.

NOW, THEREFORE, effective as of the Effective Date, the Plan is amended as follows:

1. All references in the Plan to "Energy Transfer Equity, L.P." (including in the name of the Plan) shall be, and hereby are, replaced with "Energy Transfer LP".

All other provisions of the Plan shall remain the same and in full force and effect.

[Remainder of page intentionally left blank.]

IN WITNESS WHEREOF, the undersigned has executed this Amendment, effective as of the date first set forth above.

Exhibit 23.1

CONSENT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

We have issued our reports dated February 19, 2021, with respect to the consolidated financial statements and internal control over financial reporting included in the Annual Report of Energy Transfer LP on Form 10-K for the year ended December 31, 2020. We consent to the incorporation by reference of said reports in the Registration Statements of Energy Transfer LP on Forms S-3 (File No. 333-228737, File No. 333-215969, File No. 333-215893, and File No. 333-146300) and on Form S-8 (File No. 333-229456 and File No. 333-251923).

/s/ GRANT THORNTON LLP

Dallas, Texas
February 19, 2021

Exhibit 31.1

CERTIFICATION OF CO-CHIEF EXECUTIVE OFFICER
PURSUANT TO
SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, Marshall S. McCrea, III, certify that:

1. I have reviewed this annual report on Form 10-K of Energy Transfer LP;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. I am responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under my supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to me by others within those entities, particularly during the period in which this report is being prepared;

   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under my supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report my conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d. Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. I have disclosed, based on my most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize, and report financial information; and

   b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
