Vision 2030: A Shared Commitment to Our Community

Energy is about people. It's about families getting ready for the day, small businesses opening their doors, and the workplaces that make our city thrive. Every home and business in San Antonio depends on power that is reliable, affordable, and delivered safely.

We understand what matters to you. You want power you can count on, cleaner energy choices, and clear communication. We hear you, and these priorities guide our work every day. Our job is not only to deliver energy, it is to also support the long-term success of our community.

During the Horizon 2050 process, many of you shared your hopes for the future and the challenges ahead. We know 2050 is a long-term destination, which is why we're breaking that journey into manageable milestones. Vision 2030 is the first step. This focused short-term plan that turns your ideas into action and helps us serve our growing city with care.

We are committed to providing reliable energy while managing costs and offer programs that support customers who need it most.

CPS Energy is taking a balanced approach to power our community into the future. We are adding more renewable energy and battery storage, transitioning an older coal plant to natural gas, and considering new generation options to support reliability as San Antonio grows. These steps help us prepare for future needs while keeping our energy system dependable and affordable. Vision 2030 is shaped by your ideas, our employees' hard work, and our commitment to serve. We are focused on strengthening reliability, supporting customers, and earning your trust every day.

Please stay connected by visiting our website to learn more, join the conversation, and share your feedback as we move forward together.

Sincerely,

A handwritten signature in black ink that reads "Frank".
